day was good. The work began across the river about four miles northeast of town. At 10:30 Watt and Boyd were cast off on the east side of the road where Mark Twain and Crist had finished their heat the evening before. This was the best heat during the trials. In speed and style Watt had the advantage. Boyd was a little the widest ranger. They were about equal in quartering. Working east on the hillside Watt made a beautiful point in sedge grass and was held a long time until Boyd could be brought around to back, which he did well. The handlers flushed, shot and killed; both dogs were a little unsteady to shot. To order Watt retrieved fairly well. The birds were marked down in the edge of an oak thicket and sedge grass. Working down the thicket across the branch Watt pointed but soon moved on. After working out the hillside without finding birds we then turned back across the branch, where Watt commenced roading and Boyd passed him and flushed three birds; both were steady to wing. We don't think that the judges saw this work as they were crossing the branch on a log and there was a little thicket between them and the dogs. Working on up the hillside the handlers and judges flushed several birds. Then Boyd made a good point in sedge grass; Watt was called around to back; coming up facing the dog he went between him and the bird twice, and then looked at Boyd as if he did not know what he was doing. Fontaine flushed the bird but did not shoot. This was a good piece of work for Boyd. Moving on to an oak thicket Watt made an excusable flush and was steady to wing. The dogs were then ordered up to get water. They were then cast off and worked a short distance up the branch where Watt made a good point, which Boyd backed. The handler flushed but did not shoot. Both dogs were steady to wing. Quite a large bevy then flushed wild across the branch, and were marked down on the hillside in sedge grass. Boyd then pointed a single bird that had been left. His handler flushed to order but did not shoot. Following the birds Boyd pointed a single which flushed wild; he was steady to wing. Watt then pointed, moved up and flushed the bird, and dropped to wing. Boyd quickly followed suit by a flush and was steady to wing. Quite a number of birds then flushed wild. Moving on a short distance Watt flushed a single and was steady to wing. About the same time Boyd pointed a bird that flushed wild and he was steady to wing. Only a short distance on Watt made a beautiful point; his handler flushed but did not shoot. Watt steady to wing. Working on Watt was going at a rattling pace and wheeled on a beautiful point, held it for a few moments and then made a cast. His handler coming up flushed the bird that he had left. Watt pointed again, the bird flushed wild. He made one jump for it and stopped. Ordered on he made a short cast and jumped on a beautiful point. His handler flushed the bird but did not shoot. Watt was steady to wing. The work on the last bevy was all done in a very few minutes and was of a very high character. Working on up the hill Boyd stopped and Watt backed a long way off. The dogs were then ordered up to go about a half mile back to the road where there were several coveys located. They were then cast off again and Boyd made a good point, Watt not being near to back. To order Fontaine flushed a small bevy but did not shoot. The birds flew down the branch where Boyd pointed, and Watt called around to back, before getting in sight of Boyd also pointed some of the same birds. To order both handlers flushed but did not shoot; both dogs steady to wing. The dogs were then ordered up at about 11:40, and after ten minutes of consultation by judges they were ordered down again, working where the scattered bevy was supposed to be, but they failed to find any of them; Boyd pointed a sparrow, then we made a long search before finding birds. The spectators flushed a bevy behind us that were marked down in sedge grass on a hillside. The dogs were worked back there and Boyd pointed, Watt backing him. Fontaine flushed a bird that flew over Watt, he shot and killed it and Watt broke shot and retrieved it. The dogs were then ordered up at 12:44 and the heat awarded to Boyd. Down in all two hours and twenty minutes. Kink having a bye, this ended the second series.

Third Series.

KINK AND NELLIE B.

At 12:50 Kink and Nellie B. were cast off to work on scattered birds. Failing to find any of them they were worked back toward lunch. Nellie B. had a decided advantage in speed and range. They were about equal in style and quartering. After working some distance Kink made a wide cast and flushed an outlying bird of a bevy and stopped to wing. The remainder of the birds flushed wild, he still remained steady, working where the birds were supposed to be, we failed to find them. The dogs were ordered up at 1:07 for lunch. After lunch, at 1:45, they were cast off on the west side of the road. After working about half a mile through open pine woods we went out into an old sedge field where Nellie flushed a bevy and dropped to wing. The birds flying over another large bevy they also flushed and were marked down in pine woods near the branch. Following the birds, Nellie made a bad flush up wind and dropped to wing. Then quite a number of birds flushed wild. Moving on Nellie pointed. Fontaine to order flushed, shot and killed. Nellie dropped to shot and retrieved well to order. Working on down the branch, Kink flushed a single bird and dropped to wing. Then they worked across the branch, where Kink made a good point. Nellie backed for a short time, then cast off, went around him and was stopped by her handler. Mr. Wells flushed, shot and missed, both dogs steady to shot. After working around some distance in the pine woods without finding, they were worked up the branch toward the road where a bevy had been seen running on the ground. The judges told both handlers they would give them just fifteen minutes longer and then they would decide the heat. They worked around, giving the dogs the benefit of the wind. Nellie flushed the bevy up wind and dropped to wing. Following the birds down the branch, in an oak thicket Nellie made two flushes up wind in rapid succession, dropping to wing each time. Kink pointed, Wells flushed but did not shoot. Kink dropped to wing. The dogs were then ordered up at 2:25 and the heat awarded to Kink. Down in all one hour and seventeen minutes. We were very much surprised at the work of Nellie B. in this heat. She had lost her nose entirely. It was expected by nearly every one that she would be one of the winners.

MARK TWAIN AND PRESCOTT.

At 3 o'clock Mark Twain and Prescott were cast off on the west side of the road in open pine woods, where both had an opportunity to show their speed and range. They were about equal in speed, range and quartering and both were very stylish on point, Mark having a slight advantage in style. Prescott made a good cast and made a beautiful point on a little mound, Mark backed. The handlers flushed a small bevy, but did not shoot. Prescott broke in but stopped to order, Mark remaining steady. The birds were not followed. The dogs were then worked north, across the road. After working them without finding, one hour and twenty minutes, the dogs were apparently getting very tired, the judges ordered them up and asked Mr. Avent to turn Paul Gladstone loose to see if he could find a bevy for them. After about ten minutes' rest Paul was brought up and the three dogs were cast off together in open pine woods. Paul started off at such a rate of speed that it seemed to excite the dogs and put new life in them. He made a very wide cast over a hill and was found pointing. The dogs were ordered around to back. Mark coming around behind him caught the wind of the birds and drew up to a point with Paul. Prescott swung around in front and also pointed. It was a beautiful sight to see, three dogs in such grand style all pointing staunchly at the same time. Avent went in to flush, but the birds were some distance away and he ordered Paul on. As soon as the order was given Paul went on as fast as possible about sixty yards to a log and

pointed again, Mark and Prescott did not move. Avent then flushed, shot, but did not kill. All of the dogs dropped to shot. Nothing was allowed either dog as they were ordered around for a back only. Paul was then put on cham and the dogs were cast off and worked up where birds had been marked down in light sedge grass. Mark pointed, Prescott refused to back, went in and was stopped to order. Judge Thompson flushed the bird, but did not shoot. Prescott broke in and Mark was steady to wing. Moving on a single bird flushed wild between the dogs, Mark then pointed and roaded and pointed again, but the bird flushed wild and he was steady to wing. They were then worked down where two birds had been marked. Prescott pointed a sparrow in a brush pile. Moving on birds were flushed by the handlers. The dogs were then ordered up at 5 and Mark awarded the heat. Down one hour and fifty minutes. This ended the third series, Boyd having a bye.

Fourth Series.

BOYD AND KINK.

At 5:20 Boyd and Kink were cast off on the east side of the road. They were about equal in speed and quartering. Boyd had a little advantage in range, Kink a little in style. Boyd pointed, Kink coming up also pointed. Both then roaded down wind some distance. Kink, crowding the birds too close, they flushed down wind. Both were steady to wing. Following the birds across the branch to edge of a thicket, Boyd flushed a single bird and stopped to wing, then moved up a few feet and pointed. In the same thicket Boyd made two points in rapid succession. The birds then flew across the road to an open pine thicket. Following them, Boyd pointed, Kink refused to back, went in and flushed. Both dogs steady to wing. They were ordered up at 6:03 and Boyd awarded the heat. Down forty-three minutes.

This ended the fourth series, Mark Twain having a bye.

Final Tie for First Prize.

BOYD AND MARK TWAIN.

Mr. J. M. Avent was selected to judge in Judge Thompson's place while he handled his dog.

At 10:02 on Saturday Boyd and Mark Twain were cast off on the east side of the road in open pine woods, and worked down the branch on the hillside in sedge grass. A bevy flushed near both dogs. They were steady to wing. Mark had a great advantage in the start in speed and style, but before the heat was ended he slowed down somewhat. Boyd was the widest ranger and Mark had the advantage in quartering. Following the scattered bevy across the branch up a little drain that was thick with bushes and some few briars, Mark made an excusable flush in the briars down wind, and was steady to wing. Boyd then pointed a rabbit. Mark, coming up on the opposite side, also pointed the same rabbit. They were both steady to fur. Moving on up the branch, the judges and handlers flushed several birds. Then turning northwest on a hillside both dogs did some beautiful roading. We finally discovered that they were after a chicken. After working about one mile northwest to the road through very likely places without finding, the judges then asked Mr. Avent to put down Rodrigo to see if he could find a bevy. The three dogs were cast off on the west side of the road in open pine woods. Rodrigo started off at his best rate of speed, and after going some distance over the hill he made a wide cast in a thicket and went so far he could not be found for some time afterward, when he was put in the wagon. The dogs were worked on in an old sedge field where Boyd made a good point and Mark backed him. A large bevy flushed wild and was marked down in the pine woods near the branch. Following them Mark made a beautiful point; Boyd also made a point at about the same time below Mark on different birds. To order, both handlers flushed, shot and Fontaine killed. Both dogs steady to shot. To order, Boyd retrieved fairly; they were both cast off and each made a flush and were steady to wing. They were then worked up the branch where several birds had been marked down in a thicket. Both dogs made excusable flushes in there and were steady to wing, then they were turned back down the branch out into the open pine woods again. After a long tedious hunt without finding, we returned to where there had been several birds marked down near where we got our last work. Boyd made game, Mark came up and also commenced roading, and established a beautiful point, and Boyd backed him. Judge Thompson flushed, shot, but did not kill. Mark dropped to shot, Boyd broke in but soon stopped. Moving on only a short distance Boyd pointed a single bird, moved up and flushed it and was steady to wing; we then went up the branch east about one mile to the road without finding. In the meantime Paul Gladstone was put down with him and after working some distance across the road in open pine wood, Boyd pointed a bevy and was backed by Mark. Fontaine flushed the birds, shot and killed and Mark retrieved well; the dogs were then ordered up at 11:20 and the heat and first prize awarded to Boyd. Down in all two hours and twenty minutes. We then went to lunch. After lunch we drove east about two miles to open pine woods.

Tie for Second Place.

MARK TWAIN AND WATT.

Watt was selected by the judges to run against Mark Twain for second place, being the best dog beaten by Boyd. At 3:50 they were cast off in open pine woods and worked down the branch. Mark did not show his usual speed and dash in this heat, he appeared to be very sore and had torn two of his toes nails off in his previous heat. Watt had a little advantage in speed and range, Mark had a decided advantage in style and quartering. Working up the hill around an old house and orchard, we crossed the creek and a large bevy flushed near both dogs. We could not see which dog made the flush as it was in a very thick place. Following the birds down the creek Watt flushed a bird down wind and the remainder of the bevy rose wild. Working across the creek in open pine woods the handlers and judges flushed several birds. Then they were worked back across the creek in an old field where Watt made a bad flush on a bevy and broke in. Watt then made a little cast, returned and pointed a bird that was left from the bevy; the bird flushed wild and Watt again broke in and stopped to order. Crossing the little drain toward a bevy that was marked down in the field Watt made a beautiful point on another large bevy on the bare ground. Mark came up, refused to back and drew too close, and the birds flushed; both dogs were steady to wing. We then dismounted and went over into the field after the first bevy where Watt flushed a single bird and was a little unsteady to wing. Moving on down the fence Mark pointed in the briars. Watt coming up the bird flushed wild. Then quite a number of birds flushed wild from the handlers and judges. Moving on up the thicket Mark flushed a single bird and was steady to wing. The dogs were then moved on up the thicket where Mark made a beautiful point on a woodcock. Judge Thompson flushed but did not shoot. Mark dropped to wing. They then got over the fence and worked out into the pine thicket and then back into the field, where both dogs scored a false point. The dogs were then ordered up to get out of the field back to our horses. They were then cast off down the creek in an old field that had been burned off, toward where a bevy had been marked down. Both dogs pointed in the briars and then commenced roading. Mark, being the fastest, roaded to a beautiful point on the creek bank, Watt not being up to back the birds flushed wild. Mark was steady to wing. The dogs were then cast off down the creek, where Mark made a beautiful point on running birds and Watt backed him. Mark commenced roading the back track. Watt made a little cast and located the birds and Mark backed him. The birds flushed wild. Both dogs were steady to wing. The remainder of the bevy flushed wild and flew across the creek. They were then worked back to the road and the dogs ordered up at 4:42, and

the heat and second prize was awarded to Watt. Down fifty two minutes.
Mark Twain and Custer were the only two dogs beaten by Watt, divided third prize.
The handlers and owners mutually agreed that the judges should select the two best dogs for the Consolation Cups. First was given to Kink and the second to Baron Blue.
This ended the All-Aged Stakes with the following result:
Watt won first.
Watt won second.
Mark Twain and Custer divided third.

KENNEL RECORD AND ACCOUNT BOOK.

THE KENNEL RECORD AND ACCOUNT BOOK consists of a series of carefully prepared blank entry forms for the use of the breeder. Pages are devoted to the registration of pedigrees, the record of stud visits, whelps, sales, prize winnings, receipts and expenses, and other memoranda, the great practical utility and permanent value of which are recognized by every experienced breeder. Ample provision is also made for recording other minor transactions, which may at the time appear trivial, but afterward prove of highest importance. There are few breeders, even among those most systematic in preserving records of their kennel transactions, who have not repeatedly felt the need of just such a detailed series of memoranda as that provided for in the Kennel Record. In the preparation of the blank forms, and in the arrangement of the book, special care has been taken to facilitate convenience both in making the entries and in subsequent reference to them. It is hoped that with such a book at their command, breeders may generally adopt a more careful system of record than they have been accustomed to preserve. 200 pages (size 9x11½ in.), price \$3. Sent postpaid by the Forest and Stream Publishing Company.

COCKERS AND FIELD SPANIELS.

Editor Forest and Stream:

If you will allow me to say a few more words on this subject, I shall be obliged.
Just as if to strengthen the position I have taken in this matter, I received from England a few days ago a marked catalogue of the Crystal Palace bench show of the E. K. C., held this month, giving all the entries, winners, etc., and on page 88 I was more than pleased to read: "Class 116. Cockers and other small field spaniels (dogs or bitches) not exceeding 25lbs."
This, to my mind, is proof positive that the English Kennel Club and the spaniel breeders of that country have at last come to the conclusion that a cocker is a small field spaniel and nothing else—just what I have always claimed.
The above-mentioned classification is entirely new, as on referring to the catalogue of the last Crystal Palace bench show held in July last year, page 64, it merely says: "Class 99. Cockers."

In their July show they had no class for either field spaniel or cocker puppies. In their show this month they have "Class 119. Spaniel puppies, any variety."
It would appear from the foregoing that the E. K. C. has discussed the matter most fully, and that they have made the change simply because they had to.

After this I trust we shall hear no more nonsense by self-constituted judges of field spaniels about this or that dog's head being too much like a field spaniel's to be a good "cocker," etc., when, as a matter of fact, they are all small field spaniels and nothing more or less.

While I am on my feet, as it were, may I ask whether it is right for the Pittsburgh people to alter the classification of cockers and field spaniels as regards weight in the rather arbitrary manner they have done?

They have said (through their premium list) that a "cocker" must be under 25 pounds in weight. I would like to know what a cocker that has won prizes at 26 pounds' weight is to do, supposing his owner desires to exhibit him. By entering him in the class above 25 pounds does he there and then acknowledge "he is nothing but a field spaniel anyhow," and forfeit the right to enter in the cocker classes at other shows, all of which place the limit at 28 pounds?

I think it would have been much better that a change regarding such an important matter as to weight should have been initiated by the A. K. C., and then only at the request of the American Spaniel Club. CAVE CANEM.

THE BOSTON DOG SHOW.—Following is the premium list of the dog show of the New England Kennel Club, to be held at Boston, April 6 to 9: Champion prizes of \$10 for dogs and the same for bitches, and in the open \$10 and \$5 for dogs, the same for bitches; and two diplomas for dog puppies and the same for bitches are offered in the following classes: Mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, Newfoundland, large pointers, small pointers, English setters, Gordon setters, Irish setters, greyhounds, foxhounds, collies, fox-terriers, black and tan terriers, large bulldogs and small bulldogs and pugs. Following classes are the same except that there is only one class for puppies: Irish water spaniels, field spaniels, black or liver cocker spaniels, cocker spaniels, any other color; Skye terriers, Yorkshire terriers over 5 pounds, Yorkshire terriers under 5 pounds, Scotch terriers. The remaining classes are as follows: Great Dane dogs \$10 and \$5, bitches the same; Clumber spaniels, the same; Chesapeake Bay dogs, the same; champion beagle, \$10; open dogs, \$10 and \$5; bitches, the same; beagles under 12 inches, dogs and bitches, the same; puppies, two diplomas. Dachshunde, champion dog, \$10; bitch, the same; open dogs, \$10 and \$5; bitches, the same. Deerhounds, the same. Wire-haired fox-terriers, the same. Dandie Dinmonts, \$10 and \$5. Irish terriers, the same. Bedlington, the same. Toy terriers, the same. Blenheim spaniels, the same. Champion King Charles spaniel dog, \$10; bitch, the same; open dogs, \$10 and \$5; bitches, the same. Italian greyhounds, the same. Poodles, the same. Mexican hairless, \$10 and \$5. Miscellaneous, over 35 pounds, the same; under 25 pounds, the same.

THE NEW HAVEN DOG SHOW.—The New Haven Kennel Club offers a stud dog prize of \$10 each for pointers, English setters, Irish setters, black and tan setters, spaniels, beagles, fox-terriers, mastiffs, collies, bull-terriers and pugs. Following are the conditions: Dog to be entered in the regular class—not necessarily for competition—with not less than four of his get (also entered in regular classes) the produce of one or more bitches. The prize to be awarded for general excellence and uniformity of type in the progeny without regard to the individual merits of the sire. If deemed advisable, other classes will be added. A number of valuable special prizes have been received, and many more are promised. It is rumored that there is quite a feeling of rivalry among the pointer men, and it is expected that the showing of this breed will be especially fine. It has been intimated that some of the owners are afraid to risk defeat and therefore will not exhibit. We do not believe this to be the case, and shall look to see the classes well filled. The entries close on Saturday, March 13. The services of Dr. E. C. Ross have been secured as veterinary for the show.

THE NEWARK DOG SHOW.—Editor Forest and Stream: Mr. H. Clay Glover has been appointed the veterinary surgeon of our Newark show. Kindly call attention in your paper in reference to certificates issued by us being required by railroad companies if exhibitors wish to carry their dogs free.—A. P. VREDEBURGH, Secretary.

3333 entries in the pedigree registry of the American Kennel Register.

WESTERN FIELD TRIALS ASSOCIATION.—Editor Forest and Stream: At a meeting of the executive committee of the Western Field Trials Association held at the office of James A. Bolen, 1st Vice-President, Feb. 25, 1886, the following programme for the second annual trials of the association was adopted. The trials will be run on quails at Abilene, Kansas, beginning Nov. 8, 1886, and will comprise the first annual Derby and all-aged stake, the all-aged to be run first. The stakes will be as follows: Derby—Open to all pointers and setters whelped on or after Jan. 1, 1885. Purse \$500; \$250 to first, \$150 to second and \$100 to third. All-Aged—Open to all pointers and setters not winners of first prize in all-aged stakes of Eastern, National or Western trials of previous years. Purse \$500; \$250 to first, \$150 to second and \$100 to third. Nominations for Derby will close May 1, 1886. Fee for nomination \$5, \$15 additional to start. Nominations for all-aged will close Oct. 9, 1886. Fee for nomination \$10, \$15 additional to start. Blanks for making nominations will be furnished on application to the secretary and treasurer. For all information in regard to the trials, address R. C. VAN HORN, Secretary and Treasurer, Kansas City, Mo.

CHOREA.—Editor Forest and Stream: My liver and white spaniel bitch had distemper very bad last summer (I had six dogs down with it), and she finished up with chorea as bad as could be. She was tumbling about in every direction, every part affected apparently, for weeks and weeks, during which time she was treated for both distemper and chorea, to no effect. Finally Mrs. "C. C." suggested giving her a hot sulphur bath, which was done, and the change in the bitch within one hour after the bath was most remarkable. She seemed a different animal, scampering about to the best of her ability, when for weeks before she had been a miserable looking object, only fit to be shot at, as one of the most noted dog men (a neighbor of mine) said, "I gave her at intervals more sulphur baths, and she quickly got well, and to-day there is not a trace of chorea about her. This may be a 'chestnut,' if so I apologize; but it is a discovery home, and I would like to have it tried on dogs similarly affected and result reported."—CAVE CANEM.

IMPORTATION OF ST. BERNARDS.—Newark, N. J., Feb. 27.—Editor Forest and Stream: As it is now generally known that Mr. Henry Schumacher, of Hollingen, near Berne, Switzerland, the celebrated breeder of St. Bernards, has closed out his kennel of smooth-coated dogs and disposed of them for breeding purposes in this country, I may as well inform you that I have secured from him for my own kennels, two of the handsomest specimens, viz., the dog Hector, 2 years old, and the bitch Tony, about 16 months old. Hector is Apollo's best son and stands 79 centimetres at shoulders to Apollo's 81, being but 4-5 of an inch smaller than his sire. He is a well marked typical dog of the orthodox color. Tony is also by Apollo out of Bernice, same color and markings as Hector. They are on the way now and are expected to arrive in a few days.—K. E. HOPK.

THE PITTSBURGH DOG SHOW.—Editor Forest and Stream: The Pennsylvania Railroad has agreed to take all dogs in kennels accompanied by their owners or care-takers over their roads free to the West Pennsylvania Poultry Society dog show, March 16 to 19, show to close March 19 at 6 P. M. Everything indicates that we shall have a large entry of Eastern dogs. Mr. H. W. Lacy will take charge of any dogs going to Pittsburgh show.—C. B. ELLEN, Secretary. Editor Forest and Stream: Owing to a typographical error in our premium list, the limit of the weight of cocker spaniels reads 25 pounds. It should read 28 pounds. They will be judged under the standard of the American Spaniel Club.—L. F. WHITMAN, Superintendent.

THE NEWARK MAD DOG SCARE.—A Newark doctor who has kept watch over some dogs bitten by the same rabid creature that snapped the children who were sent to Paris to be treated by Pasteur is prepared to swear that the cur was not mad at all. His bitten dogs have grown fat, and have thus far shown no signs of rabies. This is unfortunate for Pasteur, whose theory was supposed to be undergoing a grand test, but we congratulate the children, who had a delightful trip to Paris.—New York World.

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 90 cents) for the convenience of those who have occasion to use a large number of blanks. In ordering be careful to state what particular series of blanks is desired, i. e., whether Names Claimed, Sales, Bred or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be retained for future reference.

THE AMERICAN KENNEL CLUB.—Birmingham, Conn. March 2.—Editor Forest and Stream: There will be a meeting of the executive committee of the American Kennel Club at Newark, N. J., on March 24, the second day of the dog show, at 2 P. M. The committee on credentials have reported favorably on the application of the Hartford Kennel Club for membership. I have received the resignation of the Baltimore Kennel Club as member in the A. K. C.—G. EDW. OSBORN, Secretary.

THE BEAGLE CLUB.—There will be a meeting of the executive committee of the American English Beagle Club, at Newark, N. J., on March 23, the first day of the dog show. The committee extend a cordial invitation to all interested in the beagle, to meet them. Any one desirous of joining the club should communicate with the secretary, Mr. W. H. Ashburner, 27 North Thirty-eighth street, Philadelphia, Pa.

THE HARTFORD DOG SHOW.—Editor Forest and Stream: Our premium list will be issued Monday, March 1. Every indication points toward our show being a great success. There has been a great demand for premium lists and entry blanks. The puppy classes in mastiffs, St. Bernards, greyhounds, deerhounds, setters, fox-terriers, collies and pointers will be divided into dog and bitch classes.—A. C. COLLINS, Secretary.

THE SPANIEL JUDGE AT HARTFORD.—Mr. A. C. Wilmerding informs us that it will be impossible for him to act as judge at the Hartford dog show.

3333 entries in the pedigree registry of the American Kennel Register.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Ashmont Bertha. By Geo. Gillivan, West Jefferson, O., for tawn, black points, muffed bitch, whelped Nov. 24, 1885, by Hero II. out of Empress (Grip—Britannia).
Pulka. By J. N. Rander, Oakville, Tex., for black and white English setter bitch, whelped Jan. 3, 1886, by Poet (George) out of Bessie B. (Robt. Seidel's Frank—Dr. Getzwiller's Cora).
Dun. By D. E. Bowers, Cummingsville, Tex., for lemon and white English setter dog, whelped Jan. 3, 1886, by J. N. Rander's Poet (J. N. Bennett's George) out of Bessie B. (Robt. Seidel's Frank—Dr. Getzwiller's Cora).

Gipsy. By J. N. Rander, Oakville, Tex., for black, white and tan English setter bitch, whelped Jan. 3, 1886, by Poet (Bennett's George) out of Bessie B. (Seidel's Frank—Dr. Getzwiller's Cora).

Ponto. By D. E. Bowers, Cummingsville, Tex., for liver, white and tan English setter dog, whelped Jan. 3, 1886, by J. N. Rander's Poet (Bennett's George) out of Bessie B. (Seidel's Frank—Dr. Getzwiller's Cora).

Bessie B. By D. E. Bowers, Cummingsville, Tex., for black and white English setter bitch, whelped Jan. 6, 1885, by Seidel's Frank out of Getzwiller's Cora (Laverack Chief—).
Thomas W. Keene. By N. V. Ketchum, Savannah, Ga., for brindle, white streak on breast, bulldog, whelped Oct. 30, 1885, by Guillermo (A. K. R. 671) out of Patti (A. K. R. 2538).

Lady O'Donoghue. By Conghrua Medicine Co., Eau Claire, Wis., for Irish water spaniel bitch, whelped Dec. 11, 1885, by The O'Donoghue out of Water Witch.
Gladys. By Roscroft Kennels, Birmingham, Conn., for black and white English setter bitch, whelped Nov. 17, 1885, by Plantagenet out of Forest Dora.

Belmont. John Kethering, N. Jersey City, N. J., for liver and white pointer bitch, whelped Dec. 21, 1885, by Donald II. (Donald, A. K. R. 2545—Devonshire Lass—) out of Nora (A. K. R. 1785).
Jeg II. By Jas. Rae, Buffalo, N. Y., for pepper and tan Dandie Dimont bitch, whelped Jan. 18, 1885, by Bobbie Burns (A. K. R. 2907) out of Elsa (A. K. R. 2908).

Habbie II. By Jas. Rae, Buffalo, N. Y., for pepper and tan Dandie Dimont dog, whelped June 18, 1885, by Bobbie Burns (A. K. R. 2907) out of Elsa (A. K. R. 2908).
Calico. By E. W. Durkee, New York, for black, white and tan English setter bitch, whelped June 25, 1885, by Foreman (Dashing Monarch—Fairly II.) out of Belle of Allendale (Lava Rock—Liddersdale).

Chintz. By E. W. Durkee, New York, for black, white and tan English setter bitch, whelped June 25, 1885, by Foreman (Dashing Monarch—Fairly II.) out of Belle of Allendale (Lava Rock—Liddersdale).

Blue Blood Kennel. By D. A. Goodwin, Jr., for his private kennel at Newburyport, Mass.

Monitor Kennel. By Geo. E. Reading, Flemington, N. J., for his kennel of pointers.
Editor Forest and Stream: In your issue of Feb. 18, 1885, you have in Names Claimed, and as having been bred to Senator Pierce's dog Bob, the bitch Judy B. as a Skye terrier. Being a new hand at keeping dogs, I so wrote it, when I should have said Yorkshire terrier. Please correct in your next and oblige.—FRED BOLLETT (Brooklyn, N. Y., Feb. 19).

BRED

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

MONARCH, Savannah, Ga.—To get rid of the worms in the puppies feed them plenty of thick sour milk.

J. H. Steelton.—A setter dog about three years old has since last fall had three fits. An. Look for some cause for the fits. Has the dog worms, are his bowels in order, has he recently had the distemper? Give him the grains of the bromide of potash three times daily for three weeks.

YOUNG READER.—Ans. Give the puppy a teaspoonful of castor oil. Feed no more. Feed milk with a teaspoonful of lime water to the puppy, also beef tea with bits of toast in it. Give no fatty food. Use some Prussian blue powder for the fleas, but do not use too much. Watch his stools and convince yourself whether he has worms or not.

E. B. Boston.—In the case of canker in the ears it is advisable to use the canker cap? The dog is a beagle and has had canker some time; began treatment a week ago, using sulphur of zinc and green iodide of mercury every third day. No external ointment. Use Syring with warm water and soap, dry carefully, and drop a few drops of the following into the ear twice daily: Of bromo-chloral and of laudanum, each one drachm; of water, six ounces; mix. Apply warm.

C. A. T. Newmarket, N. H.—I wrote a few weeks ago about my setter dog having distemper and treatment I gave him. The distemper has apparently left him, and for the last week he has appeared nicely and had a ravenous appetite but he now seems unwell again. His symptoms now are constant shaking of the head and scratching of the ear by the use of his hind leg, and he drools continuously. I have an idea that it is canker in the ear, and should like to know

what treatment to now give; and does the Fowler's solution which I have been giving have a tendency to drive any humor which he may have to the face? Shall I continue to use it? Ans. You had better stop the Fowler's solution. Use the following wash for the ears: Of bromo-chloral and laudanum, one drachm each; of distilled water, six ounces. Mix. Drop in the ear twice or three times daily. If you have been giving the arsenic for more than three weeks, it is the cause for the drooling.

RANGE AND GALLERY.

NEW YORK ARMORY PRACTICE.

THE new Adjutant General of this State is a great advocate of rifle practice and the various regiments are devoting much attention to indoor work, many an officer having good ranges, some of them very poor and ill adapted to the purpose intended. One of the finest rifle ranges in this country is to be found at the 7th Regiment armory, at Sixty-seventh street and Lexington avenue. The range is 300 feet long and consists of six targets. The arrangements for mark and score are perfected by an admirable set of indicators. Here, six nights out of seven, the various companies of the regiment assemble for drill and rifle practice. On the latter, two hundred thousand rounds of ammunition are expended annually. The number of rounds shot at the night is reached at high a 3,000. The match of the bullets and the filling of the blank cartridges is all done in the building under the direct superintendency of Mr. Edwards, who has invented machines for filling, priming and crimping the shell. This greatly facilitates the work, and at the same time renders the operation, free from all danger. Five tons of lead are in constant circulation from the butts to the smelting room, where the bullets can be turned out at the rate of 1,000 per hour.

During the present winter an increased number of matches and prizes have been arranged by the executive committee, and some changes made in the system of handicapping. The "bullseye" matches at 200 and 500 yards are the new features of the program. At the opening of the season nine series of matches were arranged: Three prize matches, three prizes offered, value \$25; class matches, handicap matches, the bulls-eye match, 200 yards, the bulls-eye only to count, and the greatest number in any string to win; bulls-eye match, 500 yards; then comes the armory match, the match of five matches, open to one team of five men from each company, one from the field staff and non-commissioned staff, and one team from the veterans, the prize to be a "trophy" to be awarded to the team whose aggregate score of the two competitions is the highest. Regimental team matches, open to teams of three from each company, chosen as each captain may select, the badge to be held by the winners from one competition until the next, and at the close of the season awarded to such company whose score during the matches aggregated the highest, and by them held until January 1, 1887, when it will be returned to the commandant of the regiment for further competition. The "special off-hand" matches come next, the prize a trophy, valued at \$5, to be presented to the man making the highest aggregate of any two scores. A prize known as the "picture" prize will be given to that member of the club who, during the present season, make the best score of fourteen shots in any club competition, at 200 and 500 yards, or in a competition for the Abel trophy. A cup or trophy of the value of \$75 will also be given to the man who first makes the highest possible score, namely, 70-70, in any armory rifle club match or competition for the Abel trophy. In case the prize is not awarded this year, it is intended to add \$25 to the fund until the trophy is won. The scores in the team of three matches have been running especially well.

The best score ever made at the armory is 134 out of a possible 150 points. It is this extensive system of prizes, which has created so much interest in rifle practice among the various companies, causing a spirit of healthy competition and more efficient work at Creedmoor each season.

WORCESTER, Mass., Feb. 20.—At the regular meet, yesterday at the Pine Grove Range of the Worcester Rifle Association, there was an unusually large attendance and much interest. The Standard American target was used, with the following result:

Record Match

NORRISTOWN, Pa., Feb. 22.—Bridgeport range, conditions 5 shots at 100 yds., any position without artificial rest being allowed. The following strings were made, each shot being measured from the center of the target:

First match—George Ritter, total string, 3,390 in.; E. A. Leopold, total string, 6,630 in.; B. A. Parker, total string, 9,120 in.

Second match—E. A. Leopold, total string, 5,110 in.; A. B. Parker, total string, 6,630 in.; George Ritter, total string, 2,600 in.

Mr. Ritter used a Winchester repeating rifle of .32 caliber with 24 in. barrel, model of 1873, and his string is the shortest ever made on this range. The previous record was made by E. A. Leopold, on Washington's Birthday, 1884, and measured 8,690 in.

NEVADA VS. CALIFORNIA.—A long anticipated interstate military rifle match between the Car-on team of Nevada and the California Schuetzen Club took place Feb. 21. The former club shot over the range in Carson City and the California team, roused its echoes in Schuetzen Park in Alameda. The conditions of the match were twenty shots, twenty men, 200 yards, military rifles. Colonel Parker of the Carson team was present during the shoot in Alameda and acted as judge for his adversaries. He shot over the same range with them and scored 84 rings. The shoot lasted during the afternoon, but just before its conclusion a dispatch was received from Carson announcing that the team in that city had scored 1,602 rings. This number was less than that already made by the local men and although darkness had set in, the final shots were fired by Kuhls, Jacoby, Johnson and Kuhnle. The club scored 1,709 rings, winning the match by a majority of forty-seven. The twenty men averaged 85.9-20, which is said to be the best on record. The California score is as follows: Strecker 87, Ladd 92, Bachman 83, Rohlfus 81, Kahnyer 77, Lehman 84, Smith 85, Robertson 85, Stanton 85, Dornlie 85, Unscliz 87, B. aver 88, Margels 85, Werthimer 86, Kellogg 91, Carr 89, Kuhnle 85, Jacoby 81, Kuhls 80 and Johnson 85.

NEW BEDFORD, Mass., Feb. 22.—Rifle teams representing a battalion of the first regiment contested at the range of the City Guards to-day, and the home team came out the victors. Co. F of this city, Co. I of Brockton, Co. M of Fall River and Co. F of Taunton were represented. The shooting was at 200 yds., 20 shots each. Highest individual possible 70.

New Bedford Team—Sergt. Dahill 53, Sergt. Howland 40, Pvt. Barnum 53, Pvt. Gibbs 40, Sgt. Pope 54, Corp. Jennings 44, Pvt. McBay 53, Pvt. Bradley 52; total 389.

Brockton Team—Sergt. Battles 43, Pvt. Foye 52, Pvt. Hall 43, Pvt. Horton 42, Pvt. Wade 50, Pvt. Trilhou 43, Pvt. S. earn 50, Lieut. Blankinside 49; total 387.

Taunton Team—Pvt. Tucker 53, Corp. Davis 24, Pvt. Staples 47, Pvt. Lincoln 29, Pvt. Anthony 54, Corp. Strout 45, Pvt. Gifford 51, Pvt. Fowler 55; total 374.

Fall River Team—Sergt. Fuller 44, Corp. McIntyre 46, Pvt. Hullahan 46, Pvt. Robbins 44, Pvt. Crowley 32, Pvt. Davis 35, Pvt. Scowen 36, Pvt. Negus 28; total 312.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CHAMBERLIN CARTRIDGE CO.'S RULES FOR TRAP-SHOOTING.

RULE 1. Decision of Judges.—Two judges and a referee shall be appointed to judge all matches. If the judges cannot agree the referee shall decide and his decision shall be final.

Rule 2. Special Duties of Referee.—The referee shall see that the traps are properly set at the beginning of a match and that they are kept in order to the finish.

Rule 3. Flags for Judges.—Each judge shall be provided with a red flag and a white flag. They shall raise the red flag to indicate a "broken" bird, and the white flag to indicate "lost" bird; they shall raise both flags to indicate "no bird" or an imperfect bird, they shall also announce the score in a loud voice.

Rule 4. Keeping the Score.—It shall be optional with the judges and referee to keep the score themselves, or appoint some one for that purpose, and the score thus kept shall be the official score, provided however, that the referee must testify to the correctness of the score or scores made under his supervision if required.

Rule 5. Score with Ink.—All scoring shall be done with ink or indelible pencil, the scoring of a lost bird shall be indicated by an "O" of a dead or broken bird.

Rule 6. Traps.—All matches shall be shot from three traps set level in the segment of a circle five yards apart. The radius of this circle shall be eighteen yards. The traps shall be numbered from No. 1 on the left to No. 3 on the right consecutively. All traps must throw the birds a distance of not less than forty yards.

Each trap must be tested for this standard distance before the shooting begins, and if any trap be found too weak to throw the required distance a new trap or spring must be substituted.

Rule 7. Adjusting Traps.—The lever or projecting arm of the trap shall be adjusted that the elevation of the bird in its flight at a

distance of ten yards from the trap, shall not be more than eight feet nor less than four feet, and the angles of flight shall be as follows: No. 1 trap shall be set to throw a left quartering bird, No. 2 trap shall be set to throw a straight away bird, No. 3 trap shall be set to throw a right quartering bird. After the traps are set for the above angles, if the bird for any reason shall take a different angle, it shall be considered a fair bird, provided the trap has not been changed.

Rule 8. Pulling of Traps.—The trap puller shall stand at least six feet behind the shooter, and when the shooter calls "Pull," the trap shall be instantly sprung. In single bird shooting he should pull the traps indiscriminately and not one, two and three consecutively. He shall pull equally and regularly for all shooters. If the bird is sprung before, or at any noticeable interval after the shooter calls "Pull," he can accept the bird or not, but if he shoots the result shall be scored.

Rule 9. Screens.—No screens shall be used. Back-stops may be provided for trappers, 10 to 15 yards from the end traps, and not to exceed three feet in height.

of hay and laid it in the tent about one foot thick, after which we laid our rubber blankets over this, then our woolen blankets, making our beds complete. In the afternoon the owner of the Maud went home to spend Sunday.

A ROUGH WATER CRUISER.

THE waters about Newport and Narragansett Bay offer a fine cruising ground for the yachtsman, with Long Island Sound on the one hand and Buzzard's Bay on the other. Those who would sail on them in all weathers, however, must have a sturdy little craft under them, as it is no mere summer drifting, but very often a rough and bristling battle with heavy weather and big seas, work for which the ordinary centerboard craft of moderate size is entirely unfitted. The little boat illustrated in the accompanying drawings was designed by Mr. J. Borden, Jr., of the firm of Borden & Wood, of Fall River, Mass., the details being partly the work of Mr. Frank Wood. Mr. Borden describes his design and the objects to be attained in it as follows: "I have planned her especially for family cruising, and think her especially well arranged to accommodate my wife, three children and myself. I have aimed at room, comfort and safety, even at a sacrifice of speed, though I hope that she will be able to get out of the way of some of the slow ones. She will comfortably accommodate six persons without the least crowding, and furthermore, will have plenty of stowage room for all the dunnage required for a cruise of several weeks. Her elements are as follows:

Length over all.....	26.50ft.
Length L. W. L.....	22.00ft.
Beam extreme.....	8.50ft.
Beam L. W. L.....	8.00ft.
Draft extreme.....	5.00ft.
Displacement.....	6.53 tons.
Center of buoyancy (abaft middle of L. W. L.).....	1.25ft.
Center of buoyancy (below L. W. L.).....	1.21ft.
Area load water plane.....	125.03-sq. ft.
Area lateral plane.....	87.18sq. ft.
Area midship section.....	18.06-sq. ft.
Area wetted surface.....	230.02-sq. ft.
Center L. W. plane (abaft middle L. W. L.).....	1.58ft.
Center lateral plane (abaft middle L. W. L.).....	1.65ft.
Center of effort for'd of center of lat. resistance.....	.04ft.
Weight of outside ballast.....	4350lbs.
Least freeboard to top of planksheet.....	22in.

On hoarding her we find: First, a passage along her gunwales of from 18 to 27in. in width, the trunk being about 4ft. wide, thus making her practically a flush-decked boat, so far as deck room is concerned. Secondly, on entering the cockpit, we find a large standing room of 6ft. in length, with a floor 1ft. above the L. W. L. On lifting the covers of the seats, we find immense lockers for cables, extra lines, buckets, and other extras which are always kicking about decks and cabins. There will be no coils of rope in the cockpit, as the whole of the main sheet can be coiled on deck aft, there being 3ft. of deck abaft the cockpit, and the head sheets will be on deck outside the washboards, the turns being taken on cleats on the combing of the latter. The sill to the companionway will be 1ft. above the cockpit floor (as high as the main deck) and the door will be hinged to it, dropping outside against the companion hulkhead. This last arrangement will obviate the trouble of having these doors swinging or taking up valuable room when booked back.

As we enter the cabin we will find five steps by which to descend, the upper one being used as a kind of door to the ice chest and the other as clothes drawers. The water tanks will be made of galvanized iron in the form of a hollow square or box, within which will be placed the ice, which will thus keep the water cool, obviating the necessity of keeping a pitcher of ice water on hand, this latter being always available by drawing it from a faucet forward. The gasoline tank, for fuel for the stove (which latter will be in one of the forward lockers) will also be placed here and supply the stove through a pipe carried forward like the water. Both of these tanks will be filled through openings in the cockpit. We will thus avoid dirt, dampness and smells in the cabin. On each side of the companion way will be very large and roomy clothes lockers in which to hang outside clothing.

On entering the cabin one will be impressed by the amount of light as well as room. The large panels in the trunk sides will be of glass and made so as to open, the object being both light and ventilation. The height under the carlins will be 5ft. 10in., and the distance between lockers 3ft. With four persons on board I do not propose to use the lockers for sleeping, but shall stretch my folding bunks, which will be of heavy canvas and be stretched tight by lanyards drawn through heavy eyebolts at the outside corners, the inner sides being hooked in the bilge behind ornamental curtains. These latter will be raised at night on making the beds, but during the day will be dropped in front of the folded bunks and bedding. When the lockers are in use as beds, these folding bunks will be attached 6in. higher, making two tiers for sleeping. In the cabin hulkhead will be a port-hole instead of a door, the passage being 3ft. wide. By drawing this aside at night I shall obtain as good ventilation as though there were no hulkhead. From the drawings the ample locker and shelf room forward, also two folding bunks, are easily seen.

One thing is omitted in the drawings, namely, the hatch just forward of the mast. This will be ample in size to pass down into the fore-castle large bundles. It will also be used in dipping the spinnaker boom and for ventilation. A hatchway forward near the bowsprit hilt will be filled with a metallic windsail.

The main cabin will be lined in hard woods and the fore-castle in cypress. The rails, deck and trimmings will be finished bright, there being no paint used inside the bulwarks.

I shall use the Haggerty slide rig for the mast and Babbitt brass blocks throughout.

The boat is roomy, safe, comfortable, and cheap withal. She can be built and sold complete for from \$1,000 to \$1,500, according to finish and material used for ballast, and will be really a poor man's boat.

She will be called Mermaid, and we hope to show the prettiest, nicest little mermaid in the whole sea. J. BORDEN, JR.

THE NEW VANDERBILT YACHT.

THE contract for Mr. Vanderbilt's steam yacht has been awarded to the Harlan & Hollingsworth Co. of Wilmington, Del., who have agreed to have her completed in seven months. Mr. Byrne has returned home but will send an assistant over to supervise the construction, which will be in accordance with Lloyd's highest class. The dimensions finally adopted are:

Length over all.....	285ft.
Length from stem to sternpost on deck.....	256ft.
Length loadline.....	252ft.
Beam extreme.....	32ft. 3in.
Depth, moulded.....	21ft. 6in.
Draft.....	17ft.
Tons, O. M.....	1311

The specifications call for mild steel throughout, the keel to be 12x24in.; frames 4x3x3/4 angles with reverse frames 3x3x5/8. The floor plates are 36in. deep and 7-16 thick. The plating will be 5/16 in., diminishing at the ends, flush to three feet below the loadline and laid "in and out" from that point to the keel. There will be several longitudinal bulkheads in addition to six transverse ones. The deck will be of steel plate amidships with diagonal braces of the same at the ends, the white pine planking being scored over the latter. The houses will be of steel plate covered with teak and the latter will be fast for all deck work. The engines will be three cylinder compound, a cylinder 32 in diameter in the middle and one of 45 in diameter on each side of it, the stroke being 42in. The two steel boilers with 5,000ft. of heating surface will carry 1000lbs. working pressure. The screw, 18ft. 6in in diameter, will be cast in one piece out of phosphor bronze. The tanks will carry 30 tons of water and a condenser will furnish 750 gallons more per day. The usual auxiliaries, ice machine, steam windlasses, steering gear, electric lights and bells will be of the latest patterns.

The arrangements below berth the crew forward, then the owner's quarters, engine space, a library, and the officers' quarters. In the fore-castle the crew will have hammocks and iron swing cots, while the officers' mess room and pantry, and the two rooms for petty officers fill up the space forward of the first hulkhead. In the part devoted to the owner is a dining room, 31x18ft., nursery 19x11, and eight large staterooms. The galley is on deck, but the pantry, ice and wine room, etc., are all convenient to the dining hall. Aft of the engine space is a library 17x16ft. connected by a passage on the starboard side with the apartments forward. This passage at one point expands into a recess handsomely furnished, from which a view of the engines can be had. The officers' quarters, including seven staterooms, are abaft the library, and still further aft are the quarters of the oilers and firemen.

In the forward deck house is a saloon 14x11ft. a vestibule and the grand staircase; also a chart room, 7x7ft. and the main galley. The after house will contain a ladies' saloon, 9x7ft., a staircase to the library, and a room for the owner 9x6ft. 6in. There are twelve bathrooms below and a vapor bath in the deckhouse. The bunkers will carry 300 tons of coal and she will have also 75 tons of lead ballast. There will be three masts, all with topmasts, and the fore-mast will be square rigged. The boats will be of Spanish cedar and teak, one being a steam launch 30ft. long. The finish will be elegant and tasteful throughout all the yacht.

SAN FRANCISCO.—Aggie has been coppered and put in order, and is now lying off Benicia. Annie is in Richardson's Bay, where she is being overhauled thoroughly. Lurline is having new sails and is also getting ready for the season.

ICE YACHTING

PHILADELPHIA TUCKUPS.—Editor Forest and Stream: Your correspondent is right as to numbers, construction, etc., of "tuck ups" on the Delaware. I have counted 130 sail pass up stream by Cooper's Point in less than 15 minutes, most of them 15ft. flyers. I also participated in a regatta in which over 60 of these tiny craft started from buoys reaching from Philadelphia to the Cove Channel. There is no doubt these boats are the speediest in the world, going over a course in a race of 33 miles in almost the roughest kind of weather. They are man killers all the same.—R. G. W. (Camden, N. J., Feb. 18 1886).

A NEW FISHING SCHOONER.—A new fishing schooner of the following dimensions is now building at Essex, Mass.: 85ft. in length stem to sternpost, length over all 100ft., beam 20ft. 6in. depth 9ft., keel 2ft. 6in., sharp V-shaped bottom with V-shaped quarters and stern, width of stern 12ft., draft aft 11ft. 6in., mainmast 74ft., foremast 72ft., bowsprit 20ft., outside knighthead, foremast is 21ft. from the stem and there will be 28ft. 6in. between the masts, mainboom 65ft. in length.

NEW BEDFORD Y. C.—The officers for 1886, elected on March 2 are: Commodore, Frederick Swift; Vice-Commodore, E. H. Morgan; Rear Commodore, E. B. Hammond; Secretary, John H. Barrows; Treasurer, E. Hanley Wills; Directors: E. S. Brown, George M. Crapo, J. A. Barnes, Willard Nye, Jr., Horace Wood, J. C. Rhodes, R. S. Taber, Frank E. Swain, Nathaniel Hathaway, William Sherman and David L. Parker.

A YACHT CRUISE ABROAD.—Mr. W. A. W. Stewart, of the Magie, and Mr. C. S. Lee, of the Oriva, lately left New York for a long cruise, going to England by steamer, where they will charter a schooner yacht and sail for the Mediterranean, visiting later the West Indies, and probably New York. Captain Porter accompanies them as navigator.

PRISCILLA.—It is reported that the crew of the Priscilla, under Captain Gibson, have been sent to Wilmington to bring her to New York, but what is to be done with her is not yet known.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

H. P. S.—The arm is accurate. It will kill at half a mile range if you can hit anything at that distance.

G. S. S., Chicago, Ill.—Mr. Joseph Bardwell, 676 Thirteenth place, Chicago, can give you full particulars.

A. J. B., Ogdenburg, N. Y.—Can you inform me what preparation is used on inside of aquariums which is waterproof? I have a large one, bottom covered with zinc and stopped with white lead; this I covered with sealing wax varnish, but it does not give satisfaction, as it gets soft and peels off, result, dead fish. If you can inform me what I can put on to stay there and resist action of water I will be greatly obliged. I have a constant stream of water passing in and out, but I keep losing fish, and attribute to poison from zinc and lead, notwithstanding there is nearly three inches depth of sand and gravel on bottom. Ans. We would advise that all the zinc and white lead be taken out and the glass set in aquarium cement. Greenwool's rubber cement was used in the New York Aquarium, with good results, in all the tanks. The frames of these were of iron, slate, or Portland cement. This rubber cement can still be obtained in this city. An artificial stone cement is made of sand, litharge and rosin, wet with linseed oil. This hardens like stone and is difficult to remove when a new glass is to be put in. If the bottom of your tank is of wood try pitch on it.

OUR READERS will confer a favor by sending us the names of such of their friends as are not now among the subscribers of the FOREST AND STREAM, but who would presumably be interested in the paper.

POT LUCK FROM EXCHANGES.

A photograph of a tiger in the act of seizing his prey has, by a lucky accident, been made by an Englishman in Madras. The camera was focussed on a buffalo tied to a stake at a distance of 60 feet, and had just received a dry plate, when a tiger leaped from a jungle and struck down the buffalo with a single blow. The operator kept his presence of mind and released his shutter before taking to his heels. The negative showed the relative attitude of tiger and buffalo fairly well, and confirmed the generally accepted opinion that the tiger, with his knock down blow, endeavored to dislocate the neck of his victim.

A monster elk was sighted in the Ward River Mountains by a hunter, says the Salt Lake Tribune, and the hounds sent after him. A long chase of two hours led to the base of Sable Mountain, one of the loftiest of the range, up which the monarch of the forest darted as his final refuge. The ascent was steep, but the hunter and his dogs followed. Soon the elk was brought to bay. As the foremost of the dogs sprang full at the throat, the branching antlers were suddenly lowered, and keen tines pierced from side to side, and the stanch hound was thrown high in air, and fell far down the steep incline. Nothing daunted, the remaining hound, too, made its fierce spring, and shared the fate of its comrade. The animal then rushed at the hunter, who fired, but the next instant was whirled aloft on the broad antlers. His stout buckskin hunting-shirt turned aside the sharp prongs, but they had become fastened in the garment, and he bade fair to be thrashed to death. As for a second time the elk dashed him to the earth he managed to catch hold of a bush, and kept his grasp long enough to draw his revolver and send a ball crashing through the brain of his gallant foe.

Among the Many Novelties

Introduced by us for the coming season, we wish to call attention to our

Dead Finish, Waterproof, Braided Silk Fly Lines,
FOR SALMON, TROUT AND BLACK BASS.

We have been experimenting for some years in the hope of making a perfect waterproof line. Success crowned our efforts somewhat less than two years ago, but we have not offered the lines for sale till we were certain of their excellence in every particular. These lines will not crack, chip off or become sticky and stiff. They are completely waterproofed, not merely on the surface. They will not become tender in use or by age.

We make same style rods for trout and bass to weigh from 5 to 12oz, also the "Standard Henshall Rod," Lancewood Rods, Reels, Turned Stock and Rod Trimmings of all descriptions. For New Illustrated Catalogue for 1885 address

THOS. H. CHUBB,
Orange County, Post Mills, Vermont.

GRATEFUL-COMFORTING.
EPPS'S COCOA.
BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette*.
Made simply with boiling water or milk. Sold only in half pound tins by Grocers, labelled thus:

WM. S. KIMBALL & CO.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

NEW YORK: **FOREST AND STREAM PUBLISHING CO.**, 39 Park Row.
LONDON: **DAVIES & Co.**, 1 Finch Lane, Cornhill.

The Forest and Stream Publishing Co. will send post paid any book published on receipt of publisher's price.

THE DEER HOUNDING BILL.

THE Game Committee of the New York Senate gave a hearing on the bill to repeal the anti-hounding law last Tuesday. A brief report of the meeting is given elsewhere. No new arguments were advanced by the advocates of the repeal. They repeated their stock plea that the deer must be hounded to be made shy, so that the still-hunters cannot get them. The real motive of these men being selfishness, they studiously conceal this by pretending that they want only to protect the game. Notwithstanding that their assertions of pretended facts have been exposed in these columns as preposterous and intentionally misleading statements, they stick to the "shy" argument on the principle that it is "a good enough Morgan until after election." They back up their side by the most grotesque assertions. For instance, last Tuesday one man stood up and actually told the committee that the unarmed still-hunter sometimes went out into the woods, and coming upon a deer, caught it and choked it to death. It is allowable to fight the devil with his own weapons, but with what weapons, pray, can one combat an advocate of deer hounding who talks in that fashion? There is one point which all the hounders who spoke last Tuesday studiously ignored. They told about the poor invalid sitting on a log forgetful of his bodily ailments while listening to the enchanting music of the hounds; but they failed to tell what happened when that music suddenly ceased; they drew the curtain before the final act; they tried hard to concentrate sympathetic attention on the poor invalid on the log, and to divert it from the deer being butchered in the water. They dare not face the facts. They do not and cannot meet the proved fact that the end of a chase by dogs is the death of the deer—driven into the water and shot at close range, clubbed or drowned. They dodge the proved fact that deer are surely killed in this manner, in localities where they could be taken in no other way. They dodge the fact that hotel keepers like Paul Smith advocate hounding at the instance of and for the benefit of rich city guests, who could get venison in no other way. They dodge the fact that the dogs are employed as a sure thing, *i. e.*, sure to get venison. And they rant about making deer "shy." They pose as philanthropists, spending their time and money in chasing Adirondack deer to make them "shy." They purposely confound still-hunting with crusting and killing deer in yards. They

talk about the unlawful butchery of deer by crust-hunters and the unlawful killing of deer in their yards in winter, and attempt to bamboozle the committee into believing that this is still-hunting. They harp on the terrible results of jack-shooting, but studiously avoid the fact that they have expunged the very good anti-jacking clause from their bill, because they hoped thus the more readily to get their hounding clause through, and because they really do not care whether jacking is forbidden or not; but are more than glad to make a bargain with the jack-shooters, whereby the latter may have license to get all the deer they can in the first part of the season, provided the hounders can get what are left. In short, it is by one pretense and another, the hollowness of which is perfectly evident to every fair-minded man who knows anything about the Adirondacks and deer hunting, that the advocates of the anti-hounding law repeal are making their campaign.

Another hearing will be given by the committee in the Senate Chamber Tuesday afternoon, March 16, at 3 o'clock. We take this occasion to warn those who are interested in preserving the deer of the Adirondacks, that unless they take measures to provide incontrovertible evidence to disprove the statements of the repealers, which will be made at that meeting, the deer law will be repealed. The clubs and associations which have taken a stand against the repeal, should send representatives to the hearing with such statistics and facts as they may command.

There is abundant sentiment in favor of the present law to defend it, could that sentiment only be expressed to the Committee and the Senate. The advocates of the repeal are working assiduously because they want to have deer hounding next season; they must be met by a like activity unless the people of this State are content to let the case go by default.

THE MASSACHUSETTS ASSOCIATION.

THE Boston game market is the "dumping ground" for most of the game left on the dealers' hands at the close of the season in other States. The Legislature of the Bay State has for years been under the domination of the market moneyed interests of Boston whenever game legislation has come up. The Massachusetts Fish and Game Protective Association has made repeated attempts to secure more sensible and more just laws, but they have been balked every time by the dealers. So we still have the beautiful spectacle of the market men gathering in great stores of game, trade in which is declared to be illicit by some of the States whence it is shipped; and holding this game at such prices as may suit their fancy. Because of the better laws of neighboring States the Boston men have a monopoly of the trade. They can be extortionate if they choose, for they are not controlled by any competition. They cannot make a pretense that their game supplies benefit anybody except the rich. They can not plead that public good demands the present outrageous law, for the only part of the public now deriving any good from the extended game season is made up of rich gourmets, who willingly pay extravagant prices for grouse and venison.

In the report of a recent meeting of the Association, given elsewhere, it will be seen that the society is persisting in its efforts to secure better laws. The plea that the extraordinary privileges now granted are in direct violations of inter-state comity is worthy of consideration; it is not one that will appeal very strongly to the class of customers who now support the game dealers; but if properly presented to the people of the State at large it ought to have some weight, especially when it is demonstrated to the dwellers in the country that along with the game from the West, sold in the protracted open season, are scores and hundreds of ruffed grouse snared in Massachusetts, and quail from their own fields.

The principle of the Golden Rule is less powerful than that of self-interest. Let the voters of every county in Massachusetts understand that when they make Boston and tributary markets the dumping ground of western game, they put a premium on their own game birds. This is a rule which has been demonstrated over and over again.

FIRE BUGS.—We recently reported the conviction of a Maine incendiary, who had poisoned the cows and fired the barn and house of a game constable. This was his way of taking revenge for prosecution as a deer hounder. State Game Protector Armstrong reports a similar case of revengeful incendiarism by an Adirondack deer hounder. This is the class of North Woods residents who demand permission to hound.

SONGS OR FEATHERS?

IT was a very pretty lady who sat one June day on the porch of an old gray farmhouse. The hop vines were well on their way up the strings of pack-thread to the low eaves, the lilacs brushed the windows with cones of blossom, and the greensward sloping toward the road was dotted with the golden disks of dandelions in full bloom and the misty bubbles of those that bloomed a week before. She was a kindly-looking lady, too, as well as a pretty one, and one might well guess from the soft and tender expression of her eyes that she would not purposely harm one of the humblest of earth's creatures. A city-bred lady, one might be sure, by the unsunned white and damask of her fair cheek, and the fresh, half-surprised pleasure with which she listened to the merry jingle of the rout of bobolinks in the meadow and watched the orioles building their nests in the branches of a great elm, flashing up with long streamers of fibrous bark and shreds of ravelled yarn trailing behind them to weave the coming babies' cradles of. How much a part of the perfect summer day these joyous singers and happy workers seemed! She could no more imagine a June without them than a June without leaves and flowers.

A year from that day she was sitting there again. The same blue sky bent over her, with the fleecy flocks of clouds drifting across it. The hop vines were crawling toward the eaves again. The scent of the lilacs was in the air, the dandelions starring the sward with gold, and the silver balloons ready to sail away on the first breeze. But where were the birds? Only two or three bobolinks scattered their song over the wide acres of the meadow, and one oriole, atilt on the swinging limb where the weather-beaten, tattered nest of last year dangled, sang a heartbroken call over and over again for the mate who never came.

"What can have become of all the birds?" she asked her husband, who came strolling out with his book and cigar.

"The birds? Ah! Well, my dear, I think I saw one of them on your hat last winter, two or three score of them on the hats of your friends, and ten times as many in the milliners' shops. And you miss them? Well, 'you cannot have your cake and eat it.' If you must wear birds' skins in your hats, you will have to do without their singing and their pretty ways, for all that I can see."

And he fell to reading and smoking and she to thinking.

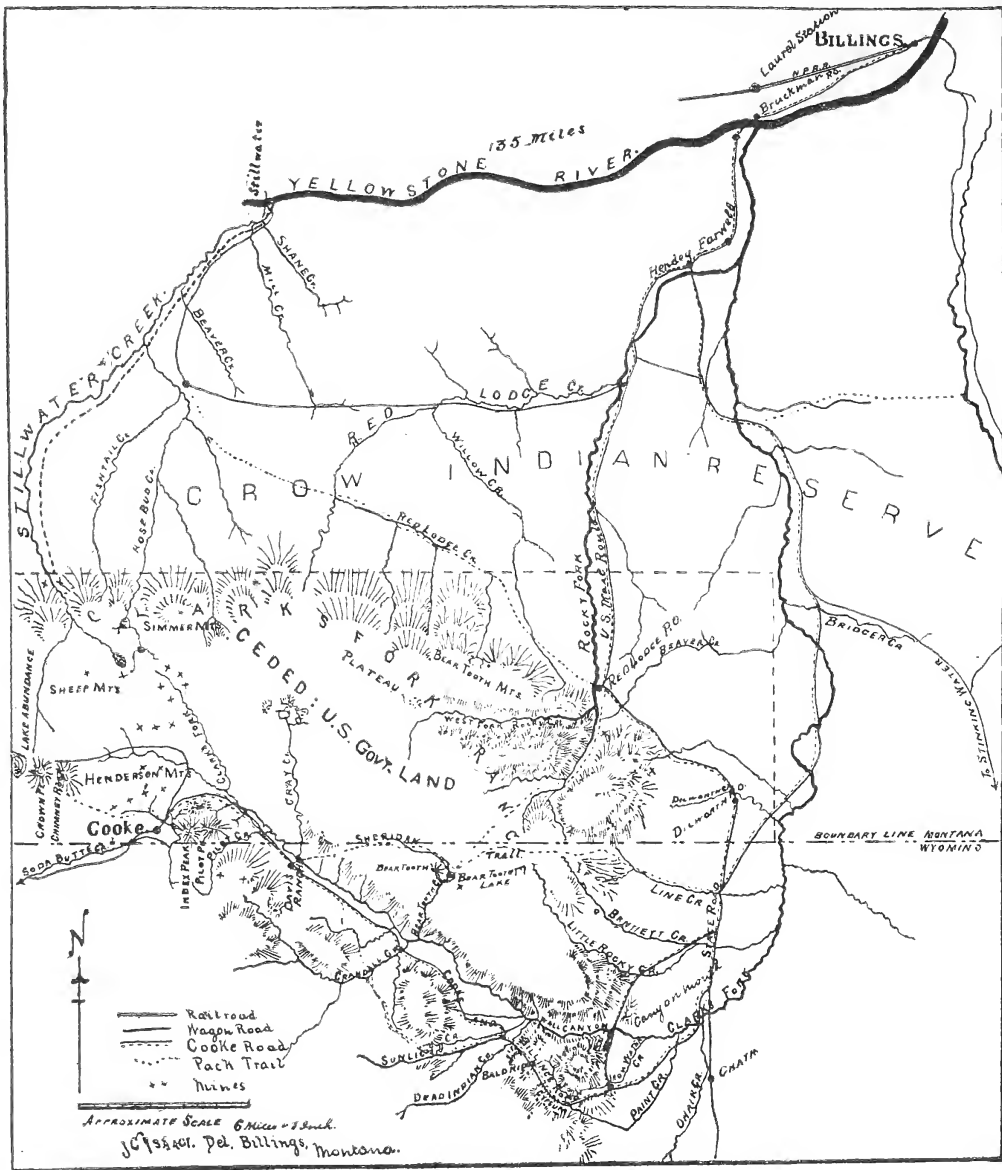

A RAILROAD TO COOKE CITY.

TO permit a railroad to enter the Yellowstone Park is to overthrow all the good work that has been done toward protecting that beautiful region. Its lands have been reserved from settlement by private individuals. Are they now to be thrown open to enrich a corporation? We have pointed out the evil results which are sure to follow the building of a railroad in the Park: Settlements within it, the game driven off, the forests burned, the brooks and springs dried up, and the volume of the rivers diminished.

These are serious, they will be deplorable, calamities. Are we prepared to face them? Certainly not, unless some great public benefit is to be gained in return. There is in the proposed Cinnabar and Clark's Fork Railroad no advantage to the public which is at all commensurate with the inevitable evils which will follow its construction. There are other routes, far easier and better, which will give the mine owners of Cooke City and Henderson Mountain a ready way to the Northern Pacific Railroad.

The route from Cinnabar up the Yellowstone, East Fork and Soda Butte Creek will be a difficult one to build. An enormous amount of rock work will have to be done, for the soft sliding tufa which constitutes a great deal of the cañon walls is treacherous material, and is likely at any time to slip down in vast masses and destroy a great deal of completed work. There are also heavy grades on this line, which can only be overcome at great cost. The road can be built, no doubt. In these days of engineering triumphs almost anything is possible, but it will be a vast undertaking, will be slow and enormously costly.

On the other side of the range there are three practicable routes from the mines to the Northern Pacific R. R. One of these is down Clark's Fork, another down Clark's Fork for part of the way, then crossing over to Rocky Fork, and down that, while the third is down Stillwater. The first two are long as compared with the third, and in one or two places present heavy grades. That down Stillwater, however, presents such striking advantages that there can be no doubt as to its desirability over all others. With the town of Stillwater as its initial point and Henderson Mountain as its terminus, the length of this railroad would be only fifty-six miles. There will be on it no very heavy rockwork, and the

RAILROAD ROUTES FROM BILLINGS TO COOKE CITY.

gradients and curvatures will be light. The average cost per mile should not be more than \$5,000. There is only one point at which there will be any heavy work. This is at the cañon, forty-one miles from the mouth of the river, where there will be a rock cutting of perhaps four thousand cubic yards. From the mouth of the river up to this point there will be only light work, and while, for the remaining fifteen miles, there will be some little rock work, there will be nothing which can fairly be called heavy work.

For the first forty-one miles, that is from Stillwater up to the mouth of the cañon, the grade will not exceed eighty feet to the mile. From the cañon to the Forks, it will not be over one hundred feet to the mile, while from the Forks to Henderson Mountain it will somewhat exceed this. This last grade may be in a measure avoided, however, by lengthening the road a little, and first running up the East Fork a short distance, and then doubling back and running up the West Fork.

An important point in favor of this route is that the topography of the valley is such that at all of the points along the route, where the snow drifts, the road can at very small cost be kept above ground, thus avoiding all danger of snow blockades. There being no divide to cross, the grade will all be one way, and therefore all the road's heavy freight—its carloads of ore—will be hauled down hill—a great saving.

The Clark's Fork route is, as we have remarked, longer, and there are one or two places where the grades are heavy. The route keeps well back from the cañon, however, and except at the point between Dead Indian and Iron Water Creek there appear to be no very serious obstacles to be overcome. We print a sketch map of the region under consideration, in which the three routes named are roughly delineated. The Clark's Fork route follows pretty closely the wagon road; the Rocky Fork route follows the U. S. Mail route to Red Lodge and then follows the dotted pack trail, while the Stillwater route follows up the valley of that river to Henderson Mountain. Some one of these three should be chosen, for no railroad should ever be allowed to penetrate the Yellowstone Park.

The projectors of railroads cannot plead any reasonable necessity of invading the Park, and endangering its forest preserves.

Dr. W. H. WINSLOW, of Pittsburgh, Pa., whose "Cruise of the Pilgrim" has furnished such acceptable reading in our Yachting columns for several weeks past, is the author of a book which is a story of the late war, entitled "Cruising and Blockading." It is a book for "boys both young and old."

TO THE WALLED-IN LAKES.

XIV.—A BEAR PIPE DANCE.

I HAD not forgotten that I had a vow to pay. Once the Sun had been kind to me, and though I bore him but slight good will, I felt that I must give the Bear Pipe a dance, as I had promised.

The morning after our arrival at the Agency, therefore, we sent over to old Red Eagle, the most potent of the medicine men of the Pegunny, to ask him if he would unwrap the Bear Pipe for us. Red Eagle is a relative of Appekunny, and for this reason it was hoped that his reply would be favorable. We were not disappointed. Word came back from the old man that three hours before sunset he would be ready for us. We therefore sent to his lodge some tea, bread and tobacco, together with a large bag of dried service berries, these last being in some way "medicine" and an indispensable accompaniment of this ceremony. Then toward 3 o'clock Mr. Kipp, Appekunny and I drove over to Two Medicine, where Red Eagle's camp was. As we passed down into the bottom and pulled up near the lodges, a pack of about forty dogs of all sizes, colors and ages, dashed out from the brush and the lodges, and with furious barking, snappings and snarlings, rushed upon us like a whirlwind; but their bark was far worse than their bite, if, indeed, they had this last at all, and when they got within a few feet of us, all their clamor changed to welcoming tail wags, and they seemed very glad to see us.

We found that Red Eagle's preparations were not completed, and while waiting we strolled over to the spot near the camp, where in ancient days the Pegunny used to jump the buffalo off the cliff. This is a high sandstone bluff, which was once a vertical cliff rising fifty feet above the valley, but it has now weathered down so that there are two benches, each one about twenty-five feet high with a very steep slope beneath each. The ground at the base of the bluff is liberally sprinkled with minute fragments of the bones and teeth of buffalo, but parts which are still recognizable are rare. Occasionally a badly-decayed vertebra may be seen, or rib, or fragment of a leg bone which had been covered up by the soil and so preserved from the general decay. To the Indians the place is still sacred, and to mark it they have built up and keep in repair a pyramid of buffalo horns. This memorial is about three feet in diameter and a foot or two high. It was once much larger, for the soil about its base seems entirely composed of fragments of decayed horns. All those which now compose the pile are very old and rotten, but the Indians still give the heap attention,

piling it up whenever it is blown down or knocked over by the horses, which like to feed at the base of this cliff, where the grass, nourished by the decay of thousands of buffalo carcasses, is luxuriantly thick and green.

We looked in vain for arrow points or stone implements of any kind. For many years, sand and stones have been washing down from the bluff in the rain and the wind, and any articles that were once lost here have long since been covered up.

Returning to Red Eagle's lodge, we found that the preparations for the ceremony were not yet completed. I sat down on a log near the lodge and began to make friends with the small children, who were nearly as numerous as the dogs. There was one little fellow about two years old who quite won my heart by his genial smile and general air of cordiality. His clothing consisted of several strings of beads, a buckskin thong about the neck to which was attached a medicine stone, and an extremely abbreviated shirt, which came down just to his lower ribs. The rest of his person was covered only by a thick coating of mud. He had evidently been playing in some half dried up puddle. This young savage marched up to me in the most confiding way, and after shaking hands in a matter-of-course fashion, quite as if we had been equals, he clambered up on my knee, and, having inspected my watch and chain and notebook until satisfied, sat there blandly watching the antics of his seniors. It appeared to be a favorite amusement of these children, from five to ten years of age, to surprise the unhappy dogs when asleep by the lodges or playing near them, and beat them with long twigs and pieces of brushwood until the wretched curs took refuge in the brush with most melancholy howlings, while the young Indians screamed with delight. I found that my tiny friend was very much such a child as a white infant of the same age would have been, and was amused at the same things; but he was far better able to take care of himself than a white child of three times his years.

At length Appekunny called me, and with him I entered the lodge, in which were already seated a number of Indians. Red Eagle sat at the back, with the fire between himself and the door, and at his left was a space, where—in the place of honor—we seated ourselves. The lodge was quite full. Several of the women had their babies, either on their backs or between their knees. On the right of the Bear Man was his wife, the Bear Woman.

Red Eagle was a large, fine looking man of majestic presence. His massive face, which had a kindly benignant expression, was framed in his long gray hair which hung down over his broad shoulders. He is one of the oldest men in the tribe, and is now quite blind.

When all were seated there was a little pause, and then the Bear Woman took up a dried willow branch, which had two parallel twigs close together, to answer for a pair of tongs, and lifted from the fire a live coal, which she placed on the ground before the Bear Man. The latter then began to sing a low monotonous chant in a minor key, in which, after a few moments, all the other Indians joined. The song was very plaintive and melancholy. While singing Red Eagle interrupted himself every now and then to exclaim, *Ni-ah*, my shelter or robe, the other Indians continuing to sing. After a few moments he reached his hand under the blanket on which he was sitting, and drew forth a small pouch, which he passed to the Bear Woman. She slowly untied it and took from it a pinch of the dried needles of the sweet pine, which she held over the coal. Then the Bear Man sang four times, and as the music would rise and fall the Bear Woman's hand would rise and fall over the coal. At the end of the fourth song the Man stretched out his hand and made a downward gesture, as if placing on, and the Bear Woman let fall the incense on the coal. Immediately the fragrant perfume of the burning leaves filled the lodge. The singing continued a little longer, but at length there was a pause. Then, both Bear Man and Woman stretched out their hands over the smoke of the burning sweet pine, and rubbed them together. Then they took smoke in their hands and rubbed it over their wrists and forearms, and afterward, taking more, passed it over their heads, shoulders and upper arms. They also took handfuls of the smoke and seemed to eat it, so that they might purify themselves without and within.

Then raising his face toward the Sun, the Bear Man prayed, saying:

"Hear, Above People, hear, Thunder, those animals [*i. e.*, his secret helpers or medicine animals] hear too. *Kim-o-tit, Kim-o-tit, Kim-o-tit*. Pity us, pity us, pity us. Let us live, let us live. Give us full life. Let us [become] old. Listen. Appekunny, let him survive. In his wandering about, let no danger befall him from bad beasts, or dangers that are on the trail. Let his wife and boy that child with hair like the sun, live to be very old, and have plenty of everything. Joe, let him live. Keep him when he is traveling. Protect him from all dangers, from perils from animals, and from all dangers on the trail. Let his wife and child live and have abundance. And their young brother, let him survive. Care for him and keep him safe from danger, everywhere he may be.

"All people let live. Oh, Creator, have pity on the people, so that they may live well, free from danger. Oh [pipe] tell them [*i. e.* all Above People] have pity on us. May all people have full life. Give everybody heavy bodies. Let the young people grow; increase their flesh. Let all men,

women and children have full life. Harden the bodies of the old people so that they may reach great age."

When he ceased all the people uttered a long-drawn *Ah-h-h-h* [Yes].

The earnestness of the petitioner was indescribably touching. This was not a droning, perfunctory prayer, whose object seems to be to convey as much information as possible to the deity. Here was a priest who really desired what he asked for. He threw himself on the mercy of this god and would not let him go. He implored, he urged, he insisted, he would not be denied; and as I saw the great beads of sweat stand out upon the old man's brow, I thought of another struggle of long ago, when, at the ford Jabbok, another patriarch wrestled through the long night with his God and prevailed.

The prayer ended the singing was resumed, Red Eagle starting it, and the others, after a little, joining in a plaintive refrain. Presently the Bear Woman again took from the sack some of the sweet pine needles and sprinkled them on the coal, and as the white smoke curled upward both Man and Woman again took it in their hands and as before, purified themselves by passing it over their arms, heads, shoulders and breasts. After they had done this, they took handfuls of it and held this up under a large package, attached to a beautifully ornamented pack saddle, which was tied to the lodge poles above their heads. This package contained the Bear Pipe. The singing continued, and now the Bear Woman chewed some of the sweet pine, and then spitting it into her hands, spread it over herself as she had done the smoke, and rising to her knees very slowly and reverently untied the package from the saddle and placed it on the blanket between the Bear Man and herself.

The Bear Man now began a new song—one which was more lively—and he and the Woman moved their hands through the smoke, and then holding their hands over the package moved them alternately up and down in time to the music. At first the hands were closed except as to the forefinger, which pointed straight out, and the up and down motions were quick and dainty, to represent the sharp rise and fall of the feet of the antelope when walking. Then at a little change in the air, the fingers were all bent, but the hand not closed, and the up and down motions became deliberate and heavy, to symbolize the slow tread of the walking bear. At another slight change in the air the old man raised his hands partly closed, the forefinger extended, pointing upward and slightly bent inward, to the sides of his head, and moving his face this way and that as if looking about him, called out in a shrill voice, "*Uoo*." The hand sign meant "buffalo" and the head motion "look out." This sign is related to the word *Ni ai*, often used in the song, meaning my shelter=covering=robe=buffalo. Then followed up and down (walking) motions in time to the air, all the fingers being extended forward, symbolizing going to war, and the danger, or lookout, signal, forefingers pointing straight up to and raised to the sides of the head like a pricked ear, with startled expression of countenance and the watchful look.

This song ended, Red Eagle slowly and carefully removed the wrappings from the package at his side, the singing not being interrupted at all, though the air was changed again to the slower, more monotonous chant. The braid string being untied from the double-mouthed red cloth sack, which formed the outer covering of the pipe, he drew forth a long bundle, wrapped in silk handkerchiefs of various colors. One by one he took these off until ten or twelve had been removed, and the Bear Pipe was revealed.

It was a handsome stem, about four feet long, wrapped for a part of its length with large, handsome beads, and profusely ornamented with white weasel tails and feathers, which depended from it in thick bunches. Near the lower or pipe extremity was a spread plume of twelve tail feathers of the war eagle, each one having its extremity wrapped with red or yellow horse hair, which hung down in a long tuft. Below this plume the stem was tied with red, green and yellow ribbons, and again below this was a cluster of brightly burnished hawk's bells. The whole stem was very handsome and heavy.

When the coverings were removed, the old man for a moment bent in silence over the pipe, and then raised it slowly and tenderly to his face, making a cooing, caressing sound, such as a mother might make to her infant. He pressed it to his lips and whispered to it ecstatically, while his sightless eyes looked toward the Sun, as if they could pierce the covering of the lodge and behold some Presence invisible to our grosser vision. After a wrapt silence of a few moments, he again spoke in a low voice to the pipe, and passed it over his arms, shoulders and both sides of the head. Then he sang again, shaking the pipe in time to the music. Then again he prayed loudly and impressively, and said: "Oh, Sun, Old Man and Stars, pity us, pity us. Look down. My dream told me that those Crows [who stole our horses] will not survive if they [the Piegan pursuers] overtake them." Then followed again the substance of the first prayer, and he ended with this petition, "Little Plume, let him survive; Tearing Lodge and Double Rider, let them survive, and bring the heads [i. e., scalps]."

Then turning to the left, he passed the pipe to Appekunny, who spoke a few words to it and handed it to me. I held it to my face and made a short prayer to it, and then passed it to an old blind warrior who sat next to me, and who prayed to it fervently and long, and then handed it to his neighbor.

And so it went round the circle, each one who received it prayed to it most earnestly. I was anxious to hear what the people said in their prayers, but they spoke in low tones, and the only words I could catch were now and then *Kim-o-tit* and *Napi*. It was touching to see the young women who had babies with them, after praying to the pipe, pass it up and down over the bodies and heads of their little ones, and to see upon their faces the expression of love and faith that one sees nowhere save on a woman's countenance.

Meanwhile Red Eagle had taken a medicine rattle made from the dried scrotum of a buffalo bull, in which were a lot of small round stone, and again began to sing, shaking the rattle in time to the music.

At length the pipe had passed round the circle and was handed by the Bear Woman to Red Eagle. He took it and said rapidly twenty or thirty times, "Pity, pity." Then rising to his feet he began a new song, and danced, first toward the east, and then, turning about, toward the west. The people accompanied him with their voices in a new but equally plaintive and musical minor chant. After he had danced he faced about, and sitting down prayed again, repeating what he had said in his first and second prayer, and concluding with these words: "Let the Sun shine upon us and our lives be without shadows." At the end of the prayer all the people said, "Yes, have pity, have pity."

Then he made a sign that the ceremony was over, and we filed out of the lodge. Yo.

A DRY HUNT.

I WAS much interested in the article of "Wells" in the FOREST AND STREAM of Jan. 14, entitled "A Wild Goose Chase," from having had many such experiences myself which I style dry hunts, but I always managed to keep up some cheerfulness, really getting much dry fun out of a dry hunt, and never allowing the failure to get a good bag of game to deprive me of the other enjoyments rightfully belonging to such a trip, and which, indeed, constitute a very important part of it. And this is a point it will be well for all sportsmen to consider. It is not the great quantity of game, nor the mere killing it, from which is derived all the enjoyable sport of an extended hunting trip; and, as they are the best generals who turn apparent defeat into victory, and the best cooks are they who can produce the most palatable and delicious meal from the least material; so, may we not add, that they are the best sportsmen who can get the most enjoyment from barging the least game.

In view of the rapid decrease in all kinds of game in all sections of our broad country, it would seem advisable to cultivate this faculty of getting all the sport we can when out on a trip, whether we get much or little game; in fact the habit, disposition, faculty or education required to make an outing pass pleasantly, is just as requisite as the ability to handle well the gun and dog. He who starts out on a shooting scout with the solemn visage he would wear to a funeral will be quite likely to reap about the same enlivening reward from the one he gets from the other, and no more. If after getting his traps together for a start and taking his dog from the kennel he does not feel the blood move a little quicker in his veins, and does not experience a premonition that he is about to enter a higher plane of life, a sort of elysium of which the great throng of humanity know not, then he had better put away his tools, chain up his dog, or give them all to some one who can enjoy them, and go back to the hum-drum drudgery of every day life, for he has mistaken his calling. The very preparations for a hunting trip will afford delight to a genuine sportsman, and he will keep that up and add to it till the campaign is ended, game or no game. I once had a friend (and many of your readers would recall him should I give his name) who, with all the patience and perseverance he could muster, could not bag more than one bird in ten shots; still he took as much delight as a veteran in keeping in perfect order and condition a fine gun and outfit and a good dog, and never let a season pass without taking many trips which he would enjoy from the crown of his hat to the sole of his shoe; and it was a very dull party that his genial whole-souled good nature would not enliven. He was brim full of all the qualities of a good sportsman, except he could not kill his birds, but even this did not deprive him of the enjoyment of a pleasure he could find nowhere else. I name this to impress again the fact that real enjoyable pleasure can be obtained in hunting, even though the quantity of game procured is quite limited. I never killed or shot a deer in my life; yet I have spent weeks at a time with parties in pursuit of them, the remembrance of which is still very pleasant to me. I give a few incidents of one of those trips in the mountains of California and this one, as far as deer were concerned, was a dry hunt.

Early one morning we started, five of us, with Old Bob (a little square-built mustang, whose caudal appendage had been very much abbreviated, hence his name) to pack our blankets, camp tools and what few articles of food we took along, mostly condiments and delicacies, with flour, a few potatoes and onions and a side of bacon, intending of course to revel mostly in venison steaks and roasts during our stay. At the close of the first day's tramp (and it was a good one, following the tops of the ridges, when once gained, as long as they led in the direction we wished to go, then striking down the side to the deep cañon below and up the steep sides of the ridge opposite to its top) we found ourselves about twenty miles from our starting point, having increased our altitude about 3,000 feet in that distance. Here we made our camp in a level spot near the head of a cañon, shut in by heavy timber, using spruce boughs for a roof, plentifully covering the ground beneath with the small fine twigs of the same, on which we spread our blankets. These spruce boughs make a nice shelter from everything except rain—for protection from rain they are a decided failure; for, as old Birney said: "It only has to rain for half an hour outside to make it rain all night under your 'bresh' tent." We tried it one evening and know the old man was pretty near right. But what cared we? There was fuel enough all about us from which to make a fire that would soon dry a saturated sponge. Only those who have built a temporary

camp in the woods know the delight in its preparation. The fire is the central sun around which, at a respectful distance, the primitive couches hover. While some are putting the finishing touches on the camp, others are preparing the delicious meal. Delicious? Yes. Delmonico never prepared so inviting a repast, and a tramp on Broadway or Fifth avenue never produced such an enchanting appetite. There was delight in being tired and hungry—delight in the immediate prospect of both being relieved and appeased, which was borne to us by the fragrance of steaming tea and coffee, and the sputtering of bacon and potatoes in the frying pan, and the sight of the round biseuit growing more plump and brown before the fire. Is there not pleasure in such a meal, in such a place? After supper the pipes and the chat and the laying out the morrow's hunt—deciding who shall look after camp and prepare the evening meal—then seeking our fragrant beds, such sleep would come to us as is never found on "flowery beds of ease."

Up the next morning bright and early, and breakfast over, the camp keeper for the day is left to "do up the dishes," while the rest of us take our respective courses and strike out for the day's still-hunting. And when one after another we had all gathered into camp at night to find our host and supper awaiting us, with what zest was that meal enjoyed, and what interest was excited in the recital of each one's experience! One may have seen a deer, but the breaking of a dry stick or some misstep on his part had telegraphed to the sensitive ear of the timid game the danger it was in, when it would quickly place the summit of a ridge between them. He would follow cautiously to the top, expecting to find the deer quietly feeding on the other side, but on peering over would quite likely see it high up on the opposite ridge, a mile away, with a deep cañon between them; then would commence the tramp of two or three miles up around the head of the cañon and down on the opposite side of the ridge on which the deer was feeding, in hopes to head it off and surprise it with a shot; but the chances were his long tramp had taken too much time, and the deer had passed on over the ridge before he arrived at the proper point. I did not even see a deer. But what of that? I did my share of camp duty and tramping; and when noiselessly wandering beneath the green arches of that magnificent forest, saw and felt a thousand delights of which the dwellers amid brick walls and paved streets know not. Added to this was the constant expectancy of seeing one of the mild-eyed and gracefully-formed denizens of the forest—in fact I killed several of them—while lying in the bushes, or feeding on some warm grassy spot, or dashing past them at full speed—yes, killed them in my vivid imagination. Had I in reality seen one, I doubt very much if I had remembered that I had a gun with me; and still I enjoyed it all as though I had been a veritable "Deer Slayer."

We were startled from our slumbers one morning just before dawn by old Bob dashing unceremoniously into camp. We were all up in an instant, just in time to hear an old grizzly crashing through the brush up the opposite side of the mountain. He had called to make a meal of old Bob, who, declining to entertain so early and uncouth a visitor, had broken his fastening where he was picketed a few rods from camp, and called on us for protection. Although it was a little early, our breakfast was soon prepared and over, when I called for volunteers to pursue the ruthless invader of our peace and quiet, or in other words, for a bear hunt. Strange as it may seem, not one of the party had lost any bears, and consequently they respectfully declined to spend any time in looking up other people's property. True, one of our party had made the intimate acquaintance of a grizzly some two years before, the mementoes of which were a broken jaw and cheek bone, but as his old acquaintance had been killed a few days after his interview with him, he seemed decidedly averse to making any new friends in that line. Finally Jerry, an old mountaineer and a good hunter, agreed to go with me if I would promise him one thing, and that was not to shoot at the bear if we came in sight of it; "for," said Jerry, "if we let the bear alone he will let us alone, unless we come on to him of a sudden." I promised faithfully, and we started on the trail of Mr. Bruin, which was quite easy to follow, for his tracks in the soft ground and patches of snow were nearly as large as the top of a coal scuttle. As we came to spots where the soft dirt or snow seemed still almost quivering on the edges of the deep tracks, so recently had it been disturbed, Jerry would remind me of my promise not to shoot, and I would assure him my sole desire was to see the bear—"only this and nothing more." While on our tramp, Jerry told me of the only personal interview he had ever enjoyed with this monarch of the mountains, and pulled his hunting shirt from his shoulders and showed me the affectionate marks of the bear's teeth while in his loving embrace. Jerry said: "It happened this way. I was hunting deer on the side of a mountain, and had come to a place where the branches of the chaparral were so thick and intertwined that I had to get down almost on my knees and creep along. Presently I came to a little open space and rose to my feet, and at the same instant a bear rose up in front of me, and before I had time to bring my rifle to a position to shoot, he hit me with one of his paws and I found myself lying on my back with the bear on top; fortunately my head lay up the hill, and as the bear made for my face, which they always do in attacking a man, I caught him by the fur on each side of his head, and by pressing his head one way and mine the other I could just save my face from being crunched, but he would occasionally give me a nip on the shoulders as you see. Of course I could endure this but a few minutes as my strength would soon give out, and I dared not let go with one hand to get my knife, for an instant's release of his jaws would have enabled him to crush my head like an egg shell. In my desperation I gathered my knees and feet in under him, and with all the power I could command I raised myself up and threw him over flat on his back with head down the hill. When he got on his feet he turned his head and looked at me as though he was astonished at such usage, and giving a grunt started off down the hill." "Did you hit him?" I asked. "No," says Jerry, "I didn't shoot, but grabbed my rifle and run the other way, glad to get out of it so; and should not have got off so easily but this happened to be a young one not weighing more than 400 pounds, but the fellow that is making these tracks would more than double that. So you will not shoot if you see him?" Again I said no, and we tramped on. Occasionally we would come to a thicket into which he had entered, and for fear we might meet him sooner than we desired, we would scout round the outer edge to the opposite side, where we would again find his tracks as he had emerged from the cover. Thus we followed him till past noon, when his foot-prints led down the side of a mountain into a deep rocky cañon thick with bushes, and Jerry would not risk the

Natural History.

THE AUDUBON SOCIETY.

THE strength which the movement in favor of protection for our birds is developing is really surprising. We had supposed that many people were interested in this subject, but until the establishment of the AUDUBON SOCIETY we had no idea how many such there were, nor how deep was their concern.

Editor Forest and Stream:

By a resolution of the A. O. U. Committee for the Protection of Birds, I am authorized to communicate to the AUDUBON SOCIETY our approval of its plan and the sanction of our authority in the work it undertakes. As you are so generously bearing the expenses of organizing the AUDUBON SOCIETY, and are giving so much time and space in your columns to the society's interests, I venture to take the liberty of expressing the wishes of the committee through your paper.

The object of our committee is to present the birds' side of the question. As experts, we feel warranted in giving our time and knowledge freely, and in suggesting means for the protection and preservation of our beautiful and useful birds; but must depend largely upon philanthropists, societies and individuals to circulate all good suggestions and to distribute the facts pertaining to the heedless destruction now taking place.

AN AUDUBON SOCIETY in every township of our land would bring about the three results aimed at, viz.: First—No bird would be used as food that was not strictly a game bird. Second—Nests and eggs would be kept inviolate, and children would no more think of stoning birds and nests than they do now of horses in the streets. Third—Birds would be preferred by all women as live pets rather than as dead ornaments. Such a change in public sentiment would soon be followed by a correspondingly delightful and gratifying change in our parks and gardens.

Our committee will be glad to render the AUDUBON SOCIETY all assistance in our power.

GEORGE B. SENNETT,
Chairman of Com. for the Protection of Birds, Am. Mus. Nat. Hist., City of New York.

Editor Forest and Stream:

The suggestion of "X. Y. Z." in your last issue, to "enlist our sisters, aunts and cousins in the good work of refusing to wear birds as ornaments" is an excellent one, and truly germane to the subject. Let us try it and even extend the courtesy to the nearest acquaintances whom we choose to see in the "borrowed feathers," which are so suggestive of cruelty and barbaric taste.

The wearers of feathers cannot be reached or enjoined directly by any legal enactment, but many will give heed to kindly speech, and an earnest showing that they are to blame in the matter, and be led to renounce the evil and so stay the red-handed slaughter of the innocents.

Next, or rather at the same time, we have to do with the bonnet shooters and the taxidermists. Moral suasion, I am aware, will be of little use with many of this class, and to aid the cause we must see that just and stringent laws are made to save the birds, and not only insist they be made, but strictly and impartially enforced.

The "Bill for Bird Protection," printed in FOREST AND STREAM, Feb. 24, is a good one, and should be made a law in every State. I would suggest that the AUDUBON SOCIETY prepare a circular to be read and permanently posted in every school house in the land, to instruct and warn every boy and girl, every youth and maid, in the interests of bird preservation, and the tipping in the bud of cruelty of every kind. It is while at school that the young idea is taught to shoot very differently than the poet intended, and it is a sad sight to see the boy trying to kill or frighten every living, wild or domestic, thing he dares level gun or missile at.

Whittier truly says, "We are in a way to destroy both our forests and our birds," and to save the remnant and as far as may be to restore both forests and birds is the bounden duty of every lover of nature. Let us be determined and persistent in the work we have chosen. It is high time and the need is a crying one for all to enlist, and every age, sex and class can be efficient allies to "rescue from the bird butcher's dooms" the pretty victims of a cruel, foolish and (for this reason) unfeminine fashion.

O. W. R.

BOSTON, March 3, 1886.

Editor Forest and Stream:

I assure you of my hearty sympathy with the members of the AUDUBON SOCIETY in their efforts to prevent the waste of these beautiful, happy, innocent and useful lives, on which we depend for a large share of our natural enjoyment. I am myself more than tolerant of the somewhat intrusive intimaey of the English sparrow. No other birds outside of the barnyard let me come so near them—not even the pigeons. If I may change the lines of Cowper a little:

They are so well acquainted with man,
Their tameness is charming to me.

But still more am I indebted to the gulls and ducks, who during a large part of the year are daily visitors to the estuary of the Charles, on which I look from my library windows. I wish they could be protected by law, and if law cannot, or will not do it, that public opinion, under the lead of your society, would come between them and their murderers. Not less, certainly, do I feel the shame of the wanton destruction of our singing birds to feed the demands of a barbaric vanity. If it would save them from destruction I would say good-by to the woodcock and sigh a long farewell to the canvasback. Yours truly,

O. W. HOLMES.

KEY WEST, Fla., March 3, 1886.

Editor Forest and Stream:

I am interested in the matter of the AUDUBON SOCIETY, for I have long watched with deep grief and intense indignation the wanton and thoughtless destruction of birds now going on in all parts of our country. My personal knowledge of the matter is limited to what is taking place in Florida; but, through the columns of your most admirable paper, I learn that the same deplorable state of affairs exists everywhere. Although I am cognizant of many scenes of bird slaughter in Florida, and know of the shipment of many thousands of bird skins and plumes from the State, I have not any reliable statistics of the trade for present reference.

I will, however, make it my business to obtain such, and will forward them to you as speedily as possible.

One instance that came under my observation last winter made my blood fairly boil. It seems that the slaughter of birds for millinery purposes has stimulated those brutes, whose debased passions are fed by the sight of blood and suffering, to renewed efforts in the line of butchery to such an extent that nothing living is safe from them. For many years there had been a flourishing pelican rookery on a small island at the lower end of the Indian River. About a year ago two disgraces to humanity, who called themselves "sportsmen from the North," visited this peaceful island one night, and with clubs and knives killed or sorely wounded and mutilated every bird on it; broke all the eggs they could find and destroyed the nests. They afterward boasted of this exploit, and remarked that that den of fish thieves was broken up at any rate, and they proposed to treat every other rookery they could find in the same way. They must have killed over a thousand birds in that one night.

I know of one skin hunter now at work, who, under the name of "naturalist," has destroyed between four and five thousand birds this winter. He is operating on Biscayne Bay, and I will try to ascertain more about him.

Advertisements offering to purchase bird skins appear in many of the Florida papers. Please enroll me as a member of the AUDUBON SOCIETY, and count on my hearty co-operation with you in the noble work of protection to bird life that you have undertaken. I never in my life killed a bird, except when forced by hunger to do so, and I hope I never shall.

KIRK MUNROE.

NEW YORK, March 1, 1886.

Editor Forest and Stream:

Your earnest and intelligent efforts for the protection of birds is awakening a widespread interest in the cause, and is leading to a serious study of the best means to prevent the barbarous practice of destroying birds for gain.

You have my warmest sympathy in your work, and I am confident that you will have the co-operation of the thinking part of our people.

W. A. CONKLIN.

Chapter D, No. 818, Agassiz Association, of Newark, N. J., will hold its first annual celebration at Library Hall, on March 13, at 3 P. M. At a recent meeting of the Chapter it was decided to join the AUDUBON SOCIETY and try and advance its commendable purpose.

TALLAHASSEE, Fla., March 2.—The first purple martins arrived from further south to-day. There were nine in the flock, and one killed proved to be in excellent condition. Several thousand breed in this city every summer in the nooks and corners of the old buildings.—H. A. KLINE.

ALBINO.—In Germany an unusual number of white varieties of animals have been noticed this winter. A white chamois was shot in the Totegebirge, a white fish otter was caught near Luxemburg, white partridges were shot near Brunswick, and a white fox was killed in Hessen.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS.—Three pinquins (*Felis concolor*), one great horned owl (*Bubo virginianus*), two European waxwings (*Angelia garrulus*), one larger bill nuthatch (*Gracula intermedius*), one raccoon (*Procyon lotor*), one opossum (*Didelphys virginiana*), two Virginia quail (*Ortyx virginianus*), one turkey vulture (*Cathartes aura*), one red-tailed hawk (*Buteo borealis*), two Carolina doves (*Zenaidura macroura*), one barn owl (*Screech owl*), one screech owl (*Scops asio*), two red-winged blackbirds (*Agelaius phoeniceus*), one alligator (*Alligator mississippiensis*), born in the garden, two Carolina doves (*Zenaidura macroura*).

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

ANTELOPE HUNTING IN DAKOTA.

THE falling snow is being rapidly driven before the fury of the lately arrived blizzard; the mercury is dropping toward the bottom of the thermometer tube, and as I sit before the blazing fire in my library calling to memory incidents and scenes of many a hunting expedition, my eyes fall upon the head of a noble buck antelope which looks down from the opposite wall recalling the day when in far off Dakota he fell before my rifle, and I thought perhaps an account of that hunt might be acceptable to your readers.

It was toward the close of a warm day in the middle of last September, that four men were busily engaged pitching a tent in the Bad Lands of Dakota, but a short distance from the open prairie, about thirty miles north of the line of the Northern Pacific Railroad. Four horses were picketed a short distance away, and three dogs, a setter and two collies of fine breeding, were lying near by, intently watching the proceedings. The party consisted of two sportsmen not unknown on the Atlantic seaboard, and their guides Jack and Tom McGregor, the first an old buffalo hunter who had done his share in the extermination of the noble bison, and the latter his brother, much younger in years, but a skillful and experienced hunter. It was a weird yet beautiful spot they had chosen to camp, a broad level covered with the short buffalo grass, bounded on one side by a ravine or coulee, through which a clear, cold stream flowed, while the trees which shadowed the water rose high above the walls of the ravine and gave a leafy background to the bright flame and sparks that leaped upward into the air before the door of the tent. The other side of the plateau rose rapidly toward the ghostly buttes that buttressed the outlying prairie beyond them. The party had driven about twenty miles that day through the Bad Lands, and it was plain to see the guns had not been idle on the way by the pile of sharp-tail grouse placed on the ground not far from the tent and which the dogs seemed to consider as under their especial charge. The air was growing chilly, and as the sun sank behind the buttes that stood in myriads of fantastic shapes around, the moon rose and flooded their many colored sides with its silver light, making the rough places smooth. As darkness gathered, and the stillness born of the wilderness seemed to settle upon the landscape, from out the ground about fifty yards away a form seemed to rise, indistinct of shape, but slender with a round head capped by two tapering upright horns as they seemed to be. The

descent; so we took a bee line for camp without getting a glimpse of his bearship. Perhaps it was just as well for the bear, and better for us. After supper we were informed by the camp keeper for the day that our stock of bacon was nearly exhausted, and as no deer had been bagged it looked as though we should soon have to be put on short allowance.

I was up early the next morning and while taking a wash I heard the grunt of a mountain grouse, and, being the only one of the party who used a shotgun, I started immediately to follow up the grouse by the sound. This requires much care and patience. These birds spend very little time on the ground, but will perch high up amid the thick foliage of the pine, hemlock or spruce, call at intervals of four or five minutes with a deep, guttural grunt that can be heard from a long distance. They are very shy and will stop calling at the slightest strange sight or sound, and when quiet it is impossible to locate the tree on which they rest, and even when located, it requires the keenest eye to detect them. I followed up the sound as carefully and rapidly as possible, stopping occasionally and waiting for a repeat to be sure of my course, until I had gone more than half a mile. At last I had him located in a tall pine tree; he had heard or seen me and ceased calling. Now came the difficult task of getting a sight of my game. Creeping slowly around the tree and looking it over from every point, gradually narrowing the circle till I found myself directly under its branches, when looking up almost vertically I saw his head and neck stretched out over a limb, evidently watching me with as much interest as I evinced in looking for him. Knowing that this was my golden opportunity, and that I could get but the one shot, as, should he dart from the tree amid the forest evergreens that surrounded us, I should see him no more, I raised my gun and gave him a broadside of both barrels and he came crashing down through the branches from his 200-foot perch, and fairly bounced when he struck the ground. Gathering my bird I hastened to camp, receiving a vote of thanks from the party for the royal breakfast the grouse made us.

We had decided to move our camp some six miles up the mountain to an old deserted hunter's or miner's cabin which one of the party had discovered in his tramp; but when we began preparing for the move, two of the party having become discouraged from our ill success and the prospect of short rations, decided to desert us and take the back track for home; so the three of us having "enlisted for the war," or rather the week, turned backs on them and started up the mountain for the deserted cabin which we reached before noon, and leaving G. to fit up camp, I and Jerry started out in different directions with an understanding that we should return at 3 o'clock. When we returned Jerry said he had seen deer sign over on the south side of a mountain where they had browsed, and he thought if I went there toward sunset I would at least see a deer. As it was about three miles to the ground I mounted old Bob and started. Reaching the summit of the ridge, which was pretty well covered with snow, I hitched the pony in the best sheltered spot I could find and moved down the side of the mountain, out of the snow and selecting my cover in a clump of chaparral prepared myself for watching and waiting. I watched and waited till the shadows had grown very long and dense, but no deer had presented itself for my observation; so breaking cover I started for old Bob and found him turning and twisting around, shivering with cold and impatience. Leading him to a fallen tree I made a spring for his back, and as he started at the same time I struck just back of the pack saddle, and not having gathered the reins properly, nor could I with my gun in one hand, away went Bob through the brush and under the trees and the tighter I clung my heels to his flanks, the harder he kicked and ran. I could not get into the saddle nor gather the lines so as to guide or stop his wild flight; and several times I came very near being brushed off his back by the low branches of trees. Something had to be done with the utmost dispatch, or old Bob would go into camp riderless, and I knew when I got there the joke would be altogether too one-sided for me to enjoy, so watching for a good snow bank I dashed my gun into it, and having two hands to devote to the old rascal I soon got him under subjection, got into the saddle, rode back and picked my gun from the snow, and when I next attempted to mount I made better calculations with better success. If any one could have seen my first exploit I think he would have agreed with me that it beat a circus clown and trick mule in realistic interest, and have laughed heartily at the ludicrous figure I cut, as I have scores of times since in thinking it over. Arriving at camp I found that one of the party had killed a big jack rabbit or hare, and supper being ready, they were impatiently awaiting my return. Oh, what a supper that was, with appetites to fit it. Search your big towns and cities all over, and you can find nothing to approach either. I reserved the recital of my adventure with old Bob till the supper was away and a rousing fire blazed in the broad fire place, when behind the curling smoke of our pipes we made the old cabin ring with our laughter till the echoes came back from the surrounding forest.

The next day being Saturday, and the limit of our time, we made an ample breakfast from the hare, and packing our blankets and campstools on old Bob, reluctantly turned our backs on the camp and magnificent forests in which we had spent a charming week, although a dry hunt.

A.

THE SPRING FLOWER SHOW.

A FLOWER show will be held at the Metropolitan Opera House, in this city, March 24, 25, 26 and 27, to be open from 11 to 11 o'clock each day.

The show will be managed by Mr. C. F. Klunder, the well-known florist, whose successful engineering of previous shows all who love flowers will remember. This one will be on a larger scale than any previous exhibition, and will far exceed anything of the kind hitherto known in America.

The enormous cost of the exhibition is guaranteed by a number of well-known and wealthy ladies. Some idea of the magnitude of the work involved can be had when it is stated that it will take 150 men four days and nights to place the decorations. Among these will be a miniature *Arc de Triomphe*, formed of flowers, on the stage. Among the interesting exhibits will be a number of orchids growing on an old oak tree trunk as in nature. The roses will be superb.

Mr. Klunder is so well known for his excellent taste and his passion for flowers, that every confidence may be felt that under his charge the management and the arrangements will be all that could be desired. The news of this flower show will interest a great number of people both in city and country, and it is said that parties are already being made up to come from a distance to visit it.

creature sat motionless and gazed at the party about the fire. "Look! get your gun" said Jack, "a jackass-rabbit makes a first-rate stew." A shotgun lying by was seized, and a cartridge hastily inserted, and although the darkness prevented accurate aim, it was evident when the report broke the silence of the night, that the animal was wounded, as it made but a few jumps before it stopped. The dogs, all unconscious of the vicinity of the rabbit, had lain quiet until the report of the gun aroused them, when catching sight of the creature as it bounded into the air, they gave chase and soon compelled pussy to exert herself to the utmost to effect her escape. Round and round the plain they went in ever increasing speed, the rabbit doubling at critical moments and using all her strategy to throw off her pursuers, but the wound prevented the creature from availing itself of its accustomed fleetness, and soon she was overtaken and seized by one of the collies, who, in spite of the plaintive cry which all rabbits utter when in immediate danger, soon dispatched her. She was carried in triumph to the camp by Jack, and prepared for dinner of the following day. The evening meal having been dispatched, and the pipe of peace smoked, the party bade the world good night, as they knew a hard ride was before them on the morrow. The sun was not an hour high the next morning when our party were mounted and on their way to the prairie. At this time of the year the antelope seldom entered the Bad Lands, but staid out on the open prairie, and as it was the rutting season, the bucks were engaged in collecting their harems, and fighting away any other buck that approached too near their little troupe of wives.

Leaving the Bad Lands which generally lie below the prairie, only the summits and hog-backs of the buttes rising above its level, the party commenced a search for sign. Tommy was by mutual consent placed in the lead, as the most skillful of the hunters, but although tracks and beds were frequently seen, the animals who made them did not come into view. We rode for hours over the rolling landscape, expecting at the summit of every rise to certainly see our game. At length, when almost despairing, we caught sight of a small band in the far distance, but almost immediately they saw us, and started off at that swift run that has made these animals famous. We watched them until they disappeared over a roll of the prairie, and then prepared to follow them, hoping that they would stop when out of sight of our party. We had gone but a short distance when Tommy, who was in the lead, suddenly reined in his horse and turned about saying in a low tone, "Goats." Although we had seen nothing we followed his example, and he then explained how there was a small band of antelope lying down around a knoll to our left, but he was afraid he would not get near them. However, we decided to try, and dismounting we left the horses in Jack's care, and prepared to stalk the goats. Flat upon our bellies we crawled to the summit of a knoll, when the animals came in view. They were in a swale, a long way off from any of the ridges of the prairie, the band of about a dozen individuals lying down except two, which were standing on either side on the watch. We saw it was impossible to approach them from the position we were in, and decided to retrace our steps and endeavor to get nearer from the other side. We made a long detour and then crawled to the top of another ridge, and came upon the band in the rear, but we were no closer than before.

"You must shoot from here," said Tommy, "can't get any nearer."

"It will not be of any use," I said, "can't hit them at this distance unless by accident, it's over two hundred yards, but we'll try."

It was agreed that my friend and myself should shoot together at the word. Neither of our guides carried guns, as we were hunting for sport, not for count. The antelope that were lying down did not look larger than rabbits, half hidden as they were in the long grass, but on either side of the band, the two were still standing as sentinels, looking away from us over the prairie. "Ready, one, two, three, fire," said Tommy, and both rifles cracked, the object selected being the two animals on guard. At the report the whole band started like one creature, on the full run. It was marvelous to see how quickly they could rise to their feet and get under full headway. Alas, the individuals shot at also joined the fleeing throng, and all were soon hidden behind a rise in the prairie. Though disappointed we were not surprised, as we did not expect to make a sure shot at the distance under the circumstances.

We rode on throughout the afternoon, but although we saw several bands of antelope they were too wary to permit us to come near them, and we returned to camp as many a hunter had done before, minus our game. My friend decided that the next day he would go after mule deer with Jack, and I determined under Tommy's guidance to try the antelope again. So, soon after sunrise, we were en route for the prairie, but this time decided to go north of the grounds hunted over the day before. We rode on for about two hours without seeing any antelope, although signs were plenty, until suddenly we came in sight of two feeding in a little swale about half a mile in front of us. Instantly dismounting, we made a long detour, leading our horses, until having reached a favorable spot for a stalk, we dropped the reins over the horses' heads and left them, knowing they would not go away from the spot, and crawled to the top of a neighboring ridge overlooking the place where we had seen the antelope. No animal was in sight however, although we searched the ground carefully with a strong glass I carried. We then continued across the low-lying piece of ground, through which the bed of a creek now dry was seen, and ascended a roll of the prairie on the opposite side. Gaining the top we caught sight of several antelope on an opposite ridge, which appeared to see us also, for after gazing a moment they disappeared on the other side.

"Well Tommy, what now," I said, "shall we follow them?"

"Don't think it any use," he replied, "they saw us." "Well, it is not far and I am going over to see if I can find where they went to," I answered, "you go and bring on the horses."

So I started for the other ridge. As I drew near the top, I laid flat upon the ground and pushed myself along, showing my rifle ahead of me. Peeping over the top, I found the ground sloped away for a long distance, giving me an extended view, and about one hundred and fifty yards from me were a band of antelope consisting of thirteen does and one splendid buck. They were scattered about feeding, but the buck seemed very restless, and kept a sharp eye over his wives, and also the surrounding landscape. I crept back under cover of the ridge, and signalled to Tommy, who was coming on with the horses, to leave them and join me, and then returned to my post of observation. Soon I heard a

rustling in the grass, and my guide shoved himself alongside of me. The antelope had fled away from us, and we decided they were too far away to give any chance for a successful shot, so I determined to watch them and see what they would do. The buck had a fine pair of horns and was handsomely marked, the tan colored stripes on his neck showing clearly against the white portion. I determined to have him if I followed him all day, which as the sequel will show I was obliged to do. He kept his does in excellent subjection, never allowing any of them to stray away, but herding them very much as a collie does a band of sheep, or a stallion a number of mares, driving them all the time dead to windward. After awhile, as they kept getting further away from us, Tommy said that he would go a little distance away and try to flag the buck, so he went off and lay down, and tying a red handkerchief to my shotgun which he carried held it aloft. Here we made a mistake, as we found out, for Tommy should have remained with me and done his flagging close by. I lay flat on the ground and consequently could not see the buck, but presently Tommy called out, "Get ready, he is coming." Expecting to see the animal rise above the ridge I held my rifle in position, but instead of coming my way he headed straight for Tommy naturally, and then before reaching the ridge turned off and passed in front of me without coming in sight. He kept on, however, and made a wide circuit around us and returned to the does, without discovering us, as we lay quite motionless while he was on his voyage of observation. He now headed his wives away from us, all feeding as they went. As we watched them another buck appeared over a distant ridge, and was immediately challenged by the one in front of us, who started off on a swift canter toward his would-be rival. The latter watched him approach and then turned and fled over a roll of the prairie followed by our friend. The latter was gone some little time, his does feeding on in the meanwhile as though they understood precisely why their lord was absent. Pretty soon, however, he returned, not alone though, for he drove before him, probably in triumph, (for we could not see what had happened beyond the other ridge), two more does, which he was evidently desirous of adding to his harem. They did not seem particularly anxious to accede to his wishes, for they ran off in every direction sometimes together, sometimes separately. The buck, however, was very swift and very determined, and every time he would head them off and turn them in the direction of his herd. After many and vain attempts to escape, the buck at last succeeded in making them join the other does, and then getting them all close together he drove them to the opposite side of the level prairie.

The band had now gotten at least a mile away from us, and Tommy and I held a council what was best to do. At first he seemed inclined to let them go and look for others, but I was determined to have that buck if it was possible, so we concluded to follow. As they disappeared behind the ridge, we mounted our horses, and rode across the ground our game had just traversed. Dismounting we crawled to the top of the ridge in front and saw the band moving on in a kind of valley between two rolls of the prairie, keeping carefully in the center and upwind, the buck in the rear holding his harem well in hand, so to speak. We dared not follow, for the moment we crossed the ridge, behind which we were concealed, the animals would see us and be off at once. We therefore decided to make a detour to the right, and see if we could not find more favorable ground in front where we could make a successful stalk. After riding about half a mile, being careful not to let the antelope get our wind, we crawled to a spot overlooking the ground the band was traversing and saw that they had selected a spot on the further side and had lain down. We carefully scrutinized the ridge beyond them, but there was no place we could reach near enough for a shot. However, we decided to cross over to that side or get as near as we could. So retracing our steps, we rode back to the plain where I first saw the band, and then passed up the side the antelope were lying, keeping carefully concealed behind the higher ground that lay between us. When we had proceeded as far as we deemed safe with the horses, we left them and advanced toward the spot we thought nearest to our game. Crawling flat on the ground we looked over the rise and saw in front of us, but a very long rifle shot away, the antelope still resting. They all lay with their noses to the leeward, the buck in the rear, gazing intently down the glade through which they had come.

"You will never get nearer," said Tommy, "try the buck." I took aim, but lowered the rifle, and replied, "It would be of no use, I could only hit that buck by the merest scratch shot. He don't look as big as a rabbit over my sight. Try the flag again, but stay close by me." Tommy raised the red handkerchief upon my shotgun, and we watched the effect. None of the animals appeared to see it, but all kept their gaze steadily down the valley. At last one of the does rose and stretched herself. The buck thinking possibly she was about to stray away, also got up and turned, when his eye caught our fluttering signal. Immediately he started for it, galloping up the slope, and increasing his speed every moment. I crouched lower and brought my rifle to bear on the spot where I expected him to come. As he drew near Tommy lowered his flag so it could not be seen so clearly. When the antelope had approached within forty yards he turned to make a circle and get our wind, passing directly in front of me. I had brought my sight to bear on him and as he was going by at full speed, pressed the trigger. I heard the bullet strike with a strong, dull thud, and immediately the animal turned and began to descend the slope toward the does. But he was destined never to reach his band, for the bullet was well placed and he had received his death stroke, for after running about fifty yards he rolled over on his side. The does had huddled together while the above scene was being enacted, but when the buck fell, they started off on a swift run and were in a moment hidden behind a rise of the prairie. I did not want them and let them go, but walked down to where the buck was lying. He was indeed a fine specimen of his race, with wide branching horns, the hooks being of unusual length. The light had not entirely left his eyes, which still shone with the bright hues of life, but as I gazed at him their colors rapidly changed and faded away before the glaze of death. Any regrets that one might naturally experience at the destruction of so beautiful a creature, were mastered by the exultant feeling that the craft of the hunter had overcome the cunning and wariness of the game, and now as the sun was rapidly approaching the horizon, we cleaned the antelope and swung him behind my saddle, entering our camp in triumph a short time afterward. As in life, when he first caught sight of our alluring flag, the head of this noble buck looks down upon me from the wall, a lasting memento of an exciting day's chase.

SAGAMORE.

A HUNTER'S PARADISE.

HAVING had our fill of the mast-fed white meat of the wild turkey, near Desputanta Station, Va., the judicial-minded Miller and J. M. S. concluded we would again test and enjoy the boundless hospitality of Richard D. Sharp, Esq., who lives the life of an elegant and hospitable planter and farmer on his thousand-acre plantation, Laurel Spring Farm, in old Surry county, Virginia. Mr. Sharp's farm takes its name from a clear and gushing water, as clear as Helicon and as cold as the St. Lawrence in mid-winter. The home of our generous and courtly host, who is, in fact, one of Nature's noblemen, is a large, ante-bellum, Virginia mansion, with an ample hall at least fifteen feet wide, with open fire-places in each room, where the blazing logs give out a seductive flame and heat which in the cool November evenings make one forget the existence of such "necessary evils" as lawyers and creditors. Mr. Sharp is a single man, who, with the help of old Uncle Joe, a seventy-five-year-old Seipio Africanus, who for good horse sense and a keen sense of humor lays over the deck and ranks as a domestic institution, dispenses here a truly princely hospitality. Joe is as straight as an arrow, as lithe as a middle-aged Apollo, and loves the sound of a gun and even the sight of a firearm as well as the sleuth hound loves, by sure tracing, to overtake the bounding stag. Old Joe is the happy possessor of an old Queen Anne or Harper's Ferry musket, and there is no finer sight upon an Easter day than to see old Uncle Joe, with his frosty brow white as the driven snow, adorn himself with an antique hunting costume older than Light Horse Harry, shoulder his musket tenderly, and prepare for the slaughter of the innocents. When the Judicial Mind praised the burnished barrel of Joe's gun, the latter smiled a smile like the poor man's feast, from (year to year, and said, "Yes, Judge, when dat ar' old musquit goes off, meat is sure to drop!" Old Joe is a much-married African, and thinks the sacred rites of matrimony not needful to bind him to his dusky and voluminous wives. "Don't bodder like white folds wid preacher," said Joe to Mr. Miller; "don't bodder like odder coons. We done gone and git married just when we wants to."

In the morning we breakfast on delicious coffee (no matutinal cocktail needed), corn bread, roast shoat, broiled venison (killed by ourselves) and currant jelly, the product of our host's garden currants.

As we smoke our "Lone Jack" on Sharp's ample piazza, old black Joe shambles up, deferentially docks his battered tile (hat), and says: "Boss, got no toddy for ole man dis yer mornin'?" "A ducat to the beggarly denier," to the man who could refuse the warm-hearted old African one single nip!

Directly fronting the piazza the gray squirrels frisk around the oak trees within fifty yards, unsuspecting of danger; and Bob White whistles a welcome to the rising sun.

"You can't knock the head off that squirrel," said J. M. S. to the Judicial Mind.

The squirrel was one hundred yards off in the top of a big oak.

"The d—l I can't. You think I am only good for drum-fish," said the festive Miller, as he drew bead with Sharp's rifle on the inoffending rodent. *Eo instanti*, down came the squirrel with its nose shot off, and before the "gray" knew what hurt him, old Joe battered its brains out on the side of the big oak.

Then the huntsman's horn sounded, and the dogs began to caper about the house, snuffing fun and frolic in the westerly wind.

The inevitable Harper's Ferry musket gleamed on the old negro's off shoulder, and the party was made up: Our host, Amos Cole, a jolly good man and a boniface, from Harrington, Del.; Edward L. Rice, Jr., Geo. Ellison, Austin Ellison, Judge R. T. Miller, J. Sharp (our host's brother), a good man and true, Chas. Ellison, Chas. Crafford, of wild turkey fame, and last, your scribe, J. M. S.

We had three dogs: One half bound and half terrier, old Joe's Cap'n, as he called him, Sharp's hound Fox, and Dave Harrison's hound Hike.

One might naturally think himself in South Jersey, between Dennisville and Tuckahoe, Cape May county, for the scrub oak abounds and the roads are so numerous that six men can strike and cover all the deer stands within two miles of the Sharp plantation, and we kill all our deer within this distance of home. We go on the old Petersburg road, leaving the Sharp farm where cotton and "peas" are raised in abundance, for the latter name is given to the fragrant peanut or "goober," as it is called in North Carolina. It was a glorious day, only a little too warm for comfort, and the heat made old Joe puff like a Cape May porpoise in one of Capt. Cook's nets. I asked old Joe if he didn't want a horse to ride to the hunt. He gave me a half indignant look as he said: "Dis yer nigga don't want no hoss. W'at he want hoss for? Deer 'traid of old Joe when he make track trou' dem woods yonder. Joe whoop 'em up, de deer in de bush," and off he ambled ahead of the party, the happiest hunter in the crowd. Joe Sharp, one of the big Injuns of the hunt, who knew every stick of timber within twenty miles of the plantation, rode Charley Crafford's horse called Doc Tanner, because he looked as if he had fasted forty days. But Doc Tanner, albeit he looked like Don Quixote's Rosinante, was more like the Chinaman's idea of "Hell in Harness," a locomotive, which Ling Foo said, "He no pushee, no pullee, but he go like hellee!"

It was about half past nine in the morning when Old Joe's half terrier gave tongue, followed by the other hounds, and no sweeter sound ever greeted the huntsman's ear or gladdened Old Joe's bounding pulses—for the dogs had started a ponderous buck. I stood near the Judicial Mind and we held our breath with our guns in our hands at full cock ready for venison, on foot. Our nerves were strung like steel. The dogs bay louder and louder, and a little to our left Ned Rice, dubbed the "mighty nimrod of Delaware," let go both barrels at once. I outran the Judicial Miller and soon reached Rice, who said: "Hist! I hit him bad; I've got him down. He ran in that thicket, but I heard him bleat."

Old Joe began to laugh, and first removing his hat, deferentially said: "Boss Rice, no meat drapped dat time, for de deer may blate down in Del'war in November, but dey don't do dat, not down yer in Ole Virginny!"

The laugh was on Rice and a solemn conclave met to determine whether in consonance with the old Surry county custom, the luckless missing hunter's shirt tail should be amputated. On account of Rice's extreme youth this usual formality—when a man missed a deer—was omitted, only in this single instance.

Rice looked lugubrious and did not use the word "blate" any more that day.

By order of Generalissimo Joe Sharp, we all sought new

stands. We turned away from the James River, only fourteen miles away, and Rosinante—Doc Tanner—coming up like a war horse, when old Joe blew the cow's horn, with a mouth like the Mammoth Cave or cornet a piston, to call the dogs off and in to change the huntsman's venue.

The writer and the Judicial Mind were posted on a pretty little knoll on the old Petersburg road, and the dogs, at 10 o'clock, began to give tongue like mad and I saw a light come into Miller's eye, like that judicial light which shines there when he gives a verdict for the plaintiff in the district court. "Down on your knees," I said, and down on his marrow bones he went; and breathless we waited for the bounding buck to come our way, for the quick, deep yelping of the hounds told us of the near approach of the venison. Both of us turned our eyes at the same instant, and there was Nimrod Rice down on one knee, shotgun pointed at something in the bushes, and quicker than I can write a line, out came a one hundred and seventy-five-pound buck running like a Camden cyclone, erect and beautiful, with slender nostrils distended, head well up in the air, apparently leaping, at every bound, over the top of the small scrub oaks.

The deer left the dense thicket with the baying dogs close behind in hot pursuit. He reached the middle of the old road, Rice was twenty-five yards away, well concealed from the vigilant but terrified eye of the beautiful animal, so lithe and graceful, with the delicate completeness and incomparable neatness of limb, round, yet slim. Rice's gun was 14 inch gauge, 6½ pounds weight, 28-inch barrel, 4½ drams Dupont's best powder in each barrel, loaded with 12 No. 1 buckshot.

He fired the right barrel, and a two-year-old buck dropped in his tracks about the middle of the road.

Off went the second barrel, when old Joe came bounding out of the brush, and exclaimed:

"Boss Rice, de Nimble Rod (Nimrod) what you shoot dat deer two times for done kill him fust shot." Then the negro began to whoop and yell like a wild Comanche warrior.

"Well," said Rice, "old man, I meant to shoot as long as the deer's ears moved."

"Boss," said old Joe, "You 'deemed (redeemed) you'self dis time. Meat drapped dere, too, as if old Harper Ferry hisself done it."

Crafford's horse Doc Tanner came cavorting like a Kentucky racer down the road, trying to throw his rider, and prancing wildly as soon as he smelled blood. In vain did the gallant rider, Joe Sharp—all in a glow, looking like the ancient Cœur de Lion—endeavor to bring Rosinante-Tanner to the front, so as to saddle the horse with the saddle of venison. Sharp was considerably nonplussed, not being familiar with Doc Tanner's ways, for the horse stood there foaming, "rock-ribbed and ancient as the sun," and refused to budge.

"Get off, Joe," said the smiling Crafford, for all were hilariously joyful, and it was that the great Conkling calls a "halcyon and vociferous occasion," old Joe doing most of the vociferating. Charley Crafford went up to Tanner, trembling in every limb, put the flat of his hand tenderly on his Rosinante's neck, and said soothingly, "Tanner, what ails you? Let me whisper in yer ear! I want no more of this nonsense." The horse, figuratively speaking, melted, became as gentle as a lamb, and the deer was quietly slung across the bow of the saddle. It was nearing 12 o'clock, but Director General Dick Sharp said we must have another deer. I began to think the woods were full of them, and I was nearly right.

Sharp the elder jumped on his old bay mare and was soon scurrying through the bushes, and in fifteen minutes we knew too well by the deep-mouthed baying of the dogs that the deer were running away from our stand. The Judge looked disgusted and all forlorn, as he did the day the 80-pound red drum broke away from his Cuttyhunk line at Anglesea, N. J., when I was one big fish ahead. Sharp had driven three deer from the bushes fifteen minutes after he started, where they were enjoying a matutinal nap, regardless of danger or the dogs.

Sharp's old mare made a good record as to speed across the barrens, and taking a cross cut, he caught sight of a fat fawn at the corner of a "goober" field, got in a first shot which made the fur fly, then gave chase, still on horseback, and at the corner of the negro grave yard gave the fawn her quietus with his left barrel. Here was glory and game enough for one day. And these gentlemen sportsmen, for such they all were, did not desire to depopulate the forests. We had game enough for the table for a week, and some to send to our homes in the Jerseys. Old Joe was wild with joy. If he had brought along his dilapidated fiddle he would surely have stopped along the roadside to play "Leather Stockings," or danced a Virginia breakdown on the amply-shaded piazza at home as he gazed with irrepressible emotion at the glossy hides of the two big bucks and a fawn triumphantly hanging in a row near the kitchen.

It was one o'clock P. M. when we reached the house, tired but happy huntsmen. At sharp two P. M. the cooks gave us a dinner which Lucullus might have envied, and over which, if now alive, Sam Ward, the literary gourmet of the lobby, would have smiled his blandest benison, and as Sam's diletant stomach distended, he would have rendered with a grace all his own, his best Rabelaisian stories. The presence of some of the brightest and wisest of the sex, kept us on our dignity between the wine and the walnuts. The scribe felt that sense of fullness so aptly described by Washington Irving, when Mynheer Van Tassel, having dined voluminously, tumbled over asleep on the greensward, while good digestion waited on appetite. Old Joe was a never ending source of wit in others and of infinite amusement to himself. He explained to us how his wives left him, post-bellum, when, as he tersely expressed, "Massa Linkum freed the nigga' man."

"Nimrod" L. Rice was the hero of the hour, and did not hesitate to declare that he was exceedingly glad that he had killed his first deer and on that particular hunt had earned the right to wear his undiminished "phylactery" or shirt.

Charles Ellison, who mourned because we could not each get one deer on the same day, and who is the crack shot of Surrey, coaxed the Judicial Mind to take a shy at the quail, and when Richard sees a gun or a game bag or a hound dog, it does not require much blandishment to get him out for a shoot. It is a case of the war horse who snuffeth the battle from afar. So, before the November sun had found his "bath beyond the western stars," or black night had dropped her curtain over our joyous but tired party, they bagged and returned with two dozen quail.

It was Keats who told so charmingly how his (or somebody else's) sweetheart slept on the eve of St. Agnes. But she never revelled in blamy sleep with half the joy that gladdened our tired sportsmen, whose dreams were filled with jack rabbits galore and turkeys innumerable, while the deer

roamed the happy hunting grounds of sleep, thick as stars in the Milky Way. What would civilization be without a gun and a dog, and, if you please, lacking the quaint humor of poor old Joe, who deserves in the great hereafter a home where his Harper's Ferry musket will be ever bright. That merry party will not soon forget the days "we went gypsy-ing" through the balmy woods and over the fertile "goober" fields of old Surry, nor will we ever cease to remember how our hearts warmed before the open fires of our generous host, and how glad we were made by the open-handed and large-hearted hospitality on Dick Sharp's plantation in Surry county, old Virginia, in November.

CAMDEN, N. J.

J. M. S.

STATE GAME PROTECTORS' REPORTS.

Editor Forest and Stream:

Protector Seymour C. Armstrong, of the fifth district, in his annual report says: "A club has been organized at Whitehall for the protection of fish and game. R. H. Cook is president, and W. N. Weeks, secretary. The club is composed of active, intelligent men, from whom I have received much assistance in enforcing the law. The club has already done good work, having secured the passage of an act by the Board of Supervisors prohibiting the netting of fish in the county of Washington at any time. In May last, I destroyed six very large fyke nets in Lake Champlain near Whitehall, and liberated about 600 pounds of bass and a large number of pike and other fish. One net contained fifty-seven bass that would range from one to six pounds in weight. I confess that my heart warmed toward them, but I let them all go free—every one. Several other nets have been destroyed since that time, and I am assured that there has been less illegal taking of fish in that vicinity the past year than ever before. I also arrested five men for illegal fishing and recovered from them fines aggregating \$53.

"I have effected the organization of a protective club at Lake George. Robert Lenox Banks is the president, and W. W. Price, secretary. The club was organized late last season. A strong effort will be made by the members of the club to enforce the law in that locality. I am under official obligations to Hon. Robert Lenox Banks for valuable assistance rendered. I would recommend the organization of protective clubs in every county.

"At the October term of Hamilton County Court two indictments were found. One against Chas. D. Rousseau and the other against Richard Birch. At the June term, Elijah Camp was indicted for having venison in possession, was tried, and escaped conviction by proving that the deer was owned by and in the possession of Norman Shaw. The Grand Jury would not indict Shaw on the testimony of the same witnesses. 'Consistency thou art a jewel,' but such jewels are not found in the courts of Hamilton county. At the October term an action was discontinued on the payment of \$100 by the offender. This was a case for having trout in possession out of season. J. C. Dunn was fined in justice court for taking trout out of season. I made a personal examination of the fish baskets of three young men from Saratoga. They have agreed to pay fines for taking trout less than six inches in length. In August I destroyed a number of set lines in Saratoga Lake.

"I have commenced suit against parties in Washington county for using dynamite in killing fish. I have also begun suits in the Supreme Court against Philander Shaw and Charles D. Rousseau for having deer in possession out of season; against Peter Wilson for spearing fish and against Leander Pasko for hounding deer on two occasions.

"At the September term of the Warren county court I had five cases presented to the Grand Jury, and four indictments were found. One of these was for spearing fish, one for taking trout less than six inches in length, and two for hounding deer. This jury was composed of fair-minded men who seemed to be willing to do their duty. There seems to be a decided improvement in the sentiment of the people in regard to the enforcement of the game laws, save in a few localities.

"There is one case out of which a few interested parties have been trying to make a little capital. In the spring of 1884 I was notified that Judson N. Barton, Warren Duel, and others had fish racks built on the outlet of Brant Lake for the purpose of catching pickerel, and that other parties were spearing and shooting fish. The racks were similar to the one built by Charles H. Faxon, at the outlet of Loon Lake, and which I destroyed as previously reported. On giving Mr. Barton and the other parties notice that it was illegal to catch pickerel save only with hook and line they immediately removed the racks. I found four men in the marsh with guns and spears, but as it was a cloudy day had no fish. I told them it was unlawful to shoot or spear fish and if they were not anxious to be arrested to go home. They went. There was much talk about this matter and there was not a man or boy in the vicinity who did not learn that it was unlawful to take fish in this way. In the spring of 1885 Peter Wilson speared a pickerel in the presence of witnesses. He said he did not care for the law and if he saw Armstrong he would tell him what he thought about fishing. A few days later I advised the man to go before Justice J. N. Barton and confess judgment for the penalty. He wanted a chance to test the matter and I brought suit against him in the Supreme Court, and at the September term he was indicted for a misdemeanor. Parties were at court to 'log roll' with the jury, but the members were true and the indictment was found. Then the man's friends set up a howl in a newspaper about 'prosecuting boys,' that he was 'the son of a soldier' and that I was 'afraid of a man with a gun.' I do not know whether the writer of the article was paid for it or not but he is welcome to all the capital he and his friends can make out of it.

"Pasko, the man indicted for hounding deer, had previously been fined for killing deer out of season. He was afterward indicted for burning a building which was the property of the man who first made the complaint against him. Pasko has told me that I would not make anything out of it. I told him I had my buildings insured when I was first appointed.

"About midnight, May 20, I captured three men on Lake George who were spearing fish. I confiscated the spears and jack and took the men to Sabbath Day Point to have them identified. The only fish found in their possession were suckers. It was a violation under the law passed last winter, but when I found the family of which the men were members were very poor, having recently lost all they had by fire, I was disposed to be merciful. I advised with Monroe Green and others and on their advice told the offenders to go their way and sin no more. I can begin suit against them at any time and will when ordered to do so by your honorable Board, upon whom must rest the responsibility hereafter.

"I have sufficient evidence to warrant the prosecution of quite a large number of persons for hounding deer. I visited Indian and Blue Mountain lakes in December to look up additional evidence. I returned home Dec. 24 and have been confined to my house and bed with pleuro pneumonia much of the time since.

"I have been particularly interested in the case of an Albany gentleman who hired the game constable as one of his guides to put out dogs. They killed several deer between Oct. 9 and 16. I presume he can give the dates, if not I can inform him.

"The suit against Wescott is still pending. Lately I have discovered the witness upon the testimony of whom Wescott was indicted is the very man who killed the deer. Wescott's dog drove the deer and the witness killed it. Wescott and the witness divided the venison.

"Several suits are still pending, though it is through no fault of mine. I have done my best to push them along, but find I cannot hurry the court. The above report contains an account of only a small part of the work performed. I have visited the different localities where offenses were committed, have looked up evidence, chased after witnesses, attended courts and have done all in my power to see that the law was enforced. I have investigated every complaint made to me. Sometimes there is not sufficient evidence to warrant prosecution and sometimes no offense is committed, complaint being made by a party ignorant of the law.

"I suggest that protectors should be allowed to appoint deputies. In some towns they purposely elect game constables who will not qualify. One half of the fines should go to the protector and half to the informer.

"The law should allow the destruction of pickerel in any manner and by any device. They are destroying the trout in the Hudson River and its tributaries.

"The game protectors should be allowed to read the evidence in game cases before the Grand Jury, in order that they may know it is all given. Much time is now spent in collecting evidence never used. Sometimes it is purposely omitted.

"I can assure you that I was much pleased to receive your letter, in which you expressed your approval of the manner in which I have performed the duties of protector since my appointment. I have done my best to merit your approval and that of all who desire to see the law enforced."

Matthew Kennedy, of Hudson, State game protector for the third district, in his annual report states that he was employed 63 days last year and that he traveled 3,604 miles. He prosecuted 22 persons for violating the game laws and all but two were convicted. Fines aggregating \$255 were recovered. He has two suits still pending. Mr. Kennedy says: "I would recommend a change in section 4 of Chapter 534 of the laws of 1879. The provision relates to the shooting of wildfowl, and says, 'any person who shall at any time kill any of said birds between sunset and daylight, or pursue or fire at any of said birds with the aid of any light or lantern, shall be deemed guilty of a misdemeanor,' etc. It is very difficult for me to fasten violators of that part of the section, as the hunters who do night shooting do it without the aid of a lantern. They do the most of their hunting by twilight or moonlight. I had three violators of the section in October, 1884, and the district attorney could not hold them for the reason that the justice held that as the parties did not have an artificial light they were not liable. It is a custom for Troy and Albany parties to come here on afternoon trains and not attempt to do any shooting until after sunset, when they go among the birds on the feeding beds. Shooting is done in the vicinity of Coxsackie and Stockport. If the section read 'to pursue or fire at any of said birds between sunset and daylight,' and the words relating to artificial light were omitted, it would be an easy matter to detect and convict offenders."

PORTSA.

A VIRGINIA GAME SCORE.

SITTING this cold February evening before an old-fashioned Virginia fire place, with dry logs piled up high and the bright blaze leaping and curling around the wood, I naturally fell into a meditative mood. My two red Irish setters Nemo and Uno, and a pointer pup, lemon and white, whose name is Olio, are my only companions, and as I looked from one to the other my thoughts reverted to the shooting season just passed, and the many halcyon days I spent in the fields and woods, of times without any companion save the Irish setters. Partridges were very plentiful the past season, and I think I did fairly well as to the number killed. I kept a diary of each day's shooting, and looking over it this afternoon I find my best score for any one day to be thirty-nine, and the total of the past season to be 760, which does not include doubtful birds, *i. e.*, birds fired at by any other person, for it frequently happens when two or more are shooting together that two men claim the same bird, in which event I never count such a bird in my day's score. My setters are both good retrievers, and I cannot now recall but one single bird that I shot down and they failed to find, but on the contrary can recall many birds retrieved by them which I would never have known I had killed but for the sagacity of my dogs. There is one fact in connection with Nemo's retrieving which I think is worthy of mention, and that is that he rarely ever retrieves a bird any other way except by the head. If the bird is only winged he catches it in any way he can, but once in his mouth he manages to get it by the head, and brings it to me with only the head in his mouth and the body of the bird hanging down. This is not due to any superior training of mine, but is a habit which he has fallen into of his own accord. Then again, when birds are only winged he rarely, if ever, kills one in retrieving it. I mention these two traits, if such I may call them, because while I have owned a great many dogs, it is the first time I have ever seen these two traits in the same dog. In addition to the 760 birds, I also killed the past season one deer and half a dozen wild turkeys, and hares by the quantity. Now that the season for shooting game is passed, I am turning my attention to the destruction of hawks and owls, and such beasts of prey as are destructive to our game. The Board of Supervisors of this county pay a bounty of fifty cents for the scalps of all hawks and owls presented to them at their annual meeting in July of each year, and also a premium for the scalps of red and gray foxes, wildcats, etc., which practically does more for the protection of game than the game laws to be found upon our statutes ever did.

T. E. E.

DELHI SPORTSMEN'S CLUB.—At the fourth annual meeting of the Delhi (N. Y.) Sportsmen's Club the following officers were elected: President, R. F. Mitchell; Vice-President, D. L. Wight; Treasurer, G. E. Maxwell; Secretary, E. L. Hitt; Directors, G. M. Harby, F. H. Griffiths and D. A. McNee.—J. L. HITT, Secretary.

HOUNDING AN ADIRONDACK DEER

To Make it "Shy"---so that the Still-Hunters will not get it.

THE SENTIMENT AGAINST HOUNDING.

THE strength of public sentiment against deer hounding in the Adirondacks is becoming daily becoming more manifest. Opposed to the selfish individuals, who by misrepresentation and forged statistics are trying to mislead the Senate into serving their greedy purposes, the great mass of the sportsmen of the State are showing themselves to be on the side of the present law. The Onondaga Sportsmen's Club Syracuse, and the Monroe County Club of Rochester have of sent to Albany resolutions indorsing the anti-hounding bill, and protesting against the passage of the repealing bill.

SYRACUSE, N. Y., March 3.—*Editor Forest and Stream:* The Onondaga County Sportsmen's Club held a meeting last night to protest against the repeal of the anti-hounding law. These resolutions were unanimously adopted:

Whereas, An effort is now being made in the State Legislature to repeal the act of last session prohibiting the running of deer with hounds or dogs in this State; therefore

Resolved, That it is the sentiment of this meeting that said act and its rigid enforcement are necessary for the protection and preservation of game.

Resolved, That in our opinion said law has already produced beneficial results.

Resolved, That we ask the Legislature of the State to defeat any act repealing or in any way detracting from the force of said act of last session; and

Resolved, That these resolutions be properly engrossed and signed by the officers of this club and delivered to the members of the Legislature from this county, and copies sent to the city press.

Action was also taken relative to the fitting up a club house north of Onondaga Valley.—ONONDAGA.

ROCHESTER, N. Y., March 5, 1885.—*Editor Forest and Stream:* At a meeting of the Monroe County Sportsmen's Club held last night, the following resolutions were adopted unanimously, and it was resolved to send a copy to the Governor:

Whereas, The Assembly has passed a bill repealing the law of 1885, prohibiting the hounding of deer in the Adirondacks, and

Whereas, The law which it is proposed to repeal is a just one, called for by the dictates of humanity, common sense and the permanent interest of the State; therefore,

Resolved, That we invoke the Governor to veto the repealing law, if it should pass the Legislature.

Resolved, That the game on the public lands of this State should be preserved and perpetuated for the whole people and not be given up to immediate or rapid extermination in the temporary interests of professional hunters, hotel keepers, gourmands or others who will not hunt it fairly.

Resolved, That as laws prohibiting the hounding of deer in other places have resulted in a great increase of game where it was almost extinct, giving abundance of sport where there was none, we ask that the present law be allowed to remain in force long enough to show the honestly skeptical its advantages, when, we are confident, it will stand on its own merits.

EDMOND REDMOND.

NEW YORK FISHERY COMMISSION.—New York, Feb 27. —*Editor Forest and Stream:* Venison has been scarce during the past season, as compared with previous years. A very small percentage of the supply is Adirondack deer. Fully 80 per cent. of the venison consumed in New York comes from Minnesota. There has been a smaller quantity of Adirondack venison in market during the past season than ever before. This is the result of my own observation, and you can confirm it on application to any of the large poultry and game dealers.—E. G. BLACKFORD.

Hounding must be prohibited absolutely and at all times. If the practice be permitted at all, the destruction of deer by dogs will not be confined to the hounding season; it will be continued the year around. This has been abundantly demonstrated. The Adirondack deer dogs are maintained on

game killed out of season. Here is another recent case in point:

Editor Forest and Stream:

Last week a neighbor of mine, while visiting his fox traps, came upon the trail of a bleeding deer which had evidently been followed by two dogs. Taking the trail he soon found where the final struggle had occurred. The snow was trod hard within a circle of perhaps thirty feet, and covered with blood and the hair of the deer. Near the center of the circle was the half devoured carcass of a large doe. The work had apparently been done the day before and the dogs had disappeared. The doe was with fawn.

This is one of the evils of keeping and using hounds of which I have before spoken. This deer and her fawns have here been sacrificed. In the next town where dogs are owned, are several more such cases, and so it goes throughout the region where any deer are to be found.

I would like to show to every member of our Legislature the frozen body of this doe, as it lies with its two little fawns disclosed through the gaping wounds, already half way on their road to life. I would willingly rest my case on their mute appeal for protection.

I well know that all writings upon the question are looked upon as coming from a partisan source, and the truth is hard to distinguish. But if a mistake is liable to be made, is it not better to risk it on the side of humanity than otherwise? The truth will eventually be known and the dog will go.

The Albany men, not one of whom would be seen leading a hound on the streets of the city, are working only for their own protection. The welfare of the deer is entirely lost sight of. While these people are in the woods full license must be allowed, and when their sport is ended, turn on the protection. A week or two in the woods at the end of summer teaches them all it is necessary to know, and they are able to discourse knowingly of woodcraft, and especially of still hunting.

A sportsman who is unwilling to give up any part of his pleasure when necessity demands it, is unworthy of the name. The time has come when to prevent extermination, we must all make some concessions. We have asked the Legislature with our petitions to continue the law against hounding, knowing that practice to be the greatest evil. Whatever additional laws are made in the interest of protection, we will cheerfully abide by. The best possible law would prohibit all deer hunting for a number of years. The guides with good reputations would not suffer by it, and the shiftless, worthless vagabonds who are ever to be found where hounding is going on, the people can better afford to support in their jails and county houses, than in the deer yards of the pleasure park of the State.

We have sent the petitions numerous signed (only one man to whom they were presented refusing) to the Senate and Assembly. The case of the deer is a fact as given.

A. C. CLIFTON.

HAGUE, N. Y., March 2, 1886.

The remaining Adirondack deer are not so numerous that the State of New York can afford to maintain hordes of hungry hounds in the North Woods by feeding them on February killed does heavy with young.

A hearing was given by the Game Law Committee of the New York Senate on Tuesday last on the bill to repeal the present non-hounding law. Senators Vedder, McMillan and Wemple were present. The hearing was opened by those who desire the repeal of the present law. Mr. Foster led off, and was followed by Mr. Richardson, of Lewis; Mr. Barnes, of Essex, and Mr. Palmer, of Franklin. The arguments advanced were those that have been heard before, that hounding made the deer shy and so protected them from the still-hunter. The speakers were evidently not practical woodsmen, and all their remarks showed that they were quite ignorant of the habits of deer. They also professed great bitterness against the jack-shooters.

Mr. Van Santvoord opened on the side favoring the pres-

ent law, and made a capital speech, in which he took the ground that if the bill now under consideration was brought forward in good faith the supporters of the measure ought to have in some way limited the killing of the deer rather than to urge the opening of an additional method of killing. He stated that the opponents of the new bill were willing to give up jack-shooting or to give up still-hunting, for they want to protect the deer. As showing the destructiveness of hounding in comparison with other methods, he instanced a county in Florida where ten years ago, although still-hunting and fire-hunting were both practiced, the deer were still plenty until hounds were brought in, when they began to diminish in numbers, until now they are no longer found within the limits of the county.

Mr. Sprague, of New York, followed, showing that hounding deer was the method followed by city sportsmen and dudes, by men in other words who had neither the skill nor the endurance to match their powers with those of the wild animal whose senses are keen and which is ever on the alert.

Mr. Erwin, Senator from St. Lawrence county, made a few remarks in which he stated that he had no intention of going into the merits of the question, but he desired to say that the people of St. Lawrence county felt very strongly on this subject and asked the committee as a favor that whatever action they might take on the bill as a whole, they would not force hounding upon that county, as his constituents by a very large majority were unalterably opposed to it. Several other gentlemen from St. Lawrence expressed similar views.

Mr. Rushton, of that county, made a telling statement of fact in support of the existing law in which he exposed the falsity of many of the statements made by the supporters of the bill under discussion. He showed that whereas it had been stated that 260 deer had been shipped from Canton during the past season, as a matter of fact only 123 had been sent from there, and that the number was to be accounted for by the fact that a new stage line had recently been opened from Canton leading twelve miles back into the woods. These deer had been bought up by the merchants at a number of outlying villages and sent to Canton as a shipping point. He said that the sportsmen and guides of St. Lawrence had had twelve years experience of a non-hounding law and that they knew that under its provisions the deer increased. They were practically unanimous in support of the law as it stands to-day.

General Curtis made some remarks advising the opponents of the present law of the points which would be made against them at a subsequent hearing.

The committee then adjourned to meet in one week in the Senate Chamber at Albany for a final hearing in the matter.

Still-hunting is the most legitimate as it is the most difficult method. * * * Hounds are also employed to drive the deer to runways or to water. It requires no very great degree of skill to shoot a deer as he runs by within thirty or forty yards, and even less to kill one when swimming in the water but a few feet from the boat. The latter method is therefore in high favor with the average summer tourist, who cares nothing as to how his game is secured, provided only he can truthfully boast that he has killed a deer.—*George Bird Grinnell in "Sport with Gun and Rod," p. 152. (New York: The Century Co., 1884.)*

THE OLD TRICK.—J. B. and myself were hunting ducks on Thompson's Lake last fall. One morning, seeing some ducks about 200 yards out in the lake, I began firing at them with a .40-caliber rifle. After three shots we discovered that they were decoy ducks. I left at once for the tent. While I was gone the owner of the decoys came up and asked J. and B. if they were shooting rifles. They told him they were not. "Well," said he, "somebody has shot my decoys all to smithereens with a rifle." While this may speak well for my marksmanship, it speaks badly for my judgment of ducks.—EN AMT.

MASSACHUSETTS ASSOCIATION.

THE regular monthly meeting was held at the Parker House, Boston, March 1. Forty-six members present, and as invited guests Mr. Wm. H. Parker, of the Fish and Game Protective Society of Montreal, and Ned Barber, from Rangeleys. Two members were elected and thirteen propositions for membership presented. The prosecuting attorney of the association, Mr. J. Russell Reid, was elected an honorary member. There was considerable discussion in regard to pushing the work at the State House regarding the game bill prepared by the association, and the following resolution was unanimously adopted:

PREAMBLE.

The existing game laws of this Commonwealth are in the opinion of the members of the Massachusetts Fish and Game Protective Association and many others who have given these laws an intelligent, impartial and unselfish study, the weakest and most absurd of any in this country.

In almost every other State in the Union, the close time for the sale of game is the same as the close time for the killing, or in other words the open and close season for field and market are identical.

In every other State in the Union, except New York and Missouri, it is most stringently forbidden by law to buy, sell or have in possession any Virginia partridge (commonly called quail), or pinqued grouse, commonly called prairie chicken, after the first day of January.

In New York, dealers are given the month of January to close out all stock of these birds they may have on hand, but after the first day of February they are forbidden under heavy penalties to have these birds in their possession.

In Massachusetts, game speculators are by our present law allowed until the 1st of May, or three months longer than in any other State, to buy, sell or have these birds in possession.

This absurd provision of law, this association claims, works greatly and directly to the detriment of the people of this Commonwealth; for it authorizes the game speculators to keep at will from the market, and thus from the people, all the supply of these two kind of game birds which come to this State, and permits them to hold for a rise in price greatly in excess of what is just and fair.

The supply from outside the State, both legitimate and illegitimate, must stop early in February, and this being the fact the speculators secure the entire stock, and hold it in freezers for a fourth part of the year; thus keeping from consumers an important and wholesome article of food, doing it out in quantities to suit themselves, and at most extortionate prices. Such a thorough monopoly of any article of food should not, in the opinion of this association, be countenanced by the laws of this Commonwealth.

The existing law also encourages and stimulates fraudulent and surreptitious dealings; for a large proportion of the supply of these two kinds of game birds that comes East is sent here illegally.

The States which furnish about all the quail and grouse brought here are Indiana, Illinois, Michigan, Minnesota, Iowa, Wisconsin, Missouri, Kansas and Nebraska, and from a majority of these States all persons, express companies and other transportation companies are forbidden by the law under heavy penalties to transport or carry these birds outside the borders of those States.

All quail and grouse, therefore, that are shipped here from those States are absolutely contraband; they are sent here in defiance and violation of the law. Can Massachusetts longer countenance such a monopoly as the game speculators now enjoy? Is it wise policy to protect and encourage a speculative business whose foundations rest upon a questionable basis?

The association believes it is not, holds that the time should no longer be deferred for the observance of decency and a fair regard also for inter-state comity in our game laws.

The provision by law for the protection of our native song and insect-eating birds is lamentably and miserably weak, and as a result, hundreds of thousands of them are slaughtered annually for millinery purposes. In consequence of this wholesale slaughter, noxious insects, the farmer's worst enemies, are increasing to a most alarming extent, and crops which were formerly protected by these birds are now almost impossible of cultivation.

This is not the only evil, for many of our native songsters, particularly those of bright plumage, those beautiful denizens of our woods and fields, are almost entirely exterminated, and unless a quick remedy in law is found we shall lose completely some of our most valuable birds.

This association has tried, in vain, for several years to secure a better law, and believing that it is its duty to try again, makes still another effort. We again call upon the Legislature for the enactment of a good and strong law which will serve to stop the merciless destruction that is so constantly going on.

RESOLUTIONS.

It is therefore by the Massachusetts Fish and Game Protective Association:

Resolved, That the Legislature of this Commonwealth be and is earnestly requested to enact a new and more wise and just code of laws providing for the protection and sale of game birds, and for the preservation of our native song and insect-eating birds.

Resolved, That an appeal be, and is made by this association to the clergy of this Commonwealth, the various "Bands of Mercy" and other bodies formed as bird protectors, the public press, the farmers and horticulturists and all others who love our native birds and wish to protect them, to, without delay and in the most earnest manner, urge the Legislature to enact a better law than that now existing, a law that will give protection and which can be enforced.

CLUB RULES.

THE following are the by-laws of Delhi Sportsmen's Club:

ARTICLE I. *Name*. This club shall be called the Delhi Sportsmen's Club.

ART. II. *Object*. The object shall be to promote gun practice, and the protection of fish and game.

Order of Business. Reading minutes of last meeting. Collection of fines. Reports of committees. Balloting for candidates. New Business. Adjournment.

ART. III. *Officers*. The officers shall consist of a president, vice-president, treasurer, secretary and board of three directors.

ART. IV. *Duties of Officers*. Section 1. The president shall preside at all meeting of the club or board of directors. Sec. 2. The vice-president shall perform the duties of the president during his absence. Sec. 3. The treasurer shall

collect and have charge of the funds of the club, and pay such bills as have been approved by the directors, and at the annual meeting shall make a detailed report of all funds collected and disbursed by him during the year. Sec. 4. The secretary shall keep a record of all meetings of the club and board of directors, and notify each member of all meetings, by mail or otherwise. Sec. 5. The directors, together with the president, vice-president, treasurer and secretary (who shall be directors *ex officio*), shall have charge of the management of the club and club property.

ART. V. *Membership*. Any person wishing to become a member may do so by notifying the secretary and receiving a majority of the votes cast, at any meeting of the club, and the payment of \$1.

ART. VI. *Meetings*. Sec. 1. The annual meeting shall fall on the first Wednesday of March in each year. The regular meetings shall be held on the first Wednesday of each month, and special meetings may be called by the president and board of directors, or upon the written request of five members of the club. Sec. 2. The officers shall be elected at the annual meeting, by ballot, for one year, and should any vacancy occur during said term it shall be filled by the board of directors. Sec. 3. No meeting shall be called except on a previous notice of two days to each member. Sec. 4. Five members shall constitute a quorum.

ART. VII. *Fees*. Sec. 1. Initiation fee shall be \$1. Sec. 2. If, at any time, the funds of the club shall be exhausted, an equal assessment shall be made upon all members of the club, and in no case shall the assessment amount to more than five dollars in one year.

ART. VIII. *Fines*. Section 1. If any member refuses to pay an assessment or fine, he shall be suspended or expelled from the club. Sec. 2. Any member pointing his gun at another member, whether gun is loaded or not, shall be fined \$1 for each offense. Sec. 3. If any member shall be proven guilty of violating the game laws, he shall be fined by the club \$5. Sec. 4. If any member knowing of the violation of the game laws by another member, and fails to report the same to the club, he shall be fined \$2. Sec. 5. It shall be the duty of each and every member to report any violation of the game laws to the club, and the president shall appoint a committee of three to investigate the case, and if they find a just one it shall be the duty of the club to prosecute said parties. Sec. 6. Any member divulging any of the private business of the club shall be fined 50 cents.

ART. IX. *Liquor*. Section 1. No liquor shall be furnished by the club or directors. Sec. 2. Any member using intoxicating liquors before or during any match or practice, shall be debarred from shooting on said day.

ART. X. These by-laws may be amended at any regular meeting, notice of the same being sent to each member of the proposed change.

AMERICAN RIFLE TRAJECTORIES.

[From the London Field, Feb. 13.]

MANY inquiries have been published in *The Field* from time to time with respect to American rifles, and numerous letters have appeared in reply; but, although a good deal of information has thus been given, preciseness as to matters of detail has often been deficient, and occasionally statements have been made which could only be accepted with the proverbial grain of salt. The remarkable flatness of trajectory of some American rifles has been among the subjects of eulogium, although the powder charges ordinarily used seemed quite opposite to the production of any phenomenal results; and it appeared highly probable that the statements made on this point were based merely upon hearsay, or upon the assertions set forth in advertisements; at any rate, it was obvious that the trajectories spoken of could not be considered low when compared with those of rifles using very small charges of powder, and that they were not likely to be low in comparison with the trajectories of English sporting rifles. At length, however, authoritative information has been published on the subject; and it is satisfactory to be put into possession of particulars that can be accepted without fear of bias.

The American journal *FOREST AND STREAM* has for some time past been engaged in carrying out and printing the details of an extensive series of experiments with rifles, conducted with the utmost care and precision. They were commenced in September last, and extended over several weeks, and the publication of the results has recently been brought to completion. In some respects the experiments followed on the lines of *The Field* trial of rifles carried out at Putney about two years ago; but in other respects they differed. The Putney trial was competitive—prizes being awarded for the greatest accuracy in the shooting of the respective weapons, as fired from a machine-rest; and this competitive trial having been decided, a few of the most successful rifles were afterwards put through tests to ascertain their trajectories. The trials carried out by our American contemporary, on the other hand, were experimental only, and not competitive; there was no test for accuracy of shooting, the main point being to settle conclusively a long-existing cause of dispute—viz., the height of the trajectories of the numerous rifles that are produced for American sportsmen. The trials were held on the celebrated rifle ground of Creedmoor, where the weapons were tested at ranges of 100 yards and 200 yards. As at Putney, the rifles were fired from a machine rest, the bullets passing through paper screens, on each of which was marked a horizontal line, on a level with the centre of the bore (the height being carefully ascertained by means of a spirit level), so that the position of the bullet marks could afterwards be accurately measured. There were, however, at Creedmoor, only three screens for each range, whether 100 or 200 yards, whereas at Putney there were six screens in the 150 yards range, which was the only distance in which the trajectories were taken.

Before recording the trajectories themselves, it may be of interest to give a few particulars about the rifles, for comparison with English weapons. One English rifle there was in the Creedmoor trial, viz., a .450 bore express, which also had taken part in the Putney trial two years since; and this was the only double-barrelled rifle used in the Creedmoor experiments, all the rest being single-barrelled rifles of American manufacture. But, as will be seen by the weights given below, although having but a single barrel, the American rifles are usually heavier than English double-barrels of the same bore; and this does not apply merely to those which are magazine rifles, for some that have no repeating apparatus are the heaviest weapons. Generally speaking, the Americans put a much greater mass of metal into their barrels than is done by English makers; and that is especially noticeable in the muzzleloading rifles included below, for, although only of .420-bore, one of them weighs 11lb. 6oz. and the other 14lb. 12oz. In the former, the barrel alone,

28in. long, weighs 8lb. 6oz., and in the latter the barrel, 27in. long, weighs no less than 11lb. In several other instances the barrel alone weighs from 6lb. to 7lb., whereas in the English .450 rifle that took part in these experiments the weight of the pair of barrels is only 5½lb., the full weight of the rifle being 8lb. 13oz.

In the Putney trials there were half a dozen expresses of .577-bore; but the largest size used in the American trials was .500-bore and the smallest .220. The particulars of weight and length of barrel are given in the following list, where the rifles are classified according to bore and the names placed in alphabetical order; and there are also added alongside for the purpose of comparison, particulars of English rifles at the Putney trials. The numbers ".50-115-850," or similar figures after the names of the rifles denote the ammunition used, according to the American mode of notation, this meaning ".50-bore, 115 grains powder, 850 grains bullet." Of course, where the decimal point is visible, it is immaterial whether the diameter of the bore is printed .5, .50 or .500, and I have seen these three ways in different pages of the same book; but in England, where many rifles are made of .577 or other calibers that cannot be lessened in number, it is found more convenient to name other bores likewise by thousandths of an inch; and this, at all events, prevents the misunderstanding that may possibly arise between the 4-bore, 40-bore or other number that means so many spherical balls to the pound, and the .4-bore, .40-bore or other caliber that denotes a fractional part of an inch. Hence I have headed the following divisions in the ordinary English way, although the American notation is followed in respect to the particulars of ammunition:

[We omit the list of rifles entered.—ED. F. AND S.]

The weight of these weapons of diminutive caliber is especially noticeable, seeing that here is a .220-bore, single barrel, having a charge of only 5 grains of powder and 40 grains of lead, and yet it weighs more than the English .450 double-barrelled rifle, used with 110 grains of powder and 310 grains of lead. One may readily believe that very steady shooting at short ranges can be obtained from such ponderous toys.

The English rifle affords a convenient means of comparison between the American rifles shot at Creedmoor and the English weapon tried at Putney. At the latter trials Messrs. Bland's rifle made the best target at 50 yards in the .450 class, but was defeated at 100 yards and 150 yards by Messrs. Holland's rifle, which carried a somewhat heavier projectile, that showed much greater steadiness at the longer distances. The trajectory ranges at Putney and Creedmoor not being the same, an exact comparison cannot be made; but, judging from the 150 yards records, it may be inferred that the rifles of .400, .450 and .500 bores tried at Putney would vary very little from the Bland rifle shot at Creedmoor—some probably having a slight advantage or disadvantage at the longer range, and others at the shorter, according to the weight of the bullets and charge of powder. The proportion of powder in Holland's .400-bore was about 1 to 2.6; in Bland's .450-bore, 1 to 2.7; and in Holland's .450-bore, 1 to 2.9; while in several rifles not tried at the trajectory screens it was 1 to 2.3 or 2.4. The fact that the American rifles (with the exception of the two muzzleloaders) showed, in the majority of cases, much higher trajectories than the English Express, is what might be expected from their comparatively small charges of powder. Except in a single instance, with a very light hollow bullet, not one of the American breechloaders used a larger proportion of powder than 1 to 3; for the most part they varied in the larger bores from about 1 : 3.4 to 1 : 5, and in the smaller bores they extended to 1 : 9 and even 1 : 10. In the muzzleloaders, on the contrary, the proportion of powder was greater than in any of the English rifles mentioned above, being 1 to 3 in Major Merrill's rifle and 1 to 2.2 in Mr. Romer's; and the consequent result was that their trajectories were the flattest in the whole series.

The following are the heights of the trajectories of the respective bullets at distances 50 yards apart in the 200 yards range, and 25 yards apart in the 100 yards range. These heights are the average of five shots each, as a rule, although there are occasional exceptions, hereafter mentioned. The weights of powder and lead are the average of three opened cartridges, and differ occasionally from the nominal weight given above. In one instance there was a remarkable difference between the nominal and actual charge—the cartridges for the Maynard .400-bore being labeled as containing 70 grains of powder, whereas those which were opened varied from 56 to 60 grains. In all cases, except the muzzleloaders, the ammunition was that supplied through the trade, and was not specially loaded for this trial. In the original records the measurements are given to thousandths of an inch; but I think comparison is rendered more easily by having only two decimals, so the results are here given to the nearest hundredth of an inch.

[We omit the tabulated results copied by *The Field*.—ED. F. AND S.]

In the numerous trajectories here given, there are, as may readily be imagined, various irregularities, which depart more or less from theoretical accuracy. If bullets would always spin quite evenly, and the successive cartridges give exactly the same amount of speed, and if the atmospheric conditions were uniform throughout the trials, then one might expect the results to be regular; but, considering the numerous incentives to variation, the wonder is that the records come out so closely as they do for the most part. Instances of irregularity in cases of this kind may often be traced by taking half the height of the trajectory midway in the 200 yards range, and deducting it from the 50 yards height in the same range, when the height at the middle point of 100 yards should be obtained; or, conversely, half the 100 yards height in the long range may be added to the 50 yards height in the short range; and similar methods might be adopted for other distances whenever there is a foundation to work upon. If such a process be applied to the trajectories of the Bullard rifle that appear at the top of the list of .500-bores, it will be found that with the solid bullet there is an appreciable difference between the actual and calculated results, but that with the hollow bullet the figures approach very much closer. This may in great measure be explained by the fact that the atmospheric conditions, while the solid projectiles were being fired in the 200 yards range, varied considerably from those which existed, on a subsequent day, during the corresponding trial at 100 yards. In temperature alone there was a difference of 20 degrees, besides changes in wind and humidity, which altered the resistance of the atmosphere, and thus tended to increase or diminish the normal retardation of the bullet. On the other hand, when the hollow bullets were tried at the long and the short range, the differences of atmospheric condition were so small as to be immaterial. The careful manner in which this trial was carried out enables many apparent anomalies

to be explained. With every separate rifle, and at each range and change of bullet, the temperature of the atmosphere was taken on the dry and wet-bulb thermometers, also the pressure on the barometer, and the direction and velocity of the wind; and the full details having been published in the pages of FOREST AND STREAM there are ample data to work upon by any one disposed to investigate the subject.

Another kind of irregularity, which may be detected on glancing over the above table, is one which was observed at the Putney trials and was remarked upon in the *Field* at the time. Some of the bullets, instead of spitting evenly during their flight, gyrated with a sort of corkscrew-like motion, which carried them sometimes above and sometimes below the true line of trajectory, besides moving now toward the left and then toward the right side of the target. Vagaries of this kind, on the part of one or two bullets, would sadly interfere with the regularity of a series of shots, spoiling the "string" by their divergence from the bullseye, and occasionally disappearing from the target altogether. Occurrences of a similar character were comparatively frequent at Creedmoor with some of the rifles, and, although they are not always noticeable in the above table of trajectories, owing to this being an average of five shots, some of which may tend to counteract the effect of the others, still in certain cases they are quite obvious to the eye. In a trajectory that is regular, the height of the bullet at three-quarters of the full length of the range is always a little greater than it was at the first quarter; and at the half distance it is higher than at either of the other points. But, on referring to the Whitney-Kennedy rifle, under the head of .500-bores, it will be seen that, in the 100-yard range, some of the bullets dipped between the first and second screen, and then rose to the third. The extent of these variations is, of course, more noticeable in the full records giving every shot than it is in the average result.

Space cannot be afforded here for entering into details of the shooting of all the weapons, and I must confine my remarks to the most salient features in the experiments.

Of the .500 bores, the Bullard repeating rifle came out first, as was varranted by its carrying a larger proportion of powder than any rifle in the trial, except the English express and the two American muzzleloaders. With the solid bullet the powder ratio was 1 to 3.1, and with the hollow bullet 1 to 2.6; and, as has been pointed out before in the *Field*, the hollow bullet has the higher trajectory, for the greater speed of the light projectile at the beginning of the range and its rapid loss of velocity toward the end both tend to make the curve higher in the center. The Winchester and the Whitney-Kennedy repeaters used the same ammunition; and, with cartridges taken from the same box, it might reasonably be supposed that they would show very nearly equal results. The Whitney-Kennedy, however, exhibited in a marked degree the corkscrew gyration of bullets alluded to above, as is demonstrated by the following record of the five successive shots at the 100-yard range with the solid bullet. The Winchester was irregular at 75 yards in the last two shots, but there is a great contrast between the general results, as will be seen by comparing the average of the three most regular shots with the average of the whole five.

WHITNEY-KENNEDY.			WINCHESTER.		
Round.	25yds.	50yds.	25yds.	50yds.	75yds.
1.....	1.09in.	1.8in.	1.55in.	1.97in.	1.66in.
2.....	1.80in.	1.84in.	1.90in.	2.50in.	2.12in.
3.....	1.25in.	0.83in.	1.71in.	1.78in.	2.14in.
4.....	2.15in.	2.43in.	3.53in.	1.66in.	1.93in.
5.....	1.10in.	0.23in.	0.01in.	1.86in.	2.38in.
Average.....	1.48in.	1.18in.	1.23in.	1.74in.	2.20in.
Av. (3 rds.) 1 68in.	2.36in.	2.02in.	1.73in.	2.22in.	1.85in.

It will be seen by the minus marks (—) prefixed to two shots of the Whitney-Kennedy, that they dropped so much after 25 yards that a horizontal line drawn from the muzzle of the rifle to the target would actually have been higher than these bullets were at mid-range; but they rose again between 50 and 75 yards, and must have risen still higher before they completed the 100 yards. Casting out the two most irregular shots with both rifles, there is not a vast deal of difference between the averages of the three remaining rounds; but only one of the bullets from the Whitney-Kennedy can be said to have had a fairly even flight. It is not easy to say what could be the cause of this difference in performance with the same ammunition unless it were the difference in the rifling. Both were 6-groove rifles, but the Whitney-Kennedy had one turn in 30 inches, and the Winchester one turn in 60 inches, the rifling with the former being also twice as deep as the latter. It is evident, therefore, that mere rapidity of spin does not secure accuracy of flight. It is rather curious that the hollow bullets shot more steadily than the solid ones in both rifles; but it will be observed that the hollow were only 12 grains less in weight than the solid, and consequently the latter would be rather the shorter of the two, while experience seems to show that these vagaries are of most frequent occurrence with bullets which are very short in comparison with their caliber.

Among the .450-bores, the Marlin magazine rifle performed very erratically, and the report says: "Do what might, with a consumption of over 25 rounds, it was only possible to get one shot through all the screens and on the target. The weapon was several times cleaned, and particular attention paid for any traces of leading in the barrel, but none were detected; yet the arm threw the bullets now high, now low, in every and various directions." There was, strictly speaking, no average with this rifle, for when, a fortnight later, it was tried at a shorter range, only one shot could be got upon the target; so that to one shot in each range the record is confined. The Bullard repeater, with the same weight of powder and bullet as the Marlin, gave very steady shooting. The Marlin rifling had one turn in 20in., and the Bullard one turn in 30in. On the other .450 rifles it is not necessary to dwell, except the Bland double Express, which was the only rifle of this bore that shot both solid and hollow bullets. Owing to a scanty supply of ammunition, this rifle was not tried so fully as it would have been; but four records from each barrel were obtained at the 200 yards range, and the separate average results stood as follows:

	50yds.	100yds.	150yds.
Right barrel average.....	4.94in.	7.47in.	5.83in.
Left barrel average.....	5.14	7.59	5.75
General average.....	5.04	7.53	5.79

This general average is the one entered in the above table for the 200 yards range; and for the shorter range, with both solid and hollow bullets, only the right barrel was used. As at Putney, there was some little irregularity of gyration exhibited by this rifle, two of the bullets being higher at the last screen than they were at the middle; but it was only to a small extent. One curious fact, however, remains to be

stated. Five shots were fired from this rifle at 100 yards, the barrel being wiped out after each round; and five other shots were fired without cleaning. The trajectories were lower in the uncleaned rifle, the average being as follows:

	25yds.	50yds.	75yds.
Cleaned barrel (average).....	1.25in.	1.46in.	1.30in.
Uncleaned barrel (average).....	1.17	1.33	1.28

This result may possibly have been due to the lubrication left in the uncleaned barrel lessening the friction of the bullet, which consequently started on its flight with a higher velocity.

The two muzzleloaders of .420 bore gave remarkable results, but, as previously stated, the proportion of powder was higher than in any of the other rifles, and the trajectories were correspondingly low; but again evidence was given of the corkscrew gyration, as will be seen by the following figures with Major Merrill's rifle:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	1.180in.	1.373in.	1.270in.
2.....	1.339	1.408	1.205
3.....	1.633	1.399	1.419
4.....	1.170	1.051	1.051
5.....	1.031	1.210	1.421
Average.....	1.130	1.306	1.273
Do. (4 shots).....	1.121	1.370	1.236

It will be observed, on examination, that only one of the five bullets flew with strict accuracy, although most of the divergencies are comparatively trifling. In the second round the bullet at the third point is lower than at the first, instead of being higher; in the next the bullet is highest at 75 yards; in the fourth round the bullet is higher at 25 yards than at the two next screens; and in the fifth round it is much lower at 50 than at 75 yards. Omitting this last round makes a marked change in the center and renders the proportion more correct. These statements, however, are only given in illustration of the previous recorded facts, and the observations are not intended to depreciate Major Merrill's rifle, which is an admirable weapon of its kind; and I imagine the defect must have been in the bullets. Shortly before this trajectory trial, Major Merrill, who is a staunch defender of the merits of muzzleloaders, gave in FOREST AND STREAM lengthy details of the shooting powers of this rifle, accompanied by diagrams of the targets made with spherical balls and charges of equal weight of powder and bullet (1 to 1). The accuracy of the shooting was remarkable; and Major Merrill challenged the world to produce any breechloader that would equal this performance when using powder and bullet in the ratio of 1 to 1. The challenge was not accepted, as may be readily supposed. It is easy enough for muzzleloaders to use any proportion of powder whatever; but breechloaders are not so accommodating, and they are not usually chambered for such a ratio as 1 to 1. With a lesser proportion of powder, however, quite as remarkable shooting was made by breechloaders at the Putney trials. Jeffries' .500-bore, with ten successive shots at 100 yards (five from the right and five from the left barrel), made a string average of 1.004in.; while Holland's single rifle of .295-bore, with twenty successive shots, made at 50 yards an average string of .395in., and with the same number of shots at 75 yards made an average of .696in. But, to return to the American muzzleloaders, Mr. Romer's rifle made splendid shooting at the 200 yards range, there not being an irregular shot in the whole series. These two rifles were each tried only at one range; it had been intended to try Major Merrill's at both distances, but, by an accident, a rifle belonging to his friend, Mr. Romer, was brought for the second test.

With respect to the smaller bores, I must leave the records to speak for themselves for the most part. It may be said, however, that they generally shot with greater steadiness than the larger bores—owing, in all probability, to the bullets being longer in proportion to the caliber; and some of the very best results were given by rifles of .400 and under. The Bullard .300-bore was not shot at 100 yards, owing to its action getting out of order. The so called "Hunter's Pet" (.320-bore), was the lightest rifle in the trial, having a skeleton stock and a barrel only 18in. long. It gave a great deal of trouble in testing, as the shots flew so wildly that about a score had to be fired before five could be got through the screens on to the target at 200 yards; at 100 yards there were similar divergencies, though fewer in number. Those bullets that were got on the target showed satisfactory regularity; the trajectory, however, was the highest of the whole series, but, as the proportion of powder was only about one to ten, the result is not very surprising.

In conclusion, I can only congratulate your American contemporary on having brought its self-imposed and most troublesome task to so highly satisfactory an issue. T.

WOOD POWDER.—When the advertisement of the American Wood Powder Company was brought to us by Mr. Elliott Smith, the president of the company, we accepted it upon that gentleman's representations respecting the mode of manufacture and the safety of the product; and, further, with the express stipulation on our part that the advertisement should remain in the FOREST AND STREAM only provided that Prof. Henry Morton, President of Stevens Institute, to whom we would submit samples of the powder, should report upon it corroborating the representations of the manufacturers. We at once sent some of the powder to President Morton for analysis. His report was expected immediately, was delayed, asked for from time to time, and has never been received. Considering the time that has elapsed, we can hardly be expected to hold the matter longer in abeyance, and it can be taken as no injustice to the manufacturers to refuse a further publication of their advertisement until we secure from Prof. Morton a report which would warrant its insertion.

MISSISSIPPI.—Aberdeen, Feb. 27.—The quail season has pretty well closed, although the law in this county allows them to be shot until March 15. The birds have stood the cold well and we have a fair number to carry over to the next season. If the spring proves dry we will have a fine stock for the next shooting season. Some snipe have come in and a few small bags have been made; but our best shooting occurs in March. During the severe weather in January a great many ducks were in the river, principally mallards, and several large bags were made. This was an unusual occurrence for this locality, as ducks have been very scarce for several years past.—WILL.

THE "POLITICAL SCIENCE QUARTERLY," a review devoted to history, economics and jurisprudence, will be published by Ginn & Co. of this city, the subscription price being \$3 per year. The magazine will be edited by the Faculty of Political Science of Columbia College,

Sea and River Fishing.

ADIRONDACK FISHES.

Editor Forest and Stream:

My note in your issue of Feb. 11 has already brought a valuable contribution to my work on the fishes of the Adirondacks. I could not find a specimen of the little miller's thumb, *Uranidea gracilis*, and inserted a description on the authority of Dr. C. Hart Merriam. A few days ago a pint fruit jar filled with them came to me from Malone, Franklin county, N. Y., and suspected that they came from Mr. A. R. Fuller, of Meacham Lake, to whom I wrote and received the following very valuable contribution regarding their habits:

MEACHAM LAKE, N. Y., March 1.

Friend Mather:

I write to-day because I can write and may not be able to write a word for a week. When I sent "my thumbs" I could not write, but I thought you would know where they came from. I hope the package reached you safely and that you were able to identify the fish. I did not find as large ones as I have seen, but did get larger ones than we generally see in the brooks. I have no doubt they can be found in nearly every pond and stream in the Adirondacks; but they are so very insignificant that nine out of ten persons would never notice them. The little light brown or spotted ones look something like a sculpin; we find them in great numbers in this lake and in all the streams about here. The larger dark ones with red mane and tail I have never seen in any other water but the little brook from which I took the lot. I have seen them there at all seasons of the year. I wish I could sit down with you for an hour or two and go over your report. I find several things which I think I can help you to describe better.

In May, 1871, I met Louis Agassiz at his home in Cambridge and we talked fish for three hours. He asked me about this fish which I called miller's thumb; he had never seen it in America, and he said no one knew much about its habits, how or where they spawned or how long it took the eggs to hatch. I told him I had seen the eggs quite often, and when I got home I took several lots into the hatching troughs and hatched them, and kept the little chaps about ten days. They dig under a stone and fasten the eggs to the under side in a pile bottom side up, or like a conical pile of shot turned over, point down; the cones vary from a quarter to one inch in diameter at the base, and are about the same distance from base to point. I put six or seven of the cones into the boxes, and kept watch of them. It was fifty days from the time I put them in until I saw the first fish, and the little chaps kept their sack of grub three to five days; they were about three-eighths of an inch long. The eggs are about the size of No. 8 shot, the temperature of the water was 45 to 47. I was somewhat surprised that it took so long for the eggs of warm-weather spawners to hatch. You can separate the eggs from the stone and they will still keep the form of the cone; the pile is well stuck together. I once put a large thumb into a pail to take to the house, and also caught a newt like the one I put in the jar. In a few minutes on looking in the pail, I saw the thumb had the newt by the middle, and after a long struggle the newt went down my thumb, and when the head came to the thumb's gill, the newt slid out, and I sat down and laughed. I thought it about the neatest escape I ever heard of, and I expected to see the thumb try it over, but he did not.

A. R. FULLER.

The jar has not yet been opened, but seems to contain fifty or sixty specimens from one and a half to six inches in length. I think it possible that there is but one species in the jar, although there are several found in the northeastern States. Through the glass of the jar they appear to resemble *U. go-bioides* more than *U. gracilis*. Concerning the breeding habits of this fish I knew nothing, and think that Mr. Fuller's experiment is the first that has been made in hatching them.

FRED MATHER.

THE TROUT OF SUNAPEE LAKE.

CONCERNING the notice of the "sun trout," or char, found in Sunapee Lake by Mr. Elliot B. Hodge, Fish Commissioner of New Hampshire, which appeared in our editorial columns of Jan. 14 and was further commented upon by Mr. Samuel Webber in FOREST AND STREAM of Feb. 11, we are now enabled to lay before our readers the decision regarding its species which has been arrived at by Professor Baird and Dr. Bean. The following correspondence, which we are permitted to publish, explains the matter in full:

Editor Forest and Stream:

I send you with this Dr. Bean's last report on the Sunapee Lake trout. In some respects I am surprised at the conclusions he comes to. It seems strange to me that he finds no difference between these fish and the blueback trout of Maine, as I believe I can show trout as many pounds in weight as he can show me a Maine blueback in inches in length. Again, the Maine trout seek the streams for the purpose of spawning; the Sunapee trout do not, they are lake spawners. I do not doubt that they belong to the *Oquassa* type, but that they are identical with the blueback trout of Maine I do. I have not time to write you more at present. You will please return me all the papers at an early date.

Yours very truly,

E. B. HODGE.

E. B. Hodge, Esq., Plymouth, N. H.:

DEAR SIR—I beg to inclose herewith a final report from Dr. Bean in regard to the trout from Sunapee Lake, and would suggest your having it published in FOREST AND STREAM. Yours truly,

SPENCER F. BAIRD.

WASHINGTON, Feb. 17, 1886.

Prof. Spencer F. Baird, Director U. S. National Museum: Sir—I beg leave to offer herewith a report upon some trout of Sunapee Lake, New Hampshire, which were received from Mr. E. B. Hodge, the first and largest on Nov. 3, 1885. It is a male twenty-two inches long and weighed six pounds. It is catalogue No. 37,357. Three additional examples arrived on the 9th of January, 1886. These are catalogue Nos. 37,408, 9 and 10. The first two being females and the last a male. The smaller of the females is about twelve inches long.

I find that these trout are identical with the blue-back trout of Oquassa, the Rangeleys, and other lakes of Maine. The same species also occurs in the township of Desalmonnes,

Province of Quebec, in a lake just below Lac Sac A Comie, which is situated about seventy miles east, and about forty miles north of Montreal. A specimen was caught in this lake by Mr. C. H. Simpson early in the present month and was brought here by Mr. E. G. Blackford on the 10th inst. It is catalogue No. 37,670.

The blue-back trout is described in recent ichthyological works under the name of *Salmo*, or *Salvelinus*, *ogassa*. The same species also occurs in Labrador and in Greenland, in which countries it reaches an immense size. Mr. L. M. Turner sent from Labrador a number of very large examples, much larger than any other specimens of *Salvelinus* to be found in the museum. One of these specimens (from Turner) is twenty-six and one-half inches long, and, in its present condition, weighs seven pounds, after lying in alcohol two years.

The oldest available name at present known to me for this species is *stagnalis*, of Fabricius; and our species should stand as *Salvelinus stagnalis*. I can find no difference of specific importance between Mr. Dresel's Disco Island specimens, Mr. Turner's Labrador examples, Mr. Hodge's Sunapee Lake blue-backs, Mr. Simpson's Quebec specimens and the *ogassa* of Maine.

Among the characters which I take to be of specific value are the following:

Proportions of the various parts of the body, length and number of developed fin rays, size and number of the scales, shape of the caudal fin, number and size of the gill-rakers, shape of the gill-covers, character of the dentition of the hyoid bone, size of the eggs, number of the pyloric caeca and general features of coloration. I find for example that none of the chars, in which the hyoids are specially developed, have mottled fins, such as are always observed in the common brook trout, *S. fontinalis*.

It is highly desirable to obtain from Mr. Hodge a full account of the feeding and breeding habits of this blue-back trout of Sunapee Lake. Our knowledge on this subject is very limited. It is highly desirable also to secure additional specimens of the blue-back from Maine, and these should be as large as possible. There is not now in the Museum a single individual from Maine that will reach twelve inches in length. Very respectfully yours, T. H. BEAN, Curator, Dept. of Fisheries.

It has formerly been supposed that the range of the blue-back trout was confined in the United States to a few lakes in Maine, and that it was a fish of very small size. It will be seen from the above correspondence that its habitat is not as restricted as has been thought, and that its size is sufficient to command it to the notice of anglers. Mr. Hodge says, "he can furnish even larger specimens than those which he sent to Professor Baird. When we saw the small specimen from Canada, at Mr. Blackford's in Filton Market, we said, 'If the fish had come from Maine we should think it could be nothing else but a blue-back trout.' Its graceful shape, forked tail, absence of mottling on fins were sufficient to show that it was neither our native brook trout nor a salmon; yet its coloration did not seem to be so decided a blue as specimens we have seen from Maine."

BLACK BASS vs. PICKEREL.

PICKEREL fishing through the ice on New England waters has been only fairly good this season—not up to what it was a year ago, and far behind several seasons ago. Not nearly as many pickerel have reached the Boston market this year as usual, for the reason, the dealers say, that they have not been taken. From a number of well-known lakes and ponds in Maine comes the report that pickerel are scarce. Curiously enough these reports come from waters which have been stocked with black bass, or into which waters the bass have drifted.

The Cobosseecontee waters, Maranocook Lake, and the other ponds in Winthrop and Readfield, Me., are not yielding the usual quantity of pickerel; all these waters have been stocked with black bass. The same situation is true of the Sebago waters. A gentleman of excellent judgment, reared in the close vicinity of the Sebago lakes and ponds, believes that the black bass in those waters are fast thinning out the pickerel. The gentleman is an enthusiast with the rod, spending all the time he can spare on the trout waters, but he is sick of the black bass. He believes the pickerel to be far ahead of the bass, and regrets exceedingly that the bass is fast becoming the king of the Sebago waters. The increase of the black bass in his section is something wonderful; but the pickerel are disappearing. The bass, from one or two ponds stocked, have crept into all the waters near, and it is evident from their multiplication that they have come to stay, and with the determination of exterminating other fish.

"The black bass furnishes good sport with the rod?"

"Oh, yes."

But a little of it has satisfied all the sportsmen near the waters in Maine best stocked with them. Lovers of the rod who dwell on the banks of the Sebago waters or the Winthrop ponds, drive thirty or forty miles to trout streams and ponds. They take their annual trips to the Androscoggin Lakes. But they do not "tackle up" and fish for the black bass which are often within less than a mile of their doors. The most of them have tried the bass fishing; a few catches was enough. Says one gentleman: "I caught a savage, ugly-looking fish, but his ungainly carcass was destitute of all the lines of beauty which go with the fresh-caught trout or salmon. A pickerel is king to a bass in the way of looks. Then when I had caught my row of ugly, black gudgeons, what was I to do with them? They are no good as a fish to eat. We left our catch of bass to rot, and I learn that every other sportsman, who has tried them cooked, does the same."

Who has ever seen a black bass in market? Perhaps a few might find their way there, but a very few would block the way ever afterward. Not so the pickerel; he is a good market fish. Thousands of pounds find their way into the Boston markets every year. It is too bad to take so much poetry out of what has been written concerning the black bass as a game fish, but to eat his warty, wormy hide is too much. The fact that he is of no earthly use when caught, helps to kill the glamour of catching. In some of our inland, muddy waters the bass may do, but to the sportsman who can reach the clear, sparkling trout waters, he is of no account.

The people upon the bass waters of Maine will probably ask their next Legislature to do no more protecting of black bass, and possibly to make some law against his further encroachments. In several sections of that State the people wished the black bass in their waters, but they now more heartily wish him out and even the pickerel back again. The white perch is a far better fish, and he might have been

propagated in many of the ponds now given up to black bass. But both white and brindled perch are fast disappearing from waters where the black bass reigns. There are a plenty of Maine sportsmen who seriously blame the prime movers in introducing black bass, because they did not look more thoroughly into the habits and value of those fish before putting them into waters where there was any hope of even pickerel.

MAINE.

THE SAME OLD STORY.—One of the chief attractions of Lake Hopatcong as a summer resort is being rapidly destroyed by the waste from the Forcite Powder Works being allowed to run into the lake. A party from this town went on Wednesday to the beautiful inland sea for a day's fishing through the ice, and after fishing for several hours and not catching anything, they moved on up the pond to a place where a party of men, who reside along the borders of this sheet, were fishing, and found empty creels there also. Upon inquiry as to the probable cause of the fish not biting, one of the natives volunteered to show our townsman where the trouble lay, and going to where the ice was clear he told him to look through and in doing so innumerable dead fish were seen floating away under the ice. The gentleman further said that if a live bait were sunk down to within a foot of the bottom of the lake, it would die in a minute, and he believed that the mortality was caused by the discharge of the waste acids into the lake by the powder company. In walking a mile our informant counted over a thousand dead fish of all varieties. The matter should be looked after by the proper authorities, and sportsmen who are interested in preserving the lake as a fishing resort should make an effort to let the authorities know that danger of its entire ruin exists. If the fishing is ruined, the popularity of Lake Hopatcong as a summer resort will be short-lived.—Hackettstown Gazette.

A NUISANCE AT HOPATCONG.—Morristown, N. J., March 6.—Editor Forest and Stream: Lake Hopatcong, lying in the hills of Northern New Jersey, is suffering from the poisonous refuse of a powder factory which is drained into the lake. The lake has been a favorite resort for anglers for some years past and the black bass have been increasing in its waters since they were planted there some ten years ago. This winter thousands of dead fish have been seen through the ice, lying on the bottom of the lake and the natives about the shores claim that they were killed by the acids or other material discharges from the powder works. Cannot something be done to stop this?—G. B.

THE NEW YORK TROUT LAW.—As the law now stands, all fishing through the ice for brook trout is forbidden at any time. Trout may be taken in the counties of Queens and Suffolk from April 1 to Sept. 1, but in the rest of the State the lawful season is from May 1 to Sept. 1. We learn that Senator Traphagen has introduced a bill which provides that trout legally taken on Long Island, in the counties mentioned, may be held, but not sold in other counties. This will permit anglers who fish on the island to bring their fish to their homes in New York or Brooklyn, and will remedy one of the errors which we have pointed out. We think, however, that a bill which opened the season south of one of the lines mentioned in our editorial last week, on April 1, would be more satisfactory all around, as many anglers wish to fish in other waters near the city besides those of Long Island. It was manifestly unjust to allow fishing on Long Island and then forbid the angler, who in nine cases out of ten came from the city, to bring his trout to his own table.

MORE MUSKRAT FISHING.—Manistee, Mich., March 1.—In your issue of Feb. 25 I read with interest Mr. Dyer's account of catching a muskrat through the ice on a pickerel hook. In the winter of 1860, while fishing on Charles River, near West Newton, Mass., with a friend, we had almost the same experience. Running to one of the lines which we down, I pulled out a dead and limp muskrat securely hooked in the side of the head near the month. As the bait was missing, we at once concluded that, while trying to secure the shiner or minnow, the muskrat had hooked himself and immediately drowned. It is singular that the one Mr. D. speaks of was alive when taken out, for when fast or caught under the ice they soon lose their breath and are drowned. So it is probable that the one he refers to had but just been hooked. It is evident that muskrats sometimes feed on fish. I have caught them in traps set for mink and baited with fish.—E. H. B.

ST. LAWRENCE RIVER FISHING.—The Utica Association for the Protection of Fish and Game and the Anglers' Association of the St. Lawrence River have adopted the following resolution: "Resolved, That these associations approve the extension of the close season for bass and muskallonge from May 15 to June 15, as recently made by the department of marine and fisheries at Ottawa, and heartily recommend that the close season in the State of New York, and particularly in the St. Lawrence River and Lake Ontario, be extended to the same date, as the best means for protecting the fish while on the spawning beds."—PORTS (Utica, March 6, 1886).

THE BASS AND MUSCALONGE SEASON in the St. Lawrence, Clyde, Seneca and Oswego rivers, is from May 20 to Jan. 1. In other words no black bass nor muscalonge can be caught in those rivers, or had in possession, or sold, only from May 20 to Jan. 1, under a penalty of \$10 for each fish so killed or had in possession. This open season is generally understood, and accepted and respected, and it is that there may be no mistake about the time that I send you this note, writes "Old Sport" to the Syracuse Journal.

THE SUSSEX ANGLER'S CLUB has just been organized and has purchased Grant Lake, on Pochuck Mountain, near Deckertown, N. J. The lake covers fifty acres, and is so liberally supplied with bass that it will not need stocking. The officers are: Cyrus C. Force, of Brooklyn, President; Schuyler B. Jackson, of Newark, Vice-President; Howard Little, of Deckertown, Treasurer, and Theodore S. Morrell, of Newark, Secretary. The preserve cost \$5,000.

LARGE TROUT FROM THE YELLOWSTONE.—We have a paper pattern of a five pound trout caught in the Yellowstone on Feb. 24 by Mr. Poole, and which is said to be the largest one yet caught there. The pattern is witnessed by Charles H. Stuart and Elwood Hofer.

HERRING IN THE AIR.—A correspondent of *Nature* gives some instances of herring jumping out of the water when frightened. He says that he has observed whole shoals of this fish, in their anxiety to escape when pursued by whales, piled up above the surface of the sea to a height of from three to six feet. On one occasion the fish formed a mass even with the top of the mast of a fishing boat, viz., about fifteen feet, and had part of this mass fallen into the boat it would doubtless have sunk.

FISHCULTURE AT BLOOMING GROVE PARK.

Editor Forest and Stream:

The Blooming Grove Park Association now have a hatchery in their extensive grounds in Pike county, Pa. The selection of the site was determined some two years ago through the enterprise of Dr. Spencer M. Nash and others, who obtained the services of Mr. Fred Mather to examine the different springs and streams, and also to plan the hatchery. This winter it is in full operation. Mr. Hardy, one of the directors, has presented the club with over a thousand eggs of the brown trout, obtained in England, and which arrived in good order and are now on the trays. The native spawners did not yield many brook trout eggs; it seemed to be an off year with them, and but a few thousands were obtained. From the U. S. Fish Commission the club received 15,000 brook trout eggs, and 50,000 eggs and 25,000 fry have been purchased from Jas. Annin, Jr., Caledonia, N. Y. All the eggs are looking well, the water is cold and the development goes on slowly, which is understood to be best for the young fish. WHITE MILLER.

BROOKLYN, March 3.

LAND-LOCKED SALMON IN NEW YORK.

AS our readers are aware the land-locked salmon of Maine has been successfully acclimated in that portion of the Adirondacks which has been cared for by the Bisby Club, so far as to live there and to be occasionally captured. We now have an account of their spawning there from the president of the club, Gen. R. U. Sherman, who is also one of the State Commissioners of Fisheries, who, in a letter dated March 3, among some other things, writes:

"A Woodhull and Bisby guide, John Stell, was here yesterday and says that he took at Woodhull dam last fall a male land-locked salmon which tipped the scales at ten pounds. The land-locked salmon gathered on the sloping wall of the dam last fall to spawn. This wall is laid at an angle of forty-five degrees, without mortar. There are open spaces between the stones and I suppose the fish sought to deposit their spawn in these spaces where they would be secure from depredations. Mr. Stell took also several female fish which he stripped and impregnated their spawn and deposited it on a gravelly bottom in the stream below the dam, returning the parent fish to the water in the lake. The fish were in plain sight from the surface and were taken by lowering a hook to their mouths, baited with a worm. The fish took the hook, apparently to keep the bed clear rather than as food. The large salmon was probably from the original plant made in 1879. There have been two plants made since that time, one in 1882 of 10,000 from the hatchery at Cold Spring Harbor, and 10,000 in 1883 hatched at the Bisby Club hatchery from spawn furnished from Cold Spring Harbor. This large fish is probably the largest land-locked salmon ever taken in this State."

SHORT LOBSTERS.

SOME persons may think that a short lobster is as good as a long one, but everybody will agree that, in that point of size, the long lobster is ahead. Now this is just where the law steps in. It has been for a long time understood that the lobster fishery on the New England and provincial coasts was dying out, or that the noble crustaceans are becoming extinct from constant and unremitting fishing. In order to give the lobster time to grow, and prevent the taking of a three-quarter pounder when each year's growth would add double to his weight, the Legislatures of Maine and Massachusetts have enacted statutes, with penalties attached, making it a punishable offense to catch or sell, or have in possession, a lobster under 10½ inches in length. This law has never been very cheerfully obeyed in either of these States. Only a short time ago Deputy Fish Commissioner F. R. Shattuck of Boston, who has worked diligently, in conjunction with the Massachusetts Fish and Game Protective Association, for the protection of the lobster, became satisfied that short lobsters were being shipped from Portland, Me., to this market, and being sold "on the sly." He also became satisfied that one or two parties, at least, the owners of smacks, were in the practice of sailing down among the islands on Portland harbor, buying the short lobsters off the fishermen, putting them into barrels on the way back, and shipping them to Boston and New York under cover of night. Commissioner E. M. Stilwell of Maine was enlisted, and he took hold of the matter with his usual earnestness. He put B. W. Counce, commissioner of sea and shore fisheries, of Thomaston, on the track. One Warden Johnson also came to Boston, ostensibly with the intention of putting Deputy Shattuck and his detectives on the watch for certain vessels expected with short lobsters. One schooner arrived the other day, and was searched by Mr. Shattuck and his detectives, but no short lobsters were found. Another suspected vessel put into Portland, evidently warned that Boston was getting to be a poor place for short lobsters. But the fight at both the Boston and the Portland ends has been kept up with very satisfactory results. Commissioner Counce, with one of his deputies, on Thursday seized a lot of short lobsters from one William Trefethen, for some time suspected, and later in the day made another haul from the schooner Monterey. But the best move of all was made yesterday, when the commissioners seized in all 3,000 short lobsters, and later in the day about \$200 was paid over by the dealers in fines. Joseph A. Brewer of Chebeague Island, schooner Horizon, has been caught with short lobsters, and fined \$50 and costs. In Maine, the fine for taking or having in possession any lobster under 10½ inches in length from head to tail extended, exclusive of claws and feelers, is \$1. In Massachusetts the fine is \$5. The Massachusetts law reads: "Whoever sells or offers for sale, or has in his possession, a lobster less than 10½ inches in length, measuring from one extreme of the body extended to the other, exclusive of claws or feelers, shall forfeit \$5 for every such lobster; and in all prosecutions under this section the possession of any lobster not of the required length shall be prima facie evidence to convict."—Acts of 1884, chap. 212, sec. 1.

To the lobster trade it may be stated that Commissioner Shattuck is determined to see this law enforced, and he has able detectives on the alert. Also, it may be added that the earnest fish commissioners and wardens of Maine are rendering able assistance by preventing the shipping of short lobsters to this market, as the results mentioned above will show.—Boston Herald.

PORTLAND, ME., March 3. William S. Trefethen was before the court this morning charged with having in his possession 1388 lobsters less than 10½ inches in length. He was found guilty and was fined \$1,388 and costs.

FISHCULTURE IN NEW HAMPSHIRE.—A large amount of work is being done at the State hatcheries at Livermore Falls and Sunapee Lake. There are now in the hatchery at Livermore Falls 500,000 eggs of the whitefish, 750,000 Penobscot salmon eggs, 90,000 lake trout eggs, 330,000 brook trout eggs. Quite recently 250,000 brook trout eggs have been sent to Massachusetts, and 10,000 rainbow trout eggs from Baird, Cal., and 125,000 landlocked salmon eggs will be received this week from Grand Lake stream. At Sunapee Lake hatchery are 100,000 brook trout.

THE AMERICAN FISHERIES SOCIETY.—We have before stated that the annual meeting would take place in Chicago on April 13, 14 and 15. We now learn from Mr. F. N. Clark, chairman of the local committee, that the meeting will be held in the club rooms of the Palmer House, which will seat 400 people, and that it is proposed to make an exhibit of fish in aquaria, specimens in alcohol, apparatus, etc., in the Exposition building. The printed invitations are not yet issued.

The Kennel.

FIXTURES.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 22.—Fifth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

March 16, 17, 18 and 19.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

March 23, 24 and 25.—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburg, Secretary, Bergen Point, N. J.

March 30 to April 2.—Third Annual Dog Show of the New Haven Kennel Club, S. R. Hemmingsway, Secretary, New Haven, Conn.

April 6, 7, 8 and 9.—Second Annual Dog Show of the New England Kennel Club, Edward A. Moseley, Secretary, Boston, Mass.

April 13, 14, 15 and 16.—First Annual Dog Show of the Hartford Kennel Club, A. C. Collins, Secretary, Hartford, Conn.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

May 13, 14, 15 and 16.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3481.

THE CRYSTAL PALACE DOG SHOW.

[From a Special Correspondent.]

THE English Kennel Club held their twenty-sixth show at the Crystal Palace on Feb. 2, 3, 4 and 5. On this occasion their total entries amounted to 1701, which is the largest entry on record, but we consider the amount of entries obtained by the Kennel Club is greatly due to the fact of all the special clubs offering a great many prizes, and together with their produce stakes, which are all for private competition among their own members. So we from a practical point of view look upon the exhibition as a combination of shows held under the Kennel Club. The result is, dogs not fit to win in the regular open classes are enabled to win cups and specials offered by the clubs upon conditions arranged by themselves. On the first night of the show we found a very large gathering of the fancy at the Swan Hotel, where the young bulldog Tom Ball was shown against the well-known Rustic King. Mr. Berrie acted as judge, and took a great deal of pains to arrive at a true decision. He judged by points, and the result was in favor of Rustic King by 17 points to 12. We could not agree with Mr. Berrie on some points; for instance, after measuring with a tape line the skull of each, and finding according to his measurement one skull was the same as the other, he marked both dogs equal. Now, when it is considered that Tom Ball was much larger than Rustic King, except his skull was larger, Rustic King should have had the score in his favor. However, when it is taken into consideration that Rustic King is the smallest dog, is as large in skull, and three inches shorter in back, with a better bulldog color, we think when they meet in an ordinary judging ring the betting will be about a sovereign to a shilling on Rustic King. Although the owner of Tom Ball lost £10 on this occasion, he succeeded in bringing his dog very prominently before the public, and we certainly prefer to see dogs becoming prominent in a more legitimate way; but if Tom Ball succeeds in working to the front in the same way as his opponent, Rustic King, has done, we will certainly be very much surprised.

The judging was carried on in six rings, as follows:
Ring No. 1.—Bloodhounds, otterhounds, deerhounds, Rev. W. J. Mellor; mastiffs, Mr. J. Sidney Turner; Great Danes, Mr. R. Leigh Pemberton; greyhounds, Col. Cowen; foreign dogs, Mr. W. Lort.

Ring No. II.—Newfoundlands, Rev. R. O'Callaghan; St. Bernards, Mr. A. B. Bailey.

Ring No. III.—Pointers, Mr. E. C. Norrish; setters, other than Irish, Mr. T. Webber; retrievers (wavy and curly), Mr. E. G. Farquharson; bulldogs, Rev. W. J. Mellor; bull-terriers, Mr. Harding de F. Cox; basset hounds, Mr. F. W. Blaine; poodles, Mr. W. Lort; Airedale terriers, Dalmatians, Pomeranians, Col. Cowen.

Ring No. IV.—Sheepdogs, Mr. A. N. Radcliffe; Irish setters, Rev. R. O'Callaghan; spaniels, Mr. J. Farrow.

Ring No. V.—Fox-terriers (smooth), Mr. C. E. Longmore; fox-terriers (rough), Mr. J. H. Colmore; Bedlington terriers, hard-haired Scotch terriers, Col. Cowen; Welsh terriers, Mr. W. Dew; Irish terriers, pugs, Mr. Harding de F. Cox.

Ring No. VI.—Smooth-haired terriers, black and tan terriers, Italian greyhounds, smooth-haired toy terriers, Mr. A. C. Jackson; Yorkshire terriers, rough-haired toy terriers, Maltese toy terriers, toy spaniels, Mr. W. Lort; dachshunds, Mr. A. O. Mudie; Dandie Dinmont terriers, Rev. E. S. Tiddeman; Skye terriers, Rev. W. J. Mellor.

The bloodhounds had a real good entry, but nothing particular turned up. The winner in the open class was a very typical animal, with a grand head and ears, but too small in size. We understand his dam was purchased by Mr. Nash at the dog's home.

Mastiffs had a good entry in the challenge class, King Canute winning also the cup for the best in the show. He is a grand dog and well known, yet he is quite lame and we always expect him to be so. Montgomery came second to him, beating Pontiff and Maximilian, who was in form, but behind the others in head. Open dogs saw the Scotch representative first. He was in fair condition, but evidently suffering from skin disease. Two equal seconds went to young dogs rather plain in type. We preferred Bismark, who is rather light in eye but of good type, and has plenty of size. Imperial Chancellor,

although long in face and not the best behind, we think ought to be further up in the company. Prussian Prince is too small in head; he is good in body but lame. The winner in bitches is a good one and was well placed. Vivian is not the best behind the shoulders and her ears are on the large side. Princess Ida, well known, is longer in face and large in ears, and not good enough for a massive body. First in dog puppies is a fine puppy; he was in good condition, but is very throaty and is rather low in front. There were only two bitch puppies; the winner is much the best.

In the challenge class for St. Bernard dogs Plinlimmon won well, with the small, but typical Gaybird second. There was only one entry in the challenge class for bitches and she did not turn up. In open dogs Mr. Smith was to the front with Macgregor, a good sort of dog with plenty of bone and substance and shown in good form; his ears are a trifle too large. Sailor, second, is rather long in face and weak in front of eye, but a good showy upstanding dog. Kastlehorn is another heavy-bodied dog, too large in ear. Scotch Bonivard, a strong large dog, is too long in face. Bitches as a class were smaller than the dogs, but were good, all the winners showing considerable quality. We thought them correctly placed. The feature of the show was the young bitch, first in puppies, which beat her sire Plinlimmon, and although a grand bitch, we certainly consider her long in face and large of ear. However, at the same age her sire possessed the same faults equally as much as she does and it was a great performance beating her sire and we hope she will continue to show up to the same form when more matured.

Newfoundlands were, as a collection, the best we have seen together. Mr. Farquharson showing up in great force with the best team we have seen from one kennel. Lord Nelson we think won correctly in the challenge class. In the challenge class for other than blacks, Trafalgar won well. In the class for black dogs there was a good collection of typical specimens. Hanlan we considered made a good first. Admiral Keppel is of good type, but rather small. We think King Bruce equally as good as the third prize winner. In bitches the winner is a grand specimen; very good in ear and coat, also with a good face, with a rather short tail. Some fancied the second prize, Lady Teazle, equally as much as the winner, owing to her size. In puppies we considered the winner a good way the best and one likely to hold her own in the open classes.

Great Danes as a breed are evidently improving, and the classes contained good specimens; yet, taking them altogether, they did not make as good a collection as we have seen on previous occasions at the Palace.

Deerhounds had only one entry in the challenge class—our old friend Bevis. He is working into years, and was here catalogued at £15, with, so far as we saw, no purchaser. First in dogs went to a very good young dog by Chieftain, Mr. Parkes coming second with a very fine dog, Randolph. Lord of the Isles II., third, is a good dog coarser in type than those placed over him. In bitches the well-known Lady won easily. She is a fine specimen, and possesses both size and substance; at the same time she has plenty of quality. She might be finer in skull.

In the variety class one of the winners turned up in a Persian greyhound, entered as The Shah, 15,798; but claimed by a gentleman as a dog belonging to him which he had lost some months ago, and not The Shah. Further, he had a photo of his dog, which when compared with the animal went far to prove the gentleman had good reason for claiming the dog. However, the committee could do nothing in the matter, and as the dog was claimed at catalogue price he has now passed into a third party's hand. We understand there will be trouble over the matter.

Greyhounds, as usual at the Palace, were not a strong class. In the challenge class for pointer dogs Milton Bang II. won and Belle of Bow won in bitches. We consider her about the best pointer bitch in the show. Nan was absent on this occasion, although entered. In the open class for large dogs the Birmingham winner, Naso of Upton, won well, we think there is still improvement in him, his light eye being about his worst fault. Mr. Anthony came second with Lad of Bow, who seems to carry his tail well up; he is a good way behind the winner in quarters. In fact we preferred the third prize, Lewban, as the best pointer of the two, although he stands full high enough on the leg. We also admired Devon Sancho, who was shown in the very worst condition, and under the circumstances we were not surprised at his having to take a back seat. In large bitches we found Mr. Anthony first with Lass of Bow, and we think him lucky to win in the class; we preferred the second prize, Duchess of Huntroyde, who possesses more bone and substance; Kate VIII. is of a good stamp but shows herself to bad advantage. Naso of Kipping won well in small sized dogs. Second, Milton Dick, is a well-made dog, but not so good before the eye as the winner. Third, Chandos, is rather leggy and a trifle large of ear and light in eye. In small bitches the winner is a very handsome bitch. Second and third are also good ones, with not the best of faces. The third prize winner, like all Mr. Bulled's dogs, was sadly out of condition. Lady Jane is too light in bone.

In the English setter challenge class were five entries, all competing. Sting, looking well, won. He has often been reported upon. Count Howard we fancied next best. He is just on the small side, but one of the most typical of setters. In open dogs, King Ned, well known and brother to champion Sting, won. He is a real good one; his ears set out rather high. Isle Bruce, vhc., is a good lemon and white, rather full in eye, but a large, powerful dog, with plenty of quality. Prince Rupert, the puppy that won first and special at Birmingham, only managed to get he. His ears are large, he is very light in body and weak in pasterns. Sir Gilbert, third, brother to Count Howard, was looking well. He is a good setter, with quality, plenty of coat, and was in good condition; but we think he would be improved by being an inch shorter in back. Lord Toue is a very nice dog, rather light in condition, but with a good, level head and well-knit body, and good feet and legs. The bitches were a good collection and the winner well placed. Some of the vhc.'s were fit to win in any ordinary company. The puppies were nothing special.

In Irish setters, Nellie, rather out of coat, was beaten in the challenge class by champion Count. Old Frisco won first in open class. He is a good, well made dog, but we never admired his color. We certainly would have placed Hector before Frisco. The rest of the class were in some cases very good, while more than the majority were common in head and ears, Mr. Bryden's Grouse XIII. being a well-made dog of good coat and color, with lots of go and style, but a trifle short in head. When coming to this dog, we noticed his chain had got fastened to the nail which supported his he. tablet, and his collar had come over his head, and we found him in the act of doing his best to get it on again. We watched him for some time, and upon one of our friends going forward and holding the collar up, the dog put his head into it. Upon making inquiries we found this dog never had any training, and his keeper was as much surprised to hear of his conduct as were those who saw him in the act of trying to put his collar on instead of taking a gallop round the show as is usual in such cases. The bitches saw Wee Kate once more in the front, second having plenty of coat, but rather fine in face and with her tail carried up. In puppies, the first is good in body, feet and legs. We preferred the second; she is better in eye and ears, her feather was too light in color.

In sheep dogs, challenge class dogs, Dublin Scot, coming into good form, won somewhat easy over Sly Fox. In bitches Peerless, in good form, won well over Peggie II. In rough dogs The Squire just managed to come to the front. We have always liked him, and think him a dog full of quality and of the correct type, but always scarce of coat. However, he is gaining in coat, but there is room yet for improvement. We find Blister, one of the best dogs in the class, unnoticed. He

is good in coat and has good ears, with good feet and legs, but seems short in face and body. The second prize, Motley, is very moderate. Sky Blue is a good collie with a good coat, but he requires more quality in head. Second, Filbert, red in color, is coarse for a young dog, and we certainly think him too thick in skull. Rob Roy McGregor is a good black and white, but just on the coarse side to please some of the club men. King of the Glen, c., bar his tail being gaily carried, we liked as well as any in the class. He is a beautiful rich red tawny dog, with a very handsome head and ears, good in coat and frill, with the best of feet and legs, and is a well-made dog all through. Paramount is a real good sort, too weak in face and light in bone. In bitches first went to Gipsy Queen, a good collie, but small and light in bone. Lady of the Lake, winner of fourth, is just soft enough in expression. Dady, third, is too small in face. Sunbeam, c. only, we think one of the best in the show, but she was just out of coat. Tippet Craig, vhc., is also a nice bitch; she was heavy in whelp. In dog puppies we fancied the third prize, Sydney. He is a good, slashing young dog, with plenty of coat and character. Yankee Jack, vhc., is of very good style, but is too fine in face. The bitches were only moderate. Taken as a whole we think there was a very large percentage of moderate animals.

In the Irish water spaniel challenge class Young Hilda was first. The open classes were moderate, as has been usual lately.

In the challenge class for Clumbers, Psycho won easy. Boss III. has a long face. In open dogs, the winner is coarse in head and the second is looking nearly worn out. The bitches were small, but good in type. In the Sussex and liver-colored challenge class we preferred Guy to the winner, Bachelor III., who is coarse and bad in coat. In open class dogs, Bridford, Dalhousie and Maubert were correctly placed. Tinkle, about the best out, won easily in bitches; one eye is partially blind. Newton Abbot Blossom is another good bitch.

In the champion class for blacks we missed our old friend Solus. Consequently, as was generally expected, Mr. Farrow placed Miss Obo first. In open dogs, Mr. Jacobs won with Newton Abbot Victor, a good type of spaniel, but on the high side; while Newton Abbot Darkie is quite too thick in head, but lower than the winner on the leg. Scamp, brother to Solus, came second, and he might have been first, as there was not much to choose between them. Buxton Beauty, well known, won in the next class. Second to her came Floss V., good in type, but leggy.

In the challenge class for other than blacks, the black and tan Eastern's Bruce won.

In cockers nothing new turned up, the handsome-colored Freda winning easy, and as usual she had a lot of admirers.

In the fox-terrier challenge class for dogs Restus, who is still holding out well, won easy. In the corresponding bitch class Diadem, a good terrier, rather fine in coat, won, closely pressed by Bedlamite. Joyful, third, being fine in bone and plain in face. In open dogs Rhymer, fifth prize, is of a good stamp but wants character in face, he is well put together. Bacchanal, the winner, is a good, well-made, compact dog, he might be smaller in ear and he has a little canker in his mouth. Rollicker, second, is a good dog, but is rather plain and wants quality. Veuil, fourth, is another good dog, but was out of form here. Valet, third, is good in size with a good head and front; he is lemon marked. New Forest, vhc., is too cloddy. In bitches Lyndhurst Vixen, vhc., is too small. Dinah Doe, second, is shelly and fine. Thebas, third, is too fine before the eye. Rachel, the winner, is just after rearing puppies, she is about the best we have seen and won well. Rosemary, the reserve, is also a good one but not up to Rachel's form. Dusky, fifth, is of a similar stamp to Lyndhurst Vixen. Sutton Viola, fourth, is another good terrier with a wall-eye and fine in face. In dog puppies Kernincham Baffler, third, is rather large for his age. Raby Baffler, the winner, is a little leggy, but a good terrier, strong enough in face, but shows to advantage, being full of go and stands well up.

In the challenge class for wire-hairs, we thought Sam Weller quite as good as Cavendish, the winner, who is showing age. In open dogs the winner was correctly placed. Second went to Trick, a good sort, not so well topped as he might be. Fourth went to Bruiser, a very good one, which was objected to as being singed and the objection held good, and consequently he was disqualified. Mr. DeTrafford was well to the front in bitches, with real good ones and well known.

Dandie Dinmonts were a large collection. In challenge classes Border King beat Roderick, and Jennie Dean had a walk over. There was close competition in the open and puppy classes, which also contained a lot of very moderate animals that breeders seemed anxious to dispose of, and we understand a good many changed hands from £5 to £10 each.

Skyles were a poor collection, Mr. Grelton's exhibits about the best shown.

Scotch terriers were also very moderate, and although Irish terriers had a good entry, the quality, taken altogether, was not as good as at Liverpool a few weeks since.

Pugs contained a lot of very good animals, and we understand some of them have been purchased for the United States. Diamond won in the challenge class for dogs, beating Sovereign, who is rather the smallest. The judge had some difficulty in selecting the winner in the next class for bitches. The winner, Darcoy, is old and very fat, but had the best head, while the other was too fine before the eye and too light in body. In open dogs the winner showed age and is getting gray. Secoud went to a good strong dog. Third to a fair dog, breeder and pedigree unknown. Reserve went to King of Diamonds, a nice little dog, possessing a lot of bone for his size, the winner at Birmingham coming next. Mr. Sheffield won in bitches, with Sweetmeat, a very nice one, small in size, Lady Cloudy and Our Jenny getting equal second, Belle of the Ball only getting he. The class throughout was good. There was nothing special in puppies.

There were three fair Maltese shown, but we missed Lady Gifford's kennel this time. Bowtie beat Flossie in the Glen-helm challenge class. We prefer Flossie. In the next class the winner was much the best, but is the largest. Jumbo II. won, Ben d'Or being absent in the challenge class for King Charles. In the open class, first went to old Duchess II. and third to Grand Duke, a little dark in tan and large, but about the best. Crown Princess, second, is also large, and that good bitch Olivetta, out of coat, he. Prince Charles spaniels were moderate, the winner being objected to, but the objection was overruled. In ruby spaniels we considered Dandy III., he., about the best, although rather large. Italian greyhounds were moderate in quality. Toy terriers were a good collection, especially the rough toys, which contained three of the best specimens in England.

MAHARG.
[The awards will be found in the American Kennel Register.]

THE BEN NEVIS SERVICES.—*Editor Forest and Stream:* The following questions having been submitted by the FOREST AND STREAM to the undersigned committee for examination and report: Whether Ben Nevis was competent to line a bitch? What bitches, if any, did he line after July 1, 1885? The committee having been attended by numerous witnesses on both sides, and having heard all the testimony submitted, are of the unanimous opinion that Ben Nevis served the following bitches on the following dates: Beauty III., on July 11, 1885; Meg Merrilies, on July 13 and 14, 1885; Jeanne II., on Sept. 8, 1885; Nelly Grey, on Sept. 10, 1885; Jeanne III., on Sept. 11, 1885; Daisy, on Nov. 13, 1885. Respectfully submitted, EDWARD DUDLEY, WM. H. CHILDS, A. H. MOORE (Philadelphia, March 4, 1886).

THE TOTAL number of entries in the American Kennel Register are 3481. The Register is booming.

NEW HAVEN SHOW SPECIALS.—The following specials have been provided: Chas. H. Mason, a piece of plate, value \$85, for best dog or bitch in classes judged by him. Best kennel mastiffs, \$25. Best mastiff stud dog, \$10. Mr. Wade for best mastiff \$25. "Ashmont's" "Diseases of the Dog" for best bitch in open class, best dog pup and best bitch pup. Best kennel rough St. Bernards, \$20; smooth \$20. Best smooth St. Bernard dog, bitch, dog pup and bitch pup, "Ashmont's" "Diseases of Dog." Best kennel greyhounds, \$10. Best greyhound, clock (New Haven Clock Co.). Best kennel pointers, \$25; pointer stud dog, \$10. Prize, value \$25, for handsomest setter or pointer ever run in public field trials. Spratts Patent, Spratts patent collar and 100lbs. biscuits for best pointer. Best kennel English setters, \$25; English setter stud dog, \$10; pair pure Laveracks, dog and bitch, \$10. Prize, best English setter bitch with field trial record. Spratts Patent offer Spratts patent collar and 100lbs. biscuits, best setter. Best black and tan setter stud dog, \$10; kennel Irish setters, \$15; Irish setter stud dog, \$10. Winchester rifle, best Irish setter. Silver sgar box best Irish setter bitch. Best kennel spaniels, \$15; spaniel stud dog, \$10. "Porcupine" offers \$10 in spaniel classes to be placed. American Spaniel Club, best field spaniel, \$10; cocker spaniel, \$10. Best kennel beagles, \$15; best beagle stud dog, \$10. American English Beagle Club, silver cup for best beagle over 12 inches; silver cup for best beagle under 12 inches. Arm chair, best pair basset hounds. Best kennel fox-terriers, \$10; fox-terrier stud dog, \$10. Best kennel collies, \$15; collie stud dog, \$10. Cassell & Co. offer Vero Shaw's "Book of the Dog" for best collie. Best bull-terrier stud dog, \$10; kennel pugs, \$10; pug stud dog, \$10. City View Kennels, prize for best pug pup sired by Bradford Ruby. Specials are in for other classes and will be placed later, and specials will be in for the small breed classes.—S. R. HEMINGWAY.

IMPORTANT SALE OF ENGLISH SETTERS.—Mr. E. J. Martin, of Wilmington, Del., has sold his kennel of English setters, formerly known as the Goodsell Kennel, to Mr. Fred E. Lewis, of Tarrytown, N. Y., proprietor of the Blackstone Kennel. The sale includes the well-known pure Laveracks: Prince, Don Juan, Petrel III, Fairy II, Fairy III, and Daisy Laverack, as well as several puppies of the same breeding. Queen Petrel was included, but had strayed or been stolen and has not yet been found. This purchase will materially add to the strength of the Blackstone Kennel, which, as heretofore, is under the charge of Mr. Wm. Tallman.

AMERICAN-ENGLISH BEAGLE CLUB.—Editor *Forest and Stream*: The club will donate two silver cups, one for the best beagle dog or bitch in open classes over 12 and under 12 inches at the following shows: Hartford, New Haven, Boston and Newark. These specials are given to the open classes as most specials have heretofore been awarded to dogs in the champion classes, and by that means one or two dogs have won most all the prizes, which is unfair, as there is honor enough now, as a dog has to win three times before he can enter the champion class.

PUPPY GIVEN TO DR. GARDNER.—Editor *Forest and Stream*: During the winter of 1882 (possibly 1881) a person who imported sporting dogs gave to Dr. Gardner (of Canal street, New York city), in part payment for the latter's services, a black and white English setter bitch puppy. At the time of the transaction the bitch was so sick that it was doubtful whether it would live or not. If any one can give the address of the importer or of any one who knew of the transaction, he will confer a favor by addressing H. J. PIERRE (Winsted, Conn.).

BOUND BOOKS OF KENNEL BLANKS.—We have bound books of kennel blanks, each book consisting of 200 blanks of a given style, and can furnish these (postpaid 30 cents) for the convenience of those who have occasion to use a large number of blanks. In ordering be careful to state what particular series of blanks is desired, i. e., whether Names Claimed, Sales, Bred or Whelps. The arrangement of the blanks is such that a duplicate record of each note sent for publication may be retained for future reference.

HARTFORD DOG SHOW.—The following railroads have offered to carry dogs free for our exhibition: N. Y., N. H. & H., New York and New England, Hartford & Conn. Western, and Hartford & Conn. Valley. The Adams Express Company will charge double merchandise rates both ways, but we have made arrangements with other express companies, and special instruction cards will be sent exhibitors at their request.—A. C. COLLINS, Secretary. (Hartford, Conn., March 5, 1886).

ST. BERNARD IMPORTATIONS.—The Hospice Kennels have imported Mr. Henry Schumacher's smooth-coated dog Hector, whelped Feb. 20, 1884. Color, tawny with white markings; sire, Apollo. He was accompanied by a young bitch for Mr. W. W. Tucker, in whelp to Hector. The bitch Tony, from the same kennel, will leave Bremen on the 10th inst., consigned to the Hospice Kennels.

IRISH SETTER BITCH LOST.—A dark red Irish setter bitch, eight months old, with a little white on breast and a small showing of white on head, and a small scar near right eye, strayed or was stolen on Feb. 20. Any information that will lead to her recovery will be remunerated. Address R. Woodman, Faulkner Station, Malden, Mass.

NEW ENGLAND KENNEL CLUB.—Boston, March 8.—Editor *Forest and Stream*: Everything looks very favorably for our coming show. Entries close the 20th inst. In addition to our other deerhound class we have made Class 88A, deerhound puppies, dogs; Class 88B, deerhound puppies, bitches.—E. A. MOSELEY, Secretary.

NEWARK SHOW.—New York, March 5.—Editor *Forest and Stream*: Owing to new business connections, Mr. A. C. Wilmerding will be unable to officiate as judge of the spaniel classes at Newark. Mr. J. F. Kirk has kindly consented to act in his stead.—A. P. VREDENBURGH, Sec'y.

THE TOTAL number of entries in the *American Kennel Register* are 3451. The *Register* is booming.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.
Queen Ann By J. J. Walker, Ann Arbor, Mich., for fawn mastiff bitch, whelped Nov. 28, 1885, by McMahon (A.K.R. 550) out of Lady Neilson (A.K.R. 312).

Duke Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Duke Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dash Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dogs, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dundee. By J. A. Long, St. Louis, Mo., for black, tan and white collie dog, whelped Nov. 7, 1885, by Grosvenor (E. 15,076) out of Picture (Harold—Ruby III).

Sparkle. By J. A. Long, St. Louis, Mo., for black, tan and white collie bitch, whelped Nov. 7, 1885, by Grosvenor (E. 15,076) out of Picture (Harold—Ruby III).

Jennie. By Geo. Gardner, Allentown, N. Y., for black cocker spaniel bitch, whelped Feb. 14, 1886, by Bob Burdette out of Newman's Nettie (Dash—Cloe).

Mac Neilson. By H. L. Hollis, Wellsville, N. Y., for fawn mastiff dog, whelped Nov. 28, 1885, by McMahon (A.K.R. 550) out of Lady Neilson (A.K.R. 312).

Lotta Neilson. By H. C. Hollis, Wellsville, N. Y., for fawn mastiff bitch, whelped Nov. 28, 1885, by McMahon (A.K.R. 550) out of Lady Neilson (A.K.R. 312).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer bitch, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Dart Ranger C. By S. B. Dilley, Rosendale, Wis., for liver and white pointer dog, whelped Jan. 30, 1886, by Ranger Croxteth (A.K.R. 1047) out of Trix Royal (Vandevort's Don, A.K.R. 165—Jean Royal).

Fairy Lass. Black and white English setter bitch, whelped June 27, 1882 (A.K.R. 36), by E. J. Martin, Wilmington, Del., to Blackstone Kennels, Tarrytown, N. Y.

Dick Black. Black pointer dog, whelped May 2, 1885, by Peter Black out of Bessie, by D. W. C. Parker, Springfield, Mass., to W. H. Lewis, same place.

Daisy Black. Black pointer bitch, whelped May 2, 1885, by Peter Black out of Bessie, by Ed. Thomas, Springfield, Mass., to D. W. C. Parker, same place.

Peter Black. Black pointer dog, whelped May 1, 1880, by Pete out of Mah, by D. W. C. Parker, Springfield, Mass., to Dr. Jose Clairac, Havana, Cuba.

Man. White and lemon marking bull-terrier dog, whelped Dec. 4, 1885, by The Earl out of Little Nellie, by Frank P. Dole, New Haven, Conn., to Edward Plummer, New York.

Sir Obo. Black cocker spaniel dog, age not given, by Obo II. out of Blackie III, by J. P. Willey, Salmon Falls, N. H., to H. G. Charlesworth, Toronto, Ont.

Nor. Liver and white ticked pointer dog, whelped Aug. 1, 1885, by Duke Royal out of Lizzie Grace, by Elm Grove Kennels, South Norwalk, Conn., to W. S. Cobb, Jackson, Mich.

Star. Silver fawn, white cross on breast, Italian greyhound dog, whelped Jan. 8, 1885, by Fly out of Posey, by Jas. E. Hair, Bridgeport, Conn., to H. F. Greenman, same place.

Flash. Fawn greyhound bitch, whelped Aug. 13, 1885, by Sport out of a Custer bitch, by Warwick Kennels, Bridgeport, Conn., to G. R. Hair, same place.

Plantagenet, Jr. Black, white and tan setter dog, whelped May 3, 1885, by Plantagenet out of Matchless, by D. A. Goodwin, Jr., Newburyport, Mass., to C. B. Faxon, Dorchester, Mass.

Terror. Apricot fawn pug dog, whelped Aug. 5, 1885, by Santa Claus out of Juno, by D. A. Goodwin, Jr., Newburyport, Mass., to Nath'l Greeley, same place.

Nell Kelly. Orange and white setter bitch, age not given, by Coin out of Belfast, by C. B. Faxon, Dorchester, Mass., to D. A. Goodwin, Jr., Newburyport, Mass.

Gunn (A.K.R. 1538)—Morning Star (A.K.R. 1541) whelp. Black, white and ticked setter bitch, whelped April 25, 1885, by John Deitch, New York, to George Jarvis, same place.

Ted Llewellyn—Trusty Gladstone whelp. Blue belton English setter bitch, whelped Nov. 3, 1885, by George Jarvis, New York, to Walter B. Peet, same place.

N. N. Liver and white ticked pointer dog, whelped July 1, 1885, by Elm Grove Kennels, South Norwalk, Conn., to N. A. Dickinson, Chester, Conn.

IMPORTATIONS.

Pinthen. Rough-coated

THE DOUBLE CENTERBOARD.

Editor Forest and Stream:

Your article about double centerboard canoes in issue of Feb. 25 applies to me as much as any one, as my new canoe was perhaps the first of this lot to reach completion; yet I should hardly have attempted to answer your string of questions had it not been for the half promise in your concluding sentences to give in return for such answers some information about double boards. Now, though received in January, my new craft has not yet been aloft and I await with much anxiety the opportunity to test practically the two-board problem, and meanwhile am eager to embrace every chance to acquire knowledge on the subject; hence I will try to purchase such by an honest reply to your questions.

To begin with I had too little knowledge of canoes up to the A. C. A. meet of 1884 to form any opinion worth having on the centerboard question. At that time I had had experience only with the Atwood and was well enough satisfied with it. Shortly afterward I was seized with a fancy to buy a canoe then partly complete in a certain builder's shop. She had an iron plate of 35 to 30 lbs. in her and one trial of her filled me up with up with boards of that kind for inland river use, and I sold the canoe on the first offer at a sacrifice of about \$35. So much for experience.

During the season of 1885 I had numerous chances to try canoes of club mates, fitted with Radix boards, and though constantly becoming less and less satisfied with the Atwood, these trials were far from inducing me to change form for the newer form of folding board. In this state I reached the A. C. A. meet of last year.

As the shades of the first evening settled upon Eel Bay, a little lantern was seen dancing over the rough water to the southward, and as it drew in toward the beach a lusty hail announced the arrival of the Rear-Commodore. Those of us who helped haul up his staunch craft were not long in finding out that we had our hands upon something new under the sun, or—at that moment—moon weather, and it was past ten o'clock before the knot of interested examiners broke up to seek rest after a weary day of tent-pitching, pole-raising, trench-digging and the thousand and steen other duties which make the first day in camp so delightful. Well, as I fanned away the blessed mosquitoes and registered a vow never again to leave home without enough netting to make a racing mainsail, I told myself I had found the centerboard. A single blade of brass scarce 1-16th thick, weighing less than 5 lbs., offering the minimum of resistance to the water, making the boat make the canoe balance with manipulated by finger and thumb, its light cord leading to any convenient point out or inside of coaming, thus doing away with the imperative necessity for a shift of your entire person to adjust the board when perhaps you are leg-length out to windward and wishing you had a brick in your hat, or anything else to add a little weight on your side, the "vanishing point" of stability. At last I have found it. But just as I am dropping off to sleep the thought, starting me wide awake again, "but how does he make that canoe balance with the board stuck away forward that way? To be sure that question was asked and answered that the drop rudder balanced her, but somehow that don't satisfy. My canoe, with dandy only quarter the area of main, needs all her rudder down to equalize a board at least two feet further aft than Sofronia's." Well, I presume an after-board would fix it, but then what a bother.

Well, after I reached home once more, and had concluded that my happiness depended on Ruggles' canoe, the question of board was the hardest of all considerations to decide. I could not give up my dream of the charms of a light brass blade, yet feared to risk one far enough forward to leave the cockpit clear, with only the rudder aft to depend on, while I could not bring myself to accept the extra complication of a second board aft, with the sure necessity of hauling it up every time I wanted to come about. Then came the Lassic! I wrote to her skipper for a plan for a dandy one, and was not until he had sent me back answer to my objections that the after-board was ordered, and even then it was with the half acknowledged hope that the test would prove it unnecessary—like Sofronia—and enable me to take it out.

Now, Mr. Editor, you have my statement, and if you find it rather long-winded, please accept it as a punishment for calling me a flock of sheep. And please put me on record as being far from certain that this time next year will find me with a better canoe; also tell the rest of the flock for me to grow until they see how the new "blue" Mohicans turn out with double board in one and single in the other. Now, send along your "more to say," and at same time tell us who it is who has discarded the drop rudder. If he finds any reason for so doing in fresh water he must be more ingenious than

READE W. BAILEY.

THE TROPHY AND A. C. A. DUES.

Editor Forest and Stream:

A principle that has been put forward first, last and all the time by the officers of the A. C. A. is that no prizes of money value shall be offered. The rules state that A. C. A. prizes shall be flags. Every effort has been made in the past to prevent "mug hunting." An A. C. A. prize certainly means one that the Association pays for. The Association has not paid for the trophy. Perhaps a hundred members have subscribed, and two hundred more may send in \$1 each. Even then the trophy will be paid for by a minority of the members, and why should those who do not subscribe have any claim on the trophy?

It is proposed to have a valuable prize presented to the Association for a sailing contest. The Association of course can and did appoint a committee to look after the matter, and it has a right to say under what conditions the prize shall be raced for if accepted. It would be foreign to the policy of the Association to decree that this prize shall be awarded to the winner of the first race—or any race or series of races—to become his personal property. By a rule of the Association nominations for prizes are placed in the hands of the regatta committee. Why should any exception be made in the case of the trophy? The regatta committee's actions are all subject to the approval of the Association as represented by its executive committee.

I submit the above for consideration since a member of the executive committee published last week in your valuable paper a letter over his own signature that seems to me to show that there has been a general misunderstanding as to what this trophy is, what it is for, and what the Association has to do with it.

Three gentlemen from England are expected to be at the meet next August. To add an attraction to the programme (an extra race or races in which they can take part), a few members of the A. C. A. proposed that such members as wished to should subscribe for a trophy to be put up as a prize for such a race, leaving to the Association, very properly, the labor of naming the conditions. These are the facts. Why the regular procedure in such cases is not followed? The matter will have to come into the hands of the Regatta Committee finally. If they are instructed what to do they cannot be held responsible for the result. "Too many cooks," etc.

Another A. C. A. matter has come to my notice. Several clubs have taken action at their meetings disapproving of the Association for increasing its dues to \$2 a year. This is simply a matter of business. If the Association cannot pay its bills with a \$1 fee it must either reduce expenses or increase the dues, the members at the last meet chose the latter course. As only a small minority of the members can attend a meet, and as those who were absent last year did not hear the secretary's report, and therefore do not know why it was necessary to raise the dues. To convince them of the necessity of the action then taken, it is but good policy to publish in this year's "Annual Book" a full treasurer's report, and thereby show them that figures cannot lie. Had this been done last year, probably the question never would have been raised, and certainly no member would be entitled to know for what the funds of the Association have been expended. This may give our gallant secretary a little more work, but he certainly will not grudge the time thus occupied, and every member will then be convinced, no doubt, that the increase was necessary and acted accordingly.

C. BOWERY VAUX.

CAMBRIDGE C. C.—Editor Forest and Stream: The Cambridge C. C. (Cambridge, Mass.), organized June 9, 1885, held its fourth quarterly meeting for the election of officers on March 4. The officers for the following term are: Commodore, John B. Jacobs; Vice-Commodore, Clarence F. Glover; Secretary and Treasurer, Rupert M. Gay. The club signals are a white burgee with a blue field, white center and red letter C. We have had our headquarters at the Riverside Boat House during the past season, but are now thinking of building a house of our own. Several of the members intend to make a cruise upon the Charles River this summer. We have all had some experience with heavy canoes on the numerous dams in our vicinity, and agree with the South Boston Club in wanting lighter ones. Three of the members have concluded to build new ones for river work, 10ft. by 26in. and 6in. deep of canvas, and they plan to have the centerboard over 25 pounds heavier. We would like to meet representatives of other clubs in the vicinity to arrange for cruises and holiday trips. All communications should be addressed to R. M. Gay, 107 Washington street, Boston, Secretary C. C. C.

NEW YORK C. C. CHALLENGE CUP.—The secretary of the N. Y. C. C. has received the following letter in regard to the coming races: 72 MARK LANE, E. C., Feb. 17, 1886. DEAR SIR—Your letter of Jan. 19, containing modified conditions of the proposed international canoe race has been duly laid before my committee and approved. It is most probable that three of our members will intend to compete for your Cup in the latter part of August, but I shall not be authorized to send you a formal challenge until after the spring meeting of this club on the 29d inst.—T. G. F. WINNER, Sec'y R. C. C.

THE ROYAL C. C.—The spring meeting took place on Tuesday last at the Caledonian Hotel. Much regret was expressed at the retirement of J. W. Clayton from the mateship, and a vote of thanks was passed for his kindness and liberality to the club during his term of office. Mr. Beal's proposal was unanimously adopted to the vacant post, and the following list of fixtures were made for 1886: April 17, Hendon; sailing race; sail area limited to 75 sq ft. April 24, Hendon; first class sailing. May 1, Hendon; challenge cup. May 19, Kingston; half-mile paddling. May 26, Kingston; one mile paddling. June 5, Kingston; two miles paddling. June 12, Teddington; sailing; any canoes; girth measurement. June 19, Teddington; first class sailing. June 19, Teddington; long paddling race. June 26, Teddington; annual regatta. July 9, Teddington; sailing race; under T. V. S. C. measurement and time allowed. It was resolved that a camp be held in the vicinity of Teddington Reach on the Friday before the regatta, and that a prize be offered for the best set of cruising appliances, with canoe, exhibited on this occasion. On the motion of T. J. Holding, a sub-committee, consisting of F. E. Prothero, W. P. Shadbol, Major Roberts and T. H. Holding, was appointed to collect information for the furtherance of canoe cruising and the perfecting of cruising appliances. It was also decided that a challenge should be at once sent to the New York C. C. race for the handsome international cup offered by that club, and the meeting then closed.—London Field, Feb. 27.

THE WESTERN CANOE ASSOCIATION.—A meeting of the Executive Committee of the Western Canoe Association was held last week in Cincinnati, when the arrangements were perfected for the meet at Ballast Island, Lake Erie, beginning July 1 and continuing to July 26. The Lake Erie yachts will rendezvous at the island during the meet and hold their annual regatta under the auspices of the Cleveland Y. C. C., whose commodore, Mr. Geo. Gardner, is also commodore of the W. C. A. The Inter-Lake Yachting Association, which met at Toledo on the 6th inst., with representatives from Buffalo, Erie, Cleveland, Sandusky, Detroit, Chicago and Milwaukee, will probably hold their regatta off Ballast in the middle of July. The Western Amateur Rowing Association will, it is expected, accept the invitation of W. C. A. to have their races at the same time and place, so that the prospects for a brilliant gathering of sails, oars and paddles are very encouraging. The W. C. A. has now on its membership list nearly one hundred names, which will no doubt receive large additions as July approaches. A pamphlet containing the programme of the meet, lists of classes, races, amusements for each day, etc., with full information respecting accommodations and the best means of reaching the island will be published in a few days.

OAKLAND C. C. CRUISE.—While Eastern canoeists were skating and coasting their luckier brothers of the far West were enjoying the opening cruise of 1886, on the waters about San Francisco. The Oakland C. C. started on Feb. 30 at noon, a fleet of ten canoes; Mysie, of the Columbia; the Black Dwarf, White Cap, Zephyr, Volant and Hattie Belle started from the club house on Oakland creek and beat down to its mouth, the latter two boats only going a couple of miles. With a good breeze Goat Island was reached at 4 P. M., camp was made and the night was pleasantly spent. The destination next day was Sheep Island, but a foul tide and head wind made it impossible to reach there, and the fleet headed for Hunter's Point, reaching it at 11 A. M. Embarking at 2 P. M. after a good dinner, the canoes headed again for Sheep Island, but met with rough water in Mission Bay. Again the course was changed and the fleet headed for Goat Island, where a second night was passed. On Monday morning a party of ladies and gentlemen visited the canoeists in the steam launch of the revenue cutter Hassler, and after a day's picnic on the island they towed the canoes home, ending a very pleasant cruise.

BROOKLYN C. C.—The following programme of races has been arranged for 1886: "Challenge Cup" sailing races will be held from May 1 to Sept. 25, probably every two weeks. Sailing races for Classes A, B & C. Class C to include all boats outside A. C. A. sailing regulations (sneakboxes, etc.), will be held on May 15 and Sept. 15, at 3 o'clock, P. M. Paddling races will be held on the following Saturdays: May 1, June 12, July 10, Aug. 7 and Sept. 4, at 3 o'clock, P. M. A. C. A. sailing regulations will govern races. Sailing and paddling races in May and September to be "All around Record" races. Prizes will be given for sailing, paddling, and for record races. Distances: Sailing, about 3 miles. Paddling, about 1/4 mile. If members of other clubs compete, special prizes will be offered.

SMOOTH SKIN CANOES.—Captain Ruggles, of Charlotte, is busy with a number of orders for his carved hull canoes. Com. Rathum's new boat will be 15ft. 8in. by 30in. Sofronia will have an after board added this season. Prof. Mellen will have a new canoe, and Mr. Ruggles is also building one for Mr. D. C. Platt, one for Messrs. Walters and Stewart, and one for Mr. W. A. Borden, besides some open canoes and rowboats.

BUCKTAIL CANOES.—We advertise in another column a duplicate of "Nessmuk's" famous canoe, which he is now using in Florida. The boat is a new one and has never been used.

PEARL.—Mr. Baden-Powell, of the Nautilus, has laid up his 175 ton yawl Pearl at Shoreham for the season as he will visit America with his canoe this year.

Yachting.

MORE YACHTS FROM BOSTON.—It is time that New York looked to her laurels if she is to retain the place she has so long claimed as a leader in yachting. Hitherto she has had little to fear from Eastern yachts, but last year the Puritan's success gave all the fame of the races to Boston. This year she is launching out for further victories. Besides Puritan and the new Mayflower, another large yacht is now promised, a schooner from Mr. Burgess's designs for a gentleman in Providence. This new boat will resemble the other two in model, being 38ft. over all, 28ft. waterline, 22ft. beam, with lead keel and centerboard. Lawleys will build her, and she will be ready in time for the Newport races. The same firm will also build a third class sloop for Mr. J. S. Fay, of Boston, from Mr. Burgess's designs.

YACHT STOVES.

Editor Forest and Stream:

I was the originator of "W." who wrote in favor of a gasoline stove. About two weeks ago another "W." criticised this class of stoves. I stand prepared to prove to any one that the gasoline stove will produce four times the heat an oil stove will and that it is less liable to accidents, and that those accidents which do occur are less serious in their results. It is probably not known by most people that if gasoline be spilt on a floor and ignited it will burn up the same as alcohol and not leave a trace of the flame. With the stove I use an accident is impossible, and is a wood-jacketed can is used for storing the gasoline in, no accident can happen there. I am now having made from patterns of my own design for my own use, a gasoline stove perfectly adapted to single-hand craft. The kind before described in these columns was designed for heating irons, not for cooking. Mine is made for cooking only.

I have read with much interest the cruise of the Coof, because it is over water which I have cruised a number of times. The annoyances Mr. Kunhardt has met with are those that always beset one in strange waters. I fear that the effect of reading the cruise will deter others from making the trip, which in the summer time is one of the most beautiful among eastern waters. I wish to say here that the Delaware from Philadelphia to Trenton is from one-half to a mile wide, and that there is a 14ft. channel to Bordentown and 5ft. to Trenton at low water. A boat drawing 8ft. of water needs no chart. There are no shoals of any importance to such a boat, one opposite Florence and the other at the mouth of Lancaster canal, and there is a deep, broad channel opposite each. Moreover, the river is buoyed to Trenton wherever there are turns in the channel, and at night the river is lighted by beacons the same as our western rivers. When I state that canal schooners carrying 300 tons of coal navigate the river at all tides, in all winds, and by day and night, I think that is sufficient to show that little trouble should be met with by a 25ft. boat.

CHAS. L. WORK.

ATLANTIC.

THE extreme cold weather of last week was not favorable for outdoor work in such an exposed place as Bay Ridge, but considerable progress has been made in the new yacht. The two main keel logs have been bolted together, the slot has been cut and the head-edges of the trunk bolted in place; the several pieces forming the forward part of keel have been bolted to the main keel and to each other. The main keel pieces have had a short piece scarfed to them, with a wood chisel, carrying out the shape of the lead keel below, and a heavy oak deadwood or keelson, running from the sternpost nearly to the after end of the trunk above the main keel. The stem, apron and knightheads are bolted together, the horn timbers are in place on the sternpost, the rudder stock is out, a fine stick of locust, and all the frames are bolted together. The casting of the keel began last Saturday. A box was made of 3in. plank, the inside being an exact counterpart of the lead keel. This box was lined with asbestos paper and laid in place upper, or open side upward on blocks placed to receive it. The keel structure was then made ready, the iron tiers being driven through from below, ready for the turnbuckles, the composition screw bolts being also driven, projecting below, and a number of blind bolts, also of composition, being driven from below, with their headed ends left to project into the lead. A wooden cove for the slot was placed in the mould and the keel was then placed in position, the iron chains were passed at intervals around the box and keel and set up by wedges, holding both together. The lower side of the keel thus forming the top of the box. The gates for pouring the lead were about 4x6in. and were cut at intervals of 2 or 3ft. along the upper edge of the keel box. On each side of the keel was an iron cauldron 5ft. in diameter, supported on iron blocks, leaving space below for a wood fire. As the lead melted it was carried in from ladles, holding about three quarts, and poured in the various parts, fresh pig being constantly added to the cauldron. About half the lead was poured on Saturday and the balance on Monday, and when the planks were removed at noon the casting was found to be in excellent shape, smooth and solid. Men were set to work at once with chisels and adzes to cut away the gates and to flush up the surface. The stem, stern and frames are going up rapidly, and all will soon be ready for planking.

THE PHILADELPHIA TUCK-UP.

Editor Forest and Stream:

The numerous inquiries I have received about the Philadelphia tuck-up, again show that you have recourse to your columns. It is very evident to my mind that there is a demand for a larger boat for cruising purposes than the canoe, and while I am not prepared to say that the tuck-up is the coming boat, I will say that so far as my experience goes it is the most roomy and comfortable boat yet brought out, and I have merely opened the subject hoping that it would bring out others whose experience had been greater than mine.

As you know, I am not a boat builder, neither am I interested in pushing any manufacturer; therefore, whatever information I may give must not be taken as authoritative, but simply as my individual experience, growing out of the ownership of perhaps a dozen of these boats.

As to cost, the builders of these boats build only for local use, and the boats are usually turned over to the owner in the wood, i. e., not painted. I will mention, however, what I have paid to have the boats completed.

The cost of the hull, specified, no knots or butts in planking; whenever any two pieces of wood are placed together, they to be first painted over; copper riveted and no iron to be used on hull, combing of walnut fastened on with nickel plated screws, \$75. If no stress is laid on these specifications, \$65 will buy the hull.

Painting the hull and polishing combing is worth \$5, the brass work for hull and rigging is worth \$10, if polished, \$15, and if nickel-plated \$30, two pairs of iron finches, \$4.

Spars for 15ft. sail, 30ft. sail, 30ft. sail \$4, shellacing same \$1; sails 15ft. x 10, 30ft. x 10, running rigging and making boat ready for use, \$3; making a total for the finest class of boat, with two sets of sails, of \$133. Of course only one suit is necessary. The 15ft. sail is the regular club racing sail, and is only carried in smooth water and moderate winds. Any one who wants this sail must also get the 30ft., which can be carried anywhere by a crew of two.

In Philadelphia sails are called by the number of yards of 27in. wide canvas contained in them. Allowing for the center bight and seams, corner pieces, etc., a yard of canvas makes 6 sq. ft. of sail surface; so in ordering from a Philadelphia sailmaker you will call for a 15-yard or a 26-yard sail. I doubt if many of them would know what to make if you asked for a 30 or 16ft. sail.

I am aware of no talk to a canoeist of anything larger than the cooie shell he is accustomed to drifting around in will bring down on my poor head a volley that ought to annihilate me; so to let these gentlemen down easy I will mention that there is in quite extensive use on the Delaware River a double-ended, 15ft. boat, having about 4ft. beam, that is in almost all respects a modern canoe broadened to that beam. This boat is known as the "ducker," and was originally designed for pushing over the marshes after reed beds. It is a very curious specimen contains the remains of the nonsinkable, uncapsizable sharpie, Vidette; which we commented on several times last winter (1884-'85). The Vidette will be remembered as a sharpie of the usual built, with a centerboard and also a keel of lead 2ft. deep and weighing four tons. After being in service for a part of the season she was hauled up at Mumm's for two more tons of lead on her keel and the removal of her centerboard. The writer she has been again hauled up, her sides, flaring as in all sharpies, were opened near the bottom, regular frames were inserted and bolted to the bottom, making a round bilge and slightly flaring side, and these were planked over, a new rabbet being cut in the stem. Except her flat bottom, the sharpie had entirely disappeared, and in its place is something that is neither sloop nor cutter in model, an anomaly that it would be very hard to class. By the change her keel was increased beam, and the weight was increased, and no more room below or on deck. The rize will also be changed, a larger mainmast and topmast being substituted. The builder has done his part well, and made a very good job. There are various ways of building a yacht, and this is one of them. Of course the outlay over such haphazard experiments is considerable, and the final results are certain to be unsatisfactory; but if the owner is suited it is no one else's business.

U. L. WORK.

MYSTERIOUS DISAPPEARANCE OF A SHARPIE.—The visitor to Mumm's yard at Bay Ridge will find on the railway a curious craft, whose hull is enough to puzzle even an expert. A schooner-rigged craft of about 60ft. over all and 14ft. beam; she is noticeable for her flat floor, round barrel sides, flat run, and very deep keel of about 3ft. A striking peculiarity in build is also observable, the planking on her flat bottom runs thwartship, while that on her sides runs fore and aft in the usual manner. A look at the name on her stern only increases the mystery, and nothing short of an explanation from some one conversant with the subject will convince the inquirer that this curious specimen contains the remains of the nonsinkable, uncapsizable sharpie, Vidette; which we commented on several times last winter (1884-'85). The Vidette will be remembered as a sharpie of the usual built, with a centerboard and also a keel of lead 2ft. deep and weighing four tons. After being in service for a part of the season she was hauled up at Mumm's for two more tons of lead on her keel and the removal of her centerboard. The writer she has been again hauled up, her sides, flaring as in all sharpies, were opened near the bottom, regular frames were inserted and bolted to the bottom, making a round bilge and slightly flaring side, and these were planked over, a new rabbet being cut in the stem. Except her flat bottom, the sharpie had entirely disappeared, and in its place is something that is neither sloop nor cutter in model, an anomaly that it would be very hard to class. By the change her keel was increased beam, and the weight was increased, and no more room below or on deck. The rize will also be changed, a larger mainmast and topmast being substituted. The builder has done his part well, and made a very good job. There are various ways of building a yacht, and this is one of them. Of course the outlay over such haphazard experiments is considerable, and the final results are certain to be unsatisfactory; but if the owner is suited it is no one else's business.

CRUISE OF THE COOT.

XV.

It may be well to mention that the U. S. charts are known by the small numbers engraved above the margin in the upper left hand corner, and not by the large figures in the title, which refer to the copper plate only. The Delaware from head of navigation to Liston's Point, some twelve miles below Delaware City, is plotted to a scale of 1-50,000 on chart No. 128, the stretch from Trenton to the northern limits of Philadelphia occupying a corner by itself. I found it convenient to cut this oil, and the rest was sliced up at Wilmington. A correspondent in FOREST AND STREAM takes me to task for this sub-division on the plea that cross bearings, etc., cannot be taken. But as I cut the charts this objection does not hold, for each section was complete in itself along the course of the river. In the lower Chesapeake the width of the charts became so great that they were cut across and also up and down the middle of the bay, or nearly so. The bay is, however, twenty miles wide, and the eastern shore being low is below the horizon, so that no cross bearings can be taken. The prevailing winds being westerly, the Coot was navigated down the western shore, and had no concern with the eastern portion of the Chesapeake. Had she at any time stood across, the eastern half of each length of chart could have been produced from the cabin and locked in the frame before closing in with the shore sufficiently to require its aid, the water in the middle of the bay being so deep as to put the Coot off soundings while the change was being effected.

"Piscator," another correspondent, brings up the time-honored and never-to-be-solved problem about stoves. All manner of propositions have appeared to do away with the oil stove, but, so far, none seem to have earned any recognition. The oil stove is in some respects a nuisance, but much depends upon certain small provisions and the skill of the person manipulating them. I have found nothing as yet which is their equal. The chief objection to the oil stove arises from the purchase of affairs devised for use on shore. In the nautical stove the bottom should be of cast iron, cover and bottom should be cast in one, so as to prevent leakage, due to the seam where the cover is screwed on to the base containing the fluid. No matter how the boat may jump about, no oil will slop over in the solid bottom. A second precaution is to seal up the aperture or bung hole in the rear, bore a fresh hole in front and solder a small funnel three inches high into the same. This does away with turning the stove about every time you wish to fill, and the funnel gives notice when full and prevents the oil jumping out. Third, set the stove in a drip tray, having an edge of one or two inches turned up all round. Keep the kerosene in two-gallon cans in the cockpit locker. If provided with brass hoods to the tin spout and a screw cap on top, perfect control is insured. Then only a little care is required to live along weeks without spilling a drop. What trifling smell there may be you soon become used to, and kerosene in any shape is not at all unwholesome. I should strongly advise two small stoves rather than a large one, so that two articles may undergo treatment at the same time. There are several stoves of this description in the market, among them the Dietz hot blast and the Westlake & Richards, of Chicago, whose office is in Fourteenth street, west of Broadway. A single wick will quickly heat up the cabin of a small boat in the coldest weather. A few augur holes and a can of water kept at a simmer preserve fresh and wholesome air. Oil of high proof can be procured at every country store. The expense all told will not average over 7 cents a day in winter and under 5 cents in summer. Not the smallest advantage of the oil stove is its ever-ready state, the absence of trouble in preparing for a neat and the sudden stoppage of all heat by merely turning down the flame, leaving no metal or embers to cool down. The oil is handy in other respects. It will remove grease, paint or red lead from the hands and heal the skin. It is also available for bruises or stiffness. This by way of parenthesis.

Chesapeake Bay is a noble sheet of water, more like an inland sea, offering every variety of experience afloat and scenery along shore, while ducks, fish, oysters, clams and crabs abound and are to be had for the trouble of pursuit. To the great majority of New York yachtsmen the bay is practically unknown except the name, otherwise its beautiful natural attractions, its picturesque harbors, great bell-mouthed rivers and salt-water arms would be visited by squadrons of vessels in spring and in fall. Imagine Long Island Sound doubled in length, carrying its greatest width for two thirds of the distance and the shores indented with scores of lateral branches like Northport, Narragansett, Buzzard's Bay and Gardiner's, but carrying a depth of ten to twenty feet clear up to their heads. Into this great body allow river upon river to flow, some of them measuring seven miles across and deliver to each of these numerous tributaries wider than the Thames at New London, many in turn supplied by a system of ramifying arms like the branches and twigs of a tree, the arms as big as the whole of Northport Harbor. Line all these with bold bluffs, now clad with the verdure of forests, now tilled in broad fields of prosperous farms, now steep and cliff-like in their frowning ascent from the sea. Dot in great cities, towns, villages and settlements, nestled in the hollows at tide line along the beach, and invariably moor a fleet of smart, rakish craft of moderate size under the lee of a sandy hook or in the turn of a sheltering creek with others standing off and on, their dredges towing astern, and keen-hulled canoes with a strong trace of poetry to their bulks and rig bending rail awash to brisk breezes, sundry ocean steamers and large square-riggers and freight schooners innumerable bound out, bound in, an ever-changing panorama of life upon the scene, and you will have something like the attractive picture which greets the eye of the cruiser in the majestic Chesapeake. Imagine Long Island Sound on a much greater scale, more picturesque and nobler even to awe inspiring, such is the greatest bay on our coast, the paradise of yachting. If New Yorkers and Eastern men were familiar with the prospects of their own country instead of being provincials whose limited vision sees no further than the comparatively narrow confines of Long Island waters or Massachusetts Bay, cruising in the Chesapeake would be fraught with benefit to yachts and owners. In the great bay vessels must be seagoing in the harbor and at fittings, for they may have to meet turbulent waters and fresh gales with long distances to sail from shelter to shelter. All the trading vessels of this region are well built, with models, spars, gear and iron work especially adapted to seagoing work. It is refreshing to contemplate the smacks and carriers, bold, high sided, with deep waists and stout seamanlike air aloft. They have an originality about them which is distinctively American. In type and outfit they are to the manor born, unlike the products of the art in New York waters, which are but servile copies of the importations of the old Dutch settlers two centuries ago. While the smack or working boat and even the fishermen of the East are homely to a degree with a Cheap John look to spars and gear, lacking in "blood" or "strain," the craft of the Chesapeake are all of them slightly, well proportioned, and well fitted for any work. Some of them are smart and stylish, with an air of "go" and a cut to their rig which would figure with credit in any fleet of yachts. The Baltimore pungaie, with her beautifully moulded head, pure sheer, clean run and high luck, surmounted by a rig jaunter than that of the famous old America herself, sails equally as flat in their set, is a sight as good as a feast.

The Buckeye, another special creation of the Chesapeake, though scarcely known to Northern men, flourishes herein great numbers. And well she may. A more serviceable, handier, faster, economical type of working boat has never been devised. Her merits are such that she ought long ago to have been well known to every port on the coast. Fast at all times, she excels in ugly weather and a chop sea. Long, narrow and often shoal, with great length of keel, she has the steady behavior of a cutter, and with a load aboard, launches along through the seas in a fashion which would make nine out of ten of our sloop yachts look sheepish. She will point and fetch with the best of them. One man and a boy make up the crew all told of a 60ft. Buckeye, and I know of a 50ft. boat habitually sailed by her owner alone. Besides these, there are all manner of canoes, half-decked and open, slightly in form and with trim and tastefully cut sails. The regular schooner is, of course, well represented, and on an average far ahead of the Northern conception of such craft. In short, the high standard attained in the local practice in shipbuilding is a perfect revelation and a most agreeable surprise to the man whose ideas have been wrapped up in New York as the source of all that is bright and original. A cruise to the Chesapeake strips the eyes of the provincial from the great metropolis, and he learns that the rest of the world has not been asleep, even though it is not huddled into a Babel as big as his own city. The vessels of Baltimore and the South are of such interest that I hope to give further details and plans of a technical character, as soon as the expected "warm weather" puts in an appearance.

Sloops are not in great favor above York River, but are more popular about Norfolk and the James. Catboats are unknown. They have been tried, but were found unhandy and unsafe in the open waters of the bay. On my voyage down, the Coot was the recipient of many sarcastic pleasantries. "Say Cap, what is the matter with your jib." "Left your jib home to be washed, Cap?" "Stick out your jib why don't you, Cap?" Be it known that the population in these latitudes answers to the appellation "Cap." To be a man of any account, you must own a boat of some description. Just as the farmer inland must have his wagon and team, the boat is in the Chesapeake regions an implement of livelihood quite as essential. To be boatless is to be without standing. A large fraction of the population goes through life habitually in oilskins. A sou'wester and rubber boots admit you to good fellowship and full confidence at once, even to the extending of credit in the country stores, for a man so appareled must needs be a "Cap," and that is passport enough for your responsibility.

From Elk Point at the confluence of Elk River and the Susque-

INTERIOR PLANS OF "MERMAID,"

hanna to Cape Henry, the southernmost extremity, Chesapeake Bay measures 160 nautical miles or 190 statute miles. From Elk Point to Bodkin at the mouth of the Patuxent, on which Baltimore is situated, the distance is 23 nautical miles. From Bodkin to Severn River, upon which is located Annapolis, the capital of Maryland, the distance is about 12. From the Severn to mouth of Patuxent 42. Thence to the well known Point Lookout of the Potomac, 20 nautical miles. Thence to the Rappahannock 28. From there to New Point Comfort, known more frequently as New Point, it is 17, and from New Point to Old Point Comfort, Hampton Roads, 24 nautical miles. The bay is 8 nautical miles or 9 1/2 land miles from Bodkin Point to the eastern shore, narrows to 6 miles from the Severn across to Kent Island. Off the Patuxent it is again 8 miles; off Point Lookout 14. Below this the greatest width of 22 nautical miles or 25 land miles, is found. It narrows again to 10 off the Rappahannock and to 13 off New Point. At Old Point it expands once more to 17 across to Cape Charles. The mouth of the bay is 10 nautical miles from cape to cape. These figures hardly give a fair idea of the breadth of the waters, because the mouths of the great rivers contribute so much to an increased reach for the wind and sea that they must be taken into account. In a northeaster, for example, the sweep down the Patapsco, a river over three miles wide at the mouth, and across the bay is actually 20 miles where the bay is but 8. A similar wind has a sweep out of the Potomac and across the bay of over 30 miles. As the Potomac is 7 miles across the mouth, the disturbance out in the bay during a northeaster is something never approached in Long Island Sound unless during an easterly gale in its widest part. From the head of Choptank Bay to Cape Charles there is another clean sweep of 30 miles. If it blows from the northward it is 15 miles from New Point to Back River, the next harbor on that shore, if you are familiar enough to risk its entrance in the high steep sea tumbling over the flats through which the narrow winding channel leads. From north or south, wind and sea are unobstructed for stretches of 75 miles. If the gale is on shore, from east round to S. S. E., the Atlantic rollers pour in the cape and 40 miles up the bay or 35 miles into "the Roads" of Haverhill. From these figures it will be seen what a mighty sheet the Chesapeake may seem to be in ugly and untoward circumstances. I have heard old smackmen here freely say they would sooner ride out a blow in the longer swell of the open Atlantic than in the short and hollow chop of the bay, ostensibly sheltered water.

Navigating such an inland ocean is serious work compared to which the backing and filling about Long Island Sound is trivial indeed. Add to this the distance of 15 to 25 miles between available harbors in the Chesapeake, and the convenience of a hole to run into every 3 to 5 miles in the Sound, and the risks grow to correspond, especially with a small boat, to which 25 miles is a good day's run, and which could never think of bearing to windward half that distance against a high sea, and often not an inch in bad weather. Now attempt to navigate the bay in the dead of the winter, the severest known in thirty years, with ice and cold to battle against besides, and during an unprecedented period of severest gales, and try to do that single handed with nine hours daylight only, and you have the tough job the Coot tackled—and accomplished, without serious accident of any kind, but with much hardship, exposure, and considerable disgust at the lack of windward powers of a small shoal-bodied beamy boat. Likewise, it must be confessed, with immediate fear of a capsize at times, when it was impossible to round to or to get the canvas off.

The Chesapeake is charted in six lengths, beginning just above the entrance of the Delaware Canal into Back River, one of the eastern tributaries of the noble Elk. The charts are numbered 36, 35, 34, 33, 32 and 31 in the titles. The latter takes in the Elizabeth River with the port of Norfolk, Hampton Roads, the Capes, the mouth of the James and Hampton Creek. These charts do not cover the rivers such as the Potomac, Patuxent, York, etc., except their lower reach as they empty into the bay. The scale is 1-80,000, which is of sufficient detail for all practical purposes, though harbor charts can also be had. The price of the charts is fifty cents. The improvements to the "aids to navigation" have been of such recent date that care must be taken to buy only "corrected" charts up to the latest date attainable. Mine were corrected up to end of 1883, but were not perfect. Several lights, notably those of Sandy Point, half way between the Patapsco and Severn and Smith's Point, southern cape of the Potomac, have since been removed to the extremity of the outlying shoals, the old towers still standing on the shore. Some of the minor harbors have also been changed. These making the voyage in small boats should not rely altogether on the charts, but supplement them with information from local luminaries, being careful not to place implicit trust in their counsels. Though well meaning, some of them like to appear wise in your opinion and assent readily to what you wish. The nomenclature of small holes and inlets is also uncertain. Different persons know the same place by different appellations not put down on the chart. Many small creeks, which afford much needed shelter between regular navigable harbors are not marked with soundings or names at all on the charts, being beneath the dignity of the latter. Others which are located by the government survey are now closed up with bars. Around Point Lookout, for instance, two small inlets are shown on the chart, half way between the Point and South Creek, five miles up the river. These I could not find, the beach being unbroken the whole distance. I believe Professor Bixby, while cruising over the same ground in his sloop *North*, went on the same sill-hunt with like results. On the other hand, Little Wicomico, below Smith Point, is not sounded on the chart. Yet a small boat drawing 3 ft. can get in on the ebb without trouble with a leading wind or by poling and sculling. At top of tide even 5 ft. may find water enough. Once inside there is a fine bay, with good anchorage. The lower inlet shown on the chart is closed for anything but canoes. This harbor was called simply Little River by the natives. The nomenclature of the Chesapeake is comparatively simple and amiable. Any number of Back Creeks, Smith and Sandy Points, Little Rivers, South Rivers, Deep Creeks, Plum Islands, etc. are scattered broadcast along the shores. Had some of the Indian nomenclature been retained, confusion would have been less and good taste not so offended. Around New Point Comfort, which affords only a lee from north and east, it is well to know that there are several creeks in which a small boat can find shelter. No soundings being given, I took the risk of a night under the Point and escaped a lee shore in a young hurricane by only a few hours. Since the chart laws this harbor, which can carry 5 ft. in the creeks without trouble. They are in the big cove inside of the Point. Deep Creek, just round the Point, has only 2 ft. of water, though it is marked with prominence on the chart. Governor's Run is said to be another refuge on the long stretch between Herring Harbor and the Patuxent. St. Jerome is the proper harbor for small boats to make when approaching Point Lookout from the north. The channel is staked and inside is the pier and establishment of the Fishery Commission. The chart shows this harbor, the entrance to which is well marked. Horn Harbor, however, similarly located with regard to New Point, has not even soundings, though buckeyes crawling ft. go in and out, I am told. Thus, it will be seen that much can be learned by pumping trustworthy local sources and nights spent in snug anchorage grounds instead of putting up with open roadsteads, if sailing by chart only. Concerning the eastern shore I am unable to speak. It has many large, outlying shoals, and is difficult to approach, with the exception of the principal rivers, notably the Choptank. In its upper windings there are many interesting and pretty towns on the eastern shore, such as Cambridge, Oxford and Easton, well worth a visit, and I hope some day to steer my bark up that coast on a general voyage of discovery. No doubt some readers

of *FOREST AND STREAM* are quite familiar with the lay of the land and caught desired information. In Rothrock's "Vacation Cruises" the shore is extensively described. C. P. K.

MARINE GLUE.—This substance, though little known in America, is in general use abroad, not only about yachts and boats, for which purpose it is specially adapted, but for such purposes as coating galvanic batteries, and for all waterproof joints. It is used exclusively in England for yachts' decks, instead of white lead putty, the advantage being that it is elastic, expanding and contracting with the wood, and thus leaving no openings for the water. The deck seams are usually a little wider than is usual here, to allow a good body of glue. No grease must be used on the caulking iron, but in large work the latter may be dipped in naphtha, water, or coal oil instead of lased oil. The presence of grease on the wood will prevent the glue adhering. The method of melting marine glue is as follows: Cut the glue into small pieces, melt in a pot or cauldron over a moderate fire, keeping it stirred now and then. When the glue is all melted the heat is about 212 degrees Fahr., but rather too thick to run freely, and if used in this state air bubbles may arise, therefore it requires boiling and stirring a few minutes longer, and should be used at a heat of 250 to 300 degrees Fahr., it then becomes perfectly liquid, and should be used as quickly as possible. The glue never boils over into the fire like pitch, but the contact of flame will ignite it, and it will burn entirely away. Should it take fire it will be covered with a carpet of cloth which will smother the flames. Marine glue is also largely used for double skin boats, a layer of muslin being laid in glue between the two thicknesses of planks. The makers are Messrs. Jeffreys & Co., whose address may be found in our advertising columns.

OSWEGO Y. C.—A meeting of the Executive Committee of the Oswego Y. C. was held Feb. 26. Commodore Phelps appointed July 3 as the day for the start on the annual cruise, and Charlotte as the port of destination. The yachts of the Royal Canadian and Toronto Y. C. will be invited to meet the Oswego fleet on the one hundred and tenth anniversary of our independence, and the event will be duly celebrated. The initiation was raised from \$10 to \$15. The Commodore appointed the following committees: Regatta Committee—Chas. N. Worts, chairman; Robert S. Sloan, William Gordon, Fred Coad, Jas. D. Henderson, William E. Lee, Allen Poucher. House Committee—John D. Phelps, chairman; Geo. N. Burt, Nicholas C. Goble. Committee on Admission—Elliot B. Mott, chairman; John F. Tuttle, James F. Herrick. Capt. A. Fitzgerald was appointed Assistant Measurer. A general revision of the club book was submitted to the committee by Chairman Chas. A. Worts, and a committee was appointed, consisting of the Commodore and Messrs. Worts and Donnelly, to attend to the publication of the new book. A club meeting will be held soon at which three delegates will be elected to represent the club at the International Lake Yacht Racing Association meeting, which is to convene at Oswego on May 8, when officers will be elected for the Association for 1886 and the general condition of yachting affairs will be canvassed.

NEWARK Y. C.—The annual meeting of the Newark Y. C. was held on March 1, Commodore Edward M. Groves presiding. The reports for the past year were read, showing the club to be in a flourishing condition financially. The following officers were elected: Commodore, Thomas W. Dawson, schooner *Sea Witch*; Vice-Commodore, Hardy Bush, sloop *Cloud*; Recording Secretary, Charles H. Mayhew; Financial Secretary, Thomas Luff; Treasurer, Stratford J. Cullen, sloop *Winifred*; Measurer, George Hartung, Jr.; Board of Trustees: Charles Cameron, Enmy C.; William B. Adams, Triton, and Lyander Wright, Jr., Duplex. After the election Mr. Charles Cameron presented Edward M. Grover, the retiring Commodore, with a handsome yacht cannon. After all business was concluded the club sat down to a dinner. The Regatta Committee will at once arrange dates for the events of next season: they will be announced as soon as fixed and the committee hope to present such attractions as will draw a full list of entries.

YACHTING NOTES.—Oswego—A new yacht is nearly planked, and bids fair to warm some of the fastest ones which generally have things their own way in the prizes. She will be about 37 ft. long and 11 ft. beam. Major Burke is her designer and builder, a guarantee that she will be a honest boat. The sale of the sloop yacht *Ariadne*, of Cold Spring, which has gone the rounds of the nautical press as being purchased by a party in Oswego, is regarded as a mistake, as no one willing to shoulder the responsibility can be discovered. Webber, of South Boston, is building a keel boat for Mr. S. J. Wood, of Somerville, Mass. She will be 22 ft. 6 in. over all, 19 ft. waterline, 7 ft. beam and 3 ft. draft, with a 15 in. keel and a shoe of 500 pounds. She will be sloop rigged. King Philip, Dr. C. G. Wood, will go to no commission this season. A schooner, schooner, arrived at St. Kitts on March 6. A sloop, Messrs. Converse & Sanford, New Haven, Y. C., has been sold to Messrs. Hope & Copman, Atlantic Y. C.

OPEN BOAT SAILING.—Mr. Tyrrell E. Biddle has added another to his well-known handbooks on yachts and boats, in a little volume entitled, "Amateur Sailing in Open and Half-Decked Boats." Mr. Biddle has had a large experience sailing, and his book contains much useful advice to the young navigator, and the hints and directions are good, especially in their plain speaking as to caution in sailing. As much cannot be said as to the boats and rigs described and the drawings of them, as the former are mostly old-fashioned and clumsy, while the cuts give very poor ideas of the boats and sails. Mr. Biddle condemns the balanced lug, for which he do not blame him if it is rigged as shown in the illustrations; but we cannot, at this time, agree with his high opinion of the sprit. The latter chapters contain useful receipts for painting, etc., and hints on the care of boats, which will be valuable to all young yachtsmen. The book is published by Norrie & Wilson, London.

A RIDING CHECK FOR CATBOATS.—Saugatuck, Conn., Feb. 27. Editor *Forest and Stream*: Many of your readers, myself among the number, are watching Mr. Kunhardt's progress with the Coot with a great deal of interest, and am sure that he carries with him the best wishes of us all for his success and pleasure. The catboats on Long Island Sound are fitted with a short bowsprit, 2 or 3 ft. over the rig, with a bowsprit and forestay. On one side an ordinary riding check is fitted as in most sloops. If Mr. K. would use it on the Coot he would have less trouble in getting up his anchor in rough water, and by leading the painter aft to the cockpit could give his boat way to windward and have the tiller within reach. Besides this advantage he will find that the Coot will ride easily at anchor with this rig. Give the Coot a chance, Mr. K., and she will carry you through in safety.—CAT.

CRUISER.—Mr. Alley is having a small cabin trunk added to the *Cruiser*, so that he may use her for duck shooting in the spring and fall. The trunk will be 1 ft. high forward, 2 ft. aft, with a good crown, and will be about 8 ft. long, making a cozy little cabin for sleeping. The sides and top are of half-inch pine, covered with canvas, and the entire affair is so fitted as to be readily removed by withdrawing a few screws. A washboard bin, high also been added forward, extending about 10 ft. aft. McWhirter, of West Brighton, is doing the work. The *Cruiser* will come out as a cat.

PILGRIM.—Dr. W. H. Winslow wishes to dispose of his cutter *Pilgrim*, the cruise of which was so charmingly described in our columns. The Doctor was so well satisfied with the boat's behavior under trying circumstances, that he has decided to build a larger one of the same kind.

A SMALL AUXILIARY YACHT.—A trial has been made at Dartmouth during the past week with an Itchen Ferry sailing boat fitted as an auxiliary, by Messrs. Simpson & Dennison, with a small set of their Kingdom's patent compound surface condensing machinery. The boat is 20 ft. in length, has a beam of 7 ft. 6 in., and was found to have a speed of about five miles an hour. The machinery consists of a vertical natural draft boiler, with a diameter of 2 ft., and standing 2 ft. 1 in. above the floor boards, the small engine close alongside only occupying a round space of 1 ft. 6 in. by 9 in., from which it will be seen that a very small space is taken up in the well of the boat, and that the whole machinery, cased in, forms in the center a small table about 2 ft. high, without interfering with the accommodation.—*The Field*, Feb. 27.

NEW SHARPIES.—Mr. Clapham is now building four Nonpareil sharpie yachts. Three of them are each 27 1/2 ft. in length by about 7 ft. beam, and will draw 9 in. water with centerboard up. All will have the Roslyn yawl rig. One of these yachts will be owned in Providence, one on Staten Island, and the third goes to Norfolk, Va. Mr. Clapham is just beginning work on a Nonpareil sharpie single-hand keel yacht for a New York gentleman. She will be 24 ft. in length, and will draw 30 in. water. This boat will be similar to the one illustrated on page 233 of "Small Yachts," except that she will have the Roslyn yawl rig, which rig is becoming a decided favorite, when handiness coupled with speed is needed. There is at present a very greatly increased demand for single-hand cruising yachts.

ATLANTIC Y. C.—The annual meeting of the Atlantic Y. C. was held on Monday, in their club rooms, No. 41 Court street, Brooklyn. The following officers were elected: Commodore, H. H. Hognis; Vice-Commodore, F. C. Swan; Rear Commodore, E. C. Sterling; Recording Secretary, R. S. Church; Treasurer, R. C. Field; Measurer, W. C. Laenger; Corresponding Secretary, J. L. Marcellus; Directors, Wm. Peet, S. Lones, N. D. Lawton, J. R. Maxwell, A. H. Farrington and W. H. Thomas. Yacht Committee, J. T. Van Wyck, C. T. Pierce, W. T. Winttingham. Membership Committee, W. W. Richards, T. L. Arnold, Henry Earle. The annual regatta will take place on June 15.

INTER-LAKE YACHTING ASSOCIATION.—A meeting of the Inter-lake Yachting Association, formed at Ballast Island last July, was held at Toledo, O., on March 6, with Commodore Gardner, of Cleveland, in the chair. It was decided to meet in Detroit on July 5 and 6, and to cruise thence to Put-in-Bay. The officers, chosen at Put-in-Bay last year, are: Commodore, G. W. Gardner, Cleveland; Vice-Commodore, H. C. Hart, Detroit; Rear-Commodore, A. W. Machen, Toledo; Secretary and Treasurer, J. S. Williams, Cleveland.

THREE SCORE YEARS AND HEARTY.—Capt. Coffin, the old-time favorite among the yachting reporters, celebrated his sixtieth birthday on the 8th. He was overwhelmed with congratulation and good wishes from every side, while the way in which he spiced the main brace from the binnacle away up to the eyebolt of the main-yardarm would have turned any sailorman green with envy.

JERSEY CITY Y. C.—At the annual meeting of the Jersey City Y. C. held at their rooms on Tuesday, March 4, 1886, the following officers were elected for the ensuing year: Commodore, H. B. Pierson; Vice-Commodore, C. A. Smith; Secretary, C. C. Pierce; Treasurer, Geo. Hawes; Measurer, G. L. Winn.

ICE YACHTS.—Several races were sailed at Hyde Park on March 3 in a high wind. Com. Rogers sailed the *St. Nicholas* against the *Bessie*, three races, each of seven miles, winning every time.

ST. JOHNS RIVER TO NEW ORLEANS.—A correspondent asks the best route from St. Johns River, Fla., to New Orleans, in a 22 ft. steam launch.

The wonderful growth of athletic sports in this country is well illustrated by the handsome and very complete catalogue of sporting goods just issued by A. G. Spalding & Bros., of Chicago and New York. It is a large size book of 180 pages, and contains over 1,000 separate illustrations of the various articles used by sportsmen, together with a complete description and prices of each article. In addition to its value as a catalogue, it also contains the latest sporting rules governing all kinds of outdoor and indoor sports and pastimes, which is well worth the price asked for the book.—*Adv.*

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

J. E. N., Greenpoint, N. J.—We can obtain the book for you.

W. J., Jr., Boston.—There is no book that treats of the building of ribless boats.

C. H. H., Lebanon, N. H.—A 13 ft. dory should be about 21 in. wide on the bottom.

J. W. C.—We know of no one who builds a decked canoe for the price you mention.

F. A. M., N. Y.—The Yacht List is published by Neils Olsen, steward of the N. Y. Y. C.

S. D., Mercersburg, Pa.—Write to the Consolidated Fruit Jar Co., 40 Warren street, N. Y.

L. C. D., New York.—We do not know the signal. The canoes probably come from New York or Bayonne.

W. D. A., Jr., Montclair, N. J.—You will find several yacht stoves described in the *FOREST AND STREAM* for last year.

G. H., Jr., Chicago.—Either of the canoes which you name will suit your purpose. They are all good cruisers and sailers.

S. H. H., Concord, Mass.—Waters' illustrated catalogue, published by Waters & Son, of Troy, in 1870, gives many drawings of shells. We know of no other book.

M. H. BENSLOW, Brooklyn.—Use linseed oil with a little turpentine as a dryer. The distance from New Brighton to New Brunswick is nearly 30 miles. See "Canoe and Camp Cookery" for methods of carrying provisions.

G. A. M.—Are California trout and rainbow trout the same fish or are they two distinct species? Ans. They are the same fish. The name is rainbow trout, but as they came from California they were re-christened. This is a bad habit they have at the California hatchery of the New York Fish Commission of renaming fish after the place they come from. They persist in calling the brown trout "German trout," but it is also an English and French trout.

H. H., Rotherfield, Sussex, England.—1. Could an experienced English game keeper obtain a permanent situation in Canada or the States? 2. What would be his wages per week? 3. Would he be likely to meet with murderous assaults from poachers as is often the case here in England? 4. Is pheasant rearing by hand carried out to any extent in America as it is in England? Ans. 1. Clubs are forming from time to time who might employ such a person. 2. Not very high. 3. No. 4. No.

No MEDICAL EXAMINATION is required to take out an accident policy in the Travelers, of Hartford, Conn., guaranteeing a sum of money weekly while disabled from accidental injury, and principal sum in case of death resulting therefrom.—*Adv.*

The Celebrated "UNION HILL."

First target represents 10 consecutive shots made by Otto Jaeger, June 10, 1885, at Wheeling, W. Va., 200 yards off hand, with some wind, using a No. 6½ Off-Hand, .32-caliber. It counts 94 on Massachusetts Decimal and 117 on Massachusetts Target. The cut is one-half size.

Second target represents 5 consecutive shots made by J. D. Marks, June 24, 1885, at Springfield, Mass., 200 yards, with rest, using a Union Hill, .32-caliber. The entire five shots are inside of a 1½-inch circle. The cut is full size.

This style of Ballard Rifle and the "Off-Hand" are the standard guns for target shooting, carrying off nearly all the prizes. **Send for Catalogue:** **THE MARLIN FIRE ARMS CO., New Haven, Conn.**

Split Bamboo Fly Rod.

This cut represents our No. 23 Split Bamboo Fly Rod with Grooved Wood Form. Length, 10½ft; weight 8oz. We make same style rods for trout and bass to weigh from 5 to 12oz, also the "Standard Henshall Rod," Lancewood Rods, Reels, Turned Stock and Rod Trimmings of all descriptions. For New Illustrated Catalogue for 1883 address

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at \$4. Price \$2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price \$1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments train the dog yourself instead of having him broken by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price \$1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicola*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he turned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he performs shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia*: he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—Extract from Publishers' Preface. Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price \$1.00.

Any of the above books can be obtained in London of Davies & Co., 1 Finch Lane, Cornhill.

THE
Chamberlin Cartridge
COMPANY, CLEVELAND, OHIO,
MANUFACTURERS OF
Fixed Ammunition for Shotguns.

SORA.

Canoe and Camp Cookery.
By "SENECA."
A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

CANOE AND BOAT BUILDING FOR AMATEURS.

Pp. 192, with 20 plates of working drawings. Price \$1.50. Address,

Forest and Stream Publishing Co., New York N. Y.

LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

GOLD MEDAL, PARIS, 1878. BAKER'S Breakfast Cocoa.

Warranted absolutely pure Cocoa, from which the excess of Oil has been removed. It has three times the strength of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, costing less than one cent a cup. It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

DOGS!! DOGS!! DOGS!!!

Excellent colored plates of celebrated dogs.

Mounted ready for framing.

DASH III, Setter DAN, Pointer
 MIKE, Water Spaniel JACK, English Mastiff
 GROUSE, Bl. and Tan Setter BOW, Pointer
 TRIMBUSH, Cl'mb'r Spaniel DON, St. Bernard
 BERKLEY, Red Irish Setter PARIS, Llewellyn Setter
 FOXHOUND IMPORTED FOX-TERRIERS
 PSYCHE, Pointer CON. Llewellyn Setter
 FULL TERRIERS ELCHO AND ROSE, Cham-
 BEVIS, Irish Wolf Dog pion Setters
 GREYHOUNDS LOFTY, Llewellyn Setter
 RATTLER AND BELLE, Beagles.
 Any one of above sent prepaid on receipt of \$1.00.
 Two for \$1.60. Address
 B. WHIDDEN, 41 Arch street, Boston, Mass.

THE CELEBRATED SILK SPONGE FRICITION MITTENS are highly recommended to owners of fine dogs. They will straighten out a rough coat and give it a smooth and glossy appearance, besides thoroughly cleansing the skin. In preparing for exhibitions they will be found invaluable. For sale by CASWELL, HAZARD & CO., Fifth avenue and Twenty-fourth street. A pair mailed to any address on receipt of 50 cts. GEO. S. BROWN, 115 Worth st., Room 4, New York. 1t

Rosecroft Kennels.

Birmingham, Conn.

Puppies by champion Plantagenet (E. 11,390) ex Forest Dora (A.K.R. 500) for sale, whelped Nov. 17. Are black and white, very handsome. Now booking orders for puppies by champion Foreman ex Passion (pure Laverack).

IRISH SETTERS.

Young stock for sale, and orders taken for choice puppies from trained bitches of the finest breeding.

BRUCE } CHAMPION ELCHO
CHAMPION NOREEN

In the stud, Fee \$25.

I. HENRY ROBERTS.

P. O. Box 153, Moorestown, N. J.

The Field Sportsman's Picture Co.,

PALMYRA, N. Y.,

Are now prepared to furnish copies of the photographs taken by Mr. Walker at the Eastern Field Trials. Lists and prices on application.

STRATFIELD KENNELS.

Dogs of all breeds boarded and conditioned for shows. Setters and pointers trained for field trials and private use. Best of accommodations and attendance. Main building 100x14; sixteen runs 6'x5', with running stream through all.

Dogs For Sale.

All communications should be addressed to JAS. SEELY, Lock Box 1887, Bridgeport, Conn. Best of references.

FOREST CITY KENNELS.

St. Bernards and English Pugs.

IN THE STUD.

Champion rough-coated St. Bernard Cressar (A.K.R. 23); fee \$25. English pug Sam; fee \$10. Pups for sale. Address with stamp, Portland, Me.

FOR SALE.

One of the finest Druid bitches in America. Big bender. Going out of dog business reason for selling. Address H., Box 223, Hackensack, N. J.

FOR SALE.

Three red Irish setter puppies, by W. H. Pierce's Glencho (A.K.R. 295) out of Alex. Kirkland's Fanchon (A.K.R. 1844). See Produce and Breeding Registers A.K.R. Feb. Male puppies larger; one has small white spot on breast. Female small, with small white spot with white. Would exchange the pair, male and female, for a good No. 12 central-fire breechloader. Address R. Q. TAYLOR, opposite Barnum's, Baltimore, Md. mch11,3t

STUD FOX-TERRIERS.

Champion Royal, Champion Joker, Belgrave Primrose, Splanger, Warren Jim, Warren Jackson. Apply by post, L. & W. RUTHERFORD, 68 Liberty st., N. Y. City. mch11,2mo

FOR SALE—THREE HANDSOME SETTER pups, two males, one female, three-quarters Ethan Allen stock, one quarter English, whelped Jan. 18. Color lemon and white. Sire a grand field dog; dam whelped through December, is staunch and very handsome. For particulars write to J. S. MERRIAM, Marlboro, N. H. mch11,1t

GREYHOUND PUPPIES, 7 MOS. OLD, FOR sale. Champion pedigree, handsome specimens; \$35 and \$40 each. Address A. M. HUGHES, Valhalla P. O., Westchester Co., N. Y. feb25

FOR SALE—PUGS, Sired BY CHAMPION Bradford Ruby out of imported Mollie. Prices reasonable. WESTERN RESERVE PUG KENNELS, Palmyra, Ohio. mch4,2t

FOR SALE, A NUMBER OF WELL BRED and well broken pointers and setters, also dogs boarded and broken, satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. Sept22,tf

The Kennel.

HAIR'S WARWICK DOG MEDICINES.

To All Lovers of Well-Bred Dogs.

Your special attention is called to my **Warwick Dog Medicines**. They are the practical results of forty years' experience by one of the greatest breeders of dogs in England, and I am positive in the assertion that they will supply a want long felt and acknowledged by American breeders. These preparations have been tested and can be relied upon as a sure cure for every DISEASE OF THE DOG. And I can say they will be valued and appreciated by all practical breeders.

HAIR'S CONDITION POWDERS FOR DOGS, 50 cents per box. **HAIR'S DISTEMPER POWDERS**, 50 cents. **HAIR'S MANGE CURE**, 35 and 75 cents per bottle. **HAIR'S WORM POWDERS**, 50 cents per box. **HAIR'S ALTERNATIVE POWDERS**, 50 cents per box. **HAIR'S DISINFECTANT SOAP**, 25 cents.

U. S. DEPOT:

CURTIS & HAIR, Pharmacists, BRIDGEPORT, CONN.

N.B.—All diseases of dogs treated by Jas. E. Hair. Prescriptions will be sent when special diseases indicate, that can be compounded by druggists in any part of U. S. Fee \$1.00.

ASHMONT'S BOOK; DOGS,

Their Management and Treatment in DISEASE.

Accepted as the standard work on the subject by the leading sportsmen of America and England. Indispensable to owners of valuable dogs. It is not confined to Canine Diseases alone, but gives full instructions as to Management in Health.

PRICE, \$2.00. For sale by all the principal booksellers, or sent postpaid on receipt of price by J. LORING THAYER, 186 Tremont st., Boston, Mass.

St. Bernards

Of purest Swiss strains, recently imported. Several fine dogs and bitches and a few puppies are in my hands to be disposed of. I can promise purchasers they are of excellent pedigree, and full of true St. Bernard character.

Address with stamp,

W. W. Tucker,

P. O. Box 1338, N. Y.

Bohannan's Magic Skin Cure.

A positive and absolute cure for **MANGE**. Cures quicker, cheaper and better than any article ever offered to the public. Two cakes, \$1.00, post paid. No cure, no pay. Address A. A. RAYMOND, South Norwalk, Conn.

THE N. E. KENNEL CLUB

Will hold their Second Annual

Bench Show of Dogs

APRIL 6, 7, 8, 9,

At Mechanic's Building,

Huntington Avenue, Boston, Mass.

\$2 000

IN CASH PRIZES AND MEDALS, also numerous valuable special prizes.

For Premium List and Entry Blanks address Secretary N. E. Kennel Club,

Hotel Boylston, Boston, Mass. Any inquiries may be made to March 15 of John Read, 815 Second avenue, or office of Spratts Patent, 239-245 East Fifty-sixth street, New York.

New Jersey Kennel & Field Trial Club

BENCH SHOW OF DOGS,

Metropolitan Rink, Newark, N. J.

MARCH 23, 24 & 25, 1886.

ENTRIES CLOSE TUESDAY, MARCH 9.

Exhibitors desiring to carry dogs by Penn. R. R., Erie R. R., Lehigh Valley R. R., Sus. & W. R. R., Phila. & Reading R. R., or D. L. & W. R. R., can do so free of charge by presenting certificates issued by the club. Apply for same to

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2.

NEW YORK, MARCH 18, 1886.

VOL. XXVI.—No. 8.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications.

A SUPERINTENDENT OF PROTECTORS.

THE bill recently introduced into the New York Assembly, providing for the appointment of a superintendent of game and fish protectors, is an admirable measure and should be passed without hesitation. The full text of the measure is as follows:

SECTION 1. The Governor is hereby authorized to appoint, by and with the advice and consent of the Senate, a person to be known as the superintendent of game and fish protectors, who shall receive a salary of ——— dollars per annum, with all necessary and traveling expenses necessarily and actually incurred, not to exceed ——— dollars per year, to be audited and allowed by the Comptroller and paid by the Treasurer out of any moneys not otherwise appropriated.

SEC. 2. For the purpose of the more effectual enforcement of the laws for the protection of fish and game, the game and fish protectors now or who may hereafter be appointed by the Governor shall be subject to the supervision and direction of the superintendent of game and fish protectors, who shall divide the territory of the State into protection districts and shall assign to each protector his district, and shall have authority also to assign for temporary duty in any district a protector from any other district. The said superintendent shall require of each protector at the close of each calendar month a report in writing, and in detail stating the service performed by each protector during the last preceding month, including an account of the suits commenced at his instance, the disposition made of such suits, the result of any brought to trial, and the condition of any undisposed of; and no payment for services performed, or traveling expenses paid by any protector, shall be made until the claimant shall present to the Comptroller, in addition to the usual oath of performance and payment, a certificate from said superintendent that he has made the report required by this act, and has in all other respects faithfully performed his official duty. The superintendent of game and fish protectors shall report to the Governor all cases of dereliction or neglect of duty of any protector which shall come to his knowledge, together with such evidence as he may have touching the case, and the Governor shall have authority to remove from office any protector reported to be delinquent, after giving him an opportunity to be heard in his defense.

SEC. 3. Said superintendent of game and fish protectors, and his successors who shall be appointed by the Governor, by and with the advice and consent of the Senate, shall hold office for three years from the date of his appointment, and all vacancies in said office shall be filled by the Governor, subject to a confirmation by the Senate at the next session, for the unexpired portion of the term in which the vacancy occurs.

SEC. 4. The said superintendent is hereby invested with and shall possess all the powers and privileges for the due and proper enforcement

ment of the game and fish laws of this State, now had and possessed by law by the game and fish protectors appointed by the Governor pursuant to the provisions of chapter five hundred and ninety-one of the laws of eighteen hundred and eighty, and the acts amendatory of the same or supplementary thereto.

SEC. 5. It shall be the duty of the superintendent of game and fish protectors appointed or who may be appointed under this act to supervise and direct the work of the game and fish protectors, to investigate all complaints concerning their inefficiency or neglect of duty, to assign them to duty wherever required, to see that they in all things enforce the laws for the protection of fish and game, and perform all the duties required of them by law.

SEC. 6. It shall be the duty of the said superintendent of fish and game protectors appointed or who may be appointed under this act to file in the office of the State Comptroller during the month of December in each year, all reports made to him during the preceding year by the fish and game protectors, and an account stating the expenses paid or incurred by him in the discharge of the duties of his office, which account shall be verified by the oath of said superintendent that the same is correct and true in every particular, and shall make and present, in January of each year, a written report to the Legislature of his proceedings and the nature and extent of the services performed by the State game and fish protectors, together with such recommendations of further legislative or official action as he may deem proper.

SEC. 7. Section four of chapter three hundred and seventeen of the laws of eighteen hundred and eighty-three is hereby repealed.

SEC. 8. This act shall take effect immediately. This supervision of the game and fish protectors is now a part of the duty of the commissioners of fisheries, and the actual labor falls to the lot of Gen. R. U. Sherman, the secretary of the commission. His position is an unsalaried one, the duties relating to the fish commission proper are all that such an unsalaried official could be expected to perform, and it is quite right that he should be relieved of the supervision of the protectors.

The actual working of the proposed system will depend altogether upon the man who may be selected for the appointment. If the new office is to be made a political sop, the system may very readily be botched. If politicians are disregarded and a superintendent appointed because of his known and proved fitness for the post, the office may prove a most valuable one in perfecting the protective system. We know of no one more fitted to take the office and acceptably fill it than Mr. A. N. Cheney, of Glens Falls. What Mr. Cheney's politics may be we are not informed, but he has given repeated and signal proofs of his devotion to the cause of game and fish protection, his information on the subject, practical experience, familiarity with the Adirondack region and known ability, are such as should be possessed by the first superintendent to be appointed should the bill become a law.

THE AUDUBON SOCIETY.

THE purpose of the AUDUBON SOCIETY is the protection of American birds not used for food. To accomplish this purpose it will

1. Secure and publish information to show the extent of the present enormous destruction of birds for millinery, decorative and other purposes.
2. Expose the outrageous and indefensible cruelty of such wanton taking of feathered life.
3. Point out the damage to the agricultural interests of the land which must certainly follow the decimation of the insectivores.
4. By thus presenting the subject in its ethical, humane and economic aspects, enlist the sympathy and active personal co-operation of a large membership in the effort to check the evil.

Three forms of pledges have been adopted, viz: 1. To discourage the killing of any bird not used for food. 2. To discourage the robbing of any bird's nest or the destruction of its eggs. 3. To refrain from the use of any wild bird's plumage as an article of dress or adornment.

The AUDUBON SOCIETY certificate of membership will be issued to those who subscribe to one, two or all of the pledges. Membership involves no expense whatever. There are no fees of any kind. The funds necessary to carry on the work are supplied entirely by voluntary subscription, the immediate expense for organization being borne by the Forest and Stream Publishing Company. The Society has local secretaries in cities, towns and villages. The local secretary will furnish the circulars of information and pledge forms; will receive the signed pledges, keep a list of the members, forward a duplicate list with the pledges for enrollment and file at the Society's office; and will receive in return certificates of membership, to be filled out and signed by the local secretary and given to the members. No certificate of membership will be issued to any person except upon the receipt of a signed pledge at the office of the Society. Where no local secretary has yet been appointed, individual applicants for membership may address the Society at its office, No. 40 Park Row, New York.

If there is no local secretary in your town, you are invited to act as such yourself. Upon application we will supply copies of this circular and pledge forms. The society furnishes to each member a handsome certificate of membership. This bears a portrait of the great naturalist, John James Audubon, after whom the Society very appropriately takes its name.

MR. PALMER'S "SHY" DEER.

THE strong plea of the deer hounders is—or was, until they were forced to back down from the position last Tuesday—that the deer is such a stupidly tame and donkey-like creature that it must be chased by dogs and clubbed by men in boats to be made "shy" and "preserved" from the still-hunters. The hounders have drummed up all sorts of witnesses to prove their "shy" argument, and among them Assemblyman George W. Palmer, whom the voters of Clinton county saw fit to send to Albany as their representative. Mr. Palmer is fond of posing before the House as an "old practical hunter," and when he gets up to deliver himself of some choice bit of woodcraft his fellow members give him most deferential hearing. Mr. Palmer made his little speech in favor of deer hounding the other day, and told his little story to show how the deer are made "shy" by the dogs. This is what he said:

<i>Six Days of Hounding.</i> Now let me tell you a little incident that happened to me about twenty-five years ago, on one of those beautiful lakes that grace the Adirondack region. A party of four or five gentlemen went to the upper Chataugee Lake; on a little island in the middle we had camped. We had half a dozen dogs, half a dozen boats, and half a dozen guides. We spent the whole week there with our dogs, every day striking a fresh track for six long days, and not a deer did we get.	<i>How it made them "Shy."</i> The guides said to us, "Put your dogs in the kennels, and to-morrow we will have some sport and you those beautiful lakes that grace the Adirondack region. A party of four or five gentlemen went to the upper Chataugee Lake; on a little island in the middle we had camped. We had half a dozen dogs, half a dozen boats, and half a dozen guides. We spent the whole week there with our dogs, every day striking a fresh track for six long days, and not a deer did we get."
---	---

To have such a relation of actual experience of this sort is doubtless very gratifying to the hounders. Here is a "sportsman" of forty years' experience, who gives definite statistics to prove the "shy" theory. His party, he says, hounded deer six days, and having by this time made them "shy," went out still-hunting on the seventh day, and shot down seven of them. *Hec fabula docet.*

THE HOPATCONG SULPHURIC ACID.

A NOTE in our angling columns last week called attention to the outrageous destruction of the fish of Lake Hopatcong, New Jersey, by refuse drained from a powder mill into the lake. It is one of a series of hundreds of like cases, but it happens to be a very aggravated instance. Lake Hopatcong, because near New York, has been for some years past a favorite angling resort. The lake was stocked with black bass and these have been a great attraction for anglers from this city and vicinity. With utter disregard of the rights of others, a powder concern has been draining its waste into the lake, and the result is that the fish are dying off in such numbers that their utter extermination is soon to be wrought. The *Evening Post* reports that a late analysis of the water of the lake, made by Dr. Newton, of Paterson, at the request of the State Board of Health, proved that its waters are highly charged with sulphuric acid, so much so that it is a question of only a short time before all the fish in the lake will be killed. His analysis of water taken from the stream, running through the powder works property into the lake, and also of water taken a mile from the shores of the lake, proves that it contains from forty to fifty grains of sulphuric acid to the gallon. Live fish placed in this water by Dr. Newton died within from six to eleven minutes. So Hopatcong is to be ruined by the stupidity of powder manufacturers who see in that beautiful lake nothing more than a cesspool for the waste from their mill. If "Jersey justice" cannot remedy this outrage the law should be amended to fit such cases.

A CLEAR CASE.—At a pigeon shooting match in New Jersey the other day, an account of which is given elsewhere, the birds were mutilated in a barbarous fashion. Their tail feathers were pulled out, their eyes were gouged out, and they were otherwise maimed, so that their flight might be erratic and puzzle the shooters. This is a case which we hope to see brought to the attention of the authorities. Every cowardly and brutal fellow responsible for the pigeon torture should be indicted and punished. The open air and sunlight are too good for them. Their proper place is in jail. It is perhaps too much to hope that the richly-deserved punishment will follow. There is too much apathy on the part of officials and too much demoralization on the part of the public.

TO THE WALLED-IN LAKES.

XV.—A CHRISTENING.

THAT evening I had some conversation with Major Allen about the management of the agency, and among other things he spoke of the Indian police. Of these there are twenty-three, appointed by the agent, who receive \$8 per month, and wear a uniform and a shield badge. Their duties are to keep order in the camp and to make such arrests as the agent may direct. They are chosen from among the best men in the tribe. When enrolled they are made to understand that every man in the service of the United States is obliged to take an oath to obey the laws. This is the form which these Piegan use: "The Sun is good," as they say this they point to the sun. "The earth is good," pointing to the ground. "I will obey the orders of my chief that I may live long with my family."

Major Allen gave me a detailed narrative of the terrible condition of affairs at the agency when he reached here in March, 1884, some account of which has already been published in *FOREST AND STREAM*. He speaks of the Indians as now doing well. They are willing to work, but sadly need instruction. A number of competent farmers and mechanics, say one to every twenty-five families, should be appointed to teach these people how to work to the best advantage. Their will is good but they are very ignorant.

The next morning as we were sitting in the trader's store old *Nei-su Ki-yu* (Four Bears), the camp orator, came in and began to tell us about the pursuit of the horse thieves by the Pegunny. All through the previous day warriors on broken down horses had been coming into camp, some of them driving before them other animals from the stolen herd which had been unable to keep up and been left behind by the thieves. These, of course, were the least valuable of those stolen.

The last Indians who had come in the night before had reported that when they had turned back the trail was very fresh, and that before they were out of sight the fugitives had fired the prairie, and they heard distant shots as if a fight were taking place. All this Four Bears explained at great length and with such expressive gestures that I caught the sense of what he was saying even though I did not comprehend his word. He is a born orator, has an unending flow of words, a sweetly musical voice, and his gestures are wonderfully graceful and telling. After he had finished telling us about the war party he proceeded to enlarge on the strength of his "medicine" and to explain what wonderful feats of magic he was capable of. He said that if he wanted to he could step out of doors and open his side and have a wagon roll out from between his ribs on to the prairie. "If I go to war," said he, "I cannot be hurt. Even if the bullets hit me they will not go through my skin, they will glance off. I cannot be hurt by them."

"Come," he continued, "I will show you something which is medicine." He spoke to one of the children, who ran into the living room and returned in a moment with a glass of water and a whistle made from the leg bone of a beaver, and gave them to the old man, who led the way out of doors, behind the store. Here he put the water and the whistle on the ground, and facing about, took off his cap and gazed steadfastly at the sun. In a moment or two he began to pray earnestly in a low voice, and presently opening his mouth wide he seemed to breathe in the sunlight and then stretch upward his open hands to grasp the rays of light and pass them over his head and breast and arms. Then he took the whistle in one hand and raising the glass of water to his mouth and immersing the end of the whistle in the water, he blew a few shrill notes. Now putting down the whistle he took a swallow of the water, and then taking a mouthful of it he blew it in fine spray toward the sun. Then he made a motion as if vomiting into his hand, which he at once held out to me, open and palm up. It was wet but there was nothing in it. Again he took a mouthful of the water and went through the same performance, and showed me his hand wet, but empty. A third time this was repeated, and I saw something fall from his mouth into his hand, and when he held it out to me there lay on the palm a spherical body perhaps three-quarters of an inch in diameter, which looked like a polished pebble of clouded whitish quartz. After allowing me to inspect it for nearly a minute, he returned it to his mouth, took a mouthful of water, and apparently swallowed it, choking a little bit in the act as if it was too large to pass down easily. Mr. Kipp examined his mouth, and there was no foreign body in it. Evidently he had swallowed it. We had been watching him closely for an hour, and he had had no opportunity to put this object into his mouth in that time, and it did not seem that he could have had it there during the whole time that he had been talking to us. He did something very similar to this recently in Mr. Kipp's presence; but in this case the objects disgorged were three or four in number and were much smaller, perhaps one-quarter inch in diameter, and looked like hailstones.

I thought the exhibition worth a present, and going into the store got a plug of tobacco, which I put in my pocket. As I came out again Four Bears asked Mr. Kipp who I was, and he replied that I came from the end of the world, from the edge of the salt water. After a little more talk Four Bears said, "Come, I will give him a name. Long ago I named White Bull Calf [Mr. Upham], and now I will name my son, your friend who comes from where the world meets the salt water."

Stepping up to me he took my hand, and leading me out

of the shadow faced me about so that I looked toward the sun. He threw his cap on the ground and I my hat. Then he prayed, saying:

"Oh Sun, oh Old Man, look down. Have pity. Look upon this my son and me. Let us live. Listen. Many years ago, when I was a young man, I went upon the top of the Sweet Grass Buttes, where all the Indians are afraid to go, and stayed there long fasting. And while I slept my medicine [secret helper] said to me, 'Take the name *Pe-nut-u-ye is tsim-o-kan* [Fisher Cap, *i. e.*, a cap made from the skin of a fisher], that is what you shall be called.' For many years I bore this name, but now I am getting old, and before long I must die. I do not longer need this name, and now I give it to this my son. Pity him. Give him long life. Keep him from all dangers of every kind. When he goes into battle let all the bullets miss him, or, if any of them must hit him, let them glance off from his body. Care for him and let live. Make him strong. Let his children live very long and have plenty. Hear, Sun; hear, Old Man; pity, pity."

As he began his prayer he stretched out his right hand and made as if grasping the sunlight, which he spread slowly over my head on either side, and down over my shoulders, arms and breast. Then he said to me, "That is what you are called—*Pe-nut-u-ye is tsim-o-kan*." The prayer was uttered with a fervor and earnestness that quite compelled my respect.

After the ceremony was concluded I gave Four Bears the tobacco, which he accepted very pleasantly, and when, after a little further conversation, he learned that I was going to write down an account of it, he expressed a desire to write his name in my notebook. This he did by making his mark, and I here present the signature as a sort of certificate of baptism from him.

his
NEI-SU X KI-YU.
mark

These were busy days at the agency. The last of the crops were being harvested, and all the white men about the stockade and every Indian who could be pressed into the service were busily engaged either in hauling the grain or tending the threshing machine. The Indians work hard and faithfully, but, as might be imagined, they did not always put forth their exertions to the best advantage. Everywhere there was seen the need of more instructors.

After watching for some time the progress of the work, and spending a pleasant hour or two within the stockade at the hospitable home of Major Allen, three of us drove over to the bluffs and the south side of the valley of Badger Creek to look at some of the many graves which stand there. In old times the Pegunny, like many other plains races of Indians, buried their dead on scaffolds placed among the boughs of trees, or sometimes merely raised on poles, as are the graves of the Sioux. Such burial places are naturally most common along the rivers, because it is along the streams that the trees grow. There are many such burial places along the Marias River, and the Piegan name of the St. Mary's River is *Ah-ki-nus-kwo-nā*. This is often translated the River of the Dead; but a better interpretation of it is Many Chiefs Dead. *Ah-ki* is a contraction of *Ah-ki-wim*—plenty; *nus-kwo*—the scaffold or platform upon which the bodies of the dead are placed, and *nā* is a contraction of the word *nē nah*—a chief; so that the full idea of the name would be the place where many chiefs are on their scaffolds.

Efforts have been made at the agency to induce the Indians to give up their primitive mode of burial, and during the famine winter many of those who perished were buried in coffins in or on top of the ground. Often the hole excavated was barely deep enough to contain the coffin, so that its lid was level with the ground. Over some of these two or three inches of dirt had been piled which had been partly washed away by the rain. Here and there skeletons of two or three horses would be seen lying on the ground by the grave of some more important or wealthy man. As a rule these latter were placed on the higher bluffs bordering the valley, and the coffins were placed on the ground, while on them were piled blankets and robes, and in the case of medicine men, their bear pipes and other magical implements.

After death the spirits of the departed—their shadows the Pegunny call them—go to the sand hills. This is a barren, hilly country near Medicine Hat, and beyond that to the northward. Here too go all the spirits of the animals which die, and upon these the shadows feed.

Our stay at the agency drew to a close, and late one afternoon we bade a cordial farewell to all those who had been so kind to us, and Appekunny and I drove off over the level valley, climbed the long hill, and turning, took our last view of the interesting spot. Then a few days later I bade farewell to Appekunny and started for the East.

I had spent but a short time at the Walled-in-Lakes, and had accomplished but little in the way of shooting and fishing, yet I felt that the long journey had been well worth taking. In an experience of the western country extending over many years, I can recall but two trips that were so pleasant and so profitable as this one had been. Of the marvellously interesting features of the region I have tried to tell, and if I have failed, it is in part because their grandeur is too surpassing to be adequately treated by my pen.

The last nights in camp are to me rather sad, full of memories in which the bitter and sweet are oddly commingled. There is pain at leaving so much that is delight-

ful, melancholy in the reflection that one more year is taken from the sum of one's happiest days. But the recollection of these days and their joys is full of pleasure.

Each year it is harder for me to turn my back on all that is left of the happy free life of the olden time. The return to civilization is like the return to his dungeon of a prisoner who has been shown a glimpse of freedom. The mountain life of to-day is not the life of twenty, nor even of ten years ago, and now there is mingled with the pleasure of my temporary independence an undercurrent of sadness. I regret the changes that have come and others that I see near at hand. It is useless to feel these regrets—still more useless to express them, but old men will still be talking, and you will have but little more of my garrulity to endure just now.

So my camps for another year are at an end. The old rifle has had its final cleaning and is put away, the knife is rusting in its sheath. The story of my summer is at an end, and as I have so often done before, I close the note book and say good-bye.

Yo-

The Sportsman Tourist.

THE HUNTER'S VOW.

WHERE the peaks pierce the home of the storms,

And stretch in their grandeur divine,

Tumultuous, mountainous forms

Along the Canadian line;

'Mid the hills where the waters divide.

Some gulfwards beginning their flow,

Or on the Saskatchewan's side,

Rushing north to the infinite snow,

Where lie, looking up to the skies,

Blue lakes ringed with precipice walls,

Earth's solemn, unchangeable eyes,

Whose curtaining lid never falls;

There, weary of desk and of pen,

I wandered the free hills to tread

And find, among primitive men,

The rest that from cities has fled.

The whirling mist had wrapped the peaks.

A long day's fruitless labor done

Was ended by the angry streaks

That showed where sank the stormy sun.

My mountain Indian's tireless stride,

Had left me panting far behind.

I shouted. Only rocks replied

With echoes drowned by whistling wind.

At length I found our upward track.

And stumbling, falling, wet and chill,

I traced the faint marks slowly back,

Till in tall woods the wind grew still.

Only the boughs, swayed overhead,

Droned out their deep Æolian air,

And startled from his leafy bed,

Rustled away some half-seen hare.

Then, lightening through the deep rich gloom,

Our camp-fire flashed a yellow star,

And homely smells, like rich perfume,

Caught my starved senses from afar.

"What luck?" they cried, as I drew near.

"Where are the spoils that hunters bring?"

At least the saddle of a deer

Should answer for your rifle's ring."

"I've fired no shot this live-long day.

My gun is clean. My stomach's light.

Just pass the venison this way.

The game will suffer most at night."

The man was feeble, and the jest

Was weaker still. They passed it by.

And soon refreshed, I lay at rest

Watching my smoke wreaths float and die.

Stretched out toward the grateful heat,

In broken speech, my half-hreed guide

Tells, beside many a venturesome feat,

Fables by long time sanctified.

And from his wakened memory pour

Grim tales of famine, fight and chase,

And fragments of that mystic lore

Nurse of the youth of every race.

Child stories full of shapeless dream,

Where homely facts of daily life

Flow, mixed with marvel in a stream

Of nightmare-like, chaotic strife.

Good Indians, skilled in magic rites,

Still foil by wonder-working plan

That wicked King of evil sprites.

The strong, malicious, sly "Old Man,"

And through the gloom of caverns dark

And deserts wild, the story flows

To music of the coyotes bark

And rumbling march of buffaloes.

And with a moral end his tales:

"Make offering to the mighty Sun;

The favored buller never fails.

If the All Seer's favor's won."

The next day opened dull and gray,

But scarce our kindling flames arose

When a young, stalwart Kootenay

Rode up and broke my long repose.

Descendant of the Indian horde

That ruled this region of the West,

He came as if the country's lord

Were honoring the country's guest.

And soon, perhaps, to make us feel

The more familiarly at home,

He volunteered to share our meal

With gesture eloquent, though dumb.

His blanket then he backward tossed,

And turning to his offered place

He stopped, and reverently crossed

His brow and whispered earnest grace.

A pagan horn, a pagan hred,

He cherished still the holy sign

Some Jesuit martyr, long since dead,

Had taught his sires as rite divine.

This symbol of forgotten creed

Surviving still, thus testified
To the high hearts whose fearless deed
Told unknown tribes how Christ had died.
Scanty our intercourse at first,
But when he'd breakfasted his fill,
Sated his hunger, slaked his thirst,
In varied tongues he tried our skill.
But most of all his speaking hands,
Portrayed his thought to watchful eyes,
Till silently one understands
Sense the unpracticed ear defies.
Grateful, he offered me his aid.
To lead me over pathways steep,
And zigzag trails through long years made
By clambering hoofs of mountain sheep.
I took the chance and, while I turned
Away a moment to prepare,
Amid the hustle, I discerned
The muttered chant of savage prayer.
My Kootenay, with upturned eyes
And waving hands, began his charm,
That the bright ruler of the skies
Might guide aright and guard from harm.
"Wizard power of rock and forest!
Foil of the hunter's skill!
Thou who unseen always warrest
For the flocks we strive to kill!
Fade before a mightier sovereign,
Friend and prop of human kind,
Overhead the Sun god hovering
Strikes all those who front him blind.
Hear our prayer benigun protector!
Guide our aim to happy chance!
And for our divine director,
Here we vow a sacred dance."

The dismal strains of worship ceased.
We started on our climb, and soon
The chill was chased, the toil increased
By the high sun of golden noon.
We reached our station near the top
Of a long, rugged mountain side,
And here my Indian made me stop
While he should fetch a circuit wide.
I stood alone, yet not alone;
Around me crag and jutting peak,
In every weathering sculptured stone,
Spread stories more than tongue can speak.
Far back in geologic time
I saw, in mind, the mighty chain
Form grain by grain in ocean's slime,
Then slowly rise to light again.
Still deeper pierced my roving thought,
Till (yet unshaped our spinning sphere),
Save whirling chaos there was naught
But infinite space, black, cold and drear.
The north wind stirs upon my cheek.
And wakes my fancy from its dream,
The rocks, before so gray and bleak,
Now catch the sunshine's fitful gleam.
Oh! beautiful the cloud of spray.
That tops the green surf's glassy arch,
And beautiful the sunlit play
Of the long rollers' measured march.
But grander, through the cloud wreaths, loom
The jagged peaks in lofty line;
And sweeter, through the mellow gloom,
The breeze-borne scent of larch and pine.
And far below the river's thread
Through its great dike in silver breaks,
Churning, along its rocky bed,
The waters of the snow-fed lakes.
The glacier torrent's turbid green,
The dark tall cliffs, that towering stood
Somber as death, like death serene,
The snuous ice-field's creeping flood;
All this I saw, all this I felt.
But some great hand the curtain draws,
And veiled in mist, the visions melt
Into the valley's darkening jaws.
Long, long my watch. But hark! that noise!
Down the long glacier rattling fast
Roll stones, forced from their trembling poise
By some great creature moving past.
A moment's pause. Above the ledge
A head with broad, curved horns is raised
On the great slope's extremest edge,
And looks toward me like one amazed.
Out on the stillness rings the shot.
The rocks reverberating 'round,
Send, from long ridge and hollow grot,
A thunder of redoubled sound.
And the struck beast in wild career
Goes plunging down the bouldered steep;
Blind with his death wound, mad with fear,
Spending his life with every leap.
Below I found him stretched out dead,
Yet half reproachful as he lay,
The noble horns and the proud head
Thrown backward on the bloody clay.
Staggering, I homeward bore the spoils.
At last the hunter's wish was won.
And, thankful for my ended toils,
I cried aloud "Strong is the Sun."
And round our fire that autumn night,
While trembling flame spires fell and rose,
I owned that earnest vows had might
On forest game and savage foes.

The dance? Ah! well the dance was done
By worshippers who owned its spell,
Though, recreant when the prize was won,
I scorned the power that earned it well.
But ever in my inmost mind
The dry light science gives is dimmed
When faintly on the northern wind
The Sun god's praise comes rudely hymned.
It echoes over bustling streets,
Or in short hills at parting day,
Its monotone my spirit greets
With memories of the Kootenay.
More in the heart than in the ear
The dreary music stirs again,
Bringing the god of nature near,
By the strong faith of simple men.

H. G. DULOG.

A ROCKY MOUNTAIN SHEEP HUNT.

I HAVE been a hunter for many years, and I suppose there is to some degree a similarity in the experience of sportsmen. At some period of life there is a ruling ambition to accomplish a certain end, to kill some particular animal, or to succeed in some enterprise. Several times in my life some special desire has been the center of my thought and energy, and during the summer of 1881, which I passed at Wagon Wheel Gap, Col., I had the greatest ambition to capture a Rocky Mountain sheep. Years of success had effectually destroyed the pleasing novelty of killing bear, deer, catamount, *et al.* Here was game I had never seen; and if I could, with the seeing, succeed in capturing, it would constitute quite an event in my hunting life—it would be a gay feather in my much-worn cap.

The proprietor of the hotel (a rude structure, by the way) kept a camping outfit for the use of his guests, and when they started out on a hunt the tent was pitched high up on some mountain, convenient to water and some desirable hunting ground. The blankets, rations, cooking utensils, etc., were packed on burros for transportation, and the little, ungainly animals, with packs double their own size, would safely climb rocky steeps, that tried the limbs as well as lungs of the men.

A certain day we all started out on a deer hunt. Kemper McDonald, than whom a better man never lived, and a true sportsman, Jesse C. Toodle and the writer were the hunters, and an Irishman named Charley drove the burros and kept camp. While climbing up a very high mountain, that I might look down and around upon the world, I killed, about timber line, a fine buck, as fat as his hide would hold. When I reached the top I saw, looking north across Bellows Creek, (I had with me a No. 1 field glass) a beautiful hunting country, large parks interspersed with islands of timber, and upon my ear there fell a faint sound, much like the bleating of sheep. "It may be an illusion—it may be the cry of Rocky Mountain sheep," I said to myself. My hopes alternated as that far-away sound continued at intervals for perhaps half an hour.

When we returned to the Gap I gave Mr. Peck, who had been living here for several years, a description of what I had seen, and of course evinced a strong desire to make an effort to get over there. He said nobody lived in that direction, and no white man was ever in the fork of Bellows Creek, but it was a fine country for deer, and he had been told that mountain sheep ranged in that section. That was enough for me. Sampson's green withes and new cords would have been as powerless with me as with himself. Mr. Peck said I could not get there without going up to either Willow or Sunnyside creek, some ten or twelve miles above, and follow either one or the other, and get on the main range and then come back. Where there is a will there is generally a way, and I determined to take a hunt over there. The project was never out of my mind.

A few days afterward I went up Bellows Creek to fish, and found a place where I thought pack animals could climb the mountain. So, early next morning, I gave directions to two of our boys and sent them off on horses. They returned about 9 o'clock that night and reported a very hard climb for three or four miles, but after that it was a fine place for hunting; they said they saw twenty-five deer. We soon started on our hunt, a horse a piece and four burros packed with tents, blankets, etc. After sunset we reached the summit of the mountain, and it was dark before our tent was pitched. Our altitude was about 10,500 feet, and sometimes this elevation affects persons very unpleasantly. It was particularly so with myself at this time. I could not breathe freely, it seemed as though my lungs could not be filled, and I could not sleep. Just at daybreak I called up our crowd to go out hunting and told them to go on and I would try to sleep. About sunrise, as I was beginning to doze, old Charley yelled out: "Kernil, Kernil, get up, here is three of the begiest bucks ye ever see." I told him to shut up and let me sleep. In a few seconds he called again: "Oh, Kernil, jshust come an luke." By that time I was wide awake, and as I crawled out of the tent he said: "Ill luck to ye, they be jshust a goin' into the tember." While eating my breakfast I saw another deer walk across the park about 300 yards away. I had just started on horseback to look around the country when I heard two rifle reports in quick succession. While I was prospecting for the best hunting ground Toodle went to camp, took the burros and Charley, and brought in two very fine bucks, the first he ever killed. A prouder boy could not have been found in these United States, and Charley shared his glory because such exploits always brought him a treat. Mac and Jesse killed nothing, although each shot several times. The next day brought them better luck. Mac killed a fine deer and Jesse brought down a fawn. I asked Jesse where he hit it; he said in the hind shoulder.

The third day I went up the right prong of Bellows Creek toward the place, as well as I could locate it, where I thought I heard the bleating of sheep some days before, and to my great satisfaction I heard the same sound. I returned to camp and told Mac about it. He said he was up in that direction, heard nothing of the kind, but saw where a band of sheep used to feed, about twenty he supposed, and he had determined to capture some before he went down to the Gap. Toodle, a wonderful woodsman, age and experience considered, came in toward evening, and said he had been on a mountain six or eight miles distant, and had seen hundreds of birds, brown and white in color, which we supposed were ptarmigan.

The next morning we all concluded to go to the top of this mountain, but found it impossible to ride near the top. Our horses were picketed, and we made the rest of the way on foot. The top of the mountain, far above timber line, was almost level, and vast numbers of ptarmigan were seen in every direction. We went on for several miles and came to a gulch, which I felt sure led not only back to camp, but to the sheep range. Mac and I agreed to go down this gulch and return to camp on foot, leaving the horses for the boys to take back. Our way into this vast ravine was very steep, and a covering of slide rock rendered it particularly dangerous. A single misstep would have precipitated us to the bottom, over a thousand feet below, but practice and Providence had made us sure-footed, and after going down, down, down, we reached the bottom without harm. Very soon several deer showed themselves, and Mac, true to instinct, raised his gun to fire. "Pray don't shoot," I said; "it would be almost impossible to get your game to camp. Besides we are hunting sheep." "Well," he said, "if it is sheep or nothing, you go up the side of the mountain about timber line, and I will stay in the valley; if I start the sheep they will run up hill, just as they always do."

The timber here had all been burned. It was a hard climb, but as I scrambled up hill I saw the whole side of the

mountain torn up with tracks, some just made. How my heart palpitated! I had been told that the mountain sheep was the wildest animal in the world, and I must be constantly on the lookout. As I rose a little knoll (it was sleeting very hard at the time) I saw indistinctly through the dead timber some animals about 200 yards below, either deer or sheep. As the sleet cleared away, I discovered that they were not deer, and stepping behind a tree I accidentally broke a twig. They all jumped and then I knew they were sheep. I fired twice, but overshot; went to where they had been, and, looking down, saw them all huddled about 250 yards below. I fired two shots in as quick succession as possible, and away they ran again. I went a short distance and saw something scrambling near where they stood when I shot last. My heart seemed in my throat as I quickened my steps. Getting near, I saw two down. "Victory first sight! Tell it everywhere!! Glory enough for one summer!!!"

Getting closer, I thought they looked mightily like tame sheep. How my triumph faded about as I saw the ears marked! Humph, umph, umph. Nevertheless it was a good joke. I hallooed. Mac answered away down below. I hallooed again, lighted my pipe and sat down to smoke. In a little while here came Mac all out of breath. "What have you killed, Colonel?" "I have killed two sheep." "Hurrah for our side! We are the men to kill mountain sheep!" "I killed them, Mac; you had no hand in it," I replied. "But I told you where to go; we killed the sheep. Three cheers for Kemper and Tom!" By that time he was close to them; his countenance fell. "These are Mexican sheep you have killed, Colonel." "We killed them, Mac." "No, I had nothing to do with it." "You told me where to go." After a hearty laugh, Mac asked what I was going to do with them. I said I would find the owner and pay for them. "Let's take them to camp and eat them. I prefer mutton to venison any day," said Mac. "I would not eat one for \$500," I replied. And there we left them.

We went on about a mile and saw the whole mountain side covered with sheep and a Mexican as herdsman. I called and told him I had killed two of his sheep by mistake and would pay him for them. He answered "Kin savvy." I repeated what I had said. Again he answered "Kin savvy." I then pointed to his sheep, held up two fingers, shut my eyes, and took out my purse. He raised both hands, which were bloody, held up one finger to let me know he had killed a deer. We went back to camp, acknowledged the corn, relished the joke, and the conversation was merging into something else when old Charley said: "Kernil, I tell ye what we'll do, let's call this Camp Wool."

The evening of the next day found us all at the Gap. Mr. Peck chanced to know the owner of the sheep. He had lost a band of 2,100 the previous fall in a snowstorm and recovered only 900. The others died or were eaten by bears and mountain lion. All the guests at the Gap and Hot Springs soon heard the joke, and when I went over to Hot Springs, the boys, by way of reminder, were bleating around. Hannibal's familiarity with military tactics was insignificant compared with my knowledge of the ways and proclivities of these western boys and men of like persuasion. "Come boys, step up," was an effectual quietus to all baaing, and I must add, it never lost its charm. ROARY.

Natural History.

Address all communications to the Forest and Stream Publishing Co.

WASHINGTON DOINGS.

[From our Special Correspondent.]

THE present winter may be considered one of unusual severity for Washington. The Potomac was closed for several weeks with heavy ice, the snowstorms were more frequent than usual and of longer duration, and the cold waves were separated from each other by shorter intervals.

About the middle of February, the heavy rains combined with the mild weather which followed, so softened the ice in the Potomac as to enable the tide to separate it into cakes and to carry it off to the sea.

As soon as the ice would permit, the Albatross left her moorings at the Navy Yard and started on the long delayed trip to the Bahamas. Some time will be spent in dredging in the vicinity of the various islands which constitute this group, thus enabling one of the naturalists to make frequent excursions to the adjacent land, for the purpose of collecting natural history specimens.

It is a satisfaction to know that Messrs. J. E. Benedict and C. H. Townsend accompany the expedition in the capacity of naturalists, their former experience giving promise of a valuable collection. Mr. Benedict will devote most of his time to the preservation of specimens procured with the dredge, while Mr. Townsend will search the islands for rare birds as well as other vertebrate forms.

Mr. Townsend returned a few days before leaving on the Albatross from a trip in Alaska, where he devoted considerable time in making valuable observations on the fish and birds, as well as collections. On his return he stopped for a while at Humboldt Bay, Cal., collecting more valuable material for future elaboration.

A number of interesting papers have been read before the various scientific societies this winter. Mr. Geo. E. Curtis lectured before the Philosophical Society on "The Farthest North." He gave a long and detailed account of Lieut. Lockwood's and Sergt. Brainard's sledging journey along the north shore of Greenland. He compared their trip with that of Lieut. Beaumont's, of the Nares expedition of 1875-76, in the same locality, pointing out the reason why, in his opinion, the Americans were enabled to reach a higher latitude than the English. Besides being in much better physical condition, the sleds were lighter and were drawn by dogs, which animals were wanting in Lieut. Beaumont's expedition. Great importance was placed on the value of dogs in Arctic traveling. Although a man can draw a half more than a dog, he consumes so much more food that the extra weight necessary for his subsistence greatly overbalances the gain derived from his superior strength. Another factor pointing to their success was spoken of by Dr. Dall, in the remarks following the lecture, which was that an Eskimo driver accompanied them, who evidently was versed in keeping the sled-runners well iced, by pouring water on them, to reduce the friction to a minimum while they were traveling over snow and ice.

At the same meeting Prof. O. T. Mason read a paper, a portion of which was on the "throwing stick" of the Eskimo, and exhibited many interesting specimens of this valuable accessory to the harpoon. The simplest form comes from the Eskimos near the mouth of the Mackenzie River, whence

passing to the westward it undergoes a variety of modifications in form in the various tribes, until below the peninsula of Alaska near Sitka it becomes an elaborate piece of carving inlaid with shell fragments, and ceases to be of use except as an ornament.

Prof. G. Brown Goode lectured before the Biological Society on "The Beginnings of American Natural History," the occasion being the address of the retiring president. Brief mention was made of the earlier English, French, Dutch and Spanish naturalists who visited the country, or whose writings treated of its natural history. The early Spaniards in the capital of Montezuma found large and well-conducted zoological gardens for the instruction and amusement of the people. How humiliating it is that such an extensive zoological garden should have existed in America in the sixteenth century, at the capital of a half-civilized nation, and that no such thing as yet exists at our national capital.

Thomas Jefferson was spoken of in the highest terms as a naturalist. Had he not been so much absorbed in matters pertaining to the State, he undoubtedly would have been a master of science. It is probable no two men have done so much for science in America as Jefferson and the elder Agassiz, not so much by their direct contributions to knowledge as by the encouragement they gave to science by their advocacy.

Dr. C. Hart Merriam has presented several valuable papers at various meetings of the Biological Society, entitled, "Contributions to North American Mammalogy."

He separates the eastern chipmunk into two races, giving the name of *Tamias striatus lysteri* to the animal which occurs in the Adirondack region of New York, Northern New England and portions of Canada, the habitat of the typical *Tamias striatus* being Southern New York, New Jersey, southward to Georgia. In a following paper he described a new and very marked species of the chipmunk, from the Sierra Nevada Mountains of Central California, ten specimens of which were exhibited. On account of its long striped ears the appropriate name of *Tamias macrorhuddoles* was given it. The most important paper from his pen was the description of a new species of *Shrew* or mountain beaver (*Aplodontia*), from the mountains of California. The species is much larger and heavier than the Washington Territory species (*A. rufa*), and the hair is of a different texture and color. It was named *A. major*. There are a number of good characters which distinguish the skull of *A. major* from that of *A. rufa*.

At the last meeting of the Biological Society Dr. George Vasey read a paper entitled "New and Recent Species of North American Grasses," and Mr. Charles Hallock presented a paper on "Hyper Instinct of Animals." If space permitted a number of other interesting papers on various subjects might be mentioned.

The initial lecture of the course of the "Saturday Lectures" (which are under the auspices of the Anthropological Society and the Biological Society), was delivered in the lecture room of the National Museum on March 6, by Mr. William Hallock, the subject being "The Geysers of the Yellowstone."

The following names and subjects have been announced for future lectures: Prof. Wm. Harkness, "How the Solar System is Measured," Prof. T. C. Mendenhall, "The Nature of Sound," Prof. F. W. Clarke, "The Chemistry of Coal," Dr. C. Hart Merriam, "The Migration of Birds."

The Cosmos Club, a club composed of the scientific men of Washington, recently came into possession of the large and desirable premises on the corner of Lafayette place and H street. The building will undergo many changes, and a large assembly hall or lecture room will be added, which will be used by the various scientific societies as a place of meeting.

Early in the season a fine snowy owl was secured at Arlington Heights, Va., and purchased by the National Museum. Ornithologists hoped this owl was a forerunner, and that others would soon appear, but their expectations were not realized.

The large harpy eagle which had been so long in the eagle cage at Central Park, N. Y., and was so much admired, recently died. It was presented to the Smithsonian Institute, and was mounted by Mr. Marshall the taxidermist.

A considerable number of pileated woodpeckers have been observed in the market stalls during the winter. As many as five or six have been seen at one time, all were reported as coming from Virginia. It is strange that crows which are considered as one of the birds possessing the greatest amount of intelligence, should not profit by this intelligence as well as by bitter experience. In the fall and winter they congregate in immense numbers in this vicinity, roosting in or near the National cemetery, at Arlington. During the colder weather when the ground is covered with snow, the food supply is limited in the area over which they make daily excursions, so that many are unable to procure sufficient food, become enfeebled, and eventually die of starvation. This mortality would be greatly lessened if they should roost in smaller colonies at some distance apart.

Mr. Wm. Hornaday proposes to found in the National Museum a small collection of bird skins, one or two skins to be prepared by each of the more noted ornithologists of this country. Mr. Hornaday mounted a zebra, which has lately been placed on exhibition in the Museum. The general expression of the head and face, together with the position of the animal, seem perfect, and plainly show what can be done.

Dr. Trybom, who was sent by the Swedish Government to this country to examine and study into the practical workings of the U. S. Fish Commission, expresses himself highly pleased with what he has already seen. During the coming season he will study carefully the different steps essential to the hatching and subsequent care of each species of fish with which the commission has to do. He will shortly start on a visit to several of the hatcheries on the Great Lakes, and later will make a trip to California.

THE PASSING OF THE BUFFALO.

Editor Forest and Stream:

The positive assurance contained in the letter of Mr. Arnold Hague of the U. S. Geological Survey as to the existence of a few small herds of buffalo in the Yellowstone Park, is exceedingly gratifying to me, and doubtless to thousands of your readers, and you deserve all thanks for your efforts to secure the needed legislative action to secure this noble game from utter extinction. The need of immediate and vigorous action is most urgent. The destruction of the vast herds which so recently roamed over the northwestern prairies has been so sudden that sportsmen and naturalists have hardly yet awakened to it.

The summer before last, during a visit to Winnipeg, I asked the agent of the Hudson's Bay Fur Co. for statistics about the buffalo and was told that the year before he received from the Winnipeg district twelve thousand skins and that year only four! During the same summer I saw in the neighborhood of Lake Minnewakan, Dakota, hundreds of buffalo skeletons bleaching upon the prairie where the animals had been slaughtered only three or four years before, chiefly for their hides as I was told. The pioneer farmers were beginning to gather up the bones and sell them at the railway station for about \$8 per ton, to be shipped to Missouri to be converted into fertilizer—a strange product of the soil and one that will never be gathered again. At Winnipeg I was gratified to learn that there was about twelve miles from the city a gentleman who had about fifty head of buffalo in a large inclosed preserve of some eight hundred acres, but that many individuals of the herd were not of pure blood but the result of crossing with domestic cattle. It would be interesting to know if similar efforts are being made elsewhere for the preservation of the buffalo, and in this connection I should like to ask if any one can inform the readers of the FOREST AND STREAM what has become of the two or three fine specimens which were recently exhibited about the country by William Cody (Buffalo Bill), in his "Wild West" show, and where they were obtained. Could Mr. Cody himself do a more graceful thing than to give to the FOREST AND STREAM what information he can as to the present existence of the race in the destruction of which he gained his peculiar fame, and such suggestions as he can offer as to its preservation from entire extinction?

C. H. AMES.

BOSTON, MASS.

THE AUDUBON SOCIETY.

Editor Forest and Stream:

I wish you good speed in the work which you have so ably espoused, of preventing the wanton slaughter of birds. The press of the country generally needs to be awakened to the importance of this subject. Usually questions of this kind are largely discussed only when made popular by energetic writers or popular journals. I am glad to note that it is becoming fashionable for the leading journals to discuss this topic. I will give a few recent thoughts on the bird question:

Fruit growers and farmers do not appreciate the importance of the birds that nest in their fields and orchards, or follow the paths of their plows and harrows.

There is great need of protection for birds, yet the average ruralist is not familiar with the name of one bird in ten that inhabits his fields, thus is not able to distinguish the most delightful songster or the most effective insect destroyer.

Each living creature has its use in the economy of nature, and no species can be annihilated without disturbance of equilibrium. The flies are useful scavengers. Mosquitoes, worms, snakes, toads and all forms of life were designed for a good purpose. One race may do service in keeping the other in check.

The increase of insects is marvelous. One insect may in one year become the progenitor of six billion descendants. Three hundred and twenty-five actual species of insects are known, and it is thought that there are as many more species unknown. If undisturbed, insects would destroy every green thing upon the earth's surface, and men would perish; but nature has provided enemies, and prominent among them are the birds, which keep the insects in check without cost to the horticulturist.

A swallow as it skims through the air on a summer day, will destroy more insects than a farmer in the same length of time swatting over a heavy bucket of Paris green mixture.

As the country became cleared of timber and more thickly inhabited, the birds have been destroyed in large numbers and insects have gained the ascendancy.

There are birds worn by our city belles that alive would accomplish more good work for mankind than the average fashionable belle, although shelved for a century. The eyes and beaks of these dead birds cry out in shame against the cruel fashion that causes their slaughter.

I once heard an intelligent fruit grower exclaim: "Shoot the birds, they are eating my cherries." Why not as well say: "Shoot the horses, they are eating my oats; shoot the cows, they are eating my hay; shoot the chickens, they are eating my corn; shoot the children, they are eating my bread." If the horses, cows, chickens, and children are useful and desirable features of our homes we must not destroy them; neither must we destroy the birds if useful and desirable.

Five thousand miles is not a long distance for birds to migrate. They often breed in one locality and feast in another. But wherever they go, wherever they alight for a mouthful of food, the gun, trap, cat or robbers await them. How long will the race survive such treatment? Is not this a question worthy of consideration? CHARLES A. GREEN,

Chairman Com. on Ornithology W. N. Y. H. Society.

ROCHESTER, N. Y.

The lady leaders of the AUDUBON movement should not forget that a prime essential of success is the creation of a new channel for the diversion of the current of prevalent fashion. No old fashion in dress is ever discarded until a new rival establishes its claims to popular favor. Ethical, economic and esthetic forces hurl themselves against established fashion in vain. Even the keen shafts of ridicule glance off harmless. Fashion can be successfully assailed by fashion only. The old by the new. Before feathers can be driven out, flowers, or artistically arranged ribbons, or other method of ornamentation must come in. Ethical, economical and esthetic forces are valuable auxiliaries, but the practical business of the campaign is to inaugurate a new fashion which can successfully compete with feathers for popular favor. The AUDUBON SOCIETY must resolve itself into a committee of taste, or take counsel with the milliners.

The feather-decked hats reach their highest development at the great gambling resort of Monte Carlo, where according to the London World, "the ladies' hats are as high as the play." Three girls, presumably sisters, and undoubtedly Americans, not in society, attract an immense attention by reason of their showy garments. They wear very high conical hats, ornamented in front with large green and yellow parrots with glaring glass eyes. Each bird is perched on a little bough, and it is impossible to imagine anything more ludicrous or in worse taste. The girls are incessant talkers, and my correspondent tells me they are known by the nickname of the "Pratting Pollys."

It is proposed to kill off, with poisoned crumbs, the

English sparrows which have bravely weathered the intense cold and deep snows of this unusually bitter winter. Why? Because these pugnacious little scavengers are said to be driving away our native birds. Yesterday an observer counted the remains of over twenty of our most attractive New England birds sewed to the headgear of the women who were riding into town in a horse-car. Five pairs of woodpeckers' wings and their accompanying tails graced, or rather disgraced, the hat of one of these persons. We venture to say that not one among ten thousand pretended friends of our birds ever saw an English sparrow kill or maim a native songster. On the other hand, how many women are there in the State of Massachusetts who can say that they have never worn the plumage of one of the birds they profess to love? If poisoned bread is to be fed to the worst enemies of our birds, milliners and their customers would better live on crackers.—Boston Advertiser.

The humorous writers are poking fun at the feathered hats. "E. R." writes in the Rochester Post-Express:

All the appeals that have been made to the sentimental side of woman's nature, in behalf of the song birds, having failed to induce her to abandon the practice of wearing their dead bodies to deck her garments, I wish to suggest a way that may be more effective toward protecting the feathered tribe from sacrifice on the altar of fashion. The plan is to simply enforce the laws now in existence for the punishment of those who kill, or have in their possession, song or insectivorous birds, except for scientific purposes. The state prisons and penitentiaries are occupied by thousands of prisoners who broke laws that are not at all more binding, in a legal sense, than the law for the protection of birds. Every one of the ten thousand women in Rochester who has a stuffed song bird on her hat is liable to imprisonment for a year or a fine of \$25. Some of them wear more than one bird, and they are subject to a double or triple fine or term in prison, for each one of them is guilty of a misdemeanor by the act of having in her possession "after the same is killed," the bird with which she seeks to increase her own attractions. If any wife, daughter, or sweetheart of a lawyer reads this and has any doubt of its truth, let her consult him, even if she has to pay a fee, and be convinced that I speak words of truth and soberness. When they realize the danger they are in by appearing before witnesses with the proof of their guilt, they may thank me for this warning, and hasten to destroy the poor dumb remains of the beautiful creatures they caused to be killed and resolve not to incur such consequences again. Think seriously of it, ye fair and gentle dames who have broken your country's laws. Picture yourselves under arrest, then indicted, next on trial in the Oyer and Terminer or not less terrible Court of Sessions, where in case of conviction (of which there can be no doubt), you will be solemnly sworn to tell your age, whether you are married or single, did you have religious instruction, can you read and write, and were you ever before convicted. After your answers to these interesting questions have been recorded in black ink, the judge will ask you if you have anything to say why sentence should not be pronounced, and whether you have or not, he will proceed to say that you, Maud, Minnie, or Laura so and so, shall be imprisoned in the—penitentiary for the term of six, eight, ten or twelve months, just as the court feels inclined. Then an officer will place heavy steel hand-cuffs on your beautiful wrists, or at least one of them, and you will be taken in company with other sinners to the prison to which the judgment of the court consigned you. In the house of woe you will have to work hard several hours a day. You will not be allowed to talk to your neighbor, nor read the papers, nor go to concerts, nor do anything except what the keeper of the prison directs. If the satisfaction you derive from wearing a glass-eyed bird perched in an unnatural position on your hat, is equal to the pain you would undergo in the hands of the law, as I have mildly drawn it, then, according to one of the maxims of an ancient philosopher, you may take the risk. In conclusion, I will offer you a word of advice, for really I am not your enemy, it is, that henceforth, on going out with the mummified bird in your bonnet, you make arrangements for the orderly management of affairs at home in case of your prolonged absence. State Game Constable George M. Schwartz is about to prosecute a vigorous spring campaign, and John McDermot has been elected city game constable. This new broom may sweep you off the street and into a cell at the police station any day. Beware!

At a recent meeting of the South Bristol Farmers' Club, the following total abstinence pledge was circulated by Daniel Ricketson, Esq.: "We hereby agree neither to buy nor use, for any purpose whatever, the plumage of birds which have been killed solely for decoration. And we promise to exercise all our influence to further the object of this pledge, which is the preservation of song birds."

SOME QUAIL NOTES.

Editor Forest and Stream:

Yesterday Mr. Arthur L. Smith, of Toledo, took his departure for his new home in Washington Territory, where he has purchased six hundred acres of very desirable land near Spokane Falls and purposes stock farming. As a part of his family he takes with him a dozen live specimens of our own Bob White (*Ortyx* v.) and expects to turn them down on his new domain. I know they are in fine condition, for I fed them all winter, and Mr. S. believes from a previous knowledge of the climate of that portion of the Territory that the birds can be acclimated there without difficulty, a belief in which some of the rest of us share.

Speaking of acclimation, my pair of Arizona quail sent me in October, 1884, "come up smiling" after their second winter in the open air of Northern Ohio, and have already begun mating, and will probably nest in April. Perhaps Mr. Brown will kindly tell us whether they are ever known to be polygamous in their breeding habits.

This winter I have carried through some fifty head of Virginia quail and other game birds, with a moderate per cent. of loss among the wild stock, and none at all among those previously on hand. Shall turn out birds intended for stocking purposes within the next two weeks if the weather is not unfavorable.

Among the birds on hand at the beginning of the past winter was a male Virginia quail hatched in the summer of 1884, and now some eighteen months old. All the wild quail were placed in the same coop with him, and he appeared from the first to view their restlessness and alarm with a great deal of good-natured contempt. But among the new comers was one large, fine looking hen, and with her he was deeply smitten from the first. It was evidently a case of mutual admiration, since the hen at once placed herself

under his care, follows him about, and is found with him when he stays (as he generally does) at the opposite end of the coop from the rest. That this is one and the same hen is established by the fact that when I first discovered the attraction I marked the hen by tying bits of blue woolen yarn on her legs so that she can always be identified. JAY BEBE.
TOLEDO, Ohio, March 11.

A PET SKUNK.—Mr. S. was left last summer to keep "bachelor's hall" while his wife went North on a visit. A few months after Mrs. S. left home, Mr. S. was quietly sitting by his kitchen fire reading, when he was somewhat surprised to see a skunk come in at a small opening in the door which had been left for the accommodation of the cat. The skunk was jet black, not a white hair on him, as far as Mr. S. could see. He first looked sharply at Mr. S., then commenced to explore the room. After his tour of inspection, seeming to think everything all right, he laid down by the stove and was soon asleep. Mr. S. sat quietly all the time, wishing to see what his visitor would do next. Some time after, the skunk, probably thinking that his visit had been long enough, quietly left the room the way he entered. This programme was kept up for about twenty evenings, not all in succession, however. The coming of the animal got to be so common that Mr. S. took no notice of it after looking up on its entrance, but read until bedtime and then retired. Sometimes he left his visitor in possession of the room. At first the cat did not like the intrusion, but raised her back and sputtered on the skunk's arrival. It gradually got accustomed to the visits and paid no more attention to his skunkship than Mr. S. did. Sometimes the cat would leave part of its supper in a saucer in the corner, when the skunk would finish the balance. After a time the visits ceased altogether, and nothing has since been seen or heard of the sable pet. No unpleasantness resulted from this caller. It shows the harmless nature of the animal when it is not molested. Almost anybody in Mr. S.'s place would have jumped up, threw something at the skunk, and then—been sorry for it for several weeks afterward.—RED WING (Glencoe, Vol. Co., Fla.).

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

GROUSE IN THE SNOW.

THE Maine papers have contained numerous items of late concerning the probable destruction of ruffed grouse by the snow crusts, and the FOREST AND STREAM has had one or two communications of that nature. The partridge has a habit of burrowing in the snow at night, and the observers who have been writing for the papers, tell us that the snow crust freezes and the bird is imprisoned, hence becoming the prey of the fox, its worst enemy. "The repeated and severe snow crusts this winter has imprisoned hundreds of them and the grouse shooting must be poor next fall," they say. Well, nature has made a mistake, then. To make the natural bed of the grouse the snow and to leave it liable to be frozen in at every thaw, was a fatal blunder to that bird. Does nature make many such blunders? Does nature leave the breast of the waterfowl to be penetrated by the cold water, or has she covered that part with feathers so thick and oily that "the duck's breast is ever dry." Has she left the legs of the deer, which lies on the snow, bare and liable to be frozen when the mercury goes down to zero, as it does so many nights in the North Woods? Answer—the man who ever saw a deer with frozen legs. No. The deer's body and legs are covered with hair, one of the strongest non-conductors of heat, so thick that not a particle of the heat of the animal's circulation escapes.

But the partridge dives under the snow and the snow does freeze. Granted, but when does the snow freeze so as to form a crust? Immediately after a thaw. It rains all day or for several days. Then the wind turns about into the northwest, and the mercury falls, the crust forms, and the partridges are caught. Well, they would be, if they were under the snow; but, in all candor, it is fair to ask, who ever saw a partridge dive into the wet snow? Is it not always the dry snow of a cold, frosty night, into which the bird dives, to form its bed? If the snow is dry, can a crust form over it? The change of weather mentioned above takes place almost invariably at night in the New England climate. The day has been warm or rainy, the snow is wet, but the partridge goes to bed in the trees. He is just as fond of the wet snow to burrow in as a hen is fond of swimming in a frog pond. He avoids the rain and wet as sedulously as any one of the bird family, and hence escapes the dreadful snow crust. Again, although the bird dives under the dry snow, yet before he turns his attention to sleep his head comes out so near the top that he can both see and hear, and would be very likely to feel any sudden fall of rain and immediately put himself in position to be crushed under rather than over.

The above position is taken after many years' careful noting of the habits of the grouse. Without boasting I have traveled many miles in the woods on snowshoes where the burrowings of the grouse were very plenty, yet never have I seen the place where I supposed the bird came to his end by being crushed beneath the snow. These burrowings are plainly discernible, especially toward spring when the snow has begun to settle, and if the grouse perished there, the feathers at least would be left. I have found where the partridge has come to his end in the winter, but not generally near any burrow. The owl is a deadly enemy of the grouse, and woe betide him if Too Whoop gets his night eye upon him.

Now, in all candor, will the writers in the FOREST AND STREAM note carefully how many birds come under their observation as actually having perished under the snow crust, and give us the number? From such facts we will measure the prospects of our fall shooting; but give us no more of the old whine that the partridge dives under the wet snow and gets crushed over. And, to wind up with, will they please tell us how many hens they ever saw go in swimming?
DRY SNOW.

HUNTING AT ARMY POSTS.

A FEW more replies from outlying army posts adds to the favors we have received from our friends in uniform, and our readers, too, are treated to additional notes from men at the front, close up to the ever-retreating game line in our rapidly filling domain.

Editor Forest and Stream:

A very extended description of this beautiful section of country, with a full account of its resources for sport would be very interesting. But unless one goes some distance from the post, game is scarce—as is usual near military posts whose vicinity is always thoroughly and continuously hunted. Ducks and geese are fairly abundant within six or eight miles. Fish also between ten and twelve, are numerous and large, the sport in the Williamson River—twelve miles distant—being magnificent between May and November. But the "post larder" does not take game of any kind into consideration. The Springfield shotgun is excellent—of its kind—and is much used for want of a better; but it is considered even by those who use it as a *dernier ressort*. As double-barreled breechloading shotguns of good make and caliber are issued in some branches of the service, we see no reason why each company should not be supplied with two such guns. A. R. EGBERT, First Lieutenant, 2d Infantry.

FORT KLAMATH, Ore., Feb. 15.

Editor Forest and Stream:

In reply to your note of inquiry dated Jan. 9, you are respectfully informed that large game is not plentiful in this immediate vicinity, particularly this year on account of drouth. Small game—duck, quail and rabbit—is plentiful; also doves, starlings and blackbirds. Of ducks we have a few canvasback, more redhead, a large proportion of greenhead, and any amount of the more common varieties. Of quail (*Oryz. californicus*) we have the "black plum" and the "white crest," both long-winged and very swift runners; when matured will not lie to a dog. The prevailing drouth has destroyed all the ponds on the Texas bank of the Rio Grande, but just across, in the "Land of God and Liberty," the ponds, lakes and sloughs are never failing. So also the ducks.

On several different occasions, during November and December last, the entire garrison was bountifully supplied with ducks bagged by three guns, twice with two guns and once with one gun, the party leaving camp at 9 o'clock A.M. and returning at retreat, the one-gun party left earlier and returned later. Distance from fort to nearest pool seven miles. The officers and several of the men own and shoot their own or their neighbors' guns.

The Springfield shotguns issued to troops cannot compete alongside the hard and long shooting double guns, and are not used, so far as my observation extends.

The larders were well supplied with duck, quail and rabbit, with now and then a saddle of venison and large channel catfish. S. B. M. YOUNG.

CAMP RICE, Texas, Feb. 28.

Editor Forest and Stream:

The only two species of grouse found in the Puget Sound country are the ruffed and dusky, or blue grouse. The latter are plentiful along the foothills of both the Cascade and Coast range of mountains. Both the Virginia and California quail have been introduced into this part of the Territory, and owing to the mildness of the winters, are increasing rapidly. On some of the islands in the sound a fair day's shooting can be had on this bird alone. The Chinese or Mongolian pheasant, have also been introduced here, but as yet are principally confined to Protection Island, although some have been seen on the mainland. All kinds of waterfowl abound in the waters of Puget Sound. Some of the finest bags of ducks and geese I ever saw were made on Whitty Island, a short distance from Port Townsend.

The country lying between the Straits of Fuca and the Coast Range is, as yet, comparatively unknown. Within the past two years two parties have been sent from this post to reconnoiter this country. Both parties reported as having seen large herds of elk near the base of the range, where the timber and underbrush is not so dense as it is nearer the Straits. When heavy snows fall on the mountains this animal is found nearer the coast. The white and black-tail deer are plentiful all through this part of the Territory, also a great many black bear and cougar; but owing to the heavy growth of timber with thick underbrush and wind-falls, the hunter finds it more of a task than a pleasure in hunting the large game. B.

FORT TOWNSEND, W. T., Feb. 20.

Editor Forest and Stream:

The Springfield shotguns (single barrel) are used by the men more or less according to the amount of small game near a post. The guns were issued a few years ago (five, if I remember rightly), two to a company. They are 20-gauge. From this post, parties go out from time to time to kill game for the dinners of the companies on Thanksgiving, Christmas, etc. Deer and wild turkeys are the game most sought after. One of the cavalry troops sent out a few men before last Thanksgiving to the Pecos River (ninety miles) for game. They brought back with them for the troop dinner 75 ducks (mostly mallards) and 122 quail (called here the whitetop quail. It is the so-called partridge or blue quail of Eastern writers (*Callipepla squamata*), and some antelope. More game was killed, but was eaten on the trip. The quail and the ducks were gotten with the shotguns. The charge used on this hunt for these Springfield 20 gauge guns was 95 grains of fine musket powder (about 3½ drams) and 1½ ounces shot. The load of powder I consider entirely too great. Still the end seems to justify the means, for meat was what they went for and meat they got. A much better charge would have been 2½ to 2¾ drams (70 to 77 grains) moderately coarse powder and 1½ ounces of No. 4 shot for the ducks. Fine shot does not do well in these small gauges; it requires too great a charge of powder to give it strength. My experience has been that No. 6 is as small as ought to be used. The shells are made by the government. They are copper and not brass and are 2½ inches long. These guns which properly loaded shoot well and kill as far as the larger gauges, but they, like all small gauges, shoot very close and scatter but little, so they are not liked by poor shots, as there is no trusting to luck and scattering to make up for bad shooting. You have to hold right on the bird. I have known a full grown wildcat (*Lynx rufus*) to be dropped dead by one of these guns at 65 yards. The stocks of the guns are rather short, too short for many persons. I think the barrels are much too short, and should be 32 to 34 inches long. The action is the Springfield, strong, solid and safe.

The gun weighs 6 pounds, the length of barrel proper is 29 inches, including the breech block the length of barrel is 29½ inches. Take it all in all, I consider the guns satisfactory, and they fulfill the purpose for which they were issued. That is, to give the soldier something to kill game with that is too small for shooting with the army rifle.

As to game in the vicinity of post, within fifteen miles there are two kinds of bears, black and cinnamon, two kinds of quail, "whitetops" (*Callipepla squamata*) and fool quail (Massena quail of eastern writers, *Cyrtonyx massena*), wild turkeys, blacktail deer, panther, wildcat, and two kinds of hares, the "cotton-tail" and *Lepus americanus*, var. *Bairdii*. In the spring and fall a few ducks on the mountain streams, mostly mallard, wedgeou and greewing teal, and the cinnamon teal. By going some distance you get plenty of ducks and geese and antelope. The bears are very abundant, more so than anywhere I know of. In a range of mountains but nine miles from the post they are plentiful. They are not hunted. Turkeys are plentiful also. Deer are not so common, as they are killed by the Apaches, but luckily these Indians will not eat wild turkey, so this helps to protect them. The Apaches also will not eat trout, which is another blessing, as otherwise they would be exterminated. Bear meat is another food the Apaches are forbidden by their religion or superstition to eat. F.

FORT STANTON, N. M., Feb. 3.

THE TRAJECTORY TEST.

Editor Forest and Stream:

All sportsmen and riflemen should certainly tender you their warmest thanks for the great trouble and expense you have incurred in presenting them with the valuable information contained in the results of the famous trajectory test.

As you have invited criticism thereon I would make a few observations.

There are three things which influence the trajectories of projectiles, viz.: The initial muzzle velocity, section and weight of the projectile. The first varies with the charge and nature of the powder contained in the cartridge, the second is the caliber of the rifle, and lastly the weight of the bullet. Therefore, to arrive at the correct trajectory of a rifle, all these must be taken into account, otherwise the test is of little value.

As the ammunition is the important factor, I would draw the sportsman's attention to the great discrepancy that exists between the "actual" weight of the powder and bullet, and the so called "standard" of the trade cartridge. Noticing some difference I took the trouble to tabulate the "cartridge test" as given in your valued paper, and was much surprised at the result.

From the list of weighings I will select those of the ammunition used in the two .50-cal. express rifles, the Winchester and Bullard. When the makers designed these rifles, they, I presume, found after careful experiments, that the best results were obtained with certain weights of powder and bullet, and adopted the following as their "standard charge," viz., Winchester 95 grains powder, 300 grains bullet; Bullard 115 grains powder, 300 grains bullet. Now the "test" shows that we are paying for the "standard," but what do we get? Winchester, 89.8, 89.3, 89.3 grains powder instead of 95, and 305.3, 298.8, 300.8 grains bullet instead of 300. Bullard, 112.1, 111.2, 110.1 grains powder instead of 115, and 303.6, 303.7, 306.8 grains bullet instead of 300. The powder is reported as in good condition but "pressed hard," which proves that the shells will not hold the standard charge. A difference of 4 grains less of powder will give at least 40 feet less initial velocity, and therefore at 200 yards the bullet will strike several inches lower on the target, which means higher trajectory. These rifles would certainly give flatter trajectories than is recorded were the cartridge up to "standard" instead of an increased weight of bullet and decreased weight of powder, as shown in both cases. In going through the whole list of the ammunition test, the only deduction that can be drawn from it is that there is no accuracy in the making of the "trade cartridges," which are used by all sportsmen and riflemen in America.

CARTRIDGE.

VIVA LOS GACHUPINOS!

IF anything had been needed to demonstrate the utter brutality, and the immense humbuggery of the modern bull fight, it surely was afforded by a recent exhibition of that sort near the City of Mexico, during which three bulls—or they may have been disguised cows—were slaughtered secundum artem, with due accompaniment of banderillas, flags, and flapdoodles of various sorts, each and all eminently calculated to terrify, bamboozle, disconcert and paralyze the energies of the aforesaid cows.

The fourth, however, was a hard nut to crack, and was afterward admitted to have been the fiercest bull ever let loose in a Mexican arena. A distinguished matador from Spain, who was at the time starring the country, encountered the beast, but he and his espada were alike set at naught; and volunteers were called for from the crowd. Two men essayed the contest, but the enraged beast defied them both and finally remained master of the arena, a worthy successor of the renowned Harpads of the cancioneros; but alas! the shade of the Alcayde of Algara must have looked on in grim disgust when, mastered at length with the treacherous lasso, the poor beast was thrown to the ground in mid arena, where the courageous attendants coolly cut his throat.

Comment would seem superfluous, but it may be admissible to note the fact that in India, the wild boar who in similar encounters has vanquished his antagonists, has sometimes been given his liberty, and been allowed to trot away unharmed to his haunts among the hills. KELPIE.

UNSEASONABLE GAME IN ONTARIO.—Hamilton, Ont., March 10.—Editor Forest and Stream: I beg to call your attention to the fact that large quantities of quail and mallard ducks are being offered for sale in this city at present purporting to come from different parts of the United States, ostensibly from Tennessee and Southern Missouri. As we are endeavoring here to get a new bill for the better protection of game in the Province, in which one of the clauses specifies that no game of any kind shall be sold or exposed for sale during the protected season here, I think that the attention of all sportsmen in your country should be called to this matter. If they have no thorough system of inspecting for the prevention of export of game in all the States, the matter ought to be thoroughly ventilated through your valuable columns. We claim that if game is allowed to be sold here during the protected season it is very difficult to prove at all times whether the game is all imported or forms parts of our own.—TH. HOOPER, Secretary, Wentworth Fish and Game Protective Association.

A DAY WITH THE CORDELIA CLUB.

"HELLO, Andy, want to go up to the marsh to-morrow night?" I look up and see the jolly faces of Charley and Cap peeping in at the half-opened door. "Why, of course I want to go." "All right; take plenty of shells and the 3:30 P. M. overland train, and I will meet you at Sixteenth street," says Charley. Accordingly, 3:40 P. M. next day found me with gun and heavy valise on board the train, bound for Teal Station. Charley swings himself aboard at Sixteenth street, fresh, smiling, and as neat as though just taken out of the drawer, and with no more apparent luggage than would fill an ordinary vest pocket. How is it that some people always contrive to travel without being encumbered with any luggage, while I always perspire under the weight of so many traps? Two and a half hours of swift riding enlivened with pleasant chat, and evening shades beginning to fall, we find ourselves in a marshy country, with ditches and embankments, and an occasional feeble glimmer of light from some little mud-colored house. Presently, "Here we are," says Charley, and hastily grabbing packages, we jump down from the scarcely stopping train and find ourselves at Teal, represented by a diminutive redwood shanty, a concern which any healthy fifteen-year-old boy could easily carry away. But here comes Cap, and after hearty hand shakes, luggage is again snatched, and we are escorted a few rods along the track, down the embankment, and across a narrow plank to the yacht Lolita, which now more nearly resembles Noah's ark, the deck being housed over from stem to stern, thus transforming the fast little craft into a perfect duck-hunter's home. Down in the cabin we find a beautiful supper awaiting us. Then reclining on the broad cushions, our heads supported by the ample pillows, we rake up recollections of past hunting trips, for you must know that this little yacht is hallowed to us by a thousand recollections. Many an evening have we dragged ourselves home, wet, tired and hungry, to its comfortable shelter, and—"Come, wake up there, fellows and go to bed; you will get your deaths of cold sleeping there." So we take Cap's advice and turn in, and soon, lulled to sleep by the monotonous lapping of water against the yacht's side, but a few inches from our heads, we are hunting the ducks of dreamland—and what a splendid flight there always is—till presently, we see one big fellow coming straight for us, and with outstretched neck, great staring eyes, and wide open mouth, shrieking *burrr-r-r-r-r*.

Great Heavens, who that ever went out to the "early morning's shooting," will forget the diabolical racket raised by that little alarm clock that hangs in the cabin of the Lolita.

"Turn out, boys, half past three o'clock," shouts Cap, tumbling out of his bunk and climbing on deck to see how the weather looks. Charley follows suit, and I make a sleepy attempt to crawl into my clothes, generally getting on a gum boot first and inwardly wishing that something would happen so I could get into my comfortable nest again, and an instant later I thought I was to be so favored, when Cap shouted from on deck, "Boys, it's raining," and so we found it, a cold drizzle, just enough to be disagreeable, but not enough to scare such a couple of old toughs as Cap and Charley. In a few moments breakfast is ready, and after disposing of a liberal allowance of chops, boiled eggs, toast and strong coffee, we envelop ourselves in our oilclothes and rubber boots and are ready for wet weather. "How many shells shall I take along, Cap?" "Take every shell you have, Andy." But I can't believe I shall want a hundred shells, so I take seventy. "Come, on Andy, you are always behind," shouts Charley from the skiff. I take my seat and the bow oar and Cap the other, while Charley with a stern countenance, as much as to say, "you need not ask me to row your old boat," takes the tiller and we are off for an hour's pull to the Sprig Ponds. Soon we come to a ditch and we drag the skiff high and dry on the bank, and each selecting a small duckboat from a number we find in the ditch, we transfer our guns and traps to them, each also taking a large sack of decoys and paddle out, Indian file, going through many little ponds and scaring up clouds of mallards, teal and sprigtails. But we don't stop for them, uo they for us, for that matter they know they are not "our ducks." Presently Cap shouts back, "Andy, you go in here, this is the Judd stand."

I am tired enough to be glad to come to a stand of any kind, so I hurry and put out my decoys, drag my little boat ashore and cover it with the long grass, crawl into the little wet blud, make myself as small as possible, and await the ducks. My fingers are numb with cold, and there is always a rascally decoy that wants to stand on its head. The ground is well littered with empty paper shells, showing that the place has been made good use of before. I haven't got into concealment a moment too soon, for the birds are beginning to come back. I raise my head a little, a pair of teal coming, I miss one but drop the other. Then comes a spoonbill and I lay him low, then a succession of misses, and there comes a rush of wings, and a mighty splash, and peeping out I see, not twenty feet away, half a dozen lordly canvasbacks swimming about among the decoys. I blaze away but only kill one, as they rise I knock down another. Good enough, a pair of "cans." I am satisfied now, if I don't get another duck. Now comes a lull in the flight, and rising to stretch my legs, I discover a pair of mallards that have swam in from another pond. I drop one dead as a mackerel, the other one comes down too, but only winged, for he is making for the shore for dear life. I push out the boat and go for him, but he is too quick, and gets away. I hunt the low bank over and over, but no use, so I paddle back, pick up my five dead birds and get into cover again. Then come more mighty rushes of wings, more splashes, a good many misses, but a good many ducks drop too, and their white bellies begin to make quite a show in the little pond, some are drifting away out of sight, round a point, too, so I push out and gather them in, and am surprised to see what a breastwork of ducks I am getting in front of me. I am also surprised, on taking stock, to see what a small number of shells I have left, and begin to wish I had taken Cap's advice. I haven't heard a great deal of shooting from him and Charley, but an occasional pounding noise, as though somebody was building a boat. That's the Cap pounding his duckboat with an oar, to scare up some ducks that he sees about alighting in another pond. Presently a flock of geese, flying low, came over, and I drop two of them.

It is getting along toward noon now, warm and pleasant, and I begin to feel hungry; but it is curious how the birds come as soon as I begin to eat my lunch. I finish, finally, and resume business, firing carefully now and taking no long shots, till I fire my last shell and with it get a duck. Then I come out of my hole. There is no use for concealment any longer; gather up my decoys, wash out my duck boat, and ship my game and traps aboard. But how the ducks

are coming in now. It really seems as if they were trying to knock my hat off. I paddle back again through the ditch toward the skiff, but how terribly hard this duck boat drags now, and at one abrupt turn in the ditch, Cape Horn, I am nearly stuck. How the ducks jump up in front of me, too, at every few yards' advance. They seem to know I am pumped out. At last I get back to the skiff, empty my duck boat and count my birds: 29 in all; 15 canvasbacks, 2 mallards, 1 sprigtail, 2 teal, 4 blackjacks, 3 spoonbills, 2 white geese. I pile them carefully in the bow of the skiff, not forgetting to give the "cans" the prominence they deserve. Then I wash the black mud from my oil-cloth coat, and spread it over them to keep the sun off, and with it comes a new idea. I start back to meet the boys and help them, for I hear their voices approaching. I meet Cap first, who says they have done pretty well, Charley, he says, has got as many as a dozen ducks. "How many did you get, Andy?" I replied that I have had the hardest kind of luck, couldn't seem to hit the birds at all, "but I got a pair of cans and a few other little ducks." "Why, Andy, is that all, I am so sorry, what a pity you didn't come with us, but I thought you might have got some birds in the Judd, it is the best pond in this marsh, and we put lots of ducks out of there, just now as we came through," and poor Cap goes on wasting sympathy on me, when I am tearing to pieces inside, I want to laugh so. Then I take hold and help Charley, whose duck boat seems to be crowding all the water out of the ditch before it, till at last the end of the ditch and the skiff are reached, and they take out their game for my inspection and astonishment, 30 birds in all; 8 of them canvasbacks, 8 sprigtails, 3 swans (killed with right and left barrel, by Charley), and the balance of small ducks. They do look nice, particularly the swans. We admired them a while and I got an occasional word of sympathy. Then Charley says, "Cap, where will I store all these birds?" "Oh, right in the bow of the skiff," he answers. Charley approaches, grabs my oil coat by the tail, shakes it off, and stands an instant in silence. "Cap, come here." They both take a glance, and make a rush for me, and for the next five minutes I am shaken and pummeled and embraced, and we finish up with a grand war dance on the spot, and a stranger visiting the banks of Frankhorn Slough that afternoon, would have thought that three lunatics had escaped from the insane asylum. Then we find it getting late, and embark for the yacht, amid much hilarity and many assurances from Cap, that he never will show the least sympathy for me again, no matter what may happen to me. We arrive in ample time for dinner, turn in early, with many promises of an early start out again next morning, but our expectations were not to be realized, and our next day's sport was anything but a repetition of my day's sport in the Judd. ANDY.

GAME PROTECTORS' REPORTS.

Editor Forest and Stream:

The several fish and game agents have filed their monthly reports for February with State Fish Commissioner Sherman, of New Hartford. Brief abstracts of the reports are given below:

Geo. W. Whitaker, protector for the first district, reports having brought suit against George Hutton and Richard Drake, of Suffolk county, for having trapped prairies in their possession. Hutton was acquitted, but Drake was fined \$5. The protector traveled 178 miles during the month, and his expenses were \$10.65.

Joseph H. Godwin, Jr., protector for the second district, in his report says that he has been co-operating with agents of the New York City Sportsmen's Association. But few violations of the game laws have been discovered recently. Sufficient evidence was obtained to warrant the commencement of two suits for violation of the fish laws. His expenses were \$23.50.

Protector Seymour C. Armstrong, of district No. 5, reports having begun action in the Supreme Court of Warren county against John C. Alden and Michael Schrodts for bounding deer. He traveled 405 miles during the month, and his expenses amounted to \$17.93.

John Liberty, protector for the sixth district, writes that he visited Nichols Pond, near Westport, to obtain information against parties accused of bounding deer but found there was no cause for the report. He obtained a judgment of \$50 against Wallace McFarland for hounding deer. The defendant paid the penalty. The protector traveled forty-four miles and paid out \$5.25.

Peter R. Leonard, protector for the seventh district, brought suit in the Supreme Court of St. Lawrence county against W. R. Woodward for hounding deer at Tupper's Lake. The case was settled, defendant paying \$75. Protector Leonard also recovered a penalty of \$50, with \$5 costs, in a suit against Darwin Day and others, for killing deer out of season. He traveled 209 miles and expended \$13.20.

Speaking of the recent action of the Assembly relative to the repeal of the anti-deer hounding law, Protector Leonard says: "If the law is repealed it will make it very hard for the State game agents to protect deer successfully."

Thomas Bradley, protector for the eighth district, reports having begun suits against W. Dirsler, David Mosher and Edward Spencer, in Fulton county, for disturbing trout on their spawning beds. In the case of the last two named, bills were found. He has two suits pending against Mathew Musgrave for having venison in possession in January. Protector Bradley traveled 300 miles and paid out \$24.

N. C. Phelps, of the tenth district, traveled 119 miles and paid out \$22.88. He found no violations of the law.

Protector Wm. N. Steele, of the twelfth district, traveled fifty miles and paid out \$2. He found no evidence on which to base a suit.

John Sheridan, of Penn Yan, protector for the fourteenth district, destroyed a set line valued at \$5 in Keuka Lake. He traveled 539 miles and expended \$20.83.

Geo. M. Schwartz, of the fifteenth district, brought suit against Wm. Carson, Henry Andrews, F. Ridgeway, Chas. Howard, Daniel Tompkins, Daniel Clump and Robert Scott, in the Wayne county Court of Oyer and Terminer, for illegal fishing in November. During the month he destroyed four fyke nets, valued at \$45, at Long Pond and Irondequoit Bay. The action against the Rochester Paper Mill Company has been settled, the corporation paying \$25 and promising to throw no more refuse in Genesee River. The protector traveled 170 miles during the month and his expenses amounted to \$53.

Protector S. A. Roberts, of the sixteenth district, reports having destroyed a seine valued at \$40, found in Niagara River. Henry and Christopher Miller were fined \$25 each for illegal fishing, and in default thereof were sent to the workhouse for twenty-five days. The protector traveled 298 miles and expended \$13.80.

SADDLE SLING FOR THE PLAINS.

HUNTING a great deal in the saddle I was naturally very much interested in "W. E. B.'s" description of a gun sling, in FOREST AND STREAM of Oct. 1, and can fully appreciate the difficulties one has in managing a horse and carrying rifle or shotgun in their hands. I send with this a pattern of sling which I use on the plains. It is fitted for a Sharps' .45 70, and a regular "cow-puncher's" saddle.

Its extreme length is 15 inches; width, 6 inches; openings at A and B, 2½ inches; width from D to D, 2½ inches; length from center to E, 7 inches. The square hole marked C is where the rear sight comes when the rifle and sling are fast to the saddle. I do not cut out the openings A and B but leave tongues, the lower one giving a bearing for the rifle against the horn of the saddle and furnishing a smooth surface for rifle to be pressed against when in haste to unfasten it from sling, or, in other words, to "draw it." I do not have to pull the rifle out lengthwise but can simply grasp it near the lever, give it a push forward, and the upper half of the sling releases itself. Can draw a rifle as quickly as the typical bad man from Bitter Creek can draw a pistol.

Have ridden hundreds of miles and never had my rifle offer to jump the sling, and when properly fitted rides smoothly and does not necessitate ones holding on to it even when the horse is running at full speed. MILLARD.

BEAR CREEK, WYOMING.

A TRAMP FOR MOOSE.

HAVING heard that a well-known sportsman of the neighborhood had returned from a week's tramp with one moose, I suggested to my friend S. that we should try our hand after them. Accordingly on Saturday, Jan. 16, we made preparations for an early start on Monday, the 15th. We laid in a supply of biscuits and baked a large pot of beans, and with some fat pork, etc., got together enough supplies for a week in case we met with no luck. We then drove to the Indian village and secured two hunters at one dollar a day each, who were to meet us on Monday at the house of a farmer named Clark, whose house is the last on the road before taking to the woods.

At 7 A. M. on Monday, we were all equipped, and packing our provisions, arms, tabogan, etc., in the pung, we started. The day before had been very wet, and the roads were somewhat broken; but we arrived at Clark's, which is nine miles from Bear River Village, at 11 A. M. The Indians had not yet arrived, so we waited an hour for them. When they came they told us that there would be too much water on the lakes and that we had better wait till next day, but we thought it better to make the attempt, and so started. Our first lake was Lake Jolly, about a mile and a half long. The ice was not very strong, but we managed to get across without mishap, and as it was freezing hard we anticipated no further trouble.

We next passed in succession ninth, eighth, seventh and sixth lakes, and at the foot of the latter we came to our first camp, and were glad enough of the rest. The camp was a poor one, but the night was bright and cold, so that with plenty of fire we managed to survive till morning. On Tuesday we made an early start and crossed the Stillwater River and then the "Turnpike," so called. This is a naturally graded sort of sand bank which runs from the Bay of Fundy right through to the ocean on the other side. It has no trees on it, and looks as if it had been laid out for a railway track. Then we went on through Cranberry Swamp, Cranberry Lake and over to Whitesand Lake, at the head of which we passed an Indian camp, and then we came to Moosehead Lake, at the foot of which we intended to camp. This last lake is two and a half miles long. We arrived at camp rather tired at 2 P. M., and at once started to get dinner ready and our supply of wood cut and everything ready for our hunt on the morrow. We had walked the whole way so far in moosecas, not having had occasion for snowshoes. We had thus far seen no tracks.

Wednesday morning we were all up bright and early, and as a good strong breeze was blowing, our Indians said it would be an excellent day for moose and probably caribou. We thought it wise to divide our forces, so S. took Jerry Barlett (Indian) with him and I started with Molt Pietou, the other Indian, our plan being to make a circuit and meet somewhere about the boundary rock. Molt and I crossed the lake and started over the swamp in the direction of Cow-fang Lake. After walking about two miles we struck moose signs, but we thought them about a week old, so we went on another mile, where my Indian discovered the tracks of two quite fresh. He immediately set about following them out, and within a quarter of a mile we discovered them browsing in a small belt of maples. We erept up to within about 70 yards, when I thought it best to fire. We heard the thud of the bullet, and she at once turned to run out of the maples. I loaded and fired again, but the bullet struck a small maple and glanced off. As I got ready to fire a third shot I saw her fall over and begin to kick. The other one started to run out, and as in the course of the battue my snowshoes came off, I handed my rifle to the Indian to fire and he had two shots at her, but fired high both times. I had by this time got my snowshoes off and taking the rifle, jumped on a rock to see where she was. Curiosity had overcome her prudence and she stopped for a minute full facing me, looking I suppose for the other, when a bullet in the breast dropped her where she stood. The two were four-year old cows, in good condition, and weighed between 1,800 and 1,900 pounds together. Not bad sport this for two hours' hunting we thought. We then dressed them and had just finished when S. and Indian came hurrying up, having tracked these same two about five miles. We then all returned to camp. Next day we all went and finished skinning and cutting up the meat. Of course we could not bring all of it out, so we gave the rest to the Indians. On our return to camp we came on the tracks of four more moose which had crossed the track about half an hour. We had as much meat as we could manage.

On Friday morning we started on the return trip, and as it rained hard all day, we determined to come through without a halt and arrived at Clark's at 7 P. M. very tired and wet, slept there and arrived home on Saturday at noon. So ended one of the best hunts it has been my good luck to

join in. For the benefit of those who perhaps have not had an extensive experience in this sport I would suggest the advisability of carrying a light good rifle, as it becomes very heavy carrying after a long tramp. The one I used was a .42 caliber.

PEREGRINE PICKLE.

THE DEER HOUNDING BILL.

WHEN the bill to repeal the anti-hounding law was under debate in the Assembly, the two principal advocates of its passage were Messrs. Hadley and Palmer. The misstatements contained in Hadley's speech were exposed and commented upon in our issue of March 4. Self-dubbed "old practical hunter" Palmer's speech is the funniest thing we have yet come across in all the deer hounding discussion. Here is the stenographer's report of what Palmer said:

Mr. Palmer spoke as follows:

MR. CHAIRMAN: It must be evident to the House that my gallant friend from St. Lawrence (Gen. Curtis) is not a practical deer hunter; that his knowledge upon this subject is derived mainly from a careful perusal of the literature which is placed upon our desks and sent through the mail for the last two or three weeks upon this subject. He has given us a very careful resumé of the objections to this bill contained in this very literature.

Now, gentlemen, will you indulge a few moments an old practical hunter on this subject? For more than forty years I have been accustomed annually to go to the Adirondack forests as a sportsman hunting deer and catching speckled trout. It is my deliberate opinion, from my personal knowledge of this subject, that the most speedy extermination of the deer to those forests that you can possibly devise will be to forbid hunters and sportsmen the use of dogs in the pursuit of deer. We all know that the men who hunt deer for market for pay never use or own a dog. The men who use dogs are the sporting gentlemen who go in there for a week or two of amusement. And I assert here that a party of six gentlemen going into those forests with half a dozen dogs, two or three nights a week on an average, every deer they bring out costs them more than one hundred dollars. Hence it is that the men who make a profit in their business, who kill deer to send to the market, never use dogs. They still hunt and kill the deer by the score and send them into the market.

Now let me tell you a little incident that happened to me about twenty-five years ago, on one of those beautiful lakes that grace the Adirondack region. A party of four or five gentlemen went to the upper Chataugey Lake; on a little island in the middle we camped. We had half a dozen dogs, half a dozen boats, and half a dozen guides. We spent the whole week there with our dogs, every day striking a fresh track—for six long days, and not a deer did we get. The guides said to us, "Put your dogs in the kennels, and tomorrow we will have some sport and you will have some deer." We followed their advice, the dogs we shut up. The next day we went to the shores of that lake still-hunting, and before noon we bagged seven deer.

I know an old hunter who lives in that region, famous all the country through for his success in killing deer. He never owned a dog in his life.

He kills more deer than any other man within ten miles around and he invariably kills them by the still-hunting process. He steals noiselessly on the deer when the first snow falls.

The gentleman (Mr. Curtis) has read to us something from this literature in regard to various objections to this bill. Impracticable, and most of them utterly absurd, as known by all men at all acquainted with the subject. He says the dogs go out of their own accord and hunt deer through the swamps and mountains. Dogs never hunt deer or rarely. Dogs only hunt deer where they are led by the guide and the track is generally found by the guide and the dog forced to follow it. Of course when he goes upon it and gets excited, he sometimes sticks to it if he is a good dog.

It is said that the venison is ruined by pursuit of dogs. Those who are acquainted with this subject know very well that a dog never goes at a speed of more than three or four miles an hour when pursuing deer through the forests. The deer can escape without going one-fourth of the time.

The gentleman from St. Lawrence says the dogs are in the habit of driving the deer into holes and dragging them out. He asks me to read this paper. The most absurd and nonsensical stuff to be found anywhere!

I will read you something from an authority well-known in this State, not an obscure guide, not a man who never owned a hound—Mr. Paul Smith, who was a candidate for Congress last year, a gentleman, a cultivated man of veracity, and he says: "I have lived thirty-five years in the Adirondacks and I know about that region, and I desire to lay before you briefly a few facts." [Reads letter in full to the effect that the deer will disappear if dogging is prohibited.]

[This old sportsman of forty years' experience is not quite decided whether deer are hounded by day or by night, but he is dead sure that after being forced by the guide to follow the trail the dog will sometimes, if he gets excited, stick to it if he is a good dog. If he is a bad dog and does not get excited, the guide has to carry him all the way over the course. In that case the deer don't have to go at all; he just climbs a tree and makes derisive gestures at the man and the dog. They say that Mr. Palmer occasionally gets up in the Assembly to talk on bills relating to the prison system. If penal legislation is based on speeches like the above, God help the convicts.]

Editor Forest and Stream:

I was somewhat surprised when I learned by your issue of March 4 that the deer hounding bill had passed the Assembly by such an overwhelming vote. I had the patience to read Mr. Hadley's speech. It was a flimsy affair, too thin to hang together, and not worth contesting. But what surprises me the most is that ninety-three members of the Assembly of the great State of New York should vote to let loose the hounds, ostensibly for the preservation of deer. I must say that looks like preserving the deer with a vengeance. Was there ever anything more ridiculous. I mean the flimsy excuse.

The final ending up of the remnant of deer in the south western part of the State was accomplished by hounding several years ago, and the deer in a portion of Pennsylvania shared the same fate. It was hounds from first to last, hounding from beginning to end, that is to the end of the deer, and I am beginning to believe that the same calamity awaits the Adirondack region.

It is only a question of time.

The deer have something of a reasonable chance among still-hunters, also among wolves, but when a pack of wolves

are on one end of the trail and the water butchers, and the inevitable buckshot gun at the other end, the deer must go.

There are some deer hounders scattered over a large portion of Middle Tennessee, and I have conversed with several on that subject, and they are (invariably to a man) honest enough to admit the fact that hounding is the most sure and only way to exterminate the deer. They also claim that they are in favor of a law prohibiting the same. But as it is, they reiterate the same old story, that if they don't hound deer somebody else will.

ANTLER.

GRAND VIEW, TENN., March 13.

A hearing as to the proposed hounding law was had on Tuesday last at Albany before the Game Law Committee of the Senate. The hour set was 3 o'clock and the place the Senate Chamber, but it was after 4:30 before the hearing was opened in one of the committee rooms. Of the committee, Messrs. Vedder and McMillan were present, and for a part of the time Mr. Wemple. The hounders were represented by Dr. Ward, Mr. Palmer, Mr. Cookingham, Paul Smith, and five or six others. Among the anti-hounders present were Hon. Lansing Hotaling, Hon. C. L. Merriam, Hon. H. A. Sprague, Messrs. Collins, Van Santvoord, Sytes, Webb, Purdy, Bird, Grinnell, McChesney, Fenton, Smith, Youngs, Mayer and about fifteen others. All parts of the State were represented, and the greatest interest manifested. The discussion was opened by Mr. Cookingham, of the Bisby Club, who argued that while floating is permitted the use of dogs does protect the deer; that a deer which had been dogged would not be so likely to let the jacker paddle up to it. He did not regard this bill as by any means a perfect one; it had many objectionable features, but he did think it was a fair compromise. He would have deer protected for the sake of recreation and sport. He believed that more deer were killed—in proportion to the number of men engaged in it—by floating than by all other methods, next in order of destructiveness comes still-hunting in proportion to the number of men engaged in it, and last hounding. In other words, more people got sport out of the killing of one deer by hounding than by any other means. Mr. Cookingham said that the only unpleasant part of a hunt by this method was the killing of the deer. He said that most men cannot still-hunt, they do not know how. In his experience a dog could not catch a deer when there was no snow on the ground. Deer when chased by dogs are accustomed to trot along unconcernedly, frequently stopping to bathe in the water, and then get up, shake themselves, rub their heads along the ground, and go up on the bank and lie down and sleep until aroused by the voice of the slowly approaching dog. He stated positively that the use of the dogs had brought back the deer to the grounds of the Bisby Club. Mr. Sprague followed Mr. Cookingham in a speech, which although it did not contain so many startling statements as that of his predecessor had more to do with the subject under consideration. He defined the methods of killing deer and inveighed against water butchering as being essentially the same in principle as crusting. He showed why it is important to protect the deer, basing his appeal on economic and not sentimental grounds. Mr. Grinnell called attention to the fact that the speakers in favor of the bill appeared to misconceive the purpose of game legislation. Such legislation is not to benefit or favor any particular class of people, but to protect the game. He then devoted a few words to the shy nature of the deer, and showed that the Virginia deer is the most shy and timid of all American game animals.

In the course of the questions which followed these remarks, the question was squarely asked of Dr. Ward whether he considered the deer a dull and stupid animal or not, and he replied that his side had never stated that deer were not shy. Their claim was that the chasing with dogs made them more shy.

Mr. Grant, a guide, who said he had had thirty years' experience, next spoke on the side of the hounders, and was followed by Mr. Fenton, who read a paper on the other side. He brought out two interesting cases to show that deer pursued by wolves or hounds became tame, so far as man is concerned. Next came Mr. Barnes, of Essex, known to fame for his touching comparison of a vigorous Adirondack deer to a diseased cat on the back fence, and M. W. Youngs and Charles Smith, old guides, both of whom considered dogging the most destructive method of killing deer in the Beaver River region.

It was now nearly 7 o'clock, and the hearing was finally adjourned, owing to the engagements of the committee. It was a serious disappointment that neither Mr. Hotaling nor Mr. Van Santvoord was heard, owing to lack of time.

MIDDLEFIELD, Conn., March 14, 1886.—*Editor Forest and Stream:* At a meeting yesterday of the executive committee of the Middlesex County Association for the Protection of Fish and Game the following resolution was taken and put on file among the minutes of the meeting:

Middletown, Conn., March 13. Resolved: That this association is in entire sympathy with the stand the FOREST AND STREAM is taking against that most unsportsmanlike sport, deer hounding, and we hope and believe that we represent the sentiment of all true sportsmen in Connecticut. (Signed) J. C. BROATCH, Secretary.

Our president, Dr. Alsop, and secretary, Mr. Broatch, suggested that I forward this resolution to the FOREST AND STREAM for publication if desired. We are about to put a lot of young trout in a number of streams in the county and hope to catch some of them when they grow up.—MEMBER

The last number of the FOREST AND STREAM contains an admirable cartoon on deer hounding. The artist pictures a doe struggling helplessly in the middle of a lake, with two men in a boat attempting to kill it. One of the hunters is holding the animal by the tail while the other clubs it with an oar. Two other boats are coming down the lake, and on the shore near by are the three hounds which have put the deer to water. The picture illustrates very finely the method advocated by hounders for killing the deer shy so the still-hunters can not get them.—*Utica Herald, March 15.*

The deer hounder who has decency enough left to squirm while looking at the cartoon in the last number of FOREST AND STREAM cannot relieve himself by calling the picture a caricature. It illustrates the alleged purpose of the hounder of our noblest game—"to make it 'shy' so that the still-hunter will not get it"—by depicting an excited hunter in the bow of a skiff, with our uplifted to beat out the brains of a swimming doe which the guide, kneeling in the bottom of the boat, holds by the tail. The picture would be a gross caricature of any possible action of a sportsman, but the North Woods are deplorably infested with mere sporting men. Their method of deer-hunting affords one of the distinctions

between the two classes. If the sportsman put hounds on the track of a deer it would be for the chance of a shot at the bounding game on its "runway." Missing the animal, and seeing it fairly in the water, he would be ashamed to use dog and boat in the same hunt. Not so with the sporting man. If he had not before lost all shame, he would lose his head in the excitement of the occasion, and eagerly butcher the game in the manner the cartoon represents. He would not dare to honestly describe his exploit to decent people. The sportsman need never hesitate. FOREST AND STREAM is on the side of the sportsman every time, and it has made many a keen thrust at the mere killer; but seldom has it punctured a victim's hide more shrewdly than with the pencil of its latest artist.—*Syracuse Standard, March 13.*

Last Wednesday afternoon a hound drove a two-year-old deer through the outskirts of the village and succeeded in catching it near the St. Lawrence Marble Co.'s quarry. A number of the employees of that company thought they would cut its throat and dress it out, which they proceeded to do; on being informed that they would be liable to a fine for having the meat in their possession, they drew off and left the carcass. In a few hours it had disappeared, some one having stolen it.—*Gouverneur (N. Y.) Free Press, March 3, 1886.*

CRYSTAL LAKE CLUB.—Burlington, Iowa, March 10.—I send you by mail to day copy of the rules and regulations of the Crystal Lake and Eagle Grove Club. This club was organized less than a year ago, and already has a membership of about seventy. It is the intention of the members to protect and encourage the propagation of game and fish, and punish law breakers to the full extent of the law. They have purchased about 2,500 acres of land, the best duck-shooting ground in the vicinity. It includes also Crystal Lake, Lone Tree Lake, Sand Lake and several smaller lakes, as good fishing waters as can be found in Illinois. They have also erected on Crystal Lake an elegant club house 30x40 at a cost of \$3,000. It is within about 50 feet of the C. B. & Q. Railroad, which makes it very convenient, the company having made the club house a regular station. Accommodations are furnished the members at the rate of \$1 a day. There has been some spearing and fishing through the ice this winter, but the catch did not amount to much. Your correspondent and a friend in one day speared about 100 dogfish. The ice is just breaking up at this point, and ducks are beginning to come in small flocks. Preparations are already being made for the Sportsman's Tournament to be held here in June. The early part of this week C. H. Wyman, one of our best amateur riders, with a .22-caliber Bullard, broke 471 out of a possible 500 glass balls, at 15 feet.—C. L. E. G.

SWANS IN FLORIDA.—St. Andrews Bay, Washington Co., Fla., March 2.—*Editor Forest and Stream:* On a trip from Pensacola to this port I spent one night at a farm house on the sea coast. In the morning I noticed what I thought was a swan among a flock of geese paddling in and near the water's edge. Mr. B. (mine host) said he supposed that it was a swan, as he had been so informed by a number of persons. It had come there about three months before, had "taken up" with his geese, and was now perfectly tame, as he showed me, by calling it to eat bread from his hand. Getting my host to catch the bird, I found it to be a whistling or American swan. "Hallock's Gazetteer" says that this species is not seen further South than North Carolina, but Mr. B. tells me that for some years past he has seen them around the salt marshes in his neighborhood. He had shot several, and was positive that it was the same bird. The largest flock that he saw contained six birds. The hunting in this vicinity has been quite good this winter, deer, bears and small game being quite abundant. We have a great many ducks and a few geese on the bay this season, but they have been hunted a great deal and now are quite shy and keep well out in deep water. The fishing here during the spring, summer and fall months is excellent, there being any quantity of redfish, trout, sheepshead, Spanish mackerel, and other varieties of food and game fish.—W. A. M.

MAINE LUMBERMEN AND GAME.—*Editor Forest and Stream:* No doubt nine-tenths of the large game are killed by the loggers now in the woods and they rest in assured security. Not a season goes by that the writer does not learn that crews are largely supplied with wild meat. In the fall, before good sliding, the rifles are in constant use. At one camp last fall half a score of caribou and one moose were shot in one day and the supply was so great that one caribou killed two miles only from camp was left to spoil. In the salmon pools dynamite is the agent used to procure a change of diet. These are cold frozen facts, which the Commissioners can easily verify. The works are easily reached by trolleys and once there the evidence is to be found. There is now over five feet of snow in the woods and nothing on legs can escape the pot-hunter. Meat will be plenty in camps not supplied by teams. How long shall this continue?—MATTAWANKEAG (Bangor, March 2).

NEW HAMPSHIRE DEER.—Plymouth, N. H., March 3.—A raid was made last week on the deer crusters in Carroll county by Commissioner E. B. Hodge. He succeeded in convicting eight who were fined \$25 and costs each. Warrants were issued for others but they could not be found. The deer are rapidly increasing in that section of the State and if they could be protected during the deep snows it would soon become one of the best sections for still-hunting in New England, being very easy of access by rail. From Conway or Glen Station, on the P. & O. R., one hour's ride and one hour's walk will land the hunter to the deer resorts. Good guides can be found at Conway or Jackson and the sportsman will have no fancy price to pay for their services.—CARROLL.

WILDCATS IN CONNECTICUT.—Essex, Conn., March 2.—Wildcats have been unusually plenty in this part of Connecticut this winter. In North Guilford recently Nelson Lane, armed with an axe, killed one in his woodhouse after a long and desperate battle. In Salem a hunter killed another with a revolver. A wildcat is robbing Niantic hen roosts, and has been hunted repeatedly without success. In Killingworth three of the animals have been killed this season; in North Guilford one, in Chester one, in Saybrook one, in Niantic and East Lyme three. This is something phenomenal in Connecticut hunting annals.

EARLVILLE, Madison Co., N. Y.—Partridges and woodcock last fall were quite plenty, but our winter shooting is poor. Rabbits are very scarce, and very few foxes have been killed thus far.—G. F. B.

TAUNTON NOTES.—Taunton, Mass., Feb. 20.—The game about here appears to be wintering all right. Many quail and ruffed grouse were left at the close of the season, and if they are not shot and snared during the close season there will be plenty to breed. Game has been very plentiful this fall and winter; in fact, I never have seen as many quail and partridges before. Many very large bags of partridges have been made. Several scores for the season are as high as 125, and one fellow says he has killed 300. He is a market-hunter and went nearly every day. About two-thirds of the game hung up in our markets show no signs of blood or shot and have no doubt been snared. Many large flocks of quail lived through the open season, and we may expect plenty of quail next season. There were no flights of woodcock this fall. Several pairs bred, but were cleaned out in August; only a very few taken in the fall flights. Rabbit shooting has been as good as usual. Quite a number of foxes have been shot. Our markets are filled with prairie chickens, some of which have been kept several months. A partridge was caught alive in a curious way a short time ago. Two boys in the woods were sitting down to eat their dinner, when a partridge flew by and dropped into some bushes. The boys ran and threw themselves into the bushes over the partridge and caught him alive. I saw the partridge in a cage and should say he was a young bird.—CHESTER.

GARDEN CITY, KANSAS, March 1.—Game of some kinds is fairly plentiful in this part of Kansas. Antelope are found in small gangs, though scores of them were "butchered" during the blizzards and deep snows of January, their hunger driving them into the city limits and rendering them bold. I do not hear of the finding of any that were frozen to death, though thousands of cattle and sheep met that fate, their carcasses lining the Santa Fé Railroad in great numbers on the north, where they had drifted against the fences and died. A large flock of geese passed north last week, and some ducks have been coming into the Arkansas river. Wildfowl are said to come in immense numbers 100 to 150 miles east of here, but I think they will give us the "go by" until we begin to raise crops of grain for them to feed upon. This I hope will be the case this season, so we may have good shooting next fall. At present very little grain has been raised.—VETERAN.

NEW JERSEY GAME.—Quail have been quite plentiful around Madison, but very hard to find. The shooters have been comparatively few, I am glad to say. Partridges have increased, owing to the very few who hunt expressly for that game, and also to the very thick cover they have been driven to occupy. In November I was told by a first-class rabbit shooter that there was hardly any of that game to hunt, and he owns the best dog in that section, but could not make half the bag he made last year; but I know that rabbits are quite plenty. The last woodcock season was a very poor one, and it will be a poorer one yet next year. If summer woodcock shooting is not stopped, good-bye to woodcock. Wild ducks do not come to the meadows as usual; for what reason I do not know, as there is plenty of food for them.—16-BORE.

"WOODCRAFT" is a manual of camping out and woods life, written by "Nessmuk," for the guidance and instruction of young men who know little of camp life and older men who do not know so much that they are unwilling to learn more. The little volume is not only instructive, but is remarkably entertaining as well. It will prove a companionable book, whether one be going into camp next season or for home reading. There is a good deal of sound philosophy in "Woodcraft" and a great deal of mother wit. Published by the Forest and Stream Publishing Company.

VIRGINIA BIRDS.—Partridges (*Oryz virginianus*) wintered well. We had two unusually deep snows, accompanied with bitter cold weather, but fortunately they were not of long duration; the first not lasting over ten days, the second not over five. The wild assertions that it was the coldest weather felt in Virginia for thirty years was all bosh. But birds are scarce, and have been for eight or ten years, all north of James River and west of Richmond.—OLD TIMER.

GALVESTON, Texas, Feb. 27.—There has not been very good duck shooting here for some time in consequence of the rainy and windy weather, but I think that after this date there will be good inland shooting and good shooting over decoys. Jacksnipe have been very plentiful for the last few months, and any one who is a good shot can secure a nice bag in two or three hours by tramping around the edges of the marshes outside of the city.—REDBREAST.

INDIANA.—Packerton.—Our Bob Whites are about played out. I wintered about four dozen for the last three years. Shooters are making away with them. Duck and brant were quite plenty on the Kankakee close by this fall. Prairie chicken gone. Plenty of cottontails. Few pheasants as they are called here. Expect good woodcock shooting in spring.—B. H. W.

ALBANY, N. Y., March 9.—In the court of special sessions at Albany to-day Joseph Clark, a prominent merchant, paid a fine of \$20 on conviction of selling quail out of season. George L. Thomas, also a leading dealer, charged with the same offense, demanded a jury trial.

IOWA.—Emmetsburg.—This town is situated on Medium Lake which is about eight miles long by one or two wide and twenty miles from Spirit Lake. We have as fine duck, geese and chicken shooting as any place in the State.—S.

SHINNECOCK BAY.—March 8.—Broadbills, redheads and whistlers are appearing in pretty respectable numbers on Shinnecock Bay.—J. WENDELL JR.

PUBLISHER'S DEPARTMENT.

THE TRAVELERS' INSURANCE COMPANY (not intended for sale or general distribution by the company), and designed solely for gifts to its helpful friends: a book of art-types containing a series of pictures of the principal streets, noted buildings, picture-galleries, private residences, and a few of the literary celebrities of Hartford. These views are not at all like ordinary photographs. They are dissimilar in beauty, location and original quality to any pictures that have yet been issued. Each artotype is a revelation of beauty. The lights, shadows and outlines of the buildings, the luxuriance and delicacy of the foliage, the fine perspectives of the streets, the exquisite details of the view, and above all the atmosphere in these gems of photography, lift them into the realm of art. The localities of the buildings have been especially studied, and the result shows Hartford under an aspect different from and more correct than any previous publication of the kind in the way of photography.

Sea and River Fishing.

Address all communications to the Forest and Stream Publishing Co.

AN ICY BATH.

Editor Forest and Stream:

I said in my last letter that the Doctor insisted on taking our guns and the dog. Well, after arriving at our destination and getting everything ready, we started up an Indian trail which was parallel to our trout stream, expecting to begin fishing one or two hundred yards above where we had hitched our horses and work down. About one hundred yards from the buggy, as we were marching along, Indian file, a flock of eight or ten mountain grouse rose up from the dusty path and with spread tails, walked leisurely along in front of us, not over five yards in advance. The Doctor requested me to go back and bring a gun and the dog, while he would watch the game. When I returned the Doctor pointed to a cluster of undergrowth close by the roadside, into which the birds had retreated. When I put the dog in, even before he had wined the birds, away they went to the steep mountain side beyond the stream without giving me a chance for a shot.

On our return home, in crossing the Bitter Root River, which at this ford was about from twenty to thirty inches deep and fifty yards wide and a very rapid current, I noticed the dog being driven rapidly down stream. I asked the Doctor if he thought the dog could make it. "Oh, yes," replied the Doctor, "he is all right." Just then the dog struck a drift caused by a pine tree projecting out from the bank, and dipping down into the water and under he went. "There," said I, "your dog is gone sure." This caused the Doctor to rein up, remarking at the same time while his eyes were fastened upon the spot where poor Sport was last seen, "He'll come out all right." After waiting some time—long enough, I thought, to have completely drowned the poor brute, we saw him emerge from the stream some distance below the drift, give himself a few shakes and start on a run to meet us. When he caught up with us he fairly lashed his body with his tail and looked up with an expression as much as to say, "I tell you I made a narrow escape."

These mountain streams are all very treacherous, and one unacquainted with them has no idea of their depth and velocity of current simply by looking at them. In trout fishing in water up to the knees you must use extreme caution in order to keep your feet. I will never forget my first experience. I was told that in order to successfully cast for trout you must keep in the middle of the stream and fish down. This I could not do without rubber boots, because, as I thought a wetting in the ice-cold water would certainly prove serious, especially to one who had been a sufferer from neuralgic rheumatism. As I had left my hip boots out of the kit when packing up for this trip, I was kindly tendered a pair by a friend, which, although new and water tight, were about two numbers too large for me. I could get along very well when exercising caution, and always noticing where I placed my foot so as to avoid the many boulders that literally cover the beds of these streams. On this last fishing bout, however, the trout were so lively and the sport so exhilarating, that I soon forgot myself, and, making a misstep, was submerged, head up stream, in this ice bath. After two or three turns over I succeeded in regaining my feet, literally wet to the skin and about a gallon of water in each boot. At first the cold was intense, but soon a warm glow spread all over me, and especially my feet and legs. The water in the rubber boots did not only get warm, but apparently scalding hot. No inconvenience resulted from the ducking, in fact I became convinced that no better treatment could be suggested than a regular daily bath in this pure cold water, for all forms of simple neuralgia.

OCCIDENT.

CANADIAN TROUT WATERS.

THE new Lake St. John Railway, which runs north from Quebec, gives easy access to a large number of most excellent trout waters. A correspondent of the Quebec *Chronicle* says: "Not only has the road been completed some 80 miles beyond St. Raymond, but that it is rapidly extending, and in a couple of years the whole road to Lake St. John will be an accomplished fact. The line taken over by the company now extends to Riviere a Pierre, 58 miles from Quebec, and where a year ago nothing but a dense forest existed may be heard the busy hum of scores of mechanics engaged in the workshops of the contractor, where everything in the shape of repairs, etc., are performed in a workmanlike manner. From this point to the end of the road at Batiscan River, a distance of thirty miles, the line is operated by the contractor and is already in excellent order. A train leaves Riviere a Pierre daily and reaches the present terminus about midday, where the traveler can be accommodated with first-class fare at the Windsor. Just imagine, where a howling wilderness existed a few months ago almost every luxury can now be obtained, and every attention paid to the traveler who may fortunately be induced to visit these parts on business or pleasure. We talk about the land and scenery on the Saguenay River, but nothing can surpass the beauties all along the route of the Lake St. John railway. Gigantic mountains, nearly equaling in height capes Trinity and Eternity, of the far-famed Saguenay, lovely valleys, meandering streams and magnificent lakes are to be seen in succession as we travel through this interesting country. The railway skirts the borders of the beautiful Batiscan River for some forty miles, which is perfectly enchanting, being a succession of rapids, bays, etc., and studded with islands. An iron bridge is now being thrown across the Batiscan River, and it is expected the road will reach Lake Edward, a distance of 110 miles from Quebec, about the 1st of July next, if financial arrangements are completed. This splendid sheet of water is twenty miles long, about two miles broad, and abounds with the finest trout. From the end of the line to the second crossing on the Batiscan River, a perfect string of magnificent lakes are to be found teeming with fish, offering to the sportsman a chance scarcely known elsewhere, they being within a few hours' ride from the city."

J. U. Gregory, Esq., writes: "The *Chronicle* letter will convey some idea of the splendid fly-fishing for trout we can now enjoy within three or four hours' ride from home. The Lake St. John Railroad runs through an entirely new country, offering facilities to reach magnificent lakes and rivers teeming with beautiful trout. Leaving New York at 4:30 P. M., the next day at 1 P. M. you are in Quebec, and can reach the lakes or river the same day or in little over twenty-four hours after leaving New York. You can be in camp in time

to get that evening's fishing. The scenery is simply grand, the atmosphere cool and balmy, and for pleasure combined with healing qualities of the air no place in America can surpass this new region. As yet man has done nothing to interfere with the laws of nature, and for some years to come it will be a perfect paradise for the lover of the rod and gun. In winter caribou are plentiful and there is also an occasional moose. I most confidently recommend any of your readers desirous of fine trout fishing to try the Laurentine lakes back of Quebec, and shall be happy to assist them all in my power.

THE FISH AND FISHERIES.*

THE work now before us is by far the most thorough and important popular work on fishes ever issued in America. It has been published by the U. S. Commission of Fish and Fisheries, from material gathered under its direction, in conjunction with the tenth census. It comprises two large volumes; the one containing the text covers 850 quarto pages, printed in large, clear type on good paper, while the accompanying volume of plates gives us the finest collection of figures of fishes, mollusks, crustaceans and marine mammals that has ever been presented to the public. While it does not enter into scientific discussions of species, it gives us such information as the average reader will value and best understand.

It opens with the marine mammals, etc.—the seals, sea lions, walrus, the manatees—giving their life history and their commercial uses. In part second, the useful aquatic reptiles and the batrachians of the United States are treated; the species ranging from the great marine turtles down through the small pond tortoises, to the frogs, there being a chapter on the bullfrog, its propagation, mode of capture and economic uses. Part third comprises the larger portion of the volume, and is devoted to the food fishes of the United States. The author says in an introductory note: "In preparing the following chapters upon the food fishes of the United States, the authors have avoided all technical discussions, all descriptions of form, all digressions of the kind in which naturalists, even when writing for the general public, are so prone to indulge. We anticipate the criticism that the book is of no use in identifying the different kinds of fish, by the statement that we expressly desire that it should not be. We have tried to present in concise form the information suited to the needs of the fisherman, the fish purchaser, statistician, and the general reader. Most of our important species can be identified by reference to the plates. If greater accuracy of identification be needed, the inquirer is advised to consult 'Jordan's Synopsis of the Fishes of North America,' which forms the Bulletin No. 16 of the United States National Museum series."

The fishes which are of the greatest interest to the angler are very generously treated in regard to space, and much interesting matter concerning their habits is given in a condensed form. Of the black bass it is very truly said: "The black bass will never become the food of the millions. The New York market receives probably less than ten thousand pounds of them annually, and they are nowhere very numerous. Yet hundreds of bodies of waste water are now stocked with them in sufficient numbers to afford pleasant sport and excellent food."

While much is said upon the habits of the salmon, we note that the question of their biennial spawning, which has been so ably discussed by Mr. Atkins, is not referred to, although reference is made to his statement "that the great run of grise which is so prominent a feature in Canada and Europe is almost entirely absent in the rivers of the United States, the fish not returning until they have become adult." The salmon was formerly plentiful in Lake Ontario, where they used to ascend the Oswego River to its falls, but in the last eighteen years they have gradually decreased till now only an occasional straggler is found there; this decrease has been especially noticeable since the construction of dams.

Prof. D. S. Jordan describes the salmon of the Pacific coast. Of the rainbow trout he mentions that this species is generally known as brook trout, mountain trout, speckled trout, golden trout and other evanescent names, and as far as is known, they do not reach a weight of more than four or five pounds. Its range is throughout California in all mountain streams, and it is said to occur in the northern part of lower California. The southernmost specimens seen by him were from the San Luis Rey River. Prof. Jordan remarks: "It may probably run into the sea from streams in which the lower waters are clear. Specimens referred to this species from the north of Mount Shasta are perhaps the young of *S. gairdneri*. It feeds on worms, larvæ and the like. For a trout it is a fish of little gameness or activity. It is not often brought into the markets of San Francisco, and at present has little economic importance, although, of course, a good table fish." The so-called "red fish of Idaho," whose identity was first determined by our correspondent, Capt. Charles Bendire, United States Army, whose notes upon its appearance and habits have been published in *FOREST AND STREAM* and in the "Proceedings of the National Mus. um," is described.

Mr. Livingston Stone contributes an article on the quinnat salmon. He vividly describes their headlong rush up the streams to the spawning beds, in which great numbers die upon the way. According to Mr. Stone these salmon scoop away the gravel from a selected spot with their noses and sweep it off with their tails, until they have made a clear spot a few feet in diameter, usually circular in shape, and depressed toward the center, not unlike a hen's nest. This question of the use of the nose is one that has been much discussed among fishcultivists on the other side of the water. Concerning the question that was agitated some years ago, whether this species of salmon on the Pacific coast died after spawning or whether a few returned to sea, Mr. Stone speaks in the following words:

"Some uninformed persons, who have never seen these fish in their natural habits, have expressed some incredulity, in regard to their all dying after they have spawned. Under this head, I will only say that it is probably true that those that spawn near the ocean return to the ocean and recover their vitality, but those that pass the United States station on the McCloud River in the summer never do. In order to make sure whether I was mistaken in my views about it, I took the testimony, a year ago, of all the white men who have lived or worked on the river, and all the Indians I could reach. It was the unanimous testimony of all that the

* The Fisheries and Fishery Industries of the United States. Prepared through the co-operation of the Commissioner of Fisheries and the Superintendent of the tenth census, by George Brown Goode, Assistant Director of the U. S. National Museum, and a staff of associates. Section I. Natural history of useful aquatic animals, with an atlas of two hundred and seventy-seven plates. Washington, Government Printing Office, 1894.

salmon which pass the McCloud hatching station in the summer, on their way up the river to spawn, die in the river and never return to the ocean."

The chapter on the brook trout of the East is a reprint of Mr. Goode's essay on this subject in Scribner's "Game Fishes of the United States," and contains no new matter. We had hoped to see something said upon the so-called "sea trout" of New Brunswick.

Following the fishes come the mollusks, the crustaceans and the sponges. Taking the work as a whole, we regard it as one of the most valuable popular publications that has been issued under the auspices of the U. S. Commission of Fish and Fisheries, which has published so many valuable works. For some reason the number of copies issued to members of Congress has been limited to one, and many persons have been disappointed in being unable to procure them. They can, however, be obtained from the public printer at a moderate cost, and the work should find a place in the library of every angler and naturalist.

THE NEW TROUT OF SUNAPEE LAKE.

Editor Forest and Stream:

I have read with great interest the articles you have published on the new trout of Sunapee Lake, and hold myself some original correspondence in regard to their size and origin. Allow me briefly to express my opinion.

In 1874 I carried my boat seventeen miles over the mountains, and launched her on Sunapee. It was a case of love at first sight. I began my addresses in an humble way as a tent-dweller by its crystal waters; to-day I own three cottages embosomed in its pines, and 1½ miles of its shore. During the last twelve years I have industriously prosecuted the gentle art, and frankly admit that I have never hooked or even seen one of these *Oquassa* trout; moreover, among the host of anglers and frequenters of the lake with whom I am acquainted I know not one who has. The trout were seen for the first time last October, spawning on my sand shoals, by Colonel E. B. Hodge, our Fish Commissioner, and Mr. A. H. Powers, ex Commissioner. The problem is easily solved; and my esteemed friend, Colonel Hodge, I fear may not figure as the discoverer of a new species indigenous to the lake—an inhabitant of Sunapee's depths from time immemorial, yet never before noticed by any of the thousands of poachers and anglers who have cast flies, fished with worms and salt pork, or swept seines in the lake for a century! Impossible. The new trout are the giant offspring of Rangeley "blue-backs," introduced a few years since as food for the large brook trout, and furnished in Sunapee with phenomenal conditions, not only for sustenance, but also for enormous growth. All fish except pickerel attain an unusual size in the waters of this lake—yellow perch, two pounds and upward; land-locked salmon, twelve pounds (seven years from the ovum); brook trout, six to nine pounds, and black bass the unprecedented weight of seven and a half pounds (two pounds beyond the limit of the naturalist).

So the little "blue-backs" of Rangeley have found here the food and water to make them grow as large as their congeners of Disco Island and Labrador, and even to exceed in weight those famous native dark-skinned, brilliant-spotted trout, in pursuit of which the aborigines made frequent journeys to "Sunapee's shore of rock," and barrels upon barrels of whose juicy pink flesh have been salted down by the white settlers and their descendants since the time the country was opened.

JOHN D. QUACKENBOS.

Editor Forest and Stream:

The letters of Prof. Baird and Dr. Bean, in the last FOREST AND STREAM, seem conclusive as to the point of the new trout discovered by Messrs. Hodge and Powers, in Sunapee Lake, being of the *oquassa* type, and I take it were written before the publication of Mr. Powers's letter, which I sent you, giving the date when the genuine *Salvelinus oquassa* were planted there.

There is another question which I have had in my mind for a year or two, and that is, as to the exact classification of the celebrated Dimond Pond trout.

Had I been able to have visited those ponds this summer, it was my intention to have forwarded some of them to Dr. Goode for examination, but I failed to get there.

Mr. Prime gives a very graphic account of fly-fishing in the upper pond, in "I Go a-Fishing," but I have never been able to take a single fish in that pond in several visits, although I have always taken them, both with fly and bait, in the lower pond.

When there two years since I whipped the upper pond faithfully one evening and the next morning, in company with an expert fly-fisherman, who had been very successful a fortnight previous, without either of us getting a rise; but I saw the outline, on a piece of birch bark, of a 2½-pounder which he took on the former occasion, nalled up against the door post of Mart Noyes's camp.

Now, I have never seen a trout over one-half pound in weight taken from the lower pond. The fish there are very uniform in size, from 9 to 12 inches long, round, slender, and with no mottling of the fins and very little of the back (which is dark and bluish), with the red spots very small and the flesh a very deep red, looking when raw like a beef-steak.

These ponds are on the Androscoggin water shed, which they drain into through Dimond Stream; and the trout of the Upper Mohawk, six miles to the westward on the Connecticut water shed, are white-fleshed, deeper bellied and more distinctly mottled.

The tail of the Dimond Pond trout, too, is inclined to be bifurcated, and, in fact, the first time I ever caught one, I was inclined to doubt its being a trout until I found the red spots. I believe that they also belong to the *oquassa* variety, and should I get up there again shall try and send some to Washington for identification.

SAMUEL WEBBER.

CHARLESTOWN, N. H.

THE SOUTH FORK FISHING AND HUNTING CLUB, of Pittsburgh, at their last meeting, decided to erect on their property in Cambria county, a large club house or hotel to be used for the exclusive benefit of members of the club, and a limited number of their friends. Plans of the proposed structure have already been prepared. It will be of unique design, three stories high, and will be large enough to accommodate 150 guests. It will be located on Conemaugh Lake, a body of water two miles long and three-quarters of a mile wide, situated two miles back of South Fork, on the Pennsylvania Railroad, and about nine miles southeast of Johnstown. The club, which has a membership of about sixty substantial citizens, now owns between 1,700 and 1,800 acres of land in Cambria county.

MASKINONJÉ, MASCALLONGE, MASKINAUGA.

Editor Forest and Stream:

I find that I have got into a very serious scrape by writing about the etymology of maskinonje. In a reminiscence in FOREST AND STREAM, of Dec. 31, I made a foot note, in which I called the attention of etymologists to the derivation of the word "mascallonge" and its variations, and drew upon my very limited stock of the Ojibwa tongue, obtained thirty years ago and nearly forgotten. In this I said:

"My spelling of the Ojibwa name of pike, *Kenosha*, is entirely phonetic. I have no idea how it might be spelled. Give the *o* a nasal sound and twist it into 'Kinoje' and it is not a far cry to 'maskinonje,' which most authorities try to twist into a French derivation with 'mask' as a synonym of 'face.' I do not pretend to decide this matter, for I am not learned enough in either French or Ojibwa, and know that the latter tongue has received many additions since the 'Chemokman' came among them. As an instance of this: A poor Indian had begged around camp for some days with more or less success, when one morning he came in and requested 'pungee pegushigan.' To my untrained ear this meant 'pungee' (little) 'pequishigan' (bread), and I told him 'gowin pequishigan' (no bread); he insisted, and taking up a gun showed me that 'pegushigan' meant percussion caps for a gun and not bread—showing that he had made a word, or others had, for something new."

This was followed by one of your correspondents, who opened up a new field to me, and created a desire to go into the matter further. This correspondent, in your issue of Jan. 7, said:

"In the foot note to the article entitled 'A New Year Fishing Trip,' Mr. Mather ventured an etymology of the word 'mascallonge.' He might safely have gone further. It is hardly necessary to remind so accomplished an Ojibwa scholar that *mas* means 'spotted' or 'speckled.' Thus: the Nipigon Indians (Chippewas) call the lake trout (*Salvelinus namaycush*) 'namaycush'; the brook trout 'mas-namaycush,' and they assured me that *mas* had the meaning above given. If the distinct spots of the mascallonge be compared with the broken-line markings of the northern pike, the reason of applying the adjective will be evident. 'Maskinonge' is said by the 'Encyclopædic Dictionary' to be the Algonquin name, and in 'Hawatha' 'kenozha' and 'maskinozha' are used as synonyms. I can have little doubt that 'maskinonge' means simply 'spotted pike.' But like Mr. Mather I have learned the difficulty of expressing Indian sounds in our usual notation.—X."

An editorial note said: "This opens a new mine for etymologists who have always looked to the French and have concluded that the name was derived from 'mask allonge' or long face. It seems more probable that the French twisted the Ojibwa name into their vernacular and made 'maskinoje' into mascallonge, maskanonge, etc. We will be pleased to hear further from our Ojibwa scholars."

"X." gave me credit for a great deal more knowledge than I possess, for it never occurred to me that "mas" meant "spotted or speckled." As he truly says, "it is exceedingly difficult to express Indian sounds in our usual notation," I should have said for red or spotted (?) "mis," thus: "Mis-quah" is red, as I understand their Ojibwa; and "mis-qua-bo," red blood or fluid; "mis qua-walk," red cedar, etc.

It occurred to me then to work this matter up and see what I could make of this variously spelled name of maskinonje or mascallonge and wrote to my old friend, D. H. Fitzhugh, Jr., of Bay City, and asked him to inquire of our guide, the famous Len. Jewel, how nearly correct this might be, as Len spoke the language quite fluently, and when in the woods with him I have attempted to brush up what little knowledge I had obtained of the Indian, by conversation. This and the attempt at a little "patter" in Ojibwa with Jack Shephard, the noted Brown tract guide of the Adirondacks, is all the chance I have had to air the few words in my Ojibwa vocabulary in thirty years. The result was that I had to depend very largely upon my knowledge of English in order to get along at all. Mr. Fitzhugh kindly replied to my letter, but before its receipt I read the obituary notice of Len Jewel in your issue of Jan. 28.

Mr. Fitzhugh said:

BAY CITY, Jan. 11, 1886. My Dear Sir—Your favor received: "In re maskinonge"—Some thirty years ago the question was agitated in *Porter's Spirit*, and the same discussion took place. Genio C. Scott was in correspondence with Mr. W. A. Fitzhugh, a cousin of mine, whose gun and tackle fell to my lot at his demise. They agreed that the proper name was maskinonge, sharp accent on the 'e,' and Genio quoted him as authority for the correct name. Now as to whether the "mas" means "spotted" or not, I can't inform you—I always thought it meant a pike of larger growth, and when I have asked the Indians they always said "Yes," but you know how hard it is to get a correct interpretation from an Indian, as they will always pleasantly agree to any suggestion. It is astonishing how far a little Indian lore, a little money and a little whisky will go to make these noble natives agree to all you may say or do. Len don't know, but thinks it means a large pike. The fearful march of civilization (much to be regretted) has swept away the Indians in this vicinity, also the intelligent traders who might give me some information. When I go to Nipigon next summer, where the purest 'Castilian' is said to exist among the Chippewa tribe, I will try to find out from the Menominees, who are good friends of mine, and report to you. The Chippewa language here is corrupted by mixing with the Ottawas on the east of Canada. In the Northwest, where you picked up your jargon, it was mixed with Menominee, but we had no trouble at Nipigon with Len to interpret. Although but very few of our guides could understand English, more could speak French. I send you by mail an Indian primer, which may guide you in your researches. 'A little book for you to look upon.' Send it back to me, as I value it and cannot replace it. The notations in pencil were made by my cousin, W. A. Fitzhugh, who was an enthusiast on the Ojibwa language. You may find it interesting. Old Len is sick in the city hospital with gravel and inflammation of the bladder. I made him go there for good treatment, and we visit him daily; but I fear he will not be able to go with us into the wilds much more, although he went with us to Nipigon last year after a similar attack, and did good light service. Truly your friend, D. H. FITZHUGH."

It will be seen from this letter how difficult it is for a man who has picked up a little lingo in one portion of a tribe which has not preserved its language in its purity to converse or even to understand what is spoken by members of the tribe residing at a distance. The admixture of French and English words has tended to confuse the tongues of the

different branches of the same tribe. Thus, while I spelled the word for large "kige," I find that Longfellow, in "Hawatha," spells it "gitchee," and in the Ojibwa primer, compiled by Rev. Peter Dougherty, 1844, kindly sent me by Mr. Fitzhugh, he spells it "gechee."

As near as I understand the Ojibwa or Chippewa as it has been Anglicized, they have one general name for fish, "kego." While I understand the pike to be "kenosha" or "kinoje" (Dougherty spells it "kenozha") the trout to be "noo-may-gus" (which has been twisted by ichthyologists into *namaycush*); the black bass to be "oo-she-gun," which I see Prof. Goode makes "achigan" in his "Game Fishes of the United States."

In the following I have given all the various spellings that I have been able to find in American works on fishes, and whenever an author has attempted to give a definition of the name of the fish, or to trace its derivation, I give his language in full. Much of the spelling is evidently corrupted, and some instances are no doubt printers' errors. I have also given the number of syllables that should be sounded in the different names, and will say that in every case the *g* should be soft.

In Report of the Geological Survey of Ohio, Vol. IV., Part I., Zoology, Columbus, 1882, p. 917, Jordan gives: "*Esor nobilitor*, Thompson Muskallonge; Mascallonge, Maskinonge, Great Pike. '*Esor musquithongy*, Mitchell' (quoted, 'Mirror, 1824, 297,' but it is not there; I cannot find the description anywhere)."

Hallock, "Sportsman's Gazetteer," 1878, gives "muskellunge, mascallonge, and maskinonge," and says: "This fish is known in the laws of Canada as the 'maskinongé,' from the Chippewa word maskanongé, meaning long nose; but in the States it is called 'mascallonge,' from the French *masque* and *allonge* (elongated) longface."

I give below, in alphabetical order, such various spellings as I find, and where an author has attempted to trace the derivation, I quote his words:

Roosevelt, "Game Fish of the North," Chap. XIV., "mascallonge, synonyms: *Esor estor*, masquellongé, muskellunge, muscalinga, masquinongy, maskinonge, muscanonga." * * * "The name of this fish is derived from *masque* *allongé*, long snout, which is a translation from the Canadian Indian dialect of *masca-nonga*, words which have the same signification; and from corruptions of these two designations arise our numerous names. I took great pains to ascertain precisely how the Canadian boatmen, who are a cross of the Indian and Frenchman, pronounced this name, although, in their French *patois*, he is ordinarily called *Brochat*, and the best my ears could make of it was *mas* or *mascallonge*, the latter syllable being guttural.* But as the most sonorous, expressive, and appropriate name is mascallonge, it is desirable that all sportsmen should employ it."

MASCALONGE (three syllables).

"Frank Forester" (Henry William Herbert), "Fish and Fishing," no date, pp. 151, 281. As a synonym he gives, "Masquellongé, Canadian French." Perhaps there is a typographical error. Page 152, he says: "The mascallonge owes its name to the formation of the head—*masque* *allongé*, long face or snout, Canadian French—but which has been translated from dialect to dialect, maskinonge, muscalunge, and muscalinga, until every trace of true derivation is lost."

Norris, Thaddeus, "The American Angler's Book," 1865, p. 135.

Sterling, Dr. E., paper read before the Mass. Angler's Ass., no date.

Jordan, D. S., "Geological Survey of Ohio," 1882, Vol. IV., p. 917.

"Kingfisher," FOREST AND STREAM, Vol. XVI., p. 72, describes one of 32 pounds.

"Dr. K.," FOREST AND STREAM, Vol. XX., p. 308, "Does it leap?"

"B.," *ibid*, p. 348.

"Canuck," in FOREST AND STREAM, Vol. XXII., p. 107. Catches a big one.

MASKALONGE (three syllables).

Dr. C. A. Hewers, FOREST AND STREAM, Vol. XIX., p. 30, tells of one caught of 33 pounds, with a live gull for bait.

Elihu Phinney, FOREST AND STREAM, Vol. XX., p. 231, does it leap?

MASKEENONJAI (four syllables).

Writer in New York *Commercial Advertiser*, Dec. 10, 1824, quoted by Thomas E. Devoe, "The Market Assistant," Orange Judd & Co., no date.

MASKELLONGE (three syllables).

G. M. Skinner, FOREST AND STREAM, Vol. XVII., p. 212, tells of one of 10 and one of 18 pounds.

MASKINAUGA.

I have somewhere seen this spelling but cannot find it now, this is doubtless a printer's error for maskinonge.

MASKINONGÉ (four syllables).

Jordan, D. S., Report Ohio Fish Commission, 1877, p. 92. "Antoine," FOREST AND STREAM, Vol. XIX., p. 70, one bites a man's foot.

Scott, Genio C., "Fishing in American Waters," 1875, p. 277. "The Ojibwa name of this fish is 'maskanongé,' meaning 'long snout.' When Canada was a French colony the *habitans* named it *masque-longue*, signifying long visage. I submit that the Ojibwa was entitled by priority to the right of naming the fish; but as the Dominion of Canada has named it again, and in all legal enactments there in reference to it the name of the fish is written 'maskinongé,' I willingly accept the modification instead of either the Indian or the French name."

Jordan, D. S., Geological Survey of Ohio, 1882, Vol. IV., p. 917.

Scott, J., FOREST AND STREAM, Vol. III., p. 395. Roof, Clarence M., FOREST AND STREAM, Vol. III., p. 322.

MASKINONJE (four syllables).

FOREST AND STREAM, Vol. XIX., p. 369, describes one of 34 pounds.

MASQUALONGUS (four syllables).

Jordan and Gilbert, Report Ohio Fish Commission, 1875-76, p. 82.

MUSCALONGE (three syllables).

FOREST AND STREAM, Vol. XI., p. 324: "A Monster Mascallonge.—Bellevue, Ont., Nov. 12 [1878].—This morning (Tuesday, Nov. 11) the largest mascallonge ever captured in the Bay of Quinte, and probably one of the largest ever caught in fresh water, was taken in a seine near Belleville. I personally measured the fish and found its dimensions to be as follows: Length, from tip of nose to end of tail, 5 feet

*Here is the only instance of a hard *g* which I have met in looking up this subject.

4 inches; girth at thickest part (after a five-pound pickerel had been taken from its stomach), 26½ inches; weight, 52 pounds. Besides the pickerel above referred to, the stomach of the monster contained a number of other good-sized fish.

"Stanstead," *FOREST AND STREAM*, Vol. XX., p. 490, it leaps.

Clarke, S. C., *FOREST AND STREAM*, Vol. I., p. 236, editorial: "The largest we have ever heard of is vouched for by our friend S. C. Clarke, who says that in 1840 he saw one at the mouth of the Calumet River, Michigan, which had just been captured in a seine, that was six feet long and weighed eighty pounds. The mouth would have admitted a man's leg; it showed a perfect *chevaux de frise* of teeth, the canines at least an inch long!"

"A.," *FOREST AND STREAM*, Vol. XVII., p. 251, tells of one of 33 pounds.

MUSCHILONGÆ (four syllables).

"Dr. Williams, author of the 'History of Vermont,' informs us that the pike in that State bears the name of 'mushkilongæ.'"—J. V. C. Smith, *Nat. History Fishes of Mass.*, 1833, p. 166.

MUSKALLUNGE (three syllables).

Jordan, "Manual of the Vertebrates," 1876.

—ibid, 1878.

MUSKALLONGE (three syllables).

Kirtland, J. P., *Proc. Cleveland Acad. Nat. Sci.*, 1845 to 1859, pub. 1874.

Klippart, J. H., *Rep. Ohio Fish Commission*, 1875-76, p. 31.

Jordan and Gilbert, *ibid*, p. 82.

Jordan, D. S., *Rept. Ohio Fish Com.*, 1877, p. 92.

—Contributions to American Ichthyology, 1877.

Cope, E. D., *Rept. Pa. Fish Com.*, 1879-80, p. 107.

Rept. Pa. Fish Com., 1881-82, p. 154.

Atwater, W. O., *Rept. U. S. Fish Com.*, 1880, pp. 239, 257.

Jordan, D. S., *Geological Survey of Ohio*, 1882, Vol. IV., p. 917.

Howard Pyle, "Sport with Gun and Rod," pp. 591, 592.

"Rambler," *N. Y. Times*, Aug. 10, 1860.

Jordan and Gilbert, "Synopsis of the Fishes of North America," p. 353, spells it "muskallonge," and in a foot-note refers to the generic name given by him in *Rep. Ohio Fish Com'n*, 1877, of *mascelonius*, which he thus defines: "Latin *maska*, mask; *longus*, long." Turning to the report referred to, page 92, we find that in his remarks on the genus *Esox* Prof. Jordan says: "There being but one genus of this family at present known, its characters need not be separated from the family characters given above. It is divisible into three well-marked groups, which may be considered as subgenera. One of these is the typical *Esox*, to another Rafinesque long since applied the name *Piceollus*; the third, or muskallunge type, may be termed *Mascelonius*, in allusion to the long face and in special allusion to the vernacular name muskallunge, which is said to be from the French *Masque allongé*; in Latin *Mascelonius*." Further down, while giving the species, Prof. Jordan follows Thompson and calls it *E. nobilior*.

MUSKELLUNGE (three syllables).

De Kay, James E., "Fishes of New York," 1842, pp. 222, 223, "The muskellunge, or maskinonge [four syllables], for its orthography is not settled, occurs abundantly in Lake Erie." (De Kay had never seen one, and took his name and description at second hand, and got the description wrong.)

Milner, James W., *Rept. U. S. Fish Com'n*, 1872-73, pp. 6, 32, 63.

—ibid, p. 523.

Goode, "Game Fishes of the United States," 1879.

Nelson, E. W., *Rept. U. S. Fish Com'n*, 1875-76, p. 792.

MUSQUEALONGE.

FOREST AND STREAM, Vol. X., p. 280. "In an official Minnesota pamphlet we find the name of this fish spelled *musquealonge*! This is the latest orthography. It is altogether an innovation upon the old-time spelling of muscalonge, maskenonge, masquelonge, muskallunge, *et al*, and cannot be regarded as an improvement."

MUSQUINONGY.

Esox musquinongy, Mitchell, *Mirror*, 1824, p. 297. (This is quoted by Gunther, *Catalogue of Fishes Brit. Mus.*, and by De Kay. Jordan says he cannot find it in the *Mirror*, and I have not access to it).

I have no doubt but the French "masqueallonge" is as near the Ojibwa "maskinonjé" as they could get it, and as the fish has a long face or long snout, they accept that as their name for it. I have as little doubt also, that the Indian word was originally "maskinonje" which, as your correspondent "X." inclines to think, means the "spotted pike," and thinks the "common pike" was simply "kinoje." I do not anywhere find any warrant for the spelling "muskellonge" and its variations. These are probably corruptions, such as we sometimes hear in Canada, where the two first syllables are entirely ignored, and the fish is spoken of as simply "lunge," a term used in Maine for the great lake trout. It is too late to attempt to correct any errors in spelling or in pronunciation which have crept into the name of this fish; and it is no part of my intention in writing this article, to do anything of the kind; the only object being to attract the attention of others who may be interested in the derivation of names to this subject in order that we may know why the fish has been thus called. It seems as if the Indian name should be spelled "maskenozha" and the Rev. Dr. Dougherty gives it as "mushkiuozha." Nowhere in this book of his do I find "mas" for spotted, but do find, as I have said, "mis" for red, as "mis-ko-be-nay-see" for redbird, "mis-quah-muh-gud," it is red, etc., and as the spots on *Esox nobilior* are not red, it certainly could not have been intended to be "mis-que-nonge." But I do not know the Ojibwa word for spotted which your correspondent "X." tells me is "mas," and therefore I have no reason to doubt it, but hope that it is so, for I believe that the Canadian Frenchmen corrupted an Ojibwa word into *masque allonge*, and we have accepted it and still further abused it, as above shown. The fish was here before the Frenchmen and they learned its name from the natives, and from its resemblance to words of theirs they gave it a twist into long snout.

Of the authors quoted above Roosevelt comes the nearest to being correct when he says that "*masque allonge* is a translation from the Canadian Indian dialect of *masca nonga*," but he divides these last words wrong and misses it when he says they "have the same signification." "Kenozha" is Ojibwa for a pike and has no other meaning more than "horse" or "cow" have, and "mas" is an adjective of some kind, for only the great *nobilior* is so called. I do not believe

with Frank Forester that the derivation is lost nor that long face or long snout had anything to do with its original Ojibwa name, even though Scott says the same thing. This is an after thought of the Canadian Frenchmen. There is no authority except that which comes from modern use, for either the letters u or l in the name. It may be maskinozha, maskinonjé, or maskinongé, but all such forms as muscalonge or muskellunge, not to mention the other outlandish names I have quoted, are corruptions.

FRED MATHER.

THE RECORD OF A LINE.

RUMMAGING among my fishing tackle I pick up a thin brown line (sample of which find inclosed) to which is attached the following memorandum:

"July-Aug., '85, taken on this (2d season), 173 perch, 18 rock bass, 32 black bass, 298 trout, 4 pike; total 524."

The remarkable part of this may be in the fact that the line has never parted with a fish upon it. Several hooks have been broken, but no fish lost through fault of the line. It had, however, one pretty severe test. The angler's wife, who is fond of the sport, once hooked a large bass while he was busy with the bait, and womanlike, she proposed to let no fish escape—big or little—if a strong steady pull would effect anything. The light rod was making rapid and very profound salaams to the denizen of the flood, while the line swished to right and left in a way to make the angler's heart jump to his throat as he realized the impending disaster to his tackle; and shouting to his "better half" to "let go the reel," which she was holding with a determination known only to woman on such occasions, he dashed to her relief. For a brief moment it was a trial of endurance between the fish, the lady and the line, but the calamity was averted by a timely release of the reel, and plenty of line wherewith to divert himself, the gallant fish was soon obliged to succumb. He tipped the beam at 5½ pounds.

The record of 1884 has been mislaid, but it included several black bass, one pike of 13 pounds and one 17-inch trout taken at the mouth of Carp River. Twice did the angler have his nose to the gravel and as often did the brave fish fight his way back to his native element against the utmost endeavors of his captor. A third time was he hauled within reaching distance, when throwing down the rod, with the desperation born of a last hope, the angler pounced upon his prize with both hands and the struggle was soon over. The weight of this fish some hours after, was 3 pounds 1 ounce. The hook was an extremely small one and the least slackening would have lost him. The line will be used again this season.

C. J. T.

HAMPTON PONDS.

A SPRINGFIELD paper yesterday morning contained the following item: "A black bass weighing 7½ pounds is on exhibition in an Elm street store window. It was caught at Hampton Ponds, and is the largest fish of this kind ever taken there."

That is a monster, indeed, and no doubt the very one so many of us were fishing for last summer. Hampton Ponds afford about the only bass angling to be found in this immediate vicinity. The fishing there is generally nothing to boast of. Every man professes to believe that the waters are full of bass, and excuses for poor success are never wanting. In fact, I have myself seen them jumping in every direction and have not been able to take more than one in all the afternoon. Large fish are caught occasionally, and the parties who keep boats to rent do not fail to give the matter proper circulation.

The first minnow I ever cast into the pond returned me a bass weighing nearly three pounds. I jumped to the conclusion that this was the place I had been looking for for some time; but I never caught another so large. I have seen one weighing four pounds caught with a frog, while traditions of six-pound fish are current among the employes at the grove, where horses are left and boats obtained.

It is a very pleasant place to spend a day, and Holyoke and Westfield anglers are always well represented when the weather is favorable for sport, while the tents of campers are often seen upon the island. Those who fish the waters frequently meet with occasional good success, and find their scores at the end of the season moderately satisfactory. One Westfield business man stated in August that he had taken fifty up to that time, ranging in weight from four pounds down. It was reported that on one day in the month of May, 1884, a man filled a clothes' basket with bass from this pond. They must, doubtless, have been taken from the spawning beds. This and similar practices amply account for the fact that a person may fish all day in July and catch nothing.

Holyoke, Mass., March 10.

COLOR OF TROUT IN SALT WATER.

IN former numbers of *FOREST AND STREAM* I have occasionally seen notes on the change of color in trout. That the color of trout undergoes some modification in different waters seems to me beyond doubt, and this I suppose to be the prevalent opinion. I will give an example within my own experience.

There is (or was in 1859) a nice little trout brook and pond at Glenwood, L. I. Glenwood is situated on Roslyn or North Hempstead Harbor. I once stocked two small ponds of my own from this brook, and years ago took many fine trout from it. The brook was dammed up a few hundred feet from the harbor. I think it was 1839 that the gate of this dam was broken down by a freshet, and hundreds, if not thousands, of trout soon found themselves in salt water. Five or six weeks afterward I saw some of these trout taken from a fyke on the opposite side of the harbor. They had all this time been living in salt water. The color had nearly all faded out of the spots and the fins, and the whole fish was of a pale silvery hue, and they might very well have been called silver trout. When cooked the flesh was firm and the flavor excellent. This account may have some interest for Mr. Hallock.

I wish to say further that the dam was repaired as speedily as possible. A few days after it was finished I went over to Glenwood to see how things were looking. The water was then coming over the dam again in quite a large volume. I may state that the dam was over six feet high at the gate. While looking at the flow of the water I was surprised to see a trout go up over the dam. My interest was at once aroused. I stepped back a few paces and looked down the brook to the bay, a distance of a few hundred feet. The brook was alive with trout, large and small, and they seemed to have been alarmed at my presence. Drawing back a little further and remaining as motionless as I could, I presently saw the

beginning of one of the grandest sights I ever beheld. First two or three, then a dozen or two, and finally multitudes of trout went dashing up and over the waterfall. For a moment I was spellbound. All, however, did not succeed in going over the fall in the first attempt. Apparently exhausted before reaching the summit, some of them fell back into the stream below, but only to renew the attempt again after a few moments of rest. They were moved by a common instinct to get back to their native haunts, and no obstacle seemed too great to overcome.

For two hours I watched this flight of the trout up and over the sparkling and foaming waterfall, and then reluctantly left for my boat. I had become so fascinated that while rowing away my eyes were kept fixed on that waterfall till it finally faded from sight. I returned the next day, and the trout were still leaping the falls, but in lessened numbers. Many a time since, in half dreamy moods, I have enjoyed this scene over again with little loss of freshness from the years that have passed.

PETRA.

A DEAD SURE THING.—The member for West Algoma tells a good story about a species of sturgeon from 40 to 60 pounds in weight, which is peculiar to Rainy River and Lake. On a visit which he paid last summer to a settlement on the river, he had occasion to visit a young bachelor, who, with true backwoods hospitality, insisted that he should stay for dinner. Mr. Conmee seated himself and watched the preparations of his entertainer. First he set down his home-made bread on the table, with tin mugs for the tea, and then he put a big pot full of water over the fire. When the water came to the boiling point he infused the tea and set it aside. Then he seized a gaff about 6 feet long, stepped outside to the river's edge, which was not over 10 paces distant, and returned in three minutes with a sturgeon kicking on the end of his gaff, part of which was soon cut off and transferred to the pot of boiling water to be cooked for dinner. This is the usual thing up there. They always have the water boiling before they go to catch the fish, and they use only a common gaff.—*Toronto World*.

COIL OF LEAD INSTEAD OF SHOT.—Paterson, N. J.—When fishing in fast running streams split shot is generally used to sink the bait. My objections to using split shot are that when attached it is difficult to remove and in attempting the same the gut becomes frayed. It is difficult to regulate the weight required; sometimes one split shot is too little and two are too much. It also has a tendency to become fastened between stones in the bed of the stream. Another device may be of use to your readers who use split shot. Procure a small piece of sheet lead and hammer it until it becomes the thickness of heavy paper. Cut off a piece the shape of a little worm and coil it around the gut in a spiral shape. The weight of the lead can be altered in an instant without fraying the gut. I carry a little sheet (1x3in.) of this lead in my tackle book and when wanted cut off a suitable piece. The lead that tea chests are lined with will answer the purpose very well.—G. A. M.

JAPANESE TACKLE.—We have recently been shown some flies and artificial baits from Japan, by our correspondent "Petra," whose daughter brought them to this country. The gut to which these flies were attached was two feet five inches long and was composed of five twisted strands and yet the whole of them made a gut length not larger in diameter than we ordinarily use. The flies were delicately made, with long black wings and colored wool bodies in closer imitation of nature than we are accustomed to. The hooks had a sharp bend and a slight beard. A caterpillar was a perfect imitation, even to the feet. "Petra" tells us that his son-in-law has been fly-fishing with Japanese gentlemen and he will try and learn something about their methods.

BLACK BASS IN LAKE CHAMPLAIN.—That small portion of Lake Champlain which extends northward into Canada and is called Missisquoi Bay has been a fruitful source of trouble to those who wish to make the laws of New York, Vermont and Canada establish a uniform time for fishing in the lake. Vermont anglers have complained that they were protecting black bass merely to have them taken on the spawning beds in Missisquoi Bay, and it is said that black bass have been illegally taken in Vermont waters, sent to Canada, and returned through the Custom House as legally caught Canadian fish. Now that the Dominion has passed a law extending the close season until June 15 all such cause of complaint is ended.

THE LARGEST TROUT.—Red Bank N. J. March 8.—*Editor Forest and Stream*: Mr. Charles Hallock in his "Fishing Tourist," says, page 93, that trout (*Salmo fontinalis*), have been taken in the Rangeley waters weighing as high as twelve pounds. From inquiries made last June I found that the heaviest on record was eleven pounds. The additional one pound is not much in a fish yarn, but let us have the true record. Come Stephen Morse, Lawrence Sargent, Marshal Whitney, and all good honest guides, send in your records and oblige your friend, GEO. WILD.

CANADIAN SEASONS.—The fishing regulation of 1879, fixing the close season for pickerel, bass and maskinongé in the Provinces of Ontario and Quebec, from the 15th of April to the 15th of May in each year, is repealed, and the following regulation adopted in lieu thereof: In the Provinces of Ontario and Quebec, no person shall fish for, catch, kill, buy, sell or possess any pickerel between the 15th day of April and the 15th day of May (both days inclusive) in each year, nor any bass or maskinongé between the 15th day of April and the 15th day of June (both days inclusive) in each year.

Fishculture.

THE AMERICAN FISHERIES SOCIETY.

THE following circular has been issued: The American Fisheries Society will hold its annual meeting in the Palmer House club rooms, Chicago, on April 13 and 14 next, and it is desired to have as large an attendance of Western men interested in fishculture as possible. The undersigned, a committee appointed for the purpose of making arrangements for this meeting, hope that your Commission may be well represented, and that you will invite all others interested in these matters that you may meet, to be present on that occasion.

During the time of this meeting there will be a fish exhibit in the Exposition building, where ample space and aquaria have been provided for the display of live fish, hatching apparatus, models of fish ladders, nets, boats, fishing tackle, etc. that dealers or interested parties can be induced to send. W

would like to see the work of your Commission on which you are spending the most brain and money well exhibited, as we desire to give the people as good an idea as possible of the amount of time, labor and cash being spent in the propagation of food fishes, with a few practical results. Mr. S. P. Bartlett, of the Illinois Fish Commission, will have immediate supervision of this display. If you send to Mr. Butler, at Detroit, a list of the live fish and anything connected with the propagation thereof that you may desire to exhibit, we will in a short time send you explicit directions in regard to shipping, etc. Respectfully, WM. A. BUTLER, Sec. Local Ex. Com. Local executive committee: F. N. Clark, U. S. Fish Com., Northville, Mich.; W. V. Cox, Washington, D. C.; W. F. May, Nebraska Fish Com.; Fred Mather, New York Fish Com.; R. O. Sweeney, Minnesota Fish Com.; Wm. A. Butler, Jr., Michigan Fish Com.

The Kennel.

Address all communications to the Forest and Stream Publishing Co.

FIXTURES.

FIELD TRIALS.

Nov. 8—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 23—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

March 16, 17, 18 and 19—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

March 23, 24 and 25—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburg, Secretary, Bergen Point, N. J.

March 30 to April 2—Third Annual Dog Show of the New Haven Kennel Club, S. K. Hemingway, Secretary, New Haven, Conn.

April 6, 7 and 8—Second Annual Dog Show of the New England Kennel Club, Edward A. Mosely, Secretary, Boston, Mass.

April 13, 14 and 15—First Annual Dog Show of the Hartford Kennel Club, A. C. Collins, Secretary, Hartford, Conn.

April 27, 28, 29 and 30—Third Dog Show of the Cleveland Bench Show Association, C. M. Munhall, Secretary, Cleveland, O.

May 4, 5, 6 and 7—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

May 13, 19, 20 and 21—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3481.

THAT UNPAID CHICAGO SPECIAL AGAIN.

Editor Forest and Stream:

Perhaps you are tired of the above heading, so I will promise not to sing the old song over again; in fact, it is not needed, for all readers of FOREST AND STREAM have arrived at the moral (if of that transaction). But it comes in very handy to preach a sermon on, about the views different people take of their duties and responsibilities, and also illustrates that peculiar diseased condition of mind that produces the rabid "anti-kicker." I have been favored with some correspondence on this subject since I first ventilated it in FOREST AND STREAM. One party writes that he is very much hurt at my letter, that he never knew of the special money being paid into the club, that he has tried and tried again to get the club together to meet these debts, etc., and generally expresses himself as we should expect a gentleman—no, I despise that abused name—as we expect an honorable man to do. For such a man, we all will have sincere commiseration at the unfortunate plight he has been put in.

But others take a different view; one writes to the victim, i. e., the winner of the special who didn't get his money, that "I didn't expect you to kick!" Great snakes! Didn't expect that an exhibitor who had been wronged out of his money should object to the process? Now this is of no great moment as simply the expression of one individual, but it is of importance when we remember that it is the code of a certain set of dog show people. It is something very base for an exhibitor to object to anything that is done him, "keep still or you will hurt somebody," "above all other things, no matter how much you are wronged, don't say anything in the papers, if you do you are a 'kicker'" and the magnificent altitude that nose takes while the lips below enunciate that odious word, would put Chimborazo to shame.

Of course the proposition involved is so utterly preposterous that it needs only to be stated to work its own reputation, but for all that the very fellow that you have sat down on over this will bob up as serenely, with his nose at half cock, the next time he hears the word, as though he had just received a written opinion from Solomon himself that even "Old Nick" would not tolerate so base an animal as a kicker. So, as I have had the honor of champion kicker of America thrust on me I propose to defend the belt against all comers, and will be only too glad when some one wrests the laurels from my brow. The more "kickers" of the kind that will not stand being wronged, the better for us.

Then another intensely funny view of the situation is scolding that "there has been more fuss about that \$15 than about all the remaining \$1,000 that was due." This is ridiculous. As though misappropriation of a man's money was no worse than the simple owing of a debt! A well-known doggy lawyer kindly wrapped me over the knuckles for a misapplication of the legal term "trover and conversion" to this proceeding, but what would "the hard legal mind" apply to the performance? Side by side two enormous evils have grown up, and if dog shows are to prosper, we must learn that the proper means for the suppression of the kicker are the removal of all real wrongs that he kicks about. Let the constitutional "sorehead" growl, nobody cares for him anyhow, and he generally makes an ass of himself without any help.

Then as the companion piece of the "kicker" silliness has grown up a easy, devil-may-care way of going on, passing over wrongdoings because the wrongdoer is a "good fellow" or "we don't want to make a fuss," or "we can't afford to get Tom Collins down on us," etc., etc. I believe it was some such reason as this that kept shut the mouth of a well-known Philadelphia fancier, who went to claim a dog and found it already claimed, and subsequently discovered that the secretary had kindly claimed it for the owner, that he might not have to part with it. And the funny part is, that this piece of business was gravely defended by the secretary as all right. In other words, it was all right to beat an exhibitor out of his rights, which were really a contract between him and the club, simply to save some one from having to stick to his bargain. The wry face with which that fancier looked on when that dog was winning all over the country, was a study, to say the least. The W. K. C. set a very wise example when they abolished the whole business of claiming dogs, but as the actor in this drama kept to the rule it will be curious to see how business under it will turn out. W. WADE.

HULTON, Pa., March 13.

THE NEWARK DOG SHOW.

THE entries for the Newark dog show number 546. There are 22 mastiffs, 57 St. Bernards, 5 Newfoundlanders, 4 Great Danes, 10 greyhounds, 6 deerhounds, 67 pointers, 56 English setters, 12 black and tan setters, 38 Irish setters, 2 Irish water spaniels, 13 field spaniels, 23 cocker spaniels, 14 spaniel puppies, 3 Clumber spaniels, 7 foxhounds, 56 collies, 21 beagles, 5 basset hounds, 3 dachshunds, 48 fox-terriers, 5 bulldogs, 13 bull-terriers, 3 black and tan terriers, 1 Irish terrier, 2 Dandie Dimonts, 3 Bedlington, 6 Skyes, 11 pugs, 4 Yorkshires, 2 toy terriers, 2 King Charles spaniels, 3 Blenheim, 4 poodles and 6 miscellaneous. Twenty-five entries were returned, having been received too late.

THE HARTFORD DOG SHOW.

THE premium list of the Hartford dog show provides for 127 classes, as follows: Champion dog, \$10; champion bitch, \$10; open dogs, \$10 and \$5; bitches the same; dog puppies, \$5 and \$3; bitches the same, for mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, deerhounds, greyhounds, large pointers, small pointers, English setters, Irish setters, Gordon setters, fox-terriers and collies. Newfoundlanders have but one champion, one open and one puppy class. Clumber spaniels, one champion and one open; field spaniels, the same; cocker spaniels, any color, one champion; open, liver or black, two classes; other than liver and black, one class; puppies, one class; foxhounds, one champion and one open; beagles, over 12 inches, one champion and two open; under 12 inches, the same; puppies, one class; dachshund, one class; basset hounds, the same; wire-haired fox-terriers, the same; bulldogs, large, two champion and two open; small, the same; bull-terriers, large, one champion and one open; small, the same; prizes the same. Champion black and tan terriers, \$8; open, \$8 and \$4; rough-haired terriers, \$8 and \$4; Dandie Dimonts, the same; Irish terriers, the same; Bedlington, the same; Skyes, the same; Yorkshires, the same; toys, the same. Champion pugs, \$8; open dogs, \$8 and \$4; bitches, the same; puppies, \$5 and \$3. Blenheims, \$8 and \$4; King Charles, the same; Mexican hairless, the same; Italian greyhounds, the same; poodles, the same; miscellaneous, over 25 pounds, the same; under 25 pounds, the same. In addition, there will be a good list of special prizes.

THE ST. LOUIS DOG SHOW.

Editor Forest and Stream:

The printer is at work on the premium list and entry blanks of the coming St. Louis Gun Club bench show. I will mail them in a few days, and will be glad if intending exhibitors will write me for copies.

Our catalogue is to be six by ten inches, much larger than heretofore, and we shall have it illustrated with full-page pictures of prominent dogs. If owners of fine animals who have cuts of their dogs will communicate with me promptly, I will be able to ascertain what pictures we shall have and announce it through the press.

We have made the prizes so liberal that we believe the dogs will come here. We have left out a lot of useless classes so common in many of the catalogues, classes that either from their very nature can't fill because there are no dogs eligible, or that won't fill because there are so few dogs of the class. Setters, pointers and collies get \$20 cash champion prizes, and \$20 open prizes with us, and all puppy classes get cash prizes. If we can be assured of some mastiff and St. Bernard entries from the East, we will offer \$50 cash kennel prizes, and we hope to be able to offer very handsome specials for kennels of pointers, setters, collies and fox-terriers.

As there is to be a bench show in Cleveland following ours, and another in Milwaukee later on, we hope some of the prominent Eastern dogs will come out to us.

The collie prizes will be the handsomest ever offered. There is to be a dog raffled every day of the show. Each person entering the show will be given a numbered ticket, a duplicate of which will be put into a wheel and drawn out at 10 o'clock P. M. of each day, and the lucky number takes the prize for that day. The dogs to be raffled will be no doubt a collie, a setter, a Newfoundland and a pug.

ST. LOUIS, March 13.

GEO. MUNSON, Manager.

PITTSBURG DOG SHOW.

THE twelfth exhibition of dogs given by the Western Pennsylvania Poultry Society, opened at the Grand Central Skating Rink, Pittsburgh, on Tuesday, March 16. The entries, which only closed a week before, were much larger than there was reason to expect, and the disappointed exhibitors who had thought to steal a march on less enterprising owners were found by the dozen long before the judging commenced. The rink was just large enough to accommodate the 400 and odd dogs and allow room for a good sized judging ring in the center. It was not a particularly cheerful building, and except when the sun is shining through the Pittsburgh smoke the light is poor. The morning of Tuesday was dull and cheerless, but before judging commenced there was a pleasant change. The delay was caused by a number of dogs being kept back on the railroads, and it was not until after dinner that Mr. Mortimer stepped into the ring, half of which was roped off for his use, while Major Taylor occupied the other half.

Mr. Mortimer not only began his judging first, but his classes headed the catalogue so that our criticisms will be confined to the work done by him, reserving Major Taylor's awards for next week, as it was impossible to do justice to the dogs or the judging going on in both rings at the same time. It is only proper to state that excellent progress was made, and if the judging had only commenced at the hour announced it would probably have been all completed in one day. The first of Mr. Mortimer's classes was the mastiff dog champions, for which Homer was unopposed. Rosalind was also alone in the bitch class. Open dogs had four entries and Hero III. won easily; he has filled out very much and has good width of skull and plenty of bone, but is coarse in coat and short of wrinkle. Hector is too small and is cut away in muzzle, but is very symmetrical. Bevis is also undersized and weak in muzzle; he has nice ears. Nero is large but sadly lacking in character, and has a ring tail. Hebe easily beat Victoria in the bitch class; both are, however, too small. The puppies were poor and only one prize was awarded.

The champion St. Bernard classes failed to attract any entries. In the class for rough dogs, Randolph II. had a clear win. He is rather on the small side, wants squareness of muzzle, and has a bad tail. Rescue was badly shown, is light in bone and body, and weak before the eye. Tiger got third, but it should have been withheld, as he is not a pure St. Bernard. The newly-imported Lady Athol was decidedly the best of the roughs. Good in skull, coat and body, she could be improved by a more decided stop. Don Juan was given first in the puppy class, but he is over 12 months, and an objection was lodged. Loyal is very good in front, but inherits his sire's faulty hindlegs. Plinthia had been brought straight from the steamer, which arrived in New York on Monday, and was dirty and in poor shape. Jumbo is a greatly overrated puppy, poor in head, short in body, and stiff in his hind legs. Mr. Tucker's new smooth-coated dogs had nothing to beat. Apollo is good in size and bone, but his heavy dewlap pulls his face down, and he shows too much hair. Rigi is small, but typical. Bess was rightly placed over Bernice, who shows age and moves stiffly. The puppies were not very promising, the winner having rather too much coat for a smooth dog.

In the Newfoundland dog class Mr. Mortimer went astray when he gave King Leo first. He is small, has not so much character as either Bruno or Pascha, and has no coat worthy the name. It should have been a clear win for Bruno, whose

coat should, however, be flatter still; there is plenty of it and it is of the right quality. Pascha should have been second. Duke is a weedy little dog, bad all over. The bitch and puppy prizes were properly withheld. The Great Dane judging was well done, Brock being the best of the breed.

Old Fan had a walk-over in the champion greyhound class, but in open dogs we think Stranger in White should have won over Paris. The former is a smart young dog and was well shown, while Paris is bad in shoulders. First in bitches went to a nicely-shown black, but the others were not a grand lot by any means. Deerhounds were drawn blank and then came spaniels. Mr. Olcott won first and second in Irish water spaniels with The O'Donoghue and Mollie, and a fair specimen, Onomoo, was vhe.

The field and cocker spaniel classes were not well filled. In the small other than black class Vic was first, but she was not good enough for such a position as both Hornell Nell and Hornell Nance are lower and better in body and legs. In the large class other than black there was a question as to weight, and the two dogs were sent out of the ring till it was decided. An objection on the same score was also made to Peerless (Gloss Jr.), who was placed over Bonanza. Between Hornell Silk and Keno there was not much to choose, but we differed from the judge, and should have placed Silk at the head of affairs. The small black bitches made up the best class of the breed, and Bene Silk properly won in coat, head and movement. Black Pearl was not quite herself and Gipsy Jane is not right in coat.

Mayor Taylor completed his pointer, Gordon, and Irish setter judging before he stopped, and if an early start be made to-morrow the judging will be completed in good season.

PITTSBURG, Pa., March 17.—Special Dispatch to Forest and Stream: Another fine day. The attendance is still limited. The committee held a meeting at noon, and decided to allow none of the protests. Judging by Major Taylor and Mr. B. F. Wilson progressed slowly. Mr. Mortimer nearly finished at 1 o'clock, when a recess was taken. We give awards to that time.

AWARDS.

MASTIFFS.—CHAMPION—Dog: Winlaw Kennels' Homer. Bitch: Winlaw Kennels' Rosalind.—OPEN—Dogs: 1st, V. M. Haldeman's Hero III.; 2d, Winlaw Kennels' Hector; 3d, F. Ardary's Bevis. High com., G. W. Morris's Nero. Bitches: 1st, Winlaw Kennels' Hope; 2d, W. D. Breyton's Victoria. Puppies: 1st, Winlaw Kennels' Hannah; 2d, withheld.

ST. BERNARDS.—ROUGH-COATED.—OPEN—Dogs: 1st, Chequasset Kennels' Rudolph II.; 2d, C. W. Van Essen's Rescue; 3d, F. George's Tiger. Bitches: 1st, J. S. Shepard's Lady Athol; 2d and 3d, Buena Vista Kennels' Stella and Baronne. Puppies: 1st, J. A. Newell's Don Juan; 2d, Buena Vista Kennels' Loyal. Very high com., R. J. Sawyer's Plinthia, and Mohawk Kennels' Jumbo. SMOOTH-COATED.—OPEN—Dogs: 1st and 2d, W. W. Tucker's Apollo and Rigi. Bitches: 1st, Dr. E. J. Birmingham's Bess; 2d, W. W. Tucker's Bernice. Puppies: 1st and 2d, Chequasset Kennels' Lionel and Lancelot.

NEWFOUNDLANDS.—Dogs: 1st, W. C. Meyer's King Leo; 2d, D. O'Shea's Bruno. Very high com., W. Lenchwin's Pascha. High com., F. A. Dean's Duke and W. W. Silvey's Nero. Bitches: Withheld. Puppies: Withheld.

GREAT DANES.—Dogs: 1st, A. Trinkle's Brock; 2d, Paul Merker's Pluto. Bitches: 1st, Paul Merker's Flora; 2d, H. M. Meyer's Elza. GREYHOUNDS.—CHAMPION.—H. W. Smith's Fan.—OPEN—Dogs: 1st, Associated Fanciers' Paris; 2d, H. W. Smith's Stranger in White. Very high com., W. Bagshaw's Nero and J. H. Beddow's Spring. High com., J. V. Scalfie's Major. Bitches: 1st, J. V. Nicholson's Belle; 2d, J. H. Beddow's Bess Braddock. Very high com., H. W. Smith's Sister in Black. High com., W. Bagshaw's Nora.

DEERHOUNDS.—No entries. POINTERS.—CHAMPION—Dog: St. Louis Kennel Club's Robert Le Diable.—OPEN—OVER 55LBS.—Dogs: 1st, Graphic Kennels' Graphic; 2d, C. L. Engel's Young Meteor. High com., L. W. Rutherford's Dana. Bitches: 1st, Graphic Kennels' Jewel III.; 2d, Uxton 55LBS. Dog: 1st, Graphic Kennels' Bracket; 2d, Westminster Kennel Club's Bang Bang; 3d, D. O'Shea's Don. Very high com., C. L. Dick's Young Sleaford and R. F. Hitchcock's Duke of Bergen. Com., F. Tamblin's Roy. Bitches: 1st, Pittsburgh Kennel Club's Jetsam; 2d, Graphic Kennels' Meally. Very high com., Pittsburgh Kennel Club's Flotsam and F. K. Hitchcock's Modesty. High com., G. A. Seven's Reiss. Com., Surrey Kennels' Bellegarde and G. H. Bailey's Grace. Puppies: Young Meteor; 3d, C. L. Dick's Hamlet S. Very high com., and com., J. M. Hilbert's Duke, Jr. and Prince. Bitches: 1st, F. Vall's Lady Snow; 2d, J. Fawcett's Nell. Com., V. M. Haldeman's Leda.

ENGLISH SETTERS.—CHAMPION—Dog: Pittsburgh Kennel Club's Royal Ranger. Bitch: R. C. Cornell's Modesta.—OPEN—Dogs: 1st, R. B. Morgan's Mandan; 2d, Reserve Kennels' Pendragon; 3d, C. L. Dick's Prince Royalty. Very high com., J. P. Thom's Call and Pittsburgh Kennel Club's Van Dord. High com., Reserve Kennels' Montana, J. O. H. Denny's Bradon, E. J. Steller's J. H. Denny and C. Buchanan's Napoleon. Com., W. McConaway's Royal Blue, Jr. and W. J. Scully's Shot Ranger. Bitches: 1st, J. S. Lewis's Lady Rock; 2d, Mrs. Dr. C. Franklin's Vixen III.; 3d, W. R. Travers's Princess Pearl. Very high com., G. Cartwell's Daisy Darling, R. B. Morgan's Addie M., and Associated Fanciers' Zarinia. High com., Pittsburgh Kennel Club's Bess B. and G. W. White's Daisy W. Com., Pittsburgh Kennel Club's Daisy Queen and Queen Laverack, A. C. Waddell's Daisy Deal, F. Wolfenden's Nelly, Geo. H. Hill's Lucy Dean, and R. B. Morgan's Akron Girl.

BLACK AND TAN SETTERS.—CHAMPION—Dog: E. Maher's Royal Duke.—OPEN—Dogs: 1st and 2d, withheld; 3d, G. H. Hill's Max. Bitches: 1st, E. Davis's Jessie II.; 2d, withheld; 3d, F. Ardary, Jr.'s Jessie.—PUPPIES—Dogs: 1st, R. Wehrle's Lang. Bitches: 1st, Ehler's Nellie.

IRISH SETTERS.—CHAMPION—Dog: J. A. J. Sprague's Brush.—OPEN—Dogs: 1st, R. C. Van Horn's Star; 2d, L. W. Rutherford's MacCollough; 3d, G. H. Hill's Jack O'Dono. Very high com., C. W. Miller's Colonel. Bitches: 1st, H. E. Chubb's Zella Glenduff; 2d, W. Hoyt's Noreen IV.; 3d, T. J. Farley's Miss Nellie Husted.—PUPPIES—Dogs: 1st, D. L. Carmichael's Mac; 2d, withheld. Bitches: 1st, J. A. J. Sprague's Cora; 2d, W. Hoyt's Noreen IV. Very high com., T. J. Farley's Miss Nellie Husted.

IRISH WATER SPANIELS.—1st and 2d, Excelsior Irish water Spaniel Kennels' The O'Donoghue and Mollie. High com., W. Ekler's Anomoo.

COCKER SPANIELS.—Dogs or bitches: 1st, Cannonsburg Cocker Spaniel Club's Vic; 2d and very high com., Hornell Spaniel Club's Hornell Nell and Hornell Gem.

BLACK FIELD SPANIELS.—1st, Miss Nellie Hendrick's Peerless Gloss, Jr.; 2d Associated Fanciers' Bonanza.

BLACK COCKER SPANIELS.—Dogs: 1st, Cannonsburg Cocker Club's Victor; 2d, Hornell Spaniel Club's Hornell Silk.

FOX-TEARERS.—CHAMPION—Dog: L. W. Rutherford's Belgrave Primrose. Bitch: L. W. Rutherford's Diana.—OPEN—Dogs: 1st, L. W. Rutherford's Splanger; 2d, R. Gibson's Nick; 3d, W. T. McAlar's General Grant. Very high com., F. Hoey's Stableford Joe and A. Belmont's Regent Vox. High com., Cloverbrook Kennels' Earl Leicester. Com., W. B. Bruckner's Pippant. Bitches: 1st, L. W. Rutherford's Cornwall Dutches; 2d, A. Belmont, Jr.'s, Marguerite; 3d, Cloverbrook Kennels' Delie. Very high com., J. H. Shepherd's Lady Wrentham. High com., L. W. Rutherford's Warren Winsome. PUPPIES—Dogs: 1st, W. T. McAlar's General Grant. Very high com., F. Hoey's Nutmeg. High com., J. W. Munson's Virus. Bitches: 1st and very high com., F. Huys's Violet V. and Mac II. Very high com., A. Belmont, Jr.'s, Blemton Gingerbread. High com., J. W. Munson's Vice.

DANDIE DIMONTS.—1st and 2d, Mrs. J. H. Naylor's Bennie Briton and Tansy. Very high com., James Rice's Bobbie Burns and Cleg II. and Associated Fanciers' Bob. Com., J. F. Nicholson's Queen Mab.

IRISH TERRIERS.—1st, D. O'Shea's Nobby; 2d, P. H. Haeke's Patrick II. Very high com., W. W. Silvey's Barney.

SKYES.—Withheld.

BULLDOGS.—PUPP—Dogs: 1st, J. P. Barnard's Brimstone; 2d, withheld.

BULL TERRIERS.—1st, withheld; 2d, Jos. Lewis's Maud Lee.—UNDER 55LBS.—1st, T. K. Varick's Little Nell; 2d, G. Will's Nelly. Puppies: Withheld.

ROUGH-HAIR TERRIERS.—1st, J. H. Naylor's Heather; 2d, D. O'Shea's Major II.

BLACK AND TAN TERRIERS.—Dogs: 1st, J. J. Brogan's Pax. Bitches: 1st, E. G. Bird's Three Cheers; 2d, M. & J. Callahan's Gyp. High com., G. Will's Dot.

PUGS.—CHAMPION—Dog: Kentucky Pug Kennels' Treasure. Bitch: Mohawk Kennels' Bo-Peep.—OPEN—Dogs: 1st, Chequasset Kennels' Young Bob; 2d, J. H. Shepherd's Lady Wrentham; 3d, W. C. Meyer's Tiny. Com., W. W. Silvey's May Queen. Puppies: 1st, Miss Corina Fulton's Trizie; 2d, Geo. Gillivan's Ruby II. Com., Miss L. Cunningham's Taffy.

JUDGES AS COMPETITORS.

Editor Forest and Stream:

It seems to me that one feature of the Alexandria Field Trials, as reported in your issue of March 4, ought not to pass without censure. I refer to the fact that two of the judges owned competing dogs. It seems to have been thought that so long as these gentlemen did not act as judges in the heats in which their dogs ran, there was no objection to the arrangement. All the other competitors may have been quite satisfied with the way the business was done, but then again they may not, and it is not fair to put upon any competitor the necessity of objecting to improprieties on the part of the judges.

The reasons why judges ought not to be competitors are the following: In the first place, so long as a judge's dog is in the race, it is his interest to decide every heat in favor of the worse dog; that is, in favor of the dog that his own would be most likely to beat. Then again, Judge A might easily be tempted to give Judge B's dog every advantage, and indisposed to judge him with severe impartiality, when it will directly be Judge B's turn to pass on Judge A's dog. It is not a sufficient answer to say that any particular judges are high-minded men who would not let themselves be influenced by such considerations. Honorable men ought not to let themselves be placed in positions where their interests conflict with their duty. Every competitor has a right to have judges who not only are fair, but also who have no interest in being otherwise.

S. H.

NEW YORK, MARCH 11.

NEW HAVEN KENNEL CLUB.

Editor Forest and Stream:

I want to thank you for the earnest support that you are giving our show this year, as in the past. We feel your influence every year, but never more than this present one, when at least two so-called "sporting papers" do all in their power to injure us, one for no known reason except to keep up its record, and the other, I believe, because we would not accept the judges suggested by the editor. This same paper is also against us because its editor objects to one of our judges; but in a personal letter to me acknowledges him to be one of the best judges in the country, and thinks by another year that he will be acknowledged so by every one, but thinks we would do better to ask Mr. — and Mr. — this year. I think our selection of judges is approved by all true lovers of dogs and men of judgment; at least our entry book proves it to be so to our satisfaction. The classes are filling up rapidly, and especially Messrs. Mason's and Davidson's. We shall have more specials than ever, and we shall try to make "the boys happy." If some persons who are working against us on account of not being friendly with Mr. Mason are not careful, I shall not feel called upon to consider as confidential some letters received by me previous to our selection of judges, and shall give them to the public. We are considering some new ideas as to benching and bedding the dogs, but have decided upon nothing as yet. Again thanking you for your endeavors in our behalf, I remain, as ever,

G. EDW. OSBORN.

Prest. New Haven Kennel Club.

A BREEDERS' ASSOCIATION.—*Editor Forest and Stream:* As the breeding of thoroughbred dogs has become a source of wealth and has developed into a business of considerable magnitude, I wish, through your paper, to suggest to brother sportsmen of our country a scheme whereby we may establish a large breeding kennel for all classes of dogs, and place ourselves in a position to obtain the very finest specimens of the breed we most prefer, at a moderate figure. Select an island, I have one in view (400 acres), let each participant either furnish — dollars as a share in the company, or a thoroughbred bitch of unquestionable breeding of the kind he desires, to keep and place on said island for breeding purposes, in the hands of a keeper, and if any owner of a thoroughbred dog let him be allowed to place him on the island for the same purpose, though only one dog of a kind to be admitted and to be the stud dog for that breed for the island. Then gentlemen who have taken the trouble and borne the expense to import or purchase good bitches will have a place to send them, save the annoyance of breeding, and disposing of those they may not require. One competent man can be the servant of many owners. Let those who think well of it speak through your paper.—BREEDER.

THE BOSTON DOG SHOW.—*Editor Forest and Stream:* Arrangements for the transportation of dogs to the coming bench show of the New England Kennel Club, at Boston, April 6 to 9, have been made with the express and railway companies as follows: American, U. S. and Canada, International, United States, and New York & Boston Dispatch companies have agreed to return to shippers free, all dogs that may be sent to the show (in crates) in their charge, upon which one full rate has been paid. The Boston & Albany, Boston & Lowell, Boston & Maine, Fitchburg, Old Colony and Providence railroads will carry dogs free to and from the show in baggage or smoking cars when accompanied by owner or caretaker paying fare. Railroad companies to be released from all liability from loss or injury. This arrangement to hold from April 3 to 12 inclusive. The above arrangements with the express companies covers nearly all points in the United States, Canada and the British Provinces, while the arrangements with the railroads cover New York city and points in New England. Entries close March 20.

THE CLEVELAND DOG SHOW.—The third dog show of the Cleveland Bench Show Association will be held at the old Tabernacle, Cleveland, O., April 27 to 30. Mr. L. G. Hanna will be the manager and Mr. C. M. Munhall, superintendent. Cleveland has always been popular with exhibitors, and as the management will spare no pains to make this the best show they have ever held, we have no doubt that the benches will be well filled.

MISTAKE IN PEDIGREE.—*Editor Forest and Stream:* I noticed an advertisement of a red Irish setter bitch with a pedigree as follows: "By Dirk out of Maud II," etc. This is a mistake, for Maud has never been bred to Dirk until within a year, but was bred to Red, the sire of Dirk. I make the correction to save future trouble in tracing the pedigree of the coming generations.—CAL. 45.

NEW HAVEN SPECIALS.—*Editor Forest and Stream:* In specials sent you last week please change greyhounds to read: Spratts Patent, dog collar and 100 pounds biscuit, we will put the clock elsewhere. Spratts Patent has sent us 300 pounds biscuit and three collars which they place themselves.—S. R. HEMINGWAY, Secretary.

THE GOODSSELL KENNELS.—The dogs constituting the Goodsell Kennels, that were recently purchased by the Blackstone Kennels from E. I. Martin, of Wilmington, Del., have been replevined by Mr. J. H. Goodsell, who holds a chattel mortgage on them from Mr. Martin.

THE NEW HAVEN DOG SHOW.—There are four hundred entries for the New Haven dog show. The display of mastiffs, St. Bernards, spaniels and greyhounds will be the finest ever seen. The fox-terrier classes are also well filled.

THE HARTFORD CLUB has not yet been elected to membership in the A. K. C. This is a matter that should be attended to, for unless the club should be elected, the wins at its show could not be recognized.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.
Ilford Claudia. By E. H. Moore, Melrose, Mass., for fawn, black points, mastiff bitch, whelped Dec. 19, 1885, by Ilford Cauton (Crown Prince—Ilford Claudia) out of Brenda II. (A. K. R. 2319).

Ilford Rector. By E. H. Moore, Melrose, Mass., for fawn, black points, mastiff dog, whelped Dec. 19, 1885, by Ilford Cauton (A. K. R. 2980) out of Brenda II. (A. K. R. 2319).

Forest Belle. By Rosebud Kennels, Southington, Conn., for black and white English setter bitch, whelped Nov. 17, 1885, by Plantagenet (Dashing Monarch—Petrel) out of Forest Dora (A. K. R. 500).

Forest May. By Rosebud Kennels, Southington, Conn., for black and white English setter bitch, whelped Nov. 17, 1885, by Plantagenet (Dashing Monarch—Petrel) out of Forest Dora (A. K. R. 500).

Forest King. By Rosebud Kennels, Southington, Conn., for blue belton English setter dog, whelped Nov. 17, 1885, by Plantagenet (Dashing Monarch—Petrel) out of Forest Dora (A. K. R. 500).

Bell Jarvis. By Freestone Kennels, Middletown, Conn., for dark red, star on breast, Irish setter bitch, whelped Aug. 28, 1885, by Nimrod (Elcho—Lorna) out of Bizarah (A. K. R. 1888).

Brown Betty. By A. W. Day, Danvers, N. J., for liver spaniel bitch, whelped Dec. 17, 1884, by Obo II. (A. K. R. 432) out of Lyp (Salpe—Althia).

Concert. By A. Goetting, New York, for liver and white pointer dog, whelped Sept. 1, 1885, by Donald II. (imported Donald—Sappho) out of Gayley (Gay—Grace).

Tell. By Emil Marquardt, New York, for liver and white ticked pointer dog, whelped Sept. 1, 1885, by Donald II. (imported Donald—Sappho) out of Gayley (Gay—Grace).

Black Bear, Jr. By Jas. Luckwell, Woodstock, Ont., for black field spaniel dog, whelped March 19, 1885, by Ibrahim (Easten's Bob—Clew) out of Woodland Queen (Kelly's Tip—Woodstock Queen).

Beech Grove Queen. By Geo. P. Jones, St. Louis, Mo., for light fawn mastiff bitch, whelped Dec. 3, 1885, by imported Beech Grove Duke (Duke—) out of Beech Grove Gabrielle (Bob Ingersoll—Betsey Trotwood).

King Philip and Burgoyne. By Jacob Meyer, Newark, N. J., for brindle and white St. Bernard dogs, whelped Feb. 11, 1886, by First Choice out of Flora II. (A. K. R. 3019).

Carlo Chief and Muro Chief. By Jacob Meyer, Newark, N. J., for tawny and white St. Bernard dogs, whelped Feb. 11, 1886, by First Choice out of Flora II. (A. K. R. 3019).

Doctor Clyde. By Miss Ida F. Warren, Leicester, Mass., for brindle Scotch deerhound dog, whelped March 24, 1885, by Bras (Bruce—Maida) out of Lady Dare (imported Oscar—Ilga).

BRED

Notes must be sent on the Prepared Blanks.
Bessie—Ilford Cauton. Sam Allen's (Rockport, Tex.) mastiff bitch Bessie (Turk II.—Druidess) to E. H. Moore's Ilford Cauton (A. K. R. 2980), March 4.

Bess—Ilford Cauton. E. H. Moore's (Melrose, Mass.) mastiff bitch Bess (A. K. R. 237) to his Ilford Cauton (A. K. R. 2980), March 7.

Countess—Ilford Cauton. E. H. Moore's (Melrose, Mass.) mastiff bitch Countess (A. K. R. 2320) to his Ilford Cauton (A. K. R. 2980), March 1.

Bernie V.—Merchant Prince. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Bernie V. (A. K. R. 3008) to his Merchant Prince (Bayard—Pastime), Feb. 19.

Topsey—Merchant Prince. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Topsey (A. K. R. 3262) to his Merchant Prince (Bayard—Pastime), Feb. 19.

Gypsy Queen—Rem. C. W. Willard's (Westerly, R. I.) beagle bitch Gypsy Queen (A. K. R. 3451) to C. S. Davol's Rem (A. K. R. 2115), March 6.

Twinkle—Rem. C. S. Davol's (Warren, R. I.) beagle bitch Twinkle (A. K. R. 2390) to his Rem (A. K. R. 2115), March 6.

Brown Betty—Black Prince. A. W. Day's (Danvers, N. J.) spaniel bitch Brown Betty (Obo II.—Gyp) to A. C. Wilmerding's Black Prince (A. K. R. 62), Feb. 5.

Zona—Black Prince. W. H. Moseley's (New Haven, Conn.) spaniel bitch Zona (A. K. R. 1881) to A. C. Wilmerding's Black Prince (A. K. R. 62), Feb. 5.

Fairy—Bradford Ruby. Jesse D. Welch's (New Haven, Conn.) fox-terrier bitch Fairy (A. K. R. 3325) to Walter D. Peck's Bradford Ruby (Lovat—Jenny), Feb. 17.

Belle of Scotland—Rob Roy III. Francis Tiernan's (Fort Scott, Kan.) black and white Belle of Scotland (Help, A. K. R. 2124—Meg Merrilies I, A. K. R. 890) to W. S. Powers's Rob Roy III. (A. K. R. 2011), Feb. 16.

Woodland Queen—Obo II. Jas. Luckwell's (Woodstock, Ont.) black cocker spaniel bitch Woodland Queen (Kelly's Tip—Woodstock Queen) to J. P. Willey's Obo II. (A. K. R. 432), Feb. 6.

Myrtle—Brack. Mill Brook Kennels' (Bergenfield, N. J.) collie bitch Myrtle (Robin Adair—Lassie) to Martin Dennis's Brack (Carlyle—Santol), March 8.

Countess Gladstone. Theodore Potter's (Glendale, O.) English setter bitch Gladstone (A. K. R. 1953) to J. H. Overman's Count Gladstone (Glendale—Lelia), March 6.

Snowball—Verone. Mill Brook Kennels' (Bergenfield, N. J.) St. Bernard bitch Snowball (Fido—Dinah) to their Verone (Rex—Alma), March 7.

Bertha—Verone. Mill Brook Kennels' (Bergenfield, N. J.) St. Bernard bitch Bertha (Brutus—Elo) to their Verone (Rex—Alma), March 5.

Nellie—Verone. L. Blank's (Philadelphia, Pa.) St. Bernard bitch Nellie (Dirk—Alva) to Mill Brook Kennels' Verone (Rex—Alma), March 9.

WHELPS.

Notes must be sent on the Prepared Blanks.
Betty. W. Stewart Diffenderfer's (Baltimore, Md.) beagle bitch Betty (A. K. R. 2910), March 4, six (three dogs), by his Rattler III. (A. K. R. 2798).

Cricket. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Cricket (Dr. Twaddell's Bugle—Dr. Twaddell's Pittsburg), Feb. 2, six (three dogs), by Chas. R. Hoe's imported Rattler (Chancellor—Careless); all since dead.

Woodland Molly. Jas. Luckwell's (Woodstock, Ont.) field spaniel bitch Woodland Molly (Toronto Beau—Kelly's Judy), Jan. 18, four dogs, by his Bob, Jr. (Bob III.—Black Bess).

Thule. Mill Brook Kennels' (Bergenfield, N. J.) collie bitch Thule (imported Garry II.—Lassie of Wyckoff), March 3, six (four dogs), by N. B. Sinclair's Carlo.

Lady Bow. W. Hoyt's (Cleveland, O.) pointer bitch Lady Bow (King Bow—Belle), March 10, eleven, by A. E. Godefroy's Croxteth (Young Bang—Jane).

Titania. Essex Kennels' (Andover, Mass.) pug bitch Titania (A. K. R. 471), March 11, six (five dogs), by Forest City Kennels' Sam (Young Toby—Judy).

Sal. G. W. Amory's (Boston, Mass.) pointer bitch Sal (Dick—Ruby), March 7, six (three dogs and one bitch living), by his Bob (Bang—Princess Kate).

Kelp. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Kelp (A. K. R. 110), Feb. 21, twelve (five dogs), by Pride of Dixie; nine since dead.

Victory. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Victory (County Rapien—Reign), Feb. 20, ten (three dogs), by Pride of Dixie; one since dead.

Flora II—First Choice. Jacob Meyer's (Newark, N. J.) rough-coated St. Bernard bitch Flora II. (A. K. R. 3016), Feb. 11, eight (four dogs), by Burgess's First Choice (H. 14,297).

SALES.

Notes must be sent on the Prepared Blanks.
Nell. White native setter bitch, age and pedigree unknown, by St. George Kennels, St. George's, Del., to H. C. Burdick, Springfield, Mass.

Countess Irene. Fawn mastiff bitch, whelped Oct. 1, 1885, by Count Waldo (A. K. R. 1501) out of Lotfy (A. K. R. 2843), by Black Thorn Kennels, St. George's, Del., to John A. Graham, Chester, S. C.

Roxey's Boy's Girl. Black and white English setter bitch, whelped June 4, 1883, by Roxey's Boy out of Gipsy Maid, by St. George Kennels, St. George's, Del., to J. A. Duane, Princeton, Ill.

Fig. Fawn pug bitch, whelped Oct. 13, 1885, by Bunny out of Judy, by St. George Kennels, St. George's, Del., to H. C. Burdick, Springfield, Mass.

Ilford Hercules. Fawn mastiff dog, whelped Dec. 19, 1885, by Ilford Cauton out of Brenda II. (A. K. R. 2319), by Pine Hill Kennels, Melrose, Mass., to Winlaw Kennels, New York.

Ilford Brenda. Fawn mastiff bitch, whelped Dec. 19, 1885, by Ilford Cauton out of Brenda II. (A. K. R. 2319), by Pine Hill Kennels, Melrose, Mass., to C. M. Gilman, Southport, Conn.

Twinkle. White, black and tan beagle bitch, whelped July 7, 1884 (A. K. R. 2990), by C. S. Davol, Warren, R. I., to A. H. Wakefield & Co., Providence, R. I.

Rem and Ross. White, black and tan ticked beagle dogs, whelped Dec. 10, 1884 (A. K. R. 2115 and 2116), by C. S. Davol, Warren, R. I., to G. W. Willard, Westerly, R. I.

Nimrod, Jr. Red, small star on breast, Irish setter dog, whelped Aug. 28, 1885, by Nimrod out of Flora, by Freestone Kennels, Middletown, Conn., to Chas. Young, same place.

Lady Abbot. Solid black field spaniel bitch, whelped July 11, 1885 (A. K. R. 3312), by A. C. Wilmerding, New York, to E. M. Oldham, same place.

Lola. Black, white and tan English setter bitch, age not given, by Rake out of Fanny, by H. E. Hamilton, Hackensack, N. J., to A. E. Burche, Washington, D. C.

Concert. Liver and white ticked pointer dog, whelped Sept. 1, 1885, by Donald II. out of Gayley, by A. Quick, New York, to A. Goetting, same place.

Tell. Liver and white ticked pointer dog, whelped Sept. 1, 1885, by Donald II. out of Gayley, by A. Quick, New York, to Emil Marquardt, same place.

Dot III. Black, tan and mottled beagle bitch, whelped Sept. 6, 1885, by Judge out of Dot II., by Geo. L. Barnes, Tyringham, Mass., to Foss & Marston, Holyoke, Mass.

Rob Roy III. (A. K. R. 2011)—*Lilly Whelp.* Collies, whelped Jan. 21, 1886, by W. S. Powers, St. Louis, Mo., a black and tan dog each to Cooper S. Stevenson and S. F. Baker and a sable dog to W. M. Chunvener, all of same place.

Bugler—Rye whelps. Beagles, whelped Dec. 14, 1885, by George Laick, Tarrytown, N. Y., two black, white and tan bitches to P. P. Lewis, same place, and a white and ticked bitch to J. W. Hedgecock, Hyde Park, N. Y.

Pilot—Gilt whelp. Solid liver cocker spaniel c/g, whelped Dec. 12, 1885, by Ideal Kennels, New Haven, Conn., to A. G. Wetherell, Cincinnati, O.

Pilot—May Stubbs whelps. Cocker spaniels, whelped Dec. 6, 1885, by Ideal Kennels, New Haven, Conn., a solid liver dog each to John C. Dewey, New York, and Eli Laucaster, Providence, R. I.; a solid liver bitch to G. H. King, Denver, Colo., and a liver and white dog to Mrs. H. W. Lacy, Ray Ridge, La.

Count Gladstone—Glen. (A. K. R. 1533) whelps. English setters, whelped Oct. 26, 1885, by Theodore Potter, Glendale, O., a lemon and white bitch to Robt. B. Moore, Louisville, Ky., and a black, white and tan bitch to C. C. Kirkpatrick, Springfield, O.

Beech Grove Queen. Light fawn mastiff bitch, whelped Dec. 3, 1885, by imported Beech Grove Duke out of Beech Grove Gabrielle, by Beech Grove Kennels, Beech Grove, Ind., to Geo. P. Jones, St. Louis, Mo.

Bertha. Solid black cocker spaniel bitch, whelped Nov. 19, 1885, by Kiddlewink (A. K. R. 907) out of Gretchen (A. K. R. 906), by Ideal Kennels, New Haven, Conn., to Geo. H. King, Denver, Colo.

Benjo. Solid black cocker spaniel dog, whelped Nov. 19, 1885, by Kiddlewink (A. K. R. 907) out of Gretchen (A. K. R. 906), by Ideal Kennels, New Haven, Conn., to J. M. Gove, Rockford, Ill.

Pete. Cream fawn, black points, pug dog, whelped Dec. 1, 1885, by Young Toby out of Tantrums, by Essex Kennels, Andover, Mass., to Geo. S. Tucker, Peterboro, N. H.

PRESENTATIONS.

Rob Roy III. (A. K. R. 361)—*Lilly whelp.* Sable and white collie dog, whelped Jan. 21, 1886, by W. S. Powers, St. Louis, Mo., to Miss Daisy E. Kincaid, same place.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Publishing Co.

RANGE AND GALLERY.

CINCINNATI, O., March 8.—There was a fair attendance yesterday at the Four Mile House Range of the Cincinnati Rifle Association. Weather addition good, except a 3 o'clock wind, which interfered with the shooting some. Scores, 300 yds. off-hand, American standard target:

Morning Match.

Valuable prizes will be shot for the coming season, and it is now expected that the association will hold their first prize shoot of the

my estimation, when I found her 20ft. of length close up on the pair. In course of an hour, when clear of Turkey Point, a bold headland surmounted by a fixed white light, the little cat had run the yacht's lee and conversation was begun. Then I learned with pleasure and some surprise that the yacht hailed fifty miles east of New York on the Sound, and was bound for Florida, for better or for worse. She was handsomely fitted out, 27ft. long, 6ft. 6in. beam, and 3ft. 6in. draft, of the well known Long Island sloop boats, but decked fore and aft, with a small cabin in the stern. Amidships she had hatches, her hold being given up to stowage of provisions in bulk, shooting and fishing implements, etc. She was rigged as a sloop, drew 3ft. aft, had a centerboard, and was new, neat and trim throughout. Her siding was of 5/8 in. cedar, and great care had to be exercised lest the ice cut her through. This yacht had passed through the channels a few days in advance of the Coot, and had fortunately escaped the cold weather. I had experienced, or it would have fared badly for her light construction. For strength she had all the wood and fastenings required, having but few beams and no overhang aft. In a general way she might be compared to a ship's "long boat" with more deadrise and sheer. She was a fine sea boat, but loaded too deep with fittings and stores to profit by the great buoyancy upon which the sloop boats depend. Her hatch coverings were low and not watertight, an oversight which her owner realized and proposed rectifying some day. The cabin was 17ft. long with a hatch on each side, but the fore-cabin space was taken up by a galley stove. Aft the cabin house, the stern sheets formed a narrow, dry cockpit, big enough for the man at the helm, and, as I thought, uncomfortably close to the sea, and likely to ship water when the boat heels, as she easily did.

Meanwhile the smack had hauled her wind to await our coming, so we might all make harbor together for the night. The lookout aloft aided materially in discerning the clear leads through the field ice which again packed around us in a threatening manner. The zigzagged through the winding lanes all the afternoon, passing the ice-choked mouth of the Sassafras River, which is three miles and a half across from Grove Point to Howell's Point, a great stream, up which you can carry 13ft. to the town of Frederick ten miles from the capes, and which in places brings up the lead in no less than 2 1/2 fathoms. Ordinary Point and Turner's Creek, on the south shore opposite, about four miles up, afford good shelter. Lovi's Harbor, on the south, ten miles from the mouth, of the Sassafras, is very good at low water, though it may be entered through a very narrow opening with over 4ft. on the bar at high tide, if you do not mind taking the bottom at low water inside.

Below the Sassafras the coast trends southward, forming a big right to the next headland, after which you open the well known and much frequented Still Pond Harbor. This consists of an outer anchorage, an indentation one mile deep and broad, tapering at the head where it splits into two small arms at Kennard's Bluff, one called Still Pond proper, with a very narrow and secluded entrance, the other known as Church Creek. Even the outer bay supplies fair anchorage from all but northwesterly winds. It was for this we were making, as it has the reputation of being clear of ice before other shelters.

The wind had dropped away entirely, while we were still three miles away from our haven. The sky cleared and the weather moderated, so our hopes of getting clear of all ice below Pool's Island rose in proportion as we set to at the sweeps and scull with a will. Night overtook us, however, well jammed fast in the pack just before opening the safe retreat. It looked as though we were in for a desperate situation, squeezed between some big floes which were carrying us down on the ebb and boded evil in the ruthless scrunching of our boat's sides. I felt seriously alarmed for the safety of my light timbered friend, the Long Island sloop boat. After exhausting all means to free ourselves we made the best of matters and tossed anchors out the floes, jacking all three vessels and the sloop boat, the surf boat in the middle. Then we cooked supper and awaited events with resignation. Gradually drifting down abreast of the bay we discovered with concern that it was closed with the ice solid across from shore to shore, but apparently of new formation near the entrance. Hailing in the dark, an answer came from shore with the cheering information that we could not get in. Captain So and So's schooner had been fast for two weeks and could not budge an inch. It would have been madness to drift past the schooner, and had the schooner brought up, so an effort had to be made to cut a way into the fast ice, and so at least avoid the friction of the moving floes. For four hours, nearly up to midnight, we backed and smashed and stove away with oars, poles, hooks and hatches, till the heavy floes were cut through and quitted to go on their voyage down the bay alone. Then our friend of the smack sent his son ahead in a stout yawl boat and by dint of violent rocking from side to side, he succeeded in slowly breaking the channels all into the fast ice, and the schooner, the northernmost bluff of the harbor. We then sculled the boats into his wake and in the light of a bright moon brought up for rest in tolerable security with congratulations upon our success. Tired out, bunks were speedily sought and sleep indulged till well along next day.

The flow of ebb and flood and light easterly airs had by that time, much to our relief, partially cleared the outer waters of the heavy drift and we got under way. No wind sprang an ash breeze had to be called in. Now if there is anything to hate in such artificial style of locomotion. The Coot is a heavy thing to scull along and with the lightest breath ahead, she could scarce be made to answer the most assiduous labor at the ten foot sweep. Of course what win? we were vexed at to come out ahead. There was not room to tack ship through the narrow waterways we were working, so our whole reliance had to be placed upon the wooden implements of torture. The smack got out sweeps and pulled ahead. The surf boat likewise rowed and both dropped the Coot with her single hand plying the scull over the stern with the greatest vigor and disgust. Out of our berth we forced our way tediously enough down the coast to Wharton's Point, the northern headland of a snug harbor by the same name, some three miles from the anchorage of the previous night, and after doubling the same, two miles more stared us in the face to the head before we could fetch into good shelter. Luckily the creek proved quite clear of ice and in due course of time the boat was propelled far enough in and the Coot, with her single hand and split, around which we could easily drop into more perfect shelter should it come at hand from the northwest.

In triumph the skipper of the smack ran a brand new star spangled banner to the masthead and broke out a variegated assortment of brass and wind instruments, a bass drum, kettle drum, triangle and cymbals, upon which he and his son proceeded to regale the neighborhood for miles around with choice melodies, such as "John Brown's Body," "The Star Spangled Banner," "The White and Blue," "winding up with the Rebel Charge," in scolding of possibly rounded feelings of ante-bellum birth. Imagine a quiet, peaceful, farming community invaded on a calm forenoon, without warning, with the most terrible din, the banging of a sonorous bass drum, the rolling of a rattling kettle, the clang of cymbals, brass bugle calls, plaintive strains from a fiddle and piping of flutes, and to top it all, waves of dulcimer harmony from the ever-popular accordion, upon which the great masters were interpreted with a license to correspond with the liberty of the press. Three vessels in a state of pandemonium, bunting flying, smoke issuing from the galley funnels, bedding and clothing littered about in profusion for an airing, and what else could the sudden exhibition produce upon the bucolic mind but the feverish state of excitement anticipatory to the arrival of a circus! The countryside woke up in midwinter. The small boy appeared on the brow of the hills in such numbers as the population could afford, and the housewife and the man of the Manor appeared, dogs likewise, and they assisted the fully with their organs of expression. Cat calls resounded through the woods, and balls, half in earnest, half facetious, rang over the calm waters as our impromptu band from New Jersey rent the air with their devoted to the muse of the lyre. When the festivities had finally ceased as wind and muscle gave out, the old skipper of the smack kept all hands in a state of roaring laughter with humorous reminiscences from his life, and the son now and then chimed in with a choice moral equated to a good.

An explosion of the surf boat unshipped her mast and sawed 26ft. off the keel, after which she sailed with a single reef in mainsail, she being overpowered for winter work. The night was calm till day-break, when the chafing of the Coot against the smack's side announced the advent of a breeze from southwest, the sky becoming overcast with fleecy clouds at the same time. Eight o'clock saw us under sail, our next rendezvous being Anne's Point, eight miles, due south on the eastern shore as a refuge should the wind head us off as it threatened to do. Our plans, however, came to naught, and the Coot was the only one of the three to fetch into Annapolis roadstead, though not until five days later.

A course could just be laid out clear of Wharton's Point, when the wind was found with enough veering to make it a dead beat full, we passed night in the bay in prospect. As the morning was very full, we passed the word to tuck in all hands kept at it and make for Annapolis, below which we were sure to escape being frozen in for the season. After board or two to clear Pool's Island, we opened the main waters of Chesapeake Bay and found ourselves well clear of Suquehanna ice at last. The Coot soon had both her friends under her lee, and in the smooth water and smart breeze was working away from them in good snipe despite her rough splintered bottom.

Suddenly the wind lulled, then shifted into W. and came out with vigor. For a while all hands kept at it until the breeze had a rising sea, when the Coot about like a little shell. The breeze had a sweep of eight miles, coming out of Middle River. It rapidly increased to a mild gale, and while the Coot was hove into the wind's eye to haul down a single reef, it piped out from northwest in a full-

fledged storm, which whistled and shrieked about my head and lashed the waters into furious seas. The balliards were let run and the close-reef cringle hauled out at once. Tying the points was a difficult job, as it was scarce possible to get along decks, the way the boat was tossing and rolling in waves which by this time were almost perpendicular to so small a craft. While thus engaged the smack drove by to the northward under head of her jib, the mainsail having been doused in a hurry. She lost all the southings we had effected, and in half an hour had cut and run out of sight, probably trying for Gunpowder River. The Long Island had freed sheet and headed before the gale in some trouble with his canvas. When next I looked for him no traces were to be seen, though I scanned the sea with my glasses for a long while. Presumably he had lowered away all and his spars were lost to vision, so I could not undertake to lay up in the heavy sea, I thought, and had concluded to run to Jeward and hunt shelter around Love Point on the eastern shore. In this, I trust, he was successful, for it howled tremendously out of the northwest for three days following. Of my two companion vessels I have neither seen nor heard anything since, though inquiry was instituted at the ports touched on my way down.

A COMPARISON OF TYPES.

Editor Forest and Stream:

Last fall, after reading some numbers of your valuable paper, Mr. Robertson, engine builder, and myself designed two yachts to represent two prevailing types, now attracting the attention of yachtsmen. And this winter having seen in that wonderful store of information, "Small Yachts," illustrations of some designs similar to ours, we concluded to compare elements.

Accordingly, from the drawings of two illustrations, those of the Petrel and Madge, I deduced such of the elements, not already given, as I wished to compare with the corresponding elements of our own design. With regard to our designs of a cutter, as compared with the Madge, there is nothing novel, further than in our giving some elements not furnished in the book, but which may be of interest to some of your readers. And with regard to our sloop as compared with the Petrel, we see how a particular characteristic will cling to a particular type, notwithstanding a great disparity in size.

By observing the distances of the center of buoyancy and the center of gravity in each from their respective water lines, it will be seen that though the sloop may have immense sail-carrying power, at a moderate heel it is utterly helpless when on her beam; as then it is without a righting couple. While with the cutter, the center of gravity being below the center of buoyancy, the righting power is at a maximum when the vessel is on the beam, though it may be "tender" at small angles of heel.

To see, then, in the comparison of the sloops, the wonderful increase in power derived from the increase of volume, due to increase of dimensions, when these vary all alike. Thus, the sloop, though only 50 per cent. greater in its lineal dimensions, has more than four times the sail-carrying power (as seen in their righting moments) and more than two times as much power to the foot of wet surface as the Petrel.

COMPARISON OF DESIGN OF CUTTER WITH MADGE.

	(Pearson's).	Madge.

GRAND HAVEN, Mich., March 5.

H. C. PEARSONS.

TRIPLE EXPANSION MARINE ENGINES.

THE most remarkable and interesting fact in connection with the recent turns of the tonnage of new ships launched last year is the increase in the proportion of the tonnage of steamships to that of sailing ships. We are compared with preceding years. Taking the returns of the Clyde, we find that the tonnage of screw steamers launched in 1885 was only 67,000 tons, whereas the tonnage of sailing ships amounted to nearly 100,000 tons; but in 1884 the screw steamers stood at 150,000 tons and the sailing ships at 68,000 tons; and in 1883 the figures were, respectively, 316,000 tons and 64,000 tons. From these particulars we see that the tonnage of sailing ships was about five times that of the steamers in 1883, whereas in 1885 the screw ships were only three times the sailing ships; and that in 1885 the balance was turned against the screw tonnage which amounted to but little more than two-thirds of the sailing tonnage. In other words, during the short period to which we have referred, the annual production of sailing tonnage increased 64 per cent., while the production of screw tonnage decreased nearly 80 per cent., though the cost of steamships per ton, excepting, perhaps, a few special vessels, has been so low as to afford the sailing ship and that in 1885 the balance was turned in favor of sailing ships, it is clear from the figures we have given that the reaction is a very decided one, and is of considerable interest to marine engineers, who, if freights continue low, will probably have but little work to do except for ships of war and vessels intended for mail, passenger and other special service. Therefore, any prediction that the sailing ship will continue to flourish is of peculiar interest at the present time.

It is extremely satisfactory that the latest great improvement of the marine engine largely diminishes the consumption of fuel without any drawback in the shape of lessened durability of the engines or boilers. We refer to the extension of the ordinary compound engine known as the Triple Expansion Engine, where steam of high pressure is expanded in three successive stages in three separate cylinders. The ordinary technical expressions we may say that, in the ordinary compound engine, the steam from the boiler is admitted into a cylinder known as the high pressure cylinder, and after a certain amount of expansion is allowed to enter another cylinder, known as the low-pressure cylinder, where expansion again takes place, after which the steam passes to the condenser. In the triple expansion engine the steam, after passing through the high-pressure cylinder, and before entering the intermediate cylinder, where expansion also takes place. In the ordinary compound engine the steam expands in two successive stages, and in the triple compound in three successive stages. In a few instances two intermediate cylinders have been used, and the steam expanded in four stages; these are spoken of as quadruple expansion engines.

Those engineers who have had the largest experience with the triple expansion engine agree in claiming an economy of fuel of 20 per cent. when compared with ordinary compound engines. Cases may be cited where a saving of considerably over 20 per cent. has been obtained, and no doubt others may show somewhat less than this; but 20 per cent. is a saving which ship-owners may, as a rule, safely depend upon as being obtainable by the substitution of triple expansions for the old compound engine. Of course it very much depends upon the particular compound engine taken as the standard

of comparison. Taking a good specimen, that is, an economical specimen, with which the consumption of fuel may be taken as 2 lbs. of coal per indicated horse power per hour, on a sea voyage, and taking the average consumption of a triple expansion engine, where the initial pressure is about 140 lbs. above the atmospheric pressure, at 15 lbs. per indicated horse power per hour, we have a saving of 20 per cent. When an old compound engine with a pressure of 60 lbs., or less has been replaced by a triple expansion engine, the saving in fuel has approached 30 per cent. Assuming a saving of 30 per cent., this large reduction is not only a saving of 20 per cent. in the coal bill which the owners have to pay, but, also, for any given voyage, a reduction of 20 per cent. in the amount of coal to be carried, and to be provided for in the design of ship. The longer the voyage the greater is the absolute saving, and in China and Australian trades the advantage is very considerable. Not only may the capacity of the coal boxes be diminished, but the size or the number of the boilers may be so reduced as to occupy much less space than the boilers necessary to supply steam for a compound engine. The reductions from these two causes are a great advantage, even after allowance has been made for any increase of space which may be necessitated by the engine itself. The triple expansion engine, therefore, offers the ship owner, who is ordering a new steamship or refitting an old ship, the prospect of considerable economies in the cost of the vessel which have not been supplied with this type of engine.

The advantage obtained by the use of steam of about 150 lbs. pressure, expanded till the pressure becomes very low, may theoretically be obtained as fully in the ordinary compound engine as in the new type, but experience has shown that in the former no appreciable gain in economy is derived by increasing the pressure over about 80 lbs. per square inch, and the cause of this appears to be that when a cylinder works through a large range of pressure, and therefore through a large range of temperature the loss of steam by condensation more than balances the gain due to the use of the higher pressure. In the triple expansion engine the steam being expanded in three cylinders in the three successive stages, the range of temperature in any one cylinder is much less than the range would be if the expansion were carried out in two stages. This limitation of the temperature in the triple expansion engine is not only a practical application of any new principle, for the ordinary compound engine derives its advantage over the simple engine from the application of the same principle.

It may be asked, Why, with these advantages of economy of fuel, and compactness of machinery spaces, was not this principle of generating steam of very high pressure and utilizing it by means of triple expansion brought into general use before now? The answer to this reasonable question is that, although the principle was understood, the difficulty of manufacturing suitable marine boilers was insurmountable until the introduction of reliable steel plates capable of withstanding, without impracticable thicknesses, the great strains due to the highest steam pressure. The adoption of this improved type of marine engine is following as a consequence of the improvements made in the manufacture of boiler materials.

The triple expansion engine was first fitted on board the Proprietor, by Mr. C. C. Kirk, in the year 1874. This vessel was supplied with boilers on the water tube principle, capable of standing working pressure of 150 lbs., but after a time they gave considerable trouble and were removed from the ship. The trials proved that the engine was very economical in the use of steam. The water-tube boilers were replaced by ordinary marine boilers to work at 90 lbs. pressure—a high pressure at that time—and we believe the engines are still at work. About four years later, a small set of these engines were tried on the yacht "Isa," and gave most satisfactory results. Since, however, was the first vessel which came into general notice for the economical and satisfactory results attainable on a long sea voyage by means of the triple expansion engine. The Aberdeen—a ship 350ft. long by 44ft. beam by 33ft. deep—was built and engaged by Mr. A. C. Kirk's firm in 1881, for the Australian trade, and the particulars of the early trials were published at the meetings of the Institution of Naval Architects in 1882. The results of these trials gave promise of the most economical and satisfactory performance which was fully realized. When at sea, the necessary data were taken in the most careful manner, and the result was a consumption of fuel about 20 per cent. less than that of the best compound engines of the same power. Although the particulars of this vessel's performance were published so recently, there are now probably about one hundred sets of the new type of engine at work. The firm which turned out the Aberdeen has supplied triple expansion engines to the Royal Navy, and has sometimes been called upon to about 24,000 indicated horse power, and generally considering the short time the engine has been before the shipping world as a practical and economical machine, it has made a remarkable advance in the favor and confidence of shipowners, and, in view of the great advantage its adoption affords, it will not be surprising to see its application become rapidly universal in the mercantile marine. Machinery on the new plan is in course of construction in various parts of the world, and the Royal Navy, and the United States Navy, and the British Navy, all sea-going vessels, from the largest armor clad to the smallest gun vessel, are for the future to be supplied with triple expansion engines in preference to the ordinary compound engines, which till recently were in general favor for war purposes. The designers of war ships consider it an important feature in their arrangements to secure the required horsepower upon as small a weight and space as possible, and the triple expansion engine may be accepted as evidence that it offers a decided advantage in the matter of economy of space and weight. Although in the merchant ship economy of fuel is the most important consideration, and in the great majority of cases is almost the only consideration, still it is sometimes, in vessels of high speed, necessary to give attention to the question of weight and space, especially when the speed is to be obtained with moderate dimensions of hull. In the large passenger fast vessels, such as the Atlantic liners, the restriction placed upon the engineer designer, with the space and weight available for the machinery, is not nearly so stringent as in some smaller vessels, but in any future addition to the fleet of these liners a higher speed may be obtained without any increase of the displacement or of the consumption of fuel, and we may expect to find that the "herring pond" will be crossed in less time than the best recorded performances.

We will now make a few observations in general terms about the mechanical arrangements of the triple expansion engine. Where an old compound engine is to be replaced by the new type of engine, the length of engine room is generally so restricted that one of the three cylinders has to be fitted above the others, and the usual plan is to place the high pressure over the intermediate cylinder, and to place the low pressure beside the intermediate, the high and intermediate cylinders being applied to the same crank, and the low pressure cylinder being frequently used in new engines; but a more satisfactory method is to place each of the cylinders over a separate crank. The two-crank arrangement takes up less length of engine room, and is probably cheaper in the matter of first cost, but the three-crank arrangement gives a better balanced engine, with less wear and tear, and a more uniform motion is transmitted to the propeller, which consequently is more efficient in its action. In the large passenger fast vessels, such as the Atlantic liners, the restriction placed upon the engineer designer, with the space and weight available for the machinery, is not nearly so stringent as in some smaller vessels, but in any future addition to the fleet of these liners a higher speed may be obtained without any increase of the displacement or of the consumption of fuel, and we may expect to find that the "herring pond" will be crossed in less time than the best recorded performances.

Some little difficulty has been experienced with a few marine boilers working at sea under the high pressures now coming into use, and this difficulty has been erroneously ascribed to the engine. The boilers of the Aberdeen and other vessels have been in constant use on the longest sea voyages, and have given practically no trouble. Experience proves that with proper care and attention, and under the conditions which obtain at sea, the boilers may be worked at the highest pressures without giving trouble. It is essential that too great a quantity of oil should not be used in the cylinders, as it passes the condenser and is carried by the feed water into the boilers, where with the ordinary scale it forms a deposit which is such a poor conductor of heat that a thickness of one-sixteenth of an inch will sometimes cause an over-heat. Of course, where over-heating of the plates takes place, the higher the pressure of steam the more likely is the plate to suffer partial collapse or bulging. If attention be given to this point, and care be taken to regulate the feed and the density of the water in the boiler, no difficulty may be anticipated. In short, as we have already said, with proper care the boilers may be worked on the longest sea voyages without the slightest trouble.

It is probable that within a measurable period of time the quadruple expansion engine will receive more attention than has yet been given to it. With quadruple expansion, steam of higher pressure than that generally used for triple expansion is utilized in the manner

SAIL PLAN OF SMALL CRUISER "MERMAID."

we have described, and although the saving in the consumption of fuel over the triple expansion type is not so great as the saving of the triple expansion over the ordinary compound engine, still, as small economies are becoming more and more important, the advantage will probably be sufficient to lead to the use of the quadruple expansion engine, at least in ships intended for long voyages, where economy of fuel is especially of importance.

During the past year as many as eighteen sets of triple expansion engines have been manufactured on the Clyde alone, and many others have been turned out on the east coast. The largest set yet fitted to a merchant ship is of 7,000 indicated horse power, and is on board the North German Lloyd's President Meyer. During last year the old Cunard steamers Parthian and Batavia were refitted with triple expansion engines, and this example is one which the interests of shipowners should prompt them to follow when the machinery of an old ship is in want of renewal.

The following particulars of the performance of the steamship Yeddo are remarkable for the large saving obtained, although the triple expansion was not here at its best. The Yeddo had been working with two cylinder compound engines, the pressure of steam in the boilers being 70lbs. per square inch. There was a large margin of strength in the boilers, and it was decided to increase the working pressure to 100lbs and fit an intermediate cylinder over the low pressure cylinder, thus converting the compound engine into a triple expansion engine. The result of this alteration was the reduction of the average consumption of fuel per day on a sea voyage from 17 to 13½ tons, or a saving of a little more than 20 per cent., the speed of the ship after the alteration being practically the same as before. Here there were the same boiler, the same propeller, the same ship, and a similar quality of coal, and improved performance was entirely due to the improved engine. If the steam pressure had been increased to about 140lbs. on the square inch the saving would have been still more marked.

Steam pressures as high as 180lbs. on the square inch have lately been used with triple expansion or quadruple expansion engines, and this is not likely to be much succeeded for some considerable time, for the marine boiler is not well adapted for working under a higher pressure, owing to the thicknesses of furnace and shell plates required for such a pressure, and the ordinary type of boiler is not likely to be readily or easily superseded by a new type. The marine boiler survives numerous competitors in virtue of its superior fitness for marine work, and as its limit of working pressure has been practically reached there is no reason to apprehend that the type of engine now coming into use will be speedily replaced by a much more economical machine.—*The Shipping World*, March, 1886.

SAIL PLAN OF THE MERMAID.

Mast, deck to hounds	19ft.
Masthead	5ft.
Topmast, fid to sheave	16ft.
Bowsprit (outboard)	12ft.
Bowsprit, rabbet to bee hole	11ft.
Boom	23ft.
Gaff	17ft.
Spinnaker boom	25ft.
No. 1 topsail pole	19ft.
No. 1 topsail cluh	18.50ft.
Mainsail, hoist	16ft.
Room	22ft.
Gaff	16ft.
Angle of peak	55°
Foresail, hoist	18ft.
Foot	10ft.
Leach	17.50ft.

Jib, hoist	28ft.
Foot	15ft.
Leach	20ft.
Working topsail, luff	19.17ft.
Leach	10.67ft.
Foot	15.33ft.
Clubtopsail No. 1, luff	25.63ft.
Leach	14.75ft.
Foot	22.00ft.
Jibtopsail, luff	30.00ft.
Leach	20.00ft.
Foot	14.25ft.
Spinnaker, luff	35.50ft.
Leach	38.50ft.
Foot	26.00ft.
Areas, mainsail	889.40sq. ft.
Foresail	87.50sq. ft.
Jib	142.80sq. ft.
Three lower sails	616.70sq. ft.
Working topsail	80.75sq. ft.
Clubtopsail	169.52sq. ft.
Jibtopsail	124.50sq. ft.
Spinnaker	461.58sq. ft.
Ratio 3 lower sails per sq. ft. wetted surface ..	2.63sq. ft.

Ratio $\sqrt[3]{\text{wetted surface to } \frac{1}{2} \text{ displacement in cubic ft.}}$ 2.47sq. ft.
Ratio 3 lower sails to square of length of L.W.L. 1.27sq. ft.
Mainsail (laced foot) and jib (set flying) and working topsail, 10-ounce duck; foresail of 8 ounce, clubtopsail and jibtopsail of heavy drilling, and spinnaker of muslin, it is not excessive in proportion to the bulk of the boat, and it is so arranged that there will be no difficulty in setting it to suit circumstances.

A WORD FOR THE AMERICAN SLOOP.

Editor Forest and Stream:
Last month while in Boston I had occasion to look at the yacht building for General Pelée. She differs little from the Puritan except that the lead keel is carried further aft than in the latter. Will she outlast the Puritan? I do not see why the controlling factor (that of size) should not work as well in her case as in the other, for in all her victories (except in that of Priscilla and Genesta) over sloops and cutters, in the light of comparison, size and not excellence of model has been the controlling factor. It seems to be the prevailing opinion that nothing can be built that will outlast the Puritan. What has she accomplished for a one-masted centerboard yacht to sustain them in their opinion? She has not equaled the performances of smaller, thoroughbred American centerboard sloops. Take her record for the season. Beginning with her maiden race at Marblehead, where she had nothing to test her but keel schooners and sloops and cutters of inferior size, and any one acquainted with yachtsailing knows that any fair sailing centerboard sloop can outlast a fast keel schooner of proportionately larger tonnage as these schooners were larger than the Puritan. The cutter Redoubt, a yacht vastly inferior in size to the Puritan, defeated the speediest schooner of the lot by longer odds over a shorter course in the same force of wind the preceding season.

The races for the Goelet cup, where the superiority of size showed itself over the small sloops, and the handicap of a faulty rig and not the inferiority of model was the cause of the defeat of the Priscilla. Take the trial races, and the difference even with the handicap of rig is hardly worth mentioning. The designer and sponsors of the Priscilla accepting defeat in preference to victory at the sacrifice of the principles by which we have held the supremacy for thirty years or more. And this coming season, under an improved rig, the American model will yet show its superiority. In the race with Genesta the victory is of so small a magnitude that it passes into insignificance, compared with the victory of Vixen over Maggie. Type against type, as there is no question but that Maggie is the speediest of her class and tonnage in English water, while Genes ranks second or third in her class. I understand that there is a one-masted yacht the size of Puritan building at Bay Ridge and modeled by Ellsworth, the firm upholder of American ideas, which he has so practically demonstrated the superiority of. And now he has departed from the principles that have made him famous, and joined the army of low-weight theorists and cutter rigs. What have we to show for advancement in yacht designs of original conception, when we have to look to the English for ideas? Our models and their faults which should be corrected, but this piling on lead and hanging on lead to balance it, will not remedy the defects. Dismantling the beam is a step in the right direction, but it is not necessary that we should increase the draft to any great extent, as I sincerely believe that an American centerboard sloop yacht can be constructed of the same length of the Puritan, of less beam, less draft and less sail area, with her ballast inside, that can outlast any English thoroughbred cutter or American combination that has been constructed on borrowed ideas. LOYALTY.

NEW ROCHELLE Y. C.—On March 9 the above club held its annual meeting. The following gentlemen were elected officers for the ensuing year: Chas. Fryer, Commodore; J. H. Ryley, Vice-Commodore; E. C. Sterling, Rear-Commodore; Ph. J. Krackel, Secretary; Eugene Lambden, Treasurer; Oscar Wheeler, Measurer; N. D. Lawton, F. T. Alder, John W. Rough, Wm. L. Richards, C. Buchanan, Trustees. Appointed by the Commodore on Investigating Committee, Messrs. S. G. Chapin, Kn. B. Acker, Jr., Walter Large. At this meeting 22 new candidates were proposed which will probably bring the membership list up to 130 at the next meeting—a remarkable showing for a club only having organized last July. The initiation fee to this club is \$15 and dues \$10 per year. It has secured Echo Island, off the mouth of the harbor of New Rochelle for a club site. The house on the island at present will be put in first class condition, and additional improvements made on the island. The harbor is perfectly protected against storms from any quarter, making it a very desirable club to join for this reason.

THE INTER-LAKE YACHTING ASSOCIATION.—The first meet will open at Detroit on July 5, with racing, etc. on the 5th and 6th and be continued at Put-In-Bay until the 11th. Both the Michigan and Put-In-Bay clubs have made liberal offers in the way of prizes, and the meet is sure to be a great success and to give yachting a boom. The Western Canoe Association are to have their races at Ballast Island during the same week, so the Western aquatic clubs will have a very interesting as well as pleasant time coming season.

DISBANING OF THE HAVERHILL Y. C.—At a meeting of the Haverhill Y. C., March 8, it was voted to disband and sell the property. The only yachting organization in Haverhill now is the Pentucket Y. C. All matters in regard to yachting should be addressed to Thomas Conley, Secretary Pentucket Y. C., Haverhill, Mass.

BUFFALO Y. C.—Four members were elected at the last meeting. A committee was appointed to amend the rules as to time allowance and another committee to act with the officers of the club in connection with the building of a new club house. A squadron cruise will take place during the season.

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

CANOISTS are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other communications of interest.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc. of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, trips, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

- Sept. 18—Connecticut Meet, Sailing Races.
- Sept. 25—Connecticut Meet, Challenge Cup.

THE A. C. A. TROPHY.

Editor Forest and Stream:
In your issue of Feb. 23, you invited a "full discussion" in reference to the "A. C. A. Trophy." In the following issue (March 4) you kindly published a letter containing my views on the subject, in which I criticised club management, generally, for arbitrary acts at variance with the spirit or interests of such clubs.

Among the reasons which I mentioned as tending to the development of this state of things, was "the apathy of a large majority of members," and certainly it would seem that that part of my proposition needs no further proof than is furnished by your own columns. Here is a subject which it appears to me, of vital interest to the A. C. A., and on which you have invited discussion, and the vice-commodore has asked for an expression of opinion to guide him; and yet up to the present time only one member has thought it of sufficient importance to reply to.

In your issue of this week (March 11), Mr. C. B. Vaux undertakes to explain how the matter stands, but he fails to express himself with his usual clearness. His explanation needs an interpretation. As I understand it, he objects to the Cup Committee giving the prize, but thinks that the Executive or Regatta Committee may do so if they choose, notwithstanding it is contrary to the rule which he cites.

He also takes the curious position that because no one is compelled to subscribe and only a minority have or will do so, therefore (I quote), "why should those who do not subscribe have any claims on the trophy?"

Here's a pretty state of things!" The resolution in reference to offering the trophy as published in your issue of Feb. 23, reads: "In view of the approaching visit of the English canoeists be it resolved that a trophy be offered for competition at the A. C. A. meet, under A. C. A. rules, open to all A. C. A. men, and members of any recognized foreign canoe club, the trophy to be the property of the winner."

If Mr. Vaux had read the above before writing his letter I do not see how he could have written his interrogatory, previously quoted. If a certain number of canoeists combine to offer a prize, and to exclude from competition non-subscribers, by what right do they do it in the name of the A. C. A. and under its rules? But of course Mr. Vaux is wrong in the position he assumes.

Any person who has had much club experience knows how much of the "voluntary" there is in club subscriptions, just about as much as there is when the plate is passed at church, after a fervid appeal from the pulpit, and with your best girl watching to see how much you deposit. But if Mr. Vaux is right, the committee do as they please to give the prize in the name of the A. C. A. and to exclude all non-subscribers to the fund, then indeed it is high time to awaken to the danger ahead.

There is still another question I would like to have answered and that is, who are the discoverers that these English visitors are so much superior to our own members, that what is good enough for us is not good enough for them? Who is responsible for the assumption that the honor of winning an A. C. A. flag would not be sufficient incentive for them, unless backed up by a valuable prize with privilege of keeping the same when won? It certainly is the reverse of complimentary to them.

A BOAT CRUISE ON THE SEVERN.

BIRMINGHAM, Saturday, June, 1885.—The writer and two friends left the busy manufacturing city of Birmingham by the evening express for Stratford, with the intention of proceeding from there down the beautiful and rapid river Severn as far as Worcester, about seventy miles. Arriving there we snatched a hasty tea at the railway station (dear and nasty as usual), and having been joined by two friends (natives) we embarked at Ellis's boat house, in our craft, a beamy and comfortable river boat of light draft, and pushed off without delay. The first two miles afforded plenty of excitement in running on shallows and then hauling off to deeper water, and in our main having brought the stream very low, finally a heavier bump than usual caused a leak, which was hastily caulked, and we proceeded without any further mishaps. Having reached Upton, our first stage, we proceeded to the Corbett Arms Hotel, a charming, old-fashioned place, and one of the most comfortable riverside houses in my experience, where a hearty meal was dispatched and the leak, which proved rather a serious one, effectively stopped, after which we all turned in.

Sunday morning, 6 A. M.—"Bright chanticleer proclaims the morn" and we quickly turn out; having walked, or climbed rather, to the top of an eminence called Ormond's Hill, we were rewarded by a magnificent view of the country, with the silvery Severn winding in and out, and flashing in the morning sun. After a substantial breakfast stores were got on board, and the party, now reduced to four, proceeded on their way. A quick passage was made to Preston-Boats Weir, where great care in steering and corresponding exertions from the rowers were required to avert disaster. This rapid being successfully negotiated, a pleasant row through lovely country brought us to Aitcham Bridge, a handsome stone structure of seven arches, built in 1760. Aitcham Hall, the seat of Lord Berwick, and the ancient church "with ivy o'ergrown" were passed and much admired, being beautifully situated among luxuriant foliage, and are no less famous for their picturesque beauty than for their historical associations. The navigation here again demanded prompt attention, several very pretty islands dividing the current, and the crew had plenty of variety in having to wade and haul the craft over the numerous shoals. Close by are the ruins of the ancient city of Uriconium, formerly a Roman station, and just below there is a Roman ford, called by the natives the "Devil's Bridge," while right ahead appears a remarkable hill called the Wrekin. Leighton Bridge was next passed, and Leighton Hall, a fine mansion on the left bank, comes in view, but is soon left behind, and the ubiquitous "Wrekin," which appears now on our left, now on our right, then behind, and in a short time, looms again, right ahead, the river winding about in a most eccentric manner. An hour's steady pulling brought us to Buildwas, where we landed for luncheon, and afterward inspected the ruins of Buildwas Abbey, a fine old edifice erected in the twelfth century by monks of the Cistercian order, and considered a fine example of the architecture of that period. Again embarking, we passed under Telford's fine bridge, built in 1796, with one arch of 130 ft. span, and floating bridge, the river here becomes narrow and rapid, and the navigation again becomes difficult; an island in midstream, with a ridge of rocks just below, forming an awkward rapid, which was, however, safely passed. We were swept along at a fine pace and soon reach Ironbridge, a busy manufacturing town and the birthplace of Captain Webb, who swam across the English Channel and was drowned in the Niagara whirlpool. The river here runs and swirls between high granite banks, with their boulders freely interspersed, and we arrive in an incredibly short time at Coalport. The stream here suddenly swerves to the right, and a low trestle bridge is seen across it. A smash seemed inevitable, when we caught sight of a native on the bridge signaling the coxswain to steer straight on. A small portion of the bridge was raised, the oars were instantly unshipped, and we shot like an arrow through the narrow aperture down a leaping and boiling rapid, shipping a lot of water and narrowly escaping a cascade. Below this trestle bridge, and consequently not so swift, and a steady pull of eight miles through scenes of sylvan beauty brought the crew in sight of Bridgnorth, where we arrived about 7 o'clock. Leaving the boat

in charge of an "ancient mariner," we climbed up a steep path into the town and wended our way to the Crown Hotel, where dinner and beds had been ordered in advance.

It was intended to rise early the next morning and visit the High Rocks, the lion of the place; but the bed pulled too hard, and the courtesies had to be given up. So, after breakfast we relieved the aforesaid ancient mariner of his charge and got about about 9:30 A. M. Below the bridge is an awkward ford, where we had the misfortune to run aground and knock hole No. 2 in the boat's bottom, not, however, a serious one. So proceeding, in due time we reached Kington, where we found a large party encamped and evidently having a high time. Being invited to land, we found several acquaintances among the party. So hauling in the boat, we decided to halt for a time with the two-fold object of toasting our friends and repairing the leak in the craft. Getting under way again, we passed in succession the hamlets of Alvely and Highley, and arrived at the lovely village of Arley at mid-day. The scenery in this neighborhood is enchanting, and so mild is the climate that formerly the vine was cultivated and a wine of such excellent quality was produced as scarcely to be known from the best foreign brands. The river also here abounds in fish of all kinds, and the district is a favorite summer resort of the residents of Birmingham and Worcester. Landing for luncheon and a brief rest, we recognized and greeted several Birmingham friends who had come down to rusticate. Again embarking at 1 P. M., we found great care required to navigate the numerous fords, the most difficult being those at the Round Stone Rocks and the famous Folly Ford. After passing Bewdley, we bade adieu to fords and rapids, and soon reached the town of Stourport and entered the first of a series of locks. From this point (the day being a holiday) the river was gay with craft of all kinds, from a canoe to a steam launch. A pleasant row of three miles brought us to Cany Lock and another three to the city of Worcester, famous for its cathedral and the fine porcelain manufactured there. Here our voyage terminated and the slip was handed over to the tender mercies of the railway company for transit to Shrewsbury, while the crew, well satisfied with their trip, proceeded to a well-known hostelry, where we refreshed our inner man, an additional rest being given to the friends by the presence of our host's charming daughter, who presided in the absence of her father. We were soon whizzed home by the express, and parted with mutual congratulations and a resolve (at some future time) to further explore the course of our beautiful river, under the command of THE SKIPPER.

THE DOCKRATS' ANNUAL MEETING.—Newburgh, N. Y.—**Editor Forest and Stream:** The Newburgh Canoe and Boating Association held their annual meeting at the residence of Commodore Bartlett, on March 3. The reports of officers were satisfactory, showing that the association was doing a good work; that while the successes of the past year were due to many facts, to all the prospects for a bright future were very promising. The association arranged for a series of races—sailing, rowing and paddling—to take place during the coming season for appropriate prizes, and also for a series of outings, short runs to some convenient camp site, of which there are a number in this vicinity, with a hot supper, a la camp, and a return by moonlight; in these we hope to be joined by some of our non member friends. Steps were also taken toward a summer cruise and camp, even more so. The following named officers were re-elected: Commodore Wm. E. Bartlett; Vice-Commodore, James T. Van Ditsen; Captain, Nate S. Smith; Purser, Henry A. Harrison. The above named together with Mr. Harry A. Marvel, forming the executive committee. The strength of the association was increased by the election of seven active, three honorary and four lady honorary members and it begins the season with 31 active members, owning at present 10 canoes, 10 rowing and sailing boats, 1 steam launch, 1 cabin sloop yacht and other new canoes and boats "in sight and a-comin'." Owing to various models and sizes of the different craft, in our fleet, it was felt impossible to bring them together for racing purposes in the ordinary way, so we have adopted a system of time allowance, based on cubic contents and sail area that we hope will do away with all "classes" and still give every boat and canoe owner a fair chance. We felt that life was too short and time too precious to cut our small fleet into pieces and classes if we could do otherwise, and so the association adopted the recommendations of the committee to whom the matter had been given for consideration. We hope to make a prosperous run during the coming season.—PUNSEN.

YONKERS C. C.—**Editor Forest and Stream:** At a meeting held Feb. 17, 1886, there was organized a club under the name of the Yonkers C. C., with J. Reeves, Commodore; L. Sandford, Vice-Commodore; H. Lansing Quirk, Secretary and Treasurer. Six members and five canoes, the latter as follows: Jennie R., 14 ft. x 33 in.; J. Reeves; Rip Rap, 14 ft. 6 in. x 30 in.; L. Sandford; Spy, 13 ft. x 26 in.; H. L. Quirk; Scout, 14 ft. x 30 in.; T. and J. Simpson; Bonita, 14 ft. x 26 in.; E. K. Smeers. The object of the club is the further advancement of canoeing, more especially along the Hudson River and at Yonkers.—H. LANSING QUIRK, Sec. Yonkers C. C.

SANDUSKY C. C.—This club now numbers 22 members, the officers being F. S. Latham, Captain; J. E. Melville, Mate; Benj. Marshall, Purser, and Miles Johnson, Secretary. The club are now building a new house on Sandusky Bay, a fine piece of water for canoe sailing. They have lately joined the W. C. A. as a body, and will attend the meet at Ballast Island.

A. C. A.—Mr. D. B. Pratt, Rochester, N. Y., has been proposed for membership.

ANSWERS TO CORRESPONDENTS.

J. P. L., St. Denis, Md.—Please repeat your questions.
G. W. R., Hartford.—Do deer shed their antlers yearly? Ans. Yes.
F. J. W., Great Barrington, Mass.—Write to Kennedy Smith, Enstis Me. You will probably find ruffed grouse shooting at his Tim Pond district.

A. F. N., Providence, R. I.—Can a man control a pond in such a manner as to prohibit fishing in said pond without claiming all the land around said pond or without having the consent of all land owners whose property has a water front on the said pond? Ans. We think not, as the owners of the land have rights in the pond.

S. A. L.—Is there any way to join two braided silk fly lines together so that the juncture will pass easily through the rod rings? Ans. It is possible that a neat workman might sandpaper them down to flat surfaces and then whip them, with fine silk and varnish them so that some service could be got from them, but too much must not be expected. We do not think they could be imbraded as a rope is spliced.

POINTER, Baltimore, Md.—In selecting a pointer pup is there any way to tell which he will favor, sire or dam? That is, will a pup the color of dam be more apt to take after her than if the color of sire. Or is there any way to select one tending to take after either parent? Ans. There is no infallible rule. In selecting a puppy choose the formation that you think most resembles the one you prefer and trust to luck.

"I AM WELL AND STRONG and don't need to insure." Queer logic! When you are sick or broken down you can't get insured. Now is the time to insure—in the Travelers, of Hartford, Conn., best and cheapest of sound companies.—ADD.

Among the Many Novelties

Introduced by us for the coming season, we wish to call attention to our

Dead Finish, Waterproof, Braided Silk Fly Lines, FOR SALMON, TROUT AND BLACK BASS.

We have been experimenting for some years in the hope of making a perfect waterproof line. Success crowned our efforts somewhat less than two years ago, but we have not offered the lines for sale till we were certain of their excellence in every particular. These lines will not crack, chip off or become sticky and stiff. They are completely waterproofed, not merely on the surface. They will not become tender in use or by age.

SAMPLES AND PRICES FURNISHED ON APPLICATION.

Also a new style **LANDING NET**, made of *waterproof braided linen line*, which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

SECOND ANNUAL TOURNAMENT OF THE Chamberlin Cartridge COMPANY.

CASH PRIZES, \$3,000.00.

No Pro-Rating. No Uncertainty. Open to the World.

CONTEST--ONE HUNDRED SINGLE RISES.

Chamberlin Cartridge Co.'s Rules to Govern.

PRIZES WILL BE DIVIDED AS FOLLOWS:

\$1,000 divided 50, 30 and 20 per cent. to those whose scores are 90 or better, with \$200 added for the highest score in this class.

\$850 divided 50, 30 and 20 per cent. to those whose scores are eighty or better, and less than 90, with \$150 added for the highest score in this class.

\$700 divided 40, 30, 20 and 10 per cent. to those whose scores are 70 or better, and less than 80, with \$100 added for the highest score in this class.

Those who made scores of 90 or better in our tournament of last year, are barred this year from the 80 class. Those who made scores of 80 or better, and less than 90 in our tournament of last year, are barred from the 70 class this year.

All scores made of 90 or better will shoot in the ties at Cleveland to decide the division of the \$1,000 prizes in the 90 class.

All scores of 80 and less than 90 will shoot in the ties at Cleveland to decide the division of the \$850 prizes in the 80 class.

All scores of 70 and less than eighty will shoot in the ties at Cleveland to decide the division of the \$700 prizes in the 70 class.

The additional prizes for the highest score in each class will be decided (if there are ties) by the scores made in the regular tie shooting of each class.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at \$4. Price \$2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price \$1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments train the dog yourself instead of having him broken by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price \$1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicola*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he turned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia*; he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—Extract from Publishers' Preface. Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price \$1.00.

THE DOCUMENT REPUDIATED.

THE opening paragraph of the misleading document relating to deer hounding sent to the New York Legislature by Dr. Samuel B. Ward, President of the Eastern New York Fish and Game Protective Association, of Albany, was as follows:

At a meeting of the Eastern New York Fish and Game Protective Association, held on Jan. 13, 1886, the President stated that soon after the organization of the Association the attention of the Executive Committee had been called to the present condition of the law in this State concerning the preservation of the deer in the Adirondack region, and that he had been directed to correspond with well known residents of the North Woods and others—those who were most interested in the success of that district of the State, and knew most about it—and ascertain what their views were on this subject. A part of the letters, extracts of letters and documents which follow, were received in reply. It is to be regretted that lack of space prevents the publication of them all in full.

It was further stated—

The Executive Committee having attentively considered all the suggestions made in the various communications received, instructed their counsel to draw up a bill to be introduced into the Legislature at as early a date as practicable, which should embody the views of as many intelligent and interested persons, and antagonize as few as possible.

In our comments on this document (Feb. 11) we said that because of its peculiar character it was not creditable to the society, and we took the liberty to suggest:

If the Eastern New York Association was not organized by active deer hounders for the express purpose of conjuring with its name at Albany to help their cause, the members owe to the public a disclaimer of this pamphlet sent in the society's name to the Legislature.—FOREST AND STREAM, Feb. 11.

In reply Dr. Ward wrote (Feb. 18) as follows:

The Eastern New York Fish and Game Protective Association are responsible for the pamphlet to just exactly the extent stated in the opening paragraph. The meeting was regularly called by the secretary and what occurred is distinctly reported.

Commenting on this we said:

We did not question the regularity of the meeting of the Eastern Association, we simply intimated the suspicion, which Dr. Ward's acknowledgment goes to confirm as a fact, that the association was shrewdly organized by active deer hounding advocates to influence the repeal of the present wise law.

This last statement, we have now ascertained, was unjust to the Association, and we take much pleasure in correcting it. The correction is tardy, but until the last part of last week we had no information warranting us in making it.

We cheerfully state that, after a personal explanation by one of the officers of the Association, we believe that the society

was not "shrewdly organized by active deer hounding advocates to influence the repeal of the present wise law." The truth appears to be that the Association has been put forth as champion of a practice which its members condemn, and its name and influence have shrewdly been employed in the attempt to effect something which the members, ten to one, oppose. In other words, the hounding advocates did not shrewdly organize the society for their purpose, but they did shrewdly make use of it after it was organized.

An officer of the Association has declared to us in most unequivocal terms that the Eastern Association is not behind the effort to repeal the law; that it is not responsible for the misleading document which went to the Legislature ostensibly with its sanction; that it has never endorsed the bill (contained in the pamphlet) prepared by its counsel; that it refused to pay for the printing of the pamphlet, and that the originators of the society had no thought that its name would be used to bolster up the cause of the deer hounders.

This statement is sufficiently comprehensive and emphatic. It relieves the Eastern New York Fish and Game Protective Association of a certain degree of mistrust and suspicion on the part of the public, a feeling which it would have been difficult to overcome so long as the responsibility for the pamphlet in question attached to the society.

The disclaimer has been made in another way, equally as effective; although the credit for it belongs not to the Association, but to the efforts of certain gentlemen whose interest in Adirondack game protection induced them to make a careful canvass of the Association's members, to determine by what authority it was represented as a game protective society occupying the extraordinary position of seeking to repeal a game protective statute. Prepared blanks were sent out to the 123 members of the society, requesting their views on deer hounding. Following is the result up to March 19, the total number of replies received at that time being 72:

Have no opinion.....	5
Uncertain.....	1
Decline to vote.....	1
In favor of hounding.....	6
Opposed to hounding.....	58.

THE PROGRESS OF THE WORK.

THE good work of protecting our birds from useless slaughter goes bravely on. The readiness and even eagerness with which it is undertaken by people of all classes and all ages is most encouraging, though it is not surprising. We have from the first felt confident that in order to abate the evil it was only necessary to bring the harm which was being done to the people's attention. To do this work effectively, it was necessary that a strong and concerted effort should be made, and that the aid of every one who loves nature should be enlisted. To provide the machinery for this united action the AUDUBON SOCIETY was formed.

During the six weeks that have elapsed since the plan of the Society was announced in FOREST AND STREAM we have received a vast mass of correspondence on the subject, have distributed many thousands of circulars and pledges, and have received strong words of encouragement and sympathy from many of the best people in the country. The movement is confined to no one section of the land. From Maine, from Florida, from Louisiana, from California and from Canada come assurances that our hands will be upheld in the work which we have undertaken. Massachusetts is one of the most earnest States in her attitude for protection. The strong efforts of Mr. Geo. T. Angell cannot fail to have a most excellent effect.

As an example of what may be done by one man, a case may be cited in which twenty-five pledges were sent to a gentleman in New Bedford, and in three days the whole twenty-five were returned, signed. The farmers, as might be imagined, are very earnest in their support of the AUDUBON SOCIETY, and more than one New England farmers' club has placed itself on record as urging the formation of a branch AUDUBON SOCIETY in its locality.

The young ladies at some of our largest female colleges have actively interested themselves in the movement, have formed branch societies, and they are certainly most efficient and useful workers in the cause. They can wield a tremendous influence in checking forever this barbarous fashion, and can thus contribute directly toward the end we have in view. We see every reason to predict for the young society a vigorous and sturdy growth which nothing can check. We hope before long to send out to every member of the AUDUBON SOCIETY a certificate of membership. These have been unavoidably delayed by the difficulty of getting a good

portrait of the great naturalist from whom the Society takes its name, but we believe that they will shortly be ready for distribution.

We hope that others who may be interested in this subject, but with whom this interest has not yet taken active shape, may send in to us their names for information and pledges. There is no reason why the membership of the AUDUBON SOCIETY should not in a short time run up into the hundreds of thousands. The good that can be done by these members is enormous.

IS THERE AN AFRICAN IN THE WOODPILE?

THE Senate Committee on Railroads have submitted their report on the bill granting the right of way to the Cinnabar & Clark's Fork railroad through the Yellowstone National Park to the Clark's Fork Mine. They have thrown out the Senate bill, and favorably reported as a substitute the House bill, which grants a similar right.

The report is a remarkable document, and in its two printed pages shows more superficiality and contains more misinformation than can usually be found in this amount of matter. It opens with the statement that the committee has "given this bill very careful consideration," a statement which, we are sorry to say, is flatly contradicted by most of the succeeding paragraphs. If these gentlemen have "very carefully" considered the bill, how can they tell us that "it appears that the portion of the Park through which the railroad would pass contains no objects of public interest to attract the attention of tourists, and that the preservation of the timber and game of the Park is more hindered and the game more extensively depredated upon by the present and increasing travel upon the wagon road than it would be under the operation of the railroad." Do these intelligent and well informed gentlemen imagine that forests are preserved by cutting them down to make railway ties? or that the game is to be made more secure by introducing settlements of railroad hands into its haunts? or does it take all the United States Senate for idiots?

As a specimen of the "very careful consideration" given the bill by the committee, the following sentence will do very well: "The total length [of the railroad] within the Park would be about twenty five miles." Now, if any of these amiable gentlemen had gone to the trouble of taking any ordinarily good map, and with the dividers or a slip of paper had measured the distance along the Yellowstone, East Fork and Soda Butte Creek, from Cinnabar to Cooke City, he would have found without any very great amount of labor, and even without any "very careful consideration," that the total length of the railroad within the Park, as laid down by this bill, is not very much short of sixty miles. The truth is that the whole line, except two or three miles, the distance from Cinnabar to Gardner, is within the Park.

In support of the absurd statements made in this report the committee quote Lieut. Kingman's report of 1833, in which he states that the present road (i. e., three years ago) is in bad condition. Mr. Teller, a gentleman largely interested in mines and mining, is also quoted as recommending the granting of the right of way. Mr. Gannett, who has explored portions of the Park, also recommends the route, as does General Anderson. Neither of the latter are familiar with the eastern slope of the range.

The committee appear to have taken pains to consult only those who are in favor of the route through the Park, and they have omitted to take the opinion of several gentlemen whose experience in this region is of more value than that of any of those whom they quote. It is quite remarkable that during this "very careful consideration" which they gave this bill they failed to remember that within easy reach of their committee room was Mr. Arnold Hague, whose long experience in the Park and familiarity with the Clark's Fork country and Cooke City should make his opinion weigh more than that of any number of less well-informed men. They probably forgot too, that Mr. W. Hallett Phillips, of Washington, who was sent out last year by the Secretary of the Interior to examine into the condition of affairs in the Park, would have had good opportunities for forming an opinion as to the desirability of a railroad within the Park. There are a number of other well-informed persons who might have been asked to testify on points connected with the bill and who could have given the committee far more reliable information than they seem to have been able to obtain in the course of their investigations.

The fact appears to be that this committee have been grossly misled, and as a consequence, they have made a report which, to any one acquainted with the topography of the Park, is a mere hodge-podge of futilities. We are accustomed to stupid blunderings by Boards of Aldermen and even

by State Legislatures, but we ought to be able to look for better things from a committee of the United States Senate, and when such a committee tell us that they have given a bill "very careful consideration" it ought to mean something.

It is a serious misfortune to the interests of the Park that Senator Vest is sick and at present absent from Washington. His intelligent interest in that region is sorely needed now.

It seems extraordinary that after it has been pointed out, as was recently done by the FOREST AND STREAM, that there are routes from the Northern Pacific Railroad to the mines, which are perfectly practicable, and which do not enter the Park, this committee should have recommended the Cinnabar route. If the Yellowstone Park is to be turned over to enrich a corporation when the poor man cannot build a cabin in it, we think that the people at large will want some better reason for it than is furnished in this curious document.

The Sportsman Tourist.

A VISIT TO TOBIQUE LAKE.

THE Tobique, one of the branches of the river St. John, in the Province of New Brunswick, empties into the latter river on its east side about two hundred miles from its mouth, and is one of the prettiest in that Province. Its mouth is reached by the New Brunswick railway, where there is a considerable settlement of Abenaki Indians, who are always ready to carry visitors in their light and graceful canoes to the very source of their beautiful river, distant about ninety miles from where it unites its waters with those of the St. John. Many of these Indians are very expert canoe-men and hunters, good cooks, and very ready-witted and intelligent. Some of the legends received by tradition from their fathers are remarkably interesting, and are common to the whole Algonquin family, as the writer discovered a few years ago when among the Chippewas on the head of Lake Superior in the State of Wisconsin. It may be mentioned as a singular instance of the tenacity with which a primitive people adhere to words once received by them, that these Indians to-day call any king "King James," while Queen Victoria's designation is King Jamesque, the "que" being pronounced exactly in the same manner as it is by the French. Abbé I. A. Maurault was the first to call the attention of the public to the remarkable circumstance of these people, a portion of whom resided on the St. Lawrence, where he was their missionary, retaining the name of that king who ruled England when they first made the acquaintance of the whites, and treating it as that of the designation of all subsequent sovereigns.

For sixty miles from its mouth to the Forks the Tobique is a broad, rapid river, free from falls, its waters are bright and pure, its banks only are settled. At Nictaux, or the Forks, as it is called by the settlers, the Tobique divides into two principal streams, Nictaux or Little Tobique, and the Right-hand Branch or Campbell River, the former being much the better stream for the canoe-man, as he will have to make no portage for a distance of thirty miles, but can pole his canoe all the way from the Forks into Nictaux Lake, where, if he be so disposed, by a portage of two miles he can reach the Nepisiquit Lake and descend the stream which flows from it to Bathurst on the Intercolonial Railway. There is not a solitary settler above the Forks of the Tobique, and nothing but an unbroken forest, where caribou, moose, beaver and other wild animals are yet to be found, more especially on the very headwaters of these branches, where they come near those of the Little Southwest Miramichi.

The Right hand Branch can be ascended to Tobique Lake by means of canoes, but it is a rapid and difficult stream, as it makes a great bend to the south as one ascends, and thus in going to this lake one can sail at least thirty miles of distance by making a straight line from the mouth of the Gulquac a stream which enters into the Tobique about forty miles from its mouth to the Tobique and Long Lakes. As a portage was being cut through the woods last autumn between these two points, the writer determined to revisit by this means these lakes, which abound with trout, and in one of which, Long Lake, the "Tuladi" (*Salmo ferax*) is also taken.

Our first day's journey was along the river bank, and, over a good road, by nightfall we had reached the house of a Mr. B., where one of our party said that we would be well entertained. Another, however, who knew the disposition of Mr. B. better, shook his head at this. When the inquiry was made the consent to remain was given in such a manner that we all concluded that we would go ten miles further, to a Mr. Knowlton's, where we were comfortably entertained.

Early the next morning Mr. Knowlton ferried us across the river in a log canoe, and led us up an old timber road for about two miles, where we struck the new portage which was being cut out to Tobique Lake. Where we first reached this road it ran through a country which fire had destroyed long ago. Although it was now the end of September there was yet great abundance of blue berries to be gathered from the vines or shrubs which were scattered around.

The rock was a red sandstone of the subcarboniferous formation, and laid in a basin which was surrounded by distant hills which here and there showed sharp irregular peaks. The "Blue Mountains," which laid to our left sloped off to the south and east, their summits terminating in irregular peaks, one of which reaches an elevation of nearly 2,000 feet above the level of the sea.

The forest which had clothed these mountains the first time that I saw them had been destroyed by fire and they were now covered by white birch or poplar trees whose now golden leaves showed off the darker color of the ancient mountains against which they stood out in a pleasing relief. There were but three of us, and our intention was to walk that day about fourteen miles on the portage until we reached the place where the men who were engaged in cutting it out were camping, so that we were not obliged to carry any loads. Two or three miles brought us to the forest; the day was warm and the shelter of the trees was very grateful. Passing a small stream we noticed some choke berries, a fruit of which the common bear is very fond, indeed one of the teamsters had surprised one feeding on those at this very spot. Our road was altogether through hard wood lands, often over long hills, the ascent of which, though gradual, was tedious; every here and there we crossed spring brooks of the clearest water, beside which we sometimes seated our

selves for rest and refreshment. There was but little wind, but each breath filled the air with the golden leaves of autumn, and the faint rustle that they made in falling as they struck the branches of the trees or the ground was the only sound heard in this silent and majestic forest. The squirrel whom one often hears a long way off running among the fallen leaves seemed to be absent, the lumbermen indeed inform me that this little creature is scarcer this season in the forests of New Brunswick than it has been for many years; last winter, which was very cold, may have been too much for him. Wild beasts, like man, are subject to famine and pestilence; it is only a few years since there was a great destruction in New Brunswick among the Canada lynx (*Loup cervier*), many of which were found lying dead in the woods.

About three o'clock in the afternoon when we had walked nearly fourteen miles we heard the sound of axes, and were soon welcomed to their tent by the party of woodsmen, who had been employed to cut this portage for the lumbermen, who are this winter at work on the shores of Tobique Lake. The cook, whose kitchen was covered by the vault of heaven, informed us that he had not many delicacies to offer us, but proceeded at once to pour us out tin dippers full of black tea sweetened by molasses, and handed each of us plates with fried pork upon them. These articles of food, with some light, sweet and excellent bread, such as one gets nowhere else but in the woods, formed our evening repast. This finished and the woodsmen's desire for the news from the settlement having been gratified, we turned in under the blankets with the choppers and were soon fast asleep. After a good night's rest we arose refreshed and invigorated from the fir boughs on which we had passed the night, and so soon as the cook had his tea boiled and pork fried, we sat down on the ground to take our breakfast with the crew. Although cooks in the cities never allow the tea to boil, it is not so with cooks in the forest, and many a time have I heard the weary lumberer, as he walked into the camp and shook off the ice and snow from his clothes before the cheerful fire, call out to the cook, "Cook, give the tea a good boil."

Breakfast over, we started on our journey of six miles through the woods to the lake, as we were now as far as the men had reached with their road. The walking through the trees was very good, there being but little blown down timber on our route; the growth consisted of a mixture of hard and soft woods, the former predominating; fir, a wood but little esteemed, was also abundant. We were not long on our journey before we came in sight of one of the "Twin" mountains, a conical hill wooded to its summit with a mixture of deciduous and evergreen trees. As we neared the lake we saw traces of former Indian occupation in old camping grounds with moose bones scattered around. These lakes, Tobique and Long, the former of which is four, the latter eight or nine miles long, were once the best moose hunting grounds in New Brunswick, and there were numerous lakes and ponds around them to which the Abenakis used to resort within the last twenty years for the purpose of calling these animals in the months of September and October. Moose and caribou, if once given protection here, would soon be as plentiful as ever; this could be easily done, as the whole country across to the Little Southwest Miramichi Lake and far beyond it is utterly unfit for settlement and only valuable for the wood which covers it. This country is either owned by the New Brunswick Railway Company or by the Provincial Government, and if these proprietors would but take joint action in this matter and appoint forest guardians, this neighborhood would soon again abound with game.

I had ascended to these lakes once before in company with Ambrose Bear, a famous Abenaki hunter long since gone to his rest; he was a truthful and worthy man. At that time we had some conversation about the moose, when he mentioned a strange circumstance which had occurred to him a year or two before. He had been moose calling in the month of September, and having been very successful had some moose hides drying about his camp, an open shed. One moonlight night after midnight, when the fire had gone out, he was awakened by the sound of an animal sniffing close to him. Looking up he saw between himself and the moon the head and horns of a huge moose, which was sniffing at one of the hides which were hung up to dry. Cautiously moving his hand he took hold of the gun which he kept constantly at his side, raised it up, took aim and fired, bringing down the noble animal on the spot.

One morning on the same excursion, when Ambrose and the writer had been sleeping in the open air in the woods on the ridge between Long and Tobique lakes, just after daylight the Indian awoke me with a low whisper, "Sheddake, sheddrake," indicating to me that he had heard sheddrakes, a species of duck common about these lakes and streams. Very quietly he arose, and taking his gun from close to where he had lain, and where he had it placed so that he could reach it from where he had been sleeping without having to rise up, he stole off into the woods silently as the night. He had not been more than three minutes from my side when I heard his gun, whose report was echoed and re-echoed from the high hills which lay north of the lake toward the head of the Serpentine River, and in about the same time he was back to where I lay, bringing with him a string of four or five sheddrakes.

But to return to our present trip. The first view that we got of Tobique Lake was from an old Indian bark camp, which consisted of a few sheets of spruce bark placed against a pole supported by two forked stakes driven into the ground on either side. This shelter was open at both sides as well as in the front. On a tree nearby was written "John Laporte, 1884. There was also an old bear house in the vicinity, in which the Indians had been in the habit of placing their provisions to keep them out of the way of these animals, this consisted of a pen built as the woodsmen builds the walls of his camp, with this difference: it was built between two fir trees which were cut off at about five feet from the ground and a tennon made on the top of either, after the bottom, sides and top had been made of round logs deeply notched at the ends. A cross piece in which was a suitable mortise was placed across the top of the house, the mortises fitting over the tennons; this piece of wood was strongly keyed with wedges so that bruin could neither move bottom, top nor end log either with his teeth or claws, both of which he would be sure to bring into use should he happen to be in the vicinity at any time.

A few minutes' walk now brought us to the outlet of the lake, the brook from which seemed almost to lose itself in the bed of low-lying boulders through which it ran at the place where we took our stand. However, there was a considerable pond at the foot of a rapid, and everything looked as if we were going to get some trout; one of our party had taken the trouble to bring his reel and flies. On our way

down the brook he had cut a lithe rod, and soon fastened some brass rings to it for his line to run through, so that in a few moments he had constructed as good a rod for casting flies with as if he had carried one from the city. The other fisherman contented himself with a mackerel line and a hook large enough for cod fishing. I seated myself on the edge of the pool to watch operations.

The first fisherman cast his line well out into the water, and just as he was dragging his fly from beneath the foot of the little rapid, there was a flop and his reel began to spin. Neither fisherman had a landing net, so that the services of Mr. Edward Jenkins, a Tobique hunter, who had joined our party when we reached the road choppers, were called for. He was directed to stand on the shore, and when the sportsman had dragged the tired and half-drowned fish up to him, he was to insert his finger gently into the rapidly-moving gills and thus secure the game. In this he was eminently successful; the trout was one of a pound or more, and in a very short time we had all, even more than we wanted; the average weight was about three-quarters of a pound each.

Some of our party proceeded to the Indian camp with the fish, while the rest went off to explore for timber. Our trout were soon cleaned and prepared for cooking. We had no frying pan but had a tin plate which we made do the same duty by inserting its edge into a split stick, which held it quite firmly, answering all the purposes of a frying pan handle. One of the party preferred to take one of the largest fish, and after cleaning it carefully, put inside of it some pieces of fat pork; then wrapping it up tightly in a piece of paper, thrust it into the ashes. When it was withdrawn it was well and thoroughly cooked and tasted very savory and well. When our companions had returned from timber hunting they found a bright fire blazing up, the tea kettle boiling and the fish ready cooked in the frying pan, to say nothing of the one which had been cooked in the ashes. As the pan was small our hunter suggested that we should drink off our tea at once and boil some more of our trout in the tea kettle, putting in with them a piece of salt pork to season them. We did this, and thus had our trout served up in three different ways. When night closed in we put on a good fire and laid down to rest. We were without any blankets or bed clothes, and thus were not any too warm toward midnight.

Address all communications to the Forest and Stream Publishing Co.

THE FEATHER INDUSTRY.

THE trade in fancy feathers is full of fluctuations and illustrates well the vagaries of fashion; its sudden whimsical turns and the fictitious values which it places upon the objects of its demand. It is a trade seemingly without any very definite statistics. A representative of the FOREST AND STREAM spent several days looking into the trade as it exists in this city. There were plenty of estimates, no end of fragmentary guesses, but the very nature of the trade, its manner of conduct and the relations existing between its members, cut off all possible chance of the collections of those tables of the volume of business which are found in every other industry and line of commerce.

There is a sharp distinct line drawn between the ostrich feather trade and that in fancy feathers. The former has for years traveled in clearly defined channels. There is the great depot of supplies at Cape Town, South Africa, thence through the trade sales in London and so on to the world. In this country and especially this city, the trade is in the hands of a few houses conducted by Jews, and just now they are almost entirely without trade since fashion has for the time put its ban upon the feather of the great South African bird.

Fancy feathers include everything outside of the various ways in which the ostrich tips and plumes are worked up. Everything in the feather line comes within the omnivorous maw of the fancy feather worker, and just here is the difficulty of getting any complete data. A feather-working establishment may not be a very large one—a few kettles for dyeing or steaming the feathers, a supply of wire, gum and glass beads, and the manufacturer assisted by a few girls may furnish the local shops with a great variety of this class of millinery. A gunner goes out, bangs away, right and left, brings down anything with wings, outside of bees and barns, and forthwith hies to this local taxidermist or feather dealer. He takes the lot at a few cents each, sorts them over—some hit the popular craze and bring big profits, others are put down in the insect-proof boxes to await the changing dictates of fashion.

In and about New York the most famous of these "feather foundries" is that of A. H. Alexander, in West Hoboken. It is a three storied wooden building, well up on the Heights, and is well worth a visit. Its proprietor has lived and worked for thirty-five years at this place, and during that time millions of bird skins have passed through his hands. He is a naturalist, a lover of birds, played through a feather manufactory while a boy, and now in middle age would feel lost unless surrounded by heaps of plumage. He has studied bird science in books and watched them in their leafy homes; has shouldered his gun and penetrated South American forests in search of the gaudy denizens of those sub-tropical wastes, and while the old Elysian Fields of Hoboken were yet a pleasant suburban sylvan forest, waded in the cove near by and shot wild ducks therein. To visit the manufactory is a privilege, to hear his head talk bird lore a pleasure to any ornithologist. "Yes," he said, "it is a trade of many turns and sudden whims; but I find that it runs in a cycle say of seven years. Now it is this bird, now that. Once we had a run on seafowl, and the sea swallow, as they were called, was on every hat. Then we hunted the seashore. Then, perhaps, humming birds were in demand, and down into South America we went. Just now it is whole birds for hat fronts or set pieces for turbans. What it will be next fall the Lord only knows, I don't. It may take a sudden turn back to ostrich. A feather fancy runs about three years. In the first year the fashion is set by the best people, who pay the best prices. These willow aigrettes are now the fashion, and so the long, slender egret points sell for \$40 an ounce. The man who fancies the fashion and has a supply makes a fortune; the man who is loaded up with stock which is not the style cannot give it away. One season I sent over 50,000 skins to the London market and got over a dollar each for them above expenses. To-day it would not pay to send them to New York.

"Where do they come from? Everywhere. The great bulk

of the feathers here are imported, and pay 25 per cent. duty when they come in the skin and 50 per cent. when made up. The raw skins should be free, for there can be no sense in putting a protective tariff, say on South American birds, under the notion that some day or other we can raise them in the United States. I should say that from 10 to 15 per cent. of the feathers consumed here are of American growth, and of these the great bulk come from the Southern States, Florida, Texas and Louisiana. I have men out now in Texas, and here are two cases of merles sent in by them. The birds have to be taken when in plumage, and this, in some species, is only a few weeks out of the year. There are a very few birds in the North taken, simply because there are few to be taken. Now and then great flocks of the snow bunting come down from the north and are welcome to the gunners who shoot and trap for the trade; herons, too, and some species of duck. The sparrow, that little pest which I saw introduced here and raised my voice in protest at the time, is now brought in and made use of. It is "degraded," as we say. That is, the skin is bleached until it is a neutral tint. This is done in all skins where it is desired to dye the feathers. Common poultry feathers are now entering into the trade. As yet we do not get many from this country, because our people have not yet learned their value; but in Poland and other parts of Europe, the feathers of the poultry killed are just as carefully preserved for sale as the eggs. Our first task is to separate them, for in the feathers of a single bird we make seven grades. The steaming is followed by the dyeing, either black, or yellow, or red, or anything fashion may dictate.

"I would gladly see the indiscriminate killing of birds stopped. We have law enough, I think. What is needed is the enforcement of those laws, and that can be reached by the education of the people; but on the other hand, it is not fair to say that because there are no birds where years ago there were plenty, that therefore they have found their way on to ladies' bonnets. As settlements are made, certain species retire. I have shot foxes on that hill yonder where now you see rows of houses, but the houses killed the foxes, not I."

As the feather maker talked he drew out drawer after drawer, opened tin boxes by the dozen, drew out the wrapped skins, until every section of the earth had contributed its quota. Down below stairs were coops of ring doves, sleek and coy, and genuine white doves, too, not the ordinary white pigeon. Strutting about the yard outside were peacocks in all the glory of full strut, waiting the day when in the height of plumage, a severed vertebra should give them the happy despatch and give their feathers to the adornment of some elaborate screen. Chinese pheasants too were in other coops, and all about were evidences that Mr. Alexander was an ornithologist, and differed from the ordinary feather dealer in knowing his stock in trade; for with a single feather as a text the genial tradesman could preach of family and genera, of habitat and habits, of past and present trade history, and tell, too, of trips into every nook of the world in feather quests.

In the city C. Burton Rouse is the editor of the *Millinery Review*. He confessed that he had no statistics, had never known of any gathered beyond those given in the Custom House returns, and there the various classes of feathers were run under a common heading. About \$10,000,000 per year he thought would represent the feather trade of the country in the finished article, and of this about 40 per cent. represented what the raw article costs; in other words, what the bird killer got. He did not know of any exportation of our American birds, and thought that 10 per cent. would represent our domestic contributions to our domestic consumption. A single week might see a change in fashion, and the birds so eagerly sought to-day might not a fortnight hence be worth the wad in the cartridge burned in their killing.

Thomas Wo d, one of the best known leaders in the wholesale handling of millinery goods, stood in one of his great lofts with open boxes of pretty artificial flowers and made-up feather ornaments about him, and said that it would be impossible to form any very accurate estimate of the business. He called attention to the fact that many of the feathers were from sea fowl and from game birds, the prairie chicken and sandpiper, for instance, hunted for their flesh. Then the foreign birds sold at the regular London auctions of skins in the Feuchurch street rooms of Hall & Son, were of foreign birds coming from portions of the British Empire, where the birds existed in countless numbers. They were not song birds, but such as parrots, tanagers, and others of marked plumage and not of the insectivorous class.

Other dealers were seen. All of them had heard of the movement for the protection of home birds, and in every case they spoke in favor of it; urging that the largest measure of success would come with the cultivation of local effort, that in a particular section or neighborhood the laws enforced would benefit to those who acted as bird protectors, and all agreed that, with the fashion turned from any particular class of bird, there would be very little risk of any one hunting it.

WILD ANIMALS OF MAINE.

CARIBOU—CERVUS TARANDUS.

ONLY the woodland caribou occurs in this State. The barren ground caribou are found further north. Among the cervine tribe of animals of the western continent there are, perhaps, none more interesting than the caribou; comprising delicacy of form, roundness of body, fine tapering limbs, in fact, a compactness of organism calculated for fleetness and endurance, seldom seen in any other animal.

A full grown male will weigh alive about four hundred pounds, and the female adult near one hundred pounds less. The venison is considered by many preferable to the moose or deer.

Their hoofs are very broad, parting like the ox, and sharp, enabling them to travel with as much ease on ice as on land or snow.

When running at full speed they spread their hoofs, squat on their haunches from gambrel to foot, and thus are able to keep top of very light deep snow and at the same time throw themselves ahead with immense force. And when under full blast, a herd of them reminds one of a train of cars under full headway.

The old male sports a very pretty set of horns, which rise high over his head, with two frontals nearly covering his eyes. The frontal branches are peculiar to this animal. These immense antlers are slanted back on to his shoulders by elevating his nose while going through thick woods. The young and females have no horns, as a rule; yet there have been some females killed in this State with good-sized horns. These are exceptions, however, as I have killed and handled a large number and have never yet seen horns on a female. The horns appear on the male the second year, and they cast

them every winter after January, generally in a thaw and generally one horn at a time. They seem to have an itching sensation and rub them against a tree, and so shed them; and like all the deer kind, receive new ones in early spring.

They breed at the age of two years, going with young about nine months, dropping them in May and June.

They are extremely social in their habits, congregating in large herds where they are plentiful, and only singling off when frightened and scattered, or by accident stray away. They live chiefly in swamps and subsist on mosses and lichens, though when hard pressed for food they nip the tender buds of the willow and maple. They eat the moss of trees as well as ground moss, by sitting on their hindlegs, and, putting their forward feet against the tree, stretch up high on the body of the tree. In early morning or late evening they may be found facing the south and working in that direction, and the experienced hunter will take his position and wait their approach in the feeding season. The reason they face the south while feeding is that the moss grows more abundant on the north side of trees.

In the rutting season, which occurs in September or October, the call has the sound of "A" flat, with a tremulous continuation, and in winter a continued grunt ending in a higher key. They may have other sounds but I have not been able to hear them. They are not considered dangerous or vicious, yet if cornered or excited I would as soon be in a safe place.

They migrate from one forest to another in large herds. Thus for many years they have inhabited the Province of Nova Scotia and the adjoining forests, but a few years ago they seemed to leave the Provinces and came over into Maine, and for fifty miles along the range of the Rangeley Lakes, they were very abundant, and more than a hundred were killed in that fall and early winter by hunters of the Umbagog region, and some about Rangeley and Kennebecago. Among those killed were some very fine bucks with large handsome antlers. When the snows are deep and in the coldest weather, they stay mostly in the dense forest, and in early spring they seek the lakes and ponds.

The best way to hunt them is by still-hunting or stalking. It would be impossible to successfully hunt them with dogs. In the spring time when they are on the ice a man can go on to the lake some distance to leeward of the herd or individual as the case may be, and lie down, stick his gun up over his head and by moving it to and fro attract the attention of the caribou, and when the animal discovers it he will make for it, but there is danger of being run over if it be a herd, for when their curiosity is aroused they are very excited. To hunt them in thick woods the hunter spreads a sheet over his head and walks carefully up toward the game, and when observed by the animal, stops still until he is composed, then walks on again until near enough to take his choice of the herd, but if a large herd there is danger of being run over, for after a few shots are fired they get crazed and furious and run in every direction for some time, then make straight off for many miles toward the mountains or swamps.

In the spring of 1862 I went with an Indian of the St. Francis tribe—named Prince Bushola—on a hunting expedition from Canada down by the forks of the Kennebec River and over Moxey township, in the northern part of Somerset county. On the borders of Moxey Pond we discovered a herd of caribou of nearly thirty individuals. With sheets spread over our heads and bodies we slowly advanced toward them on the lee side, so they could not scent us by the wind, and we were favored by a light falling snow. We struck their sleet on the pond and followed up carefully within sight of them. I was highly excited. The woods seemed alive with them. Some were reared high up against the trees feeding on the moss; others digging away the snow for evergreens on the ground; others were walking about making a low moaning noise in short grunts; others were lying down, and others still fawning each other in the most affectionate manner. Presently I heard Bushy fire (I called my Indian guide Bushy for short), and very soon after heard him shout, and at the same time the very woods seemed alive with caribou—the roaring sound of a large herd on the travel, and the sonorous grunts of the old males, together with the lively shouts of Bushy, who was an eighth of a mile to the north of me, made the woods ring with exciting interest. I started toward the Indian, but it was with the greatest difficulty I could reach the spot from which the shout arose, and on my way shot, right and left, an old buck and a year old doe.

The whole herd were now fairly aroused and on a lively scare, running hither and thither. Bushy had shot a large doe, and several old males were after him, and he had jumped into a beech top and had dropped his ammunition. On my approach they scattered, and Bushy, being relieved, soon reloaded and let drive at the nearest.

As one came near in their circuit, we would shoot until we had killed seven, when the whole herd made off to the northward at a tremendous pace, and we with tumplines and fir boughs dragged our game together on the shore of the pond and then enjoyed the realization of our successful hunt over a pot of hot tea and roast venison.

We camped on the shore of Moxey Pond that night and the next day we made some moose sleds and loaded on each a whole animal and slowly made our way out of the woods to the military road, made more than a hundred years ago by Arnold, while on his disastrous expedition into Canada, six miles distant, thence back to camp and so on until we hauled them all out. Bushy then returned to Moxey, where he trapped a few weeks for fishers and sable. I took the caribou to Boston, whole, hired a room at the foot of Cambridge street on Charles street, where, after due notice in the daily papers, I was visited by Prof. Agassiz and gentlemen from the Boston Society of Natural History and agents from Yale College, and others who examined my stock in trade with much interest, and made purchases—some for skeletons, others for mounting, and others for both—and the most of the same caribou can now be seen, prepared and preserved, in the above museums.

Thus a relic of that herd of caribou of twenty five years ago is being handed down to future posterity—possibly in the future years when the original animal shall be extinct.

J. G. R.

BETHEL, Maine.

IVORY-BILLED WOODPECKER.—On March 7 I was so fortunate as to procure a specimen of the above-named rare species. It was pecking on a large cypress tree in a swamp near the St. Mark's River, about twenty miles from this place. I observed a pair of these birds near the same place a few weeks previous, but was unable to shoot them, as they are very shy. March 8 I killed two pileated woodpeckers at the same place. They are abundant all along the river and in the cypress swamps throughout the States.—HORACE A. KLINE (Tallahassee, Fla.).

HAWKS AND OWLS.

BENEFICIAL OR INJURIOUS?

AT a meeting of the West Chester (Pa.) Microscopical Society, held March 4, some interesting matter on the subject of the good and bad qualities of our rapacious birds was brought out.

This subject had been investigated, under the circumstances explained below, by a committee, of which Dr. B. Harry Warren was chairman.

REPORT OF COMMITTEE.

The committee appointed at the last meeting of the Microscopical Society to take into consideration the Act of Assembly passed the 23d day of June, A. D., 1885, entitled "An act for the destruction of wolves, wildcats, foxes, minks, hawks, weasels and owls, in this commonwealth," and which reads as follows: "That for the benefit of agriculture and for the protection of game within this commonwealth, there is hereby established the following premiums for the destruction of certain noxious animals and birds, to be paid by the respective counties in which the same are slain, namely: For every wildcat \$2, for every red or gray fox \$1, for every mink 50 cents, for every weasel 50 cents, for every hawk 50 cents, and for every owl (except the Acadian screech or barn owl, which is hereby exempted from the provisions of this act) 50 cents," beg leave to report that the chairman of the committee, Dr. B. Harry Warren, Ornithologist of Pennsylvania State Board of Agriculture, has devoted several years of his life to the collection, dissection and examination of birds, and that all of the committee from observation and experience, have believed that all of the birds denounced in the law above quoted, with rare exceptions, have been found to be the best friends of the farmer. Lest, however, any of the committee might be mistaken, they have corresponded with the best ornithologists in the country, men who have made ornithology a study and are connected with that department in the Smithsonian Institution, asking their opinion as to the benefits or injury likely to arise from the execution of the law against the birds therein named.

They have received answers from Dr. C. Hart Merriam, Ornithologist of the United States Department of Agriculture; Robert Ridgway, Curator of Department of Birds United States National Museum; Dr. Leonard Stejneger, Assistant Curator of the same department; H. W. Henshaw, of the Bureau of Ethnology, also a collector of birds for the Smithsonian Institution and connected with the late Wheeler Survey of the Territories, and Lucien M. Turner, a collector of birds, etc., for the Smithsonian Institution for the last twelve years. These answers, which are annexed to this report, all bear testimony that the hawks and owls are of great benefit to the farmer, and render him far greater service than injury, and that it is unwise to select any of them for destruction.

The committee regrets that there have been ninety odd hawks and a dozen or more owls killed since the law was passed, June 23, 1885, at a cost to this county of about \$75, and that the slaughter is still going on.

Believing, therefore, that the killing of these birds is detrimental to the interest of the agriculturists, they believe that instead of being destroyed they should be protected, and they, therefore, recommend the passage of the following resolution:

Resolved, by the Microscopical Society of West Chester, that in the opinion of the society, the act of June 23, 1885, offering a premium for the destruction of hawks and owls is unwise and pre-judicial to the interests of agriculture, and so far as those birds are concerned, ought to be repealed.

Resolved, That the president and secretary of the society be instructed to forward a copy of the above resolution to our members of the Legislature at its next session and request their aid toward the repeal of the act so far as is above stated.

All of which is respectfully submitted.

B. HARRY WARREN,
W. TOWNSEND,
THOS. D. DUNN,
JAMES C. SELLERS. } Committee.

MARCH 4, 1888.

U. S. DEPARTMENT OF AGRICULTURE,

WASHINGTON, D. C., March 2, 1888.

Dr. B. Harry Warren, Ornithologist of the Pennsylvania State Board of Agriculture:

DEAR SIR—Your letter of the 1st inst. has just come to hand. I have read with surprise and indignation the copy sent of Section 1 page 141 of the laws of Pennsylvania for 1885, in which a bounty is offered for the destruction of weasels, hawks and owls. The clause purports to have been enacted "for the benefit of agriculture," etc.

The possibility of the passage of such an act by any legislative body is a melancholy comment on the widespread ignorance that prevails even among intelligent persons, concerning the food of our common birds and mammals, and is an evidence of the urgent need of just such systematic and comprehensive investigations as this department is now making on the subject of the relation of food habits to agriculture.

There are two kinds of weasels in the Eastern States. The smaller kind feeds chiefly on mice and insects and is not known to kill poultry. The larger preys also mainly on mice and rats, but in addition sometimes kills rabbits and poultry. Both species are friends of the farmer, for the occasional loss of a few chickens is of trifling consequence compared with the good that these animals are constantly doing in checking the increase of mice.

You ask my opinion in regard to the beneficial and injurious qualities of the hawks and owls which inhabit Pennsylvania. This question seems almost superfluous in view of the fact that your own investigations, more than those of any other one person, have led to a better knowledge of the food habits of these birds, and what you have done in the East, Prof. Aughey, of Nebraska, has done in the West. Many others have added their "mites," till at the present time a sufficient array of facts have been accumulated to enable us to state, without fear of contradiction, that our hawks and owls must be ranked among the best friends of the farmer. With very few exceptions their food consists of mice and insects, meadow-mice and grasshoppers predominating. The exceptions are the fierce goshawk from the North and two smaller resident hawks, Cooper's and sharp-shinned, which really destroy many wild birds and some poultry. These three hawks have long tails and short wings, which serve, among other characters, to distinguish them from the beneficial kind.

Strange as it may appear to the average farmer, the largest hawks are the ones that do the most good. Foremost among these are the rough-legged and marsh hawks, which

do not meddle with poultry and rarely prey upon wild birds. Of hawks and owls collectively, it may safely be said that, except in rare instances, the loss they occasion by the destruction of poultry is insignificant in comparison with the benefits derived by the farmer and fruit grower from their constant vigilance; for when unmolested the one guards his crop by day and the other by night.

It is earnestly to be hoped that you will succeed not only in causing the repeal of the ill-advised act which provides a bounty for the killing of hawks and owls, but that you will go further, and secure the enactment of a law which will impose a fine for the slaughter of these useful birds.

Yours very truly,

C. HART MERRIAM,
Ornithologist of the Department of Agriculture.

UNITED STATES NATIONAL MUSEUM,
UNDER DIRECTION OF THE SMITHSONIAN INSTITUTION,
WASHINGTON, March 3, 1886.

Dr. B. H. Warren, West Chester, Pa.:

DEAR DR. WARREN—I am just in receipt of your letter of the 1st inst., and therefore fear that my reply cannot reach you in time for use at the meeting to-morrow evening. It affords me much pleasure, however, to comply with your request for my views concerning the food habits of hawks and owls, and their relation to man.

Of all the species which you name there are only two which, according to my best judgment, are at all seriously destructive to game or poultry, these being Cooper's hawk and the great-horned owl. The rest, with the possible exception of the sharp-shinned hawk, which certainly is destructive to the smaller birds, my experience leads me to regard as very decidedly beneficial to man, their food consisting very largely, if not chieflly, of the smaller rodents, field mice especially. The red-shouldered and red-tailed hawks occasionally pick up a young chicken or rabbit, but I feel quite sure that their service to man far outweighs the injury which they thus do. The little sparrow hawk and other smaller species destroy large numbers of grasshoppers, locusts, and other large insects.

Very truly yours,

ROBERT RIDGWAY, Curator, Dept. Birds.

SMITHSONIAN INSTITUTION,
WASHINGTON, D. C., March 3, 1886

Dr. B. H. Warren, West Chester, Pa.:

DEAR SIR—In reply to your letter of the 3d inst., asking for my opinion in regard to the food etc., of certain hawks and owls specified, I would state that I have read Mr. Robert Ridgway's answer to a similar request from you, and that I agree with him in every particular. The idea of persecuting the majority of hawks and owls systematically is simply preposterous, and any law which has for its object their indiscriminate destruction should be immediately repealed, since most of the birds alluded to are among the very best friends of the farmer. In regard to a few species it is well worth while to suspend judgment until a thorough investigation as to their habits and food in your State can be carried out, for, as you are well aware, a species which in some parts of the country and at some seasons may be injurious, in other regions and under altered circumstances may be chiefly beneficial. I remain, yours sincerely,

LEONARD STEJNEGER,
Assist. Curator Dept. Birds, U. S. Nat. Mus.

WASHINGTON, March 3, 1886.

B. H. Warren, M. D., West Chester, Pa.:

DEAR SIR—In reply to your favor of the 1st inst. asking for my opinion with regard to the economic utility of the birds of prey, I take pleasure in responding as follows: To the ornithologist, whose business it is to study the habits of birds, the widespread ignorance of the habits of the hawk and owl tribe and the mistaken idea as to the amount of injury they do are almost inconceivable.

So common, however, are these erroneous ideas respecting the birds of prey and their relations to the farmer and agriculturist that it is not at all surprising that laws similar to the one now in force in Pennsylvania should be enacted.

Your own investigations into the nature of the food of the birds of prey of your country might be cited in support of the statement that such enactments are based upon erroneous conceptions. I may add that wherever such investigations have been systematically conducted they have resulted in a verdict favorable to the birds of prey. In almost every portion of this country I have found the opinions of all field ornithologists to be in favor of the preservation of the hawk and owl tribe on account of the good they do. I believe the time will come when the farmers as a class will carefully protect the hawks and owls on the ground of their beneficent services.

Following is the list of species most numerous in your State:

1. Marsh hawk (*Circus cyaneus hudsonius*).
2. Sparrow hawk (*Falco sparverius*).
3. Red-shouldered hawk (*Buteo lineatus*).
4. Red-tailed hawk (*Buteo borealis*).
5. Cooper's hawk (*Accipiter cooperi*).
6. Sharp-shinned hawk (*Accipiter fuscus*).
7. Broad-winged hawk (*Buteo pennsylvanicus*).
8. Rough-legged hawk (*Archibuteo lagopus sancti-johannis*).
9. Short-eared owl (*Asio accipitrinus*).
10. Screech owl (*Scops asio*).
11. Long-eared owl (*Asio wilsonianus*).
12. Barred owl (*Strix nebulosa*).
13. Horned owl (*Bubo virginianus*).

Of this list, the marsh hawk, red-shouldered hawk, red-tailed hawk, broad-winged hawk, rough-legged hawk, short and long eared owls, screech owl, barred owl and horned owl are of very great value to the agriculturist because of the immense numbers of meadow mice and other small rodents they annually destroy. The mice when unchecked increase with amazing rapidity, and the hawks and owls above named are among the chief natural means for their destruction, mice and other rodents forming a large percentage of their food. The harm the hawks do in the destruction of small birds is inconsiderable compared with the benefits derived by the farmers from the destruction of the four-footed pests. The owls particularly work by night, and hence the benefits they confer are easily overlooked.

The sparrow hawk is one of the most harmless of birds and one of the most beneficial to man. He lives almost exclusively on grasshoppers and crickets, and the number of the former destroyed by these birds is incalculable.

I mention the Cooper's and sharp-shinned hawks last because they unquestionably kill many small birds and they also commit depredations upon the poultry yard. I believe, however, that they can safely be left to be dealt with by the

class they injure, chiefly poultrymen. To place all the hawks and owls under ban, and to attempt their extermination simply because one or two species are injurious, is certainly not good policy.

After more than twenty years' study of birds, I am decidedly of the opinion that the hawks and owls as a class are of great economic value, and that no State in which agriculture is pursued to any extent can afford to dispense with their services. They not only ought not to be exterminated, but they should be placed upon the list of birds protected by law. I am, very truly yours,

H. W. HENSHAW.

SMITHSONIAN INSTITUTION,
WASHINGTON, D. C., March 3, 1886.

B. H. Warren, M. D., Ornithologist Pennsylvania State Board of Agriculture, West Chester, Pa.:

DEAR SIR—Your letter of recent date requesting my opinion of the act (No. 109) of the Commonwealth of Pennsylvania relative to the premiums paid for the destruction of certain species of birds and mammals, alleged to be injurious and classed as noxious within the meaning of that act, is at hand.

I must confess a surprise at the truly lamentable ignorance of the framers of that act in regard to the supposed noxious character of the hawks and owls, upon whose lives a premium has been set for their destruction.

It is well known that no more beneficial bird exists than the owl, whose nocturnal habits render it specially fitted to pursue the smaller rodents, such as the mice, whose ravages upon the field, grain, root and orchard are so well known that all farmers have from time immemorial exclaimed against the destructiveness of those quadrupeds whose annual devastation causes the money value of the losses sustained through their ravages to swell into countless thousands of dollars.

The tender growths of the orchard are decorticated by the mice and rabbits, which are in turn devoured by the owls sought to be destroyed simply because some one desires to become notorious as a lawmaker, and through utter ignorance of the subject endeavors to deprive the farmer of his best nocturnal friends, which guard the growing crop with zealous care while the owner sleeps to regain a strength to enable him to continue the daily toil of protecting his crops from the devastation of his sleek-furred enemies, most insidious at night. There is not a species of owl but that amply repays for the few incursions made at irregular periods upon isolated hen roosts. Where a single fowl is thus lost, a thousand mice pay the penalty of their lives to the same owl.

The nocturnal habits of the owls render their services far more beneficial than may be accurately ascertained.

In regard to the hawks, their reputation is much exaggerated so far as their injurious propensity is concerned, yet, when truthful evidence is placed in the scales, the beneficial services of the hawks will preponderate in a most satisfactory manner.

Certain species of the diurnal birds of prey are well-known to feed almost exclusively upon small rodents, and in fact, differing but little from the owls in regard to their food. Two or three species of hawks (those belonging to the genus *Archibuteo*) are notoriously the best diurnal mouse catchers of all birds. Their habits to soar over the level tracts devoted to grasses and search for their food are so well-known that further consideration of them is but repetition of established facts. The bolder species of hawks so rarely commit depredations upon the farmyard fowls that these instances are, without doubt, the result of an individual predilection for which the entire family should not be branded. The number of rabbits and mice which the hawks annually destroy is simply incredible, as any really observant person will admit.

In my own opinion the destruction of the hawks and owls within the State of Pennsylvania will, ere many years, result in an incalculable injury to the farmer, who will be overrun with hordes of mice, which he will be powerless to limit, as their reproductiveness, when undisturbed, progresses with astonishing rapidity.

It would, in my opinion, be a wise measure to have the act relating to the alleged noxious birds totally repealed. Very truly yours,

LUCIEN M. TURNER.

FOOD EXAMINATIONS.

From a report entitled "Diurnal Rapacious Birds" (with special reference to Chester county, Pa.), prepared by B. Harry Warren and published in the annual report for 1883 of the Pennsylvania State Board of Agriculture, is taken the following reference to the stomach examinations of the species of hawks most commonly found in Pennsylvania:

The Red-tailed Hawk (*Buteo borealis*).—My examination of one hundred and two birds of this species, revealed in eighty-one chiefly mice and small quadrupeds, also some few small birds; nine, chickens; three, quail; two, rabbit; one, ham-skin; one, part of a skunk; one, a red squirrel; one, a gray squirrel; three, snakes.

The Red-shouldered Hawk (*Buteo lineatus*).—Of thirty-six examinations which I have made of this species, twenty-three showed mice and small quadrupeds, grasshoppers and coleopterous insects; nine revealed frogs and some few insects, in two, snakes and portions of frogs were present, and from the remaining two small birds, particles of hair and a few orthopterous insects were taken.

Broad-winged Hawk (*Buteo pennsylvanicus*).—In twelve specimens examined by myself, four revealed mice; three, small birds; four, frogs; one, killed the 22d of May this present year, 1882 was gorged with crayfish, with which were traces of coleopterous insects.

The Sparrow Hawk (*Falco sparverius*).—The stomach contents of twenty-nine of this species, which I have dissected, showed, in fifteen, principally mice, with frequent traces of various insects; six, grasshoppers; two, coleoptera and grasshoppers; two, meadow larks; four, small birds—sparrows.

Cooper's Hawk (*Accipiter cooperi*).—Of twenty-seven birds which I have examined, fourteen showed the food taken to have been chickens; five revealed small birds—sparrows and warblers.—*Dendroica*—two, quail; one, bullfrogs; three, mice and insects; two, hair and other remains of small quadrupeds.

Sharp-shinned Hawk (*Accipiter fuscus*).—I have dissected fifteen of these falcons. Six of this number showed small birds; three, quail; one, mice; four, remains of young chickens; one, grasshoppers and beetles.

The Rough-legged Falcon (*Archibuteo lagopus sancti-johannis*).—Nine birds all showed their food to be exclusively field mice.

The Marsh Hawk (*Circus cyaneus hudsonius*).—Of eleven birds examined, five revealed mice; two, small birds—*Dendroica*;—three, frogs; one, a large number of grasshoppers

with a small quantity of hair, evidently that of a young rabbit.

Rev. Dr. Clemson spoke deprecatingly of the merciless slaughter sanctioned and rewarded by law of these harmless animals, as he called them, particularly those beautiful creatures, easily domesticated, habitants of the woods and meadows.

THE TENDER HEART.

SHE gazed upon the burnished brace
Of plump ruffed grouse he showed with pride;
Angelic grief was in her face;
"How could you do it, dear?" she sighed.
"The poor, pathetic, moveless wings!
The songs all hushed—oh, cruel shame!"
Said he, "The partridge never sings."
Said she, "The sla is quite the same."

"You men are savage through and through.
A boy is always bringing in
Some string of bird's eggs, white and blue,
Or butterfly upon a pin.
The angle worm in anguish dies,
Impaled, the pretty trout to tease—"
"My own, we fish for trout with flies."
"Don't wander from the question, please!"

She quoted Burns's "Wounded Hare."
And certain burning lines of Blake's,
And Ruskin on the fowls of air.
And Col-ridge on the water snakes.
At Emerson's "Forbearance" he
Began to feel his wit benumbed;
At Browning's "Donald" utterly
His soul surrendered and succumbed.

"Oh, gentlest of all gentle girls,"
He thought, "beneath the blessed sun!"
He saw her lashes hung with pearls
And swore to avenge away his gun.
She smiled to find her point was gained
And went, with happy parting words
(He subsequently ascertained),
To trim her hat with humming birds.

—Helen Gray Cone, in the Century.

MASSACHUSETTS BIRDS.—Salem, March 18.—Bluebirds, redwings, cow buntings, song sparrows are with us again. A coot (*F. americana*) was recently shot near Boston. I saw the bird. Gulls occasionally seen in flocks on Lynn marshes. —X. Y. Z.

A RAILROAD IN THE PARK.

THE Senate bill granting to the Cinnabar and Clark's Fork Railroad Company a right of way through the Yellowstone National Park has been favorably reported by the Committee on Railroads of that body. The action is lamented by every one interested in the region. Mr. W. Hallett Phillips, who under the direction of the Secretary of the Interior, devoted two months last summer to an investigation of the Park, has written to the chairman of the Senate Committee on Railroads the following letter:

WASHINGTON, D. C., March 18, 1886.

Hon. Philletus Sawyer, Chairman Senate Committee on Railroads:

SIR—I observe that there has been a favorable report from your committee on a bill granting to the Cinnabar and Clark's Fork Railroad Company the right of way through the Yellowstone National Park.

Thinking perhaps that the attention of the committee has not been sufficiently drawn to the importance of the measure as affecting the Park, I take the liberty of presenting to you some reasons why, in my estimation, the bill should not be enacted into a law.

Last summer I was instructed by the Secretary of the Interior, under an appointment from him, to proceed to the Yellowstone Park with a view of placing before him for executive action and recommendation such information as I might acquire in reference to the protection, improvement and preservation of the Park. My report to the Secretary was communicated by him to the Senate under a call made by that body, and is printed as S. Ex. Doc. 51, present Congress.

In that report I remark: "Interested parties have for some years brought to bear a constant pressure upon Congress and the Department to induce action in favor of a railroad through the Park. The railroad is sought ostensibly for the purpose of bringing to market the ore from Cooke City, a mining camp adjacent to the northeast boundary line of the Park. If there is one object which should be kept in view more than any other, it is that of preserving the Park as much as possible in a state of nature. A railroad through it would go far to destroy its beauty, and besides, it is not demanded by the public. The roads are being improved yearly, and soon will make every portion of the Park easily accessible. The distance between the points of interest is not great, and transportation is good and plentiful. Apart from the consideration that a railroad is not needed in the Park and that it would deface its beauty, is the further consideration that the two objects of Congress in creating the Park, to wit, the preservation of the game and the forests, would be unattainable should a railroad be allowed within its limits. I think the Department should strenuously oppose the project. If the parties interested in the mines really are desirous of a railroad, I am satisfied from diligent inquiry that a route from Billings, Montana, to Cooke, is practicable. Such a route would be entirely outside the boundaries of the Park."

By the bill reported by the committee a railroad is authorized to run its line through one of the most interesting portions of the Park. I refer particularly to that part of the route along the Yellowstone River to its junction with the East Fork of said river. To my mind the whole charm of this beautiful and interesting region will have departed when once a railroad is established through it, and "station houses, depots, machine shops" are placed along the route. It is needless to say that the game will be driven off, and the damage to the timber by the increase of forest fires would be incalculable.

By the organic act establishing the Park the land embraced within its boundaries was reserved and withdrawn from settlement, occupancy or sale, and set apart as a public Park or pleasure ground "for the benefit and enjoyment of the people."

The proposed bill, should it become a law, would go far to nullify this provision by allowing an occupancy by a private railroad corporation for the benefit of private interests, while the pleasure and enjoyment of the Park by the whole people would be seriously interfered with.

It is needless to say that the introduction of a railroad would bring with it a settlement along the line of the road, and so practically the whole benefit of the original dedication would be greatly diminished if not extinguished. In my opinion the passage of the bill in question would be a most serious blow to the interests of the Park, and I may state that this opinion is shared by the officers of the Government whose duties are connected with the Park. I refer particularly to Mr. Wear, the Superintendent of the Park; Mr. Arnold Hague, in charge of the geological survey in the Park, and Lieut. Daniel Kingman, of the Engineer Corps, the officer in charge of the trails in the Park.

It is sincerely to be hoped that the bill will not be enacted into a law.

Very respectfully,

W. HALLETT PHILLIPS.

THE ANTI-HOUNDING LAW.

THE following brief of the argument in support of the anti-hounding law of New York was submitted to the Senate committee Tuesday evening. The paper was accompanied with numerous letters and sworn statements as exhibits. To committee will report this week. To the Honorable Committee on Game Laws of the State of New York:

The State of New York possesses in the wild game of the Adirondacks a natural resource of recognized value. The intent of legislation is to conserve that game as a permanent possession. If a statute accomplishes this intent it is a wise law and should be retained.

In purpose the anti-hounding deer law is thus wholly economic; in practice it accomplishes its purpose, and it should be retained.

The law of 1879, which permitted jacking, hounding and still-hunting, was inadequate. Under its provisions, the annual destruction of deer between 1879 and 1885 was so great as to insure, if continued, the speedy extinction of the species.

Of the three modes of killing, hounding was the most destructive. To check the excessive slaughter, the Legislature of 1885 enacted the anti-hounding law.

The statute has proved a wise and beneficial protective measure. Where enforced it has already accomplished much and promises more. It is sustained by the overwhelming sentiment of sportsmen. The retention of the law is essential to the maintenance of the game interests of the State. Its repeal would result disastrously.

In support of these economic considerations for retaining the law, the following presentation of evidence is submitted:

THE EVIDENCE.

THE DEER HAD DECREASED PRIOR TO 1885.

While the numbers of hunters (of different classes) engaged in its pursuit had multiplied, the deer had been destroyed at a rate and to an extent viewed with gravest alarm by all intelligent persons cognizant of the actual condition of affairs and concerned for the perpetuity of the supply.

Statement of Professor E. L. Richards, of New Haven, Conn.: "I have been in the woods off and on for almost twenty-five years. I can see that the deer are decreasing yearly. This decrease is especially noticeable in those parts of the wilderness where the running of dogs has most prevailed." (Letter of March 6, 1886.) [Exhibit 1.]

Statement of Dr. M. McV. Tobey, late of Jay, Essex county, N. Y.: "Fifteen years ago I could find good hunting in North Elba and St. Armand, and I was satisfied with it, but as deer became scarcer I tried other sections, therefore following the deer from one quarter to another, until my last hunt was had about 60 miles beyond Martin's, in the depths of the wilderness. * * * North Elba and St. Armand, where deer used to be plenty, are almost destitute of them." (Letter of Feb. 22, 1886.) [Ex. 2.]

Statement of Chas. H. Smith, of Petrie's Corners, Lewis county, N. Y.: "I guided at the Saranac House, then kept by William F. Martin, in '95, '97 and '98. I have followed guiding ever since. Deer have decreased very fast from '79 until '85. I think the main cause was driving with dogs, as there were more killed in that way than in all others." (Letter of Feb. 27, 1886.) [Ex. 6.]

Statement of W. R. Smith, Petrie's Corners, Lewis county, fifteen years a guide: "There is not over one-quarter the deer in this county there was in '82, and if they had drove less fall I don't think there would have been scarcely a deer left in the whole Adirondacks." (Letter of March 19, 1886.) [Ex. 4.]

THE DECREASE WAS DUE TO DOGGING.

Among the several modes of taking deer, hounding was recognized as most disastrous, and the certain result of its continued practice was clearly foreseen to be the impending ruin of the North Woods as a game region.

Statement of Richard M. Shotts, Chateaugay Lake, Franklin county (northeast part of Adirondacks): "For thirty years I have hunted around Chateaugay Lake, and have watched decrease of deer. * * * Have hunted them by jacking, trapping, hounding, crusting and still hunting. * * * If the dogs are allowed to be used, you may protect them in every possible way and our deer are doomed." (Letter, Jan. 5, 1886.) [Ex. 15.]

Statement of M. W. Young (thirty-five years experience), of Watson, Lewis county, N. Y.: "As to hounding * * * I know that it is utter destruction to the deer. * * * I believe two or three years more like 1884 would have utterly destroyed the deer in this portion of the wilderness." (Letter of Feb. 27, 1886.) [Ex. 32.]

Statement of F. A. Young, (twenty years experience) of Watson, Lewis county, N. Y.: "Two years more of hounding would have been utter extermination of deer in this section, as there were nearly 300 deer killed by hounding in the Beaver River section in the year of 1884. This number does not include the deer killed by floating. On the game ground there were less than 60 killed last fall, 1885." (Letter of March 1, 1886.) [Ex. 33.]

Statement of H. Wetmore (an old hunter), of Petrie's Corners, Lewis county, N. Y.: "I have in former years driven deer with dogs and think that it is by far the most destructive to the deer of any kind of hunting, and have given it up." (Letter of March 8, 1886.) [Ex. 34.]

Statement of Robert Griffith, Jr., of Watson, Lewis county, N. Y.: "Thirty years experience has learned me that if we want to preserve the deer we must keep out the dogs. A few more years like the fall of 1884 will make the deer in this part very scarce. I have no hesitation in saying that in those two falls in October that there were more deer killed with dogs than in any ten years by still-hunting since I have known the woods." (Letter of March 6, 1886.) [Ex. 31.]

Statement of A. J. Muncy, Little Rapids, Herkimer county: "In Smith and Albany lakes in the fall of '81 there were about 25 deer got with dogs; in the fall of '82, 40; in the fall of '83, 45 to 60, in the fall of '84, 30; the parties and dogs were more numerous, but the deer were not there to get it; double the 30 than the 45 to 60. (Letter of March 7, 1886.) [Ex. 3.]

Statement of Wm. R. Smith, Petrie's Corners, fifteen years a guide: "There are but few killed by floating or still hunting in season, but * * * of all evils the hound is the worst and the only thing that will exterminate the deer." (Letter of March 19, 1886.) [Ex. 4.]

Statement of Chas. H. Smith (forty-five years experience), Petrie's Corners, Lewis county, N. Y.: "Deer have decreased very fast from '79 until '85. I think the main cause was driving with dogs, as there were more killed in that way than in all others." (Letter of Feb. 27, 1886.) [Ex. 6.]

DOGS AND NO DEER, OR DEER AND NO DOGS.

The Legislature of 1885, then, was petitioned to enact an anti-hounding law. This was not asked for as a piece of odious class legislation, working to the deprivation of one particular class of hunters for the benefit of another class. It was not to stop the sport of the hounder that the still-hunter might have the privilege of killing more game, but that the stock might be rescued from extinction, and that there might be deer left to hunt at all. It was in New York as it had been in Maine and Pennsylvania, an alternative between deer dogs and no deer, or deer and no deer dogs.

Statement of Gen. R. U. Sherman, Secretary N. Y. State Fish Com-

mission: "I am quite certain that if the hounding had gone on to the scale it did in the fall of 1883 and 1884, the Adirondack deer would soon have been practically exterminated." (Letter of Jan. 19, 1886.) [Ex. 11.]

Statement of A. C. Clifton, Hague, Warren county (east side of the Woods), for many years a guide: "The act was passed barely in season to prevent extermination in several of the border counties of the deer range." (Letter of Dec. 28, 1885, in Glens Falls Republican.) [Ex. 9.]

SIMILAR LAW IN MAINE.—Statement of E. M. Stillwell, Com. Fisheries and Game, Bangor, Me.: "We could have achieved nothing without it. * * * The only question is between deer and dogs. You cannot have the one without stringently enforcing the law against the other. There is no such thing as a compromise between the two. Since the passage of the amended dog law in 1883, the deer of our State have more than doubled." (Letter to FOREST AND STREAM, Feb. 16, 1886.) Statement of H. O. Stanley, Com. Fisheries and Game, Oxford, Me.: "The law, in my opinion, is the very best one we have on our statute books for the protection of our deer in the Maine forests. * * * To the enforcement of this law I attribute the increase of the game, that has filled our forests with deer as they are to-day." (Letter of Feb. 14, 1886.) [Ex. 38.]

THE LAW HAS PROVED A WISE ONE.

The law has been in force one season. It was not everywhere strictly observed. Some of the petitioners for its repeal defied and violated it. But where obeyed it diminished the number of deer killed in 1885. Its effect was beyond all cavil protective. In the Adirondacks, as in Maine, it saved the deer.

St. Lawrence and Franklin counties.—Peter B. Leonard, Protector for St. Lawrence and Franklin counties, says: "In its working there can be no question but the law prohibiting dogging has saved large numbers of deer." The reports from Mr. R. M. Shotts (Upper Chateaugay Lake), of the Chateaugay and Meacham lakes, Plummer and Duck ponds and Deer River section, in Franklin county, show a like beneficial result; the total for Meacham Lake, Plummer and Duck ponds and Deer River in 1885 was 69, against 169 for the year before; in the Wolf Pond and State Dam section in 1885 by still-hunting 17 against 40 by dogging in 1884.

Essex and Clinton counties.—John Liberty, Protector for Essex and Clinton counties, says: "I think the law has saved a great many deer in my district."

Warren, Washington, Saratoga and part of Hamilton counties.—Seymour C. Armstrong, Protector for Warren, Washington and Saratoga counties and town of Indian Lake in Hamilton county, says: "There were not as many deer killed in 1885 as there were in 1884, notwithstanding that there were only a very few days of good still-hunting in 1884 and a month or more in 1885. This is shown by the numbers of deer expressed from North Creek during the months of September, October and November, 1884 and 1885. The former year there were 176 against 154 this year."

Lewis, Herkimer and part of Hamilton counties.—"Where the law was enforced, it worked well, the Beaver River district (Lewis and Herkimer counties) showing total of 60 killed in 1885 against 260 in 1884." (Mr. Chas. Fenton.)

Fulton County.—Protector T. C. Bradley in his annual report urges that the anti-hounding law ought to be more stringent than it is.

Statement of O. F. Hulser, supervisor of the town of Forestport, Oneida county: "From a record that I have kept it shows that two years ago last fall there were brought out of the woods in this vicinity 47 carcasses of venison, one year ago last fall 35, and this last fall 15 only." (Letter of Feb. 12, 1886.) [Ex. 22.]

In St. Lawrence county an anti-hounding law has been in force since 1879. The result is that the deer have increased there in that time.

Statement of A. Ames Howlett, of Syracuse: "In St. Lawrence county, the increase of deer (between 1879 and 1885) has been very marked. Indeed, for, by comparison, in 1880 I saw there about fifteen deer in a six weeks' trip, while in 1884 I saw about forty deer in an eighteen days' trip, and in 1885, in a ten days' trip, I saw more deer than ever before." (Letter of March 22, 1886.) [Ex. 41.]

See Stoddard's Guide, p. 15. [Ex. 37.]

It is significant that in this county sentiment supports the anti-hounding law. Its repeal is asked for only by those who are in districts where the few remaining deer can be gotten in no other way.

GENERAL SENTIMENT SUSTAINS THE LAW.

The law is sustained by the overwhelming sentiment of sportsmen in all parts of the State, and nowhere more earnestly than in many districts in the North Woods.

Statement of R. M. Shotts, Chateaugay Lake, Franklin county: "Eight men out of ten of those here whose interests are affected, are in favor of retaining the present law." (Letter of Feb. 24, 1886.) [Ex. 15.]

Statement of F. A. Young, thirty years a guide: "I think it [present law] is good. In proof, I owned two hounds, when the present law was passed, they were as good as any in the North Woods. I shot both of them. I know every guide in this section, and there is not one in favor of hounding deer." (Letter of March 1, 1886.) [Ex. 33.]

Statement of O. F. Hulser, supervisor, town of Forestport, Oneida county: "The non-hounding law I believe to be the best that has ever been enacted, and so do nine out of every ten people say who live hereabout on the borders of the woods." (Letter of Feb. 12, 1886.) [Ex. 22.]

Statement of John D. Collins, Esq., Utica, N. Y.: "I am wonderfully surprised at the earnest and unanimous sentiment with which people sign the petition [to retain the law] here. They are very decided." (Letter of Feb. 24, 1886.) [Ex. 23.]

Statement of Mark Smith [March 1]: "I think if we can prohibit hounding of deer for three years I think they will increase. All our sportsmen are not in favor of hounding, for one reason—extermination and unwholesomeness of the meat." [Ex. 38.]

THE LAW IS ESSENTIAL TO THE FUTURE WELFARE OF THE ADIRONDACKS.

The conditions which, on economic grounds, demanded the enactment of the law in 1885, have not changed—save in so far as the law itself in this brief time and with imperfect execution has worked advantageously; and these conditions call for the law's retention.

Statement of T. Q. Frost, storekeeper and postmaster at Belfort, N. Y.: "The way to make the deer last the longest is to simply keep the dogs out of the woods. We have paid to exterminate the wolf and panther, and feel keenly the injustice of turning the dogs in the woods. I am a hunter of forty years standing." [Ex. 39.]

Statement of O. A. Batcheller, Commander U. S. Navy: "I have no doubt deer would be much more plenty if there were no dogs." (Letter.) [Ex. 16.]

From Edward H. Litchfield, New York: "I disapprove most decidedly of hounding in a country where the deer must take to water and there be butchered by having their brains beaten out with a paddle or in some similar unsportsmanlike manner. * * * The legislation that we do need, if any, is to compel a more vigorous enforcement of the law as it stands." (Letter of Feb. 15, 1886.) [Ex. 24.]

Sworn statement of Elijah Simonds: "As long as they allow hounding and keep dogs in the woods, they won't have any deer. If you want to keep the deer, you must cut the dogs' heads off or get rid of them." [Ex. 21.]

Statement of Mark Smith, of Number Four, Lewis county, N. Y.: "I think if we can prohibit hounding for say three years longer and prevent killing until the 1st of August, and give them a chance to increase, I think it will be best for us all." (Letter of March 1, 1886.) [Ex. 38.]

Statement of John Hitchcock, Petrie's Corners: "If the present hounding and crusting law is enforced there is no mistake about the increase of deer, as the guides and hunters will assist in protecting game and will assist the game constables in their duties." (Letter, March 8, 1886.) [Ex. 40.]

Statement of Sam Dunning, Essex county [March 12]: "Deer will increase, in spite of the still-hunters, in the rougher parts of the Adirondacks, but the dogs can drive them out of these places easily." [Ex. 2.]

THE LAW'S REPEAL WOULD BE DISASTROUS.

Its repeal would be the license of a mode of hunting so destructive in character and so disastrous in effect as to practically nullify the purpose of game legislation. After a short scramble for the game while it lasted, the end would be ex-

tingtion; the Adirondack deer would follow the Adirondack elk and the Adirondack moose.

Statement of P. R. Leonard, Game Protector, Seventh District: "If it is repealed it will make it very hard for the State Game Protectors to protect the deer successfully." (Monthly report (Feb.) to Com. R. U. Sherman.) [Ex. 36.]

Statement of E. R. Wallace, author "Wallace's Guide to the Adirondacks": "If the bill became a law it would sound the death knell and mean the total extinction of the deer. * * * If hounding is again legalized the entire extinction of deer will be a matter of only a few years." [Ex. 20.]

Statement of D. W. Cross, author of "Fifty Years with the Gun and Rod": "Hounding can only be advocated as the shortest and easiest method of exterminating and finally exterminating this noble game." (Letter of Feb. 1885.) [Ex. 10.]

Statement of John Hitchcock, Petrie's Corners: "The State could not exterminate the deer quicker if they offer a bounty for each deer of \$5 than they will by hounding again, for all the hunters will take their last chance, as I have heard many of them say." (Letter, March 6.) [Ex. 40.]

Statement of Prof. E. L. Richards, of New Haven, Conn.: "If killing deer by the aid of dogs is to be allowed to any extent the deer are bound to go." (Letter, March 6.) [Ex. 1.]

Statement of David Baird, of Croghan, N. Y.: "To pass a law for dogging deer for two months I consider an outrage, and will be the means of exterminating the deer in five years. I am a hunter and will do all I can to protect deer from slaughter." (Letter, March 6.) [Ex. 18.]

THE DESTRUCTIVENESS OF HOUNDING.

It is more destructive than other methods, because by the use of dogs the game is more surely found. The dogs penetrate to the deepest coverts and drive out the game which would be perfectly safe from the efforts of man unaided by the bound. It is the only method of hunting that is successfully practiced at all times, in all kinds of weather, wet or dry, warm or cold, whether the day be noisy or still, on leaves, on bare ground, on snow. Other methods require peculiar conditions and are restricted by unfavorable circumstances.

Sworn statement of Samuel Dunning, of New Russia, Essex county, N. Y.: "Deer will increase in spite of the still-hunters in the rougher parts of the Adirondacks, but the dogs can drive them out of these places easily. * * * There are five killed by hounding where there is one killed by still-hunting." [Ex. 2.]

Statement of William Halkett, of Petrie's Corners, Lewis county: "Have been a hunter and trapper for 40 years. I think there are more deer killed and destroyed by dogs than by floating and still-hunting." (Letter of March 4.) [Ex. 30.]

Statement of Robt. Griffith, Sr., of Petrie's Corners, Lewis county, N. Y.: "I have hunted in Lewis, Herkimer and Hamilton counties for forty years. * * * In regard to the most destructive way of killing deer, it is by the use of dogs." (Letter, March 6, 1886.) [Ex. 19.]

Hounding is more sure in results, because its success depends on the certainty of the deer's obedience to the instinct which prompts it, when pursued, to take refuge in the water. Once in the water its capture is easy. Water-killing is the mode of hunting asked for by the advocates of the law's repeal. (Oral testimony of Dr. Samuel B. Ward, in reply to question by the chairman of your Committee, hearing of March 16.)

Statement of Wm. R. Smith, fifteen years a guide [supra]: "I don't think there is one in twenty that gets away after the hound once gets the track." (Letter of March 19.) [Ex. 4.]

Hounding is destructive because the deer is given no chance of escape, through any lack of skill on the part of the hunter. Water-killing calls for very little or no skill. It is practiced with equal success by the professional hunter and by the inexperienced tourist.

Statement of E. R. Wallace, Syracuse, author of "Wallace's Guide to the Adirondacks": "For twenty-five years that * * * region has been * * * my careful study and exploration. I have witnessed the killing of deer by every mode practiced, and have observed that none is so effectual as that of hounding." (Letter of March 13, 1886.) [Ex. 30.]

Statement of Wm. R. Smith, fifteen years a guide [supra]: "I know of men killing five and six a day with dogs, when the same men could not kill one a year in any other way." (Letter of March 19.) [Ex. 1.]

Statement of Sam Dunning, Essex county [supra]: "There are five killed by hounding where there is one killed by still-hunting. There are very few men that are good still-hunters. Any one that has a hound can get one now and then, when deer have been run hard." [Ex. 2.]

Statement of E. R. Wallace, of Syracuse, N. Y., author of "Wallace's Guide to the Adirondacks": "If hounding is again legalized the entire extermination of deer will be a matter of only a few years. Have hunted twenty-five years and observed that no way was so effective as hounding." (Letter, March 13.) [Ex. 30.]

In its effect upon the deer supply the killing of one doe is estimated to be equal to the killing of four bucks. (Dr. S. B. Ward, in letter in FOREST AND STREAM Feb. 18, 1886.) Hounding is indirectly more disastrous than other methods because of the deer killed by it a large proportion are does and fawns. This is consequent upon the nature of the method, which consists in tiring out the game so that it shall plunge into the water; the does and fawns being sooner exhausted, sooner seek refuge in the water. The bill now before you contemplates the hounding of does when burdened with the cares of maternity, and the starvation of suckling fawns deprived of their mothers.

Statement of Sam Dunning, Essex county [supra]: "Dogs will follow a doe at any time as well as they will any deer. My dog started a deer that was with her fawn. It was too young to run, and I picked it up and carried it home. There are more does killed in August than any other month." [Ex. 2.]

Sworn statement of Sam Dunning [supra]: "My dogs have driven very young fawns into the water. I have got them that would not weigh over twenty pounds alive and sold them. Most any dog can catch a deer when he gets tired from a long race. * * * When the deer was tired I have known deer driven into the water by dogs that could not stand up when they got ashore." [Ex. 2.]

Hounding is now more destructive than formerly (i. e., in proportion of game killed to game supply) because of the confined range of the game. By the extension of railroad and steamboat lines, growth of settlements, multiplication of hotels, felling of forests, clearing of woodland coverts, denudation of some feeding grounds by fires and freshets, and desolation of others by "back waters" of dams and reservoirs, the range of the game had become year by year more narrow.

For removal of forests and extension of denuded and water killed areas see Report of Forestry Commission [Ex. 25.]

Statement of Prof. E. L. Richards, Yale College, 25 years a visitor to the Adirondacks: "If, as was the case before the woods were so much frequented as they are now, an occasional pond only was watched when the dogs were out, there might be some reason in allowing a few days to be taken in this way. But now every pond is watched, and if the deer escapes one enemy he is certain to fall before one of the many others who are lying in wait for him. * * * If the New York Legislature allow the deer to be killed by dogs in obedience to the senseless clamor of a few dog-keeping guides and hotel keepers, they may enable said guides and hotel proprietors to take in a little money for a few years. But after a very few years the woods will be deserted by sportsmen because there will be no deer to kill." (Letter of March, 1885.) [Ex. 1.]

Sworn statement of Elijah Simonds [supra]: "It is the practice of some hotel keepers to get up a big hunt, take thirty or forty dogs and ten or fifteen guides, watch all the ponds and lakes, scatter the dogs through the woods and scoop in deer by the wholesale." [Ex. 21.]

Hounding is more destructive than other methods because the system entails the slaughter of game all the year around by the hounds, unassisted by human agency. The hounds

when put out for sport often overtake and destroy game without the hunter's knowledge; and in the close season they hunt and kill deer on their own account. This destruction is inseparable from the maintenance of herds of ill-fed deer dogs in a deer country.

Statement of Gen. R. U. Sherman: "A strong effort will be made at the present session of the Legislature to open a season for hounding, a season not as long as the old law provided, but yet one that will warrant guides and camp keepers in keeping hounds; and while hounds are kept it is not to be expected that very close adhesion will be made to seasons." (Letter of Jan. 19, 1886.) [Ex. 11.]

Statement of O. A. Batcheller, Commander U. S. Navy: "The owners of hounds * * * as a rule make no attempt to keep their dogs confined during the closed season. * * * Any one who knows anything of the hound knows that they will hunt by themselves. The reason is too obvious to need explanation. I have seen many of them. (Letter of Jan. 29, 1885.) [Ex. 16.]

Statement of R. M. Shuts, of Franklin county: "Hounds are allowed to run the year round. There is not a month in which you cannot hear the hounds baying; if not with a hunter, they are on their own hunt." (Letter.) [Ex. 15.]

Statement of R. M. Shuts, of Franklin county [supra]: "To-day (Jan. 15) I was shown the carcasses of two deer that were frozen in the ice near Ralph's Hotel. * * * They had been driven in by the hounds. * * * Three years ago I saw an immense buck driven into the lake three times in one day * * * in May. The last time he was led ashore by Col. Nichols, of Plattsburgh, ran through the hotel yard at Ralph's and into the marsh where I could not get to drive him to dry land. He died in less than an hour."—(Letter as above.) [Ex. 15.]

Statement of Elijah Simonds, near New Russia, Essex county; has hunted deer 40 years; has kept hounds and used them. "In traveling one-half mile on Cold Brook, I counted nine deer killed by hounds in March. Another time my dog got away from me, and in two days killed seventeen deer; this was in March. In my trapping excursions I have seen hundreds of hounds after deer in the winter and spring. These hounds were mostly hunting on their own hook. * * * As a general rule, after the lakes are frozen over the dogs catch and kill most of the deer that are shot. Owners of hounds that tie up their dogs have to let them loose once in a while for exercise. As soon as they get out they generally start for the woods and look for deer. Some men make no pretense of tying up their dogs in winter or spring. I have found dead deer killed by dogs in North Hudson, Elizabethtown, Blue Mountain Lake, Raquetteville, North Elba, Trapper's Lake, Long Lake, Saranac, Boreas River." (Sworn to before A. R. Dudley, N. P., March 13, 1886.) [Ex. 21.]

Sworn statement of Sam Dunning, New Russia, Essex county: "I have been in the woods guiding and hunting since 1850; have owned a good many hounds. I once got a hound that caught and killed five deer with my help. I followed on and got every one of them, there being about one inch of snow on the ground at the time. Before I got him he had a habit of staying in the woods and hunting on his own hook. * * * I have owned several different hounds that would very often catch their deer before they got to water, even in September. * * * That night the dog came back. In the morning I took a back track and found the deer dead on a mountain. The dog had eaten what he wanted from the hindquarters. Some dogs will eat a mile from the head of a live deer. I have caught them at it in the spring." (Sworn to before Stephen B. Pitkin, Justice of the Peace, March 12, 1886.) [Ex. 2.]

Extract from Gouverneur Free Press, March 3: "Last Wednesday afternoon a hound drove a two-year-old deer through the outskirts of the village and succeeded in catching it near the St. Lawrence Marble Co.'s quarry." (Vouched for by Prof. M. R. Sacke.) [Ex. 42.]

Statement of Bainbridge Bishop, Essex county [supra]: "I found three carcasses of deer that were driven into a small stream in March and April. I have seen deer after deer at all times in the spring and winter. Most of the people who keep hounds in the north of the Adirondacks make a practice of letting them run loose in the winter and spring." (Letter, March 12.) [Ex. 3.]

Statement of A. C. Clifton, of Warren county [supra]: "Last week (in Feb.) a neighbor of mine, while visiting his fox traps, came upon the trail of a bleeding deer which had evidently been followed by two dogs. Taking the trail he soon found where the final struggle had occurred. * * * Near the center of the circle was the half devoured carcass of a large doe. * * * I would like to show to every member of our Legislature the frozen body of this doe, as it lies with its two little fawns, and show through the gaping wounds, already large, the way on their road to life. I would willingly rest my case on their mute appeal for protection." (Letter of March 2.) [Ex. 3.]

Sworn statement of Sam Dunning, Essex county [supra]: "There is a set of irresponsible persons, both own hounds, and some of them expect them to get most of their own living in the winter, and let them run loose for this purpose." [Ex. 2.]

Statement of Squire Wilcox, an old resident of Indian River, Lewis county: "Have lived in border of wilderness for over 40 years, and while traveling through the woods in different parts, we have found numerous carcasses of deer that have been killed in this way of hunting with dogs. * * * My sons * * * come across two dogs with a deer in the road; the dogs had eaten the deer's hams nearly all out and the deer was still alive. I shot the deer and we found a large, noble buck. * * * that was killed by dogs, lay rotting." (Letter of Dec. 29, 1885, in Lowville Republican, vouched for by Ed. Rep.) [Ex. 17.]

Statement of J. H. Rushton, Canton: "The still-hunter kills deer, the jack-hunter kills deer, the boulder kills deer, but neither jack nor gun will go hunting on its own account, at any and all seasons of the year, if not securely chained. Only the dog does that; only the dog eats his victim alive." (Letter of March 1, 1886.) [Ex. 5.]

The numerous deer thus sacrificed to feed starving hounds are not the only ones that are wantonly wasted. Scores of carcasses of "run" (i. e., hounded) venison are necessarily thrown away as unfit for food because of the diseased and poisonous character of the meat.

Sworn statement of Samuel Dunning, of New Russia, Essex county, New York: "When deer have been run hard, the venison won't keep." [Ex. 2.]

Statement of Mark Smith, of Number Four, Lewis county, New York: "I have witnessed large parties in the woods who were taken down from eating hounded venison, and one man from Syracuse said he would give \$500 if he could be at home where he could see his friends once more and physician." (Letter of March 1, 1886.) [Ex. 38.]

Statement of William Hulbert, of Petrie's Corners, Lewis county, N. Y.: "Deers drove by dogs and hit, the meat is dark colored and is not so good as still-hunted venison." (Letter of March 4, 1886.) [Ex. 30.]

From a report by Dr. H. M. Detmers, member of the American Society of Microscopists, read before the society, August, 1885, reporting on beef, the eating of which had proved fatal. Extract: "Cases of frezzy occur quite often after cattle driven from the stock yards to Archer avenue, but the health officers seem to pay no attention to frezzy cattle, although they ought to know that the meat of a frezzy animal is sometimes—not always—exceedingly poisonous. So, for instance, there are many cases on record in which venison from a deer chased to death by dogs has proved to be poisonous." (Proceedings of the American Society of Microscopists, eighth annual meeting, Cleveland, O., Aug. 18-21, 1885, pp. 37-39.)

THE ARGUMENTS ADVANCED FOR THE LAW'S REPEAL.

The arguments advanced to justify the repeal of the anti-hounding law are here alluded to for the purpose of submitting such considerations as, we suggest, afford a sufficient answer to each.

The "Sportsmanship" Argument.

a. Advocates of hounding urge that it is "the historic and most sportsmanlike method of hunting deer."

Diver hounding, as conducted in the North Woods, is not historic; and the general sentiment of American sportsmen condemns it as unsportsmanlike and indefensible. A discussion of this point is out of place here. The economic phase of the subject is of graver importance than its ethical side. The law does not concern itself with a consideration of the sportsmanship or unsportsmanship of any mode of capture; it does concern itself with the preservation of an unimpaired deer supply, of which the citizens of the State, now and in the future, may enjoy the usufruct. It wisely provides that there shall be deer to hunt in such methods as may be compatible with the preservation of the parent stock.

The "Pot-Hunter" Argument.

b. It was alleged that the general sentiment of sportsmen

was in favor of hounding and that it was objected to only by those pot-hunters and still-hunters who desire to kill the most deer in the shortest possible time, for the few paltry dollars that their flesh and hides may bring. (Dr. Samuel B. Ward, in pamphlet sent to the Legislature, p. 5.)

Those who at first advanced this argument have since found ample reason for its withdrawal. If any doubt as to the character of the opposition to hounding still exists it may be removed by reference to the subjoined list of individuals and societies who hold the conviction that the repeal of the anti-hounding law will insure the early extirpation of the deer of the Adirondacks. [Exhibit 44.]

A canvass of the members of the Eastern New York Fish and Game Protective Association of Albany has shown that the members of that society regard hounding as follows:

Have no opinion	6
Uncertain	1
Decline to vote	1
In favor of hounding	6
Opposed to Hounding	58

Total number of replies received, 72; total number of members, 123. For mode of conducting canvass and for the returns, see Exhibit 27.

The "Shy" Argument.

c. That hounding was necessary to make the deer shy so that they might not fall into the hands of market still-hunters.

This position also has been abandoned. The facts are that the deer is naturally shy, that the use of dogs makes it not more, but less, shy of man; that in a country where deer are hounded, still-hunting can be practiced more successfully than in a district where dogs are not employed; and that professional market-hunters hound in the hounding season and then still-hunt on the same ground in the still-hunting season.

Statement of M. L. Fenton of Jamestown, N. Y.: "My camp [in the Adirondacks] was surrounded last November by men that hounded all summer long and had taken out of the woods several loads of deer driven to water by their dogs and killed. But they all stayed and still-hunted through the month just the same for all that. * * * They were good still-hunters and bagged as many deer as the best of hunters. That is just the mode adopted by the hounding fraternity years ago by those that followed it years ago in the State of Pennsylvania. They always hounded through the summer and fall months, claiming that it was the only way to get a deer, but they also came in for their share of the balance left upon snow, and usually succeeded in obtaining it. (Letter in FOREST AND STREAM.) [Ex. 36.]

John Dean Canton, L. L. D.: "The great characteristic of the Virginia deer is its natural wildness. 'Antelope and Deer of America,' p. 303, and C. Hart Merriam: 'A deer is always on the alert; his eye is good, his hearing acute, and his sense of smell developed to an unusual degree.' 'Mammals of the Adirondacks,' p. 112, J. J. Audubon: 'The timidity of the deer is such that it hurries away even from the sight of a child.' 'Vivaparous Quadrupeds of North America,' p. 222. Charles Halle: 'Deer stalking is simply man vs. brute, and requires all the strength, craft and coolness of the man before he can lay low the deer, who is possessed of a much keener sense of smell, immense speed, excessive nervous organization, and is ever on the alert to circumvent its human foe.' ('Sportsman's Gazetteer,' p. 86.)

Sworn statement of Elijah Simonds [supra]: "I don't think that hunting deer with dogs makes a deer shyer or more difficult of approach by the still-hunter." [Ex. 21.]

Statement of Hon. Geo. W. Palmer: "Now let me tell you a little incident that happened to me. * * * A party of four or five gentlemen went to the upper Chateaugay Lake; on a little island in the middle we camped. We had half a dozen dogs, half a dozen boats, and half a dozen guides. We spent the whole week there with our dogs, every day striking a fresh track—for six long days, and not a deer did we get. The guides said to us, 'Put your dogs in the kennels, and to-morrow we will have some sport and you will have some deer.' We followed their advice, the dogs we shut up. The next day we went to the shores of that lake still-hunting, and before noon we bagged seven deer." (Speech before the Assembly.) [Ex. 25.]

Statement of John D. Collins, Esq., Utica, N. Y.: "I found two persons who think dogs are good for deer preservation. * * * They both seem to think that deer merely trot along in front of the dog, quite unconcerned. * * * Such is not the case here, where a cross of the bloodhound is used. In such cases it is only a question of the life of the deer, or the dog, whether there be a hunter along or not." (Letter of Feb. 24, 1886.) [Ex. 23.]

Statement of Chas. H. Smith, Petrie's Corners: "I hear they claim deer are made shy by hounding. Once when I was driving the dogs drove a fawn into the water. The dog swam after the fawn. I rowed up to it and caught the fawn and put it in the boat, and I drove them off and [went] to shore with fawn. I let the fawn on the shore and kept back the dogs. The fawn instead of running away followed me to camp. The dogs were put away, and after a while the fawn left." (Letter of March 13, 1886.) [Ex. 6.]

Statement of Bainbridge Bishop, New Russia, Essex county: "I have spent most time still-hunting, but I killed double the number before dogs that I did still-hunting. There is not more than one year in three in which still-hunters can work to advantage, and only a few days in that year at the most." (Letter of March 12, 1886.) [Ex. 3.]

Sworn statement of Sam Dunning, Essex county, guide and hunter since 1840 [supra]: "I do not think that dogging makes deer shyer or more difficult to be killed by the still-hunters. * * * It is a good time to still-hunt when the hound is in the woods, because the deer are watching for the dog and do not notice the man." [Ex. 2.]

The "Market of 1885" Argument.

d. To support the "shy" argument it was alleged that an unusual number of deer were sent to market last season, so that the markets were glutted and the price was lower than usual.

This argument also has been perforce abandoned. The carefully ascertained facts are that the supply of Adirondack venison in market last season was less than usual.

UTICA.—The Slesding dealers received 59 saddles in 1885 against 82 of 1884. [Ex. 26.]
SYRACUSE.—Andrews Bros., contract price Adirondack venison in 1884, 10c. per lb.; in 1885, 12½c. Those Whitbread & Co. report "no material difference in prices" for 1884, 1885. W. J. Fage paid in 1885, 16c. [Ex. 12.]

NEW YORK.—D. Keary, Washington Market (largest dealer in venison in city), not more than 1/4 the amount received in former years. Drohan & Powell, 214 Washington street, received in former years Adirondack venison in lots of 25 to 50 saddles; received at no one time in 1885 so many as 5; total receipts very small. The firm would gladly see a law passed forbidding absolutely the transportation to market and sale of any venison killed in New York State at any time. French & Co., 180 Reade street, received no Adirondack venison at all in 1885. Knapp & Van Nostrand, 208 Washington street, report "none on the market this season to speak of, and we never want to see any; we would like to see the law forbid the killing and sale of New York meat." E. G. Blackford (State Fish Commissioner), Fulton Market, reports as his observation, less in market than ever before. [Ex. 13.]

Weekly venison quotations, New York market, as given by the *Producer's Price Current*, for month of December, 1883-'81-'85; prices are those paid by dealers to commission merchants; venison described as Western meat, or in some cases, is unidentified:

	First	Second	Third	Fourth	Average.
Saddles.	Week.	Week.	Week.	Week.	
1883.	12½@14c.	12½@13c.	12½@14c.	12½@14c.	12½@13½c.
1884.	12½@14c.	14½@15c.	14½@15c.	14½@15c.	13½@15c.
1885.	12½@13c.	12½@14c.	14½@16c.	12½@14c.	12½@14½c.
Whole.	First	Second	Third	Fourth	
	Week.	Week.	Week.	Week.	Average.
1883.	8½@9c.	8½@9c.	8½@9c.	8½@9c.	8½@9c.
1884.	8½@9c.	8½@9c.	8½@9c.	8½@9c.	8½@9c.
1885.	8½@9c.	8½@9c.	8½@9c.	8½@9c.	8½@9c.
Saddles in 1885 lower than in 1884, higher than in 1883. Whole deer in 1885 higher than in 1884 and 1883. The only quotations of "State" (or Adirondack) meat, given by the <i>Price Current</i> , for 1883-'84-'85 are as follows:					
	First	Second	Third	Fourth	
December, 1884.	Week.	Week.	Week.	Week.	
October, 1885.	13½@14c.	13½@14c.	13½@14c.	13½@14c.	
For verification of above and for quotations of venison for whole					

season—August-January, 1883-'84-'85—see file of *Producer's Price Current*, herewith. [Exhibit 14.]

The "Crusting, Jacking and Still-Hunting" Argument.

e. Much stress has been laid upon the alleged great destruction by crusting, jacking and still-hunting.

Crusting is now forbidden by law; its illicit practice will not be detected and punished by restoring hounding. Jacking will not be stopped by restoring hounding; neither will the dogs diminish the killing by still-hunting, save by the number of deer first killed by hounding.

The way to check destruction by jacking and still-hunting is to stop those two practices, not to add a third.

Your attention is invited to the significant fact that the bill now under consideration provides for greater license to destroy, but it makes no such compensating restriction. It does not contemplate the abolition of jack-shooting nor of still-hunting. Whether the bill does or does not become a law, the jacking and the still-hunting will continue. The numbers killed by these modes will not be decreased. To the deer, then, certain to be killed by jacking and still-hunting in 1886, the repeal would add those killed by hounding, i. e., it would double the destruction.

The "Guide, Hotel and Invalid" Argument.

f. That hounding is necessary for the support of Adirondack guides, in the interest of hotel keepers, for the diversion of invalids who sit on logs and listen to the dogs.

In no part of the North Woods are the guides dependent upon the revenue to be derived from hounding. They can find employment in other ways. The profit to them of hounding would at the best be temporary, for hounding would not last. The only reason why dogging parties now engage more guides and dogs than formerly is because the deer are so scarce that the doggers have to scour over more country to find them.

Hounding is not essential to the interest of the hotel proprietors; the tourists who frequent the North Woods, exclusively for hounding, are few in comparison with the total number of visitors. The only hotel keepers who ask for hounding are those in districts where the deer are so scarce that they can be secured in no other way. The use of hounds would enable these men to secure for their few rich city guests (who are at the bottom of this movement for a repeal) the last deer in their region.

Deer drives are not organized as medicine for invalids. Few invalids take part in dogging. Were deer dogging any essential element of the merits of the Adirondacks as a resort for invalids, not even then would it be wise economy to license hounding. After a few years of hounding there would still remain consumptives to be cured, logs for them to sit on, guns for them to hold, but no dogs to hear because no deer to drive.

Nor can we reasonably overlook the fact that other invalids and overworked professional men—lawyers, physicians, clergymen, teachers, business men and others—annually repair to the North Woods, attracted thither partly to find recreation, recuperation, and renewed health in the pursuit of deer by modes other than hounding. There will always be such visitors, so long as the game remains. Their claims for consideration—not less in future years than in the immediate present—outweigh the demands of those who ask extraordinary and temporary privileges, speedily ruinous in their operation.

The "Number of Participants" Argument.

g. It is alleged that more persons may participate in the hounding of deer than in the capture by any other method.

This is true in some cases; in others it is not true. For it should be remembered that the practice of deer hounding is not confined to any one class of hunters. It is followed by professional hunters, and in many instances the number of deer killed is very large in proportion to the numbers engaged in it.

Sworn statement of Sam Dunning, New Russia, Essex county [supra]: "Stephen Martin and I killed 32 deer at Clear Pond in one week with two dogs. They drove the deer into the water and we killed them there. In this joint hunt we divided over 80 deer skins that we got with dogs." [Ex. 2.]

Sworn statement of Elijah Simonds [supra]: "I have hunted deer for market. I and another man and three hounds killed ninety-six deer in one fall's hunt. We killed them by dogging near Scott's at North Elba. Two of us with two dogs killed forty deer at Schroon River in one month." [Ex. 21.]

In the summer it is true that, when the woods are full of tourists, it is the custom, upon hearing the hounds, to man all the waters in the vicinity with hunters armed with such weapons as may be provided. In this way many individuals do take part in the dogging. But under such conditions the capture of the game is assured; no water is unwatched; and it is manifest that just in proportion to the numbers engaged must be the speed with which the ultimate ruin will be accomplished.

At the very highest estimate, those who would be benefited by hounding, for the short time that the scramble for the game lasted, would be few compared to the hosts who will now and in future years be benefited by the permanent maintenance of the game supply.

Statement of E. L. Richards, of Yale College: "The men who generally kill the most deer with dogs are the men who live near the woods and who bring very little money into the woods and do very little there but to destroy deer and drink whiskey. That is the result of my observation of the men hunting deer with dogs. * * * Let the law against hounding continue and a man can go into the woods if he is anything of a sportsman, and kill what he wants to eat and have enough trouble to do it if he does it legitimately and not out of season, and the meat will be good. The men who bring money into the woods will come and the whiskey drinkers and the slaughterers who spend as little as they can and get all the deer they can without regard to their real wants, will stay away and New York State will be better off." (Letter of March 6.) [Ex. 1.]

The greatest good to the greatest number demands that the destruction of game be restricted within a bound commensurate with its power to recuperate. To that end hounding must be forbidden. If other modes must be stopped too, prohibit them as well, and stop all hunting for a term of years. That is the position held by the defenders of the anti-hounding law.

From the Utica Herald, March 13.

It is not easy to make a sportsman accept the arguments of the pot-hunters who are trying to create a sentiment against the anti-hounding law. There is not even plausibility to the theory that the use of hounds would be more preservative of game than still-hunting. Any one knows that more birds can be shot with a good bird dog to start them out or tree them. Any one should know that a deer can be started and secured with a dog when he could not be reached without one. It is not the intention of the law to make the hunting of deer impossible, but to make a wise restriction so as to guard against extermination, which the selfish sportsmen and pot-hunters disregard. The cut, which represents the very unsportsmanlike taking of the game with the aid of boats and hounds, is really no exaggeration. It is

only what a pot-hunter would do, and what a real sportsman would disdain to do. There is necessity for protective legislation, if we intended to protect the game and make the pursuit of it possible in our game preserves for years to come.

There is a spirit among real sportsmen which looks beyond the present, and that is highly creditable to them. It is hoped that this sensible view of the subject will serve as a foil against the attacks of the hungry crowd who wish to secure to themselves the butchery of game at the expense of true sport. If the Adirondacks are to be regarded as mere cattle yards for the keeping and slaughtering of venison, then let the scheme of pot-hunters go through. But even then a little common sense would suggest that some means be restored to keep up the supply, instead of using the chief means of extermination. The *FOREST AND STREAM*, a paper always found on the side of the sportsman's true interests, eloquently defends the present law, and sounds a note of warning which it will be well to heed. It is not without significance that the oldest and wisest guides of the North Woods are so strongly opposed to the efforts which would result in depopulating the forests of their most graceful as well as their most valuable game. The cut on our sixth page handsomely illustrates the situation which the deer hounders would bring about, and to which the opponents of the repeal of the present wise law are opposed. They are against slaughter of the deer, as such, in every form. There is a difference between hunting and slaughtering.

HUNTING AT ARMY POSTS.

Editor Forest and Stream:

Having had a longer experience with the game in this vicinity than any other officer at this cantonment I have been requested to reply to your inquiries.

No large game can be said to be abundant within less than fifty miles of this place, except during October, when hundreds of mule deer are crossing the Uncompahgre Valley within a mile of the post on their migration from the high mountain ranges forming the continental divide east and south of us to the Dolores and other lower valleys west and north of us. They are driven from the higher country by the first snow storms in October, and cross this valley by regular trails which date back to the time that this country was occupied by the Ute Indians. As proof of this, several Indian "platforms" are still to be seen in piñon trees overhanging these deer trails in the foothills on both sides of the valley. Most of the deer cross the open valley at night, consequently not very many are shot while crossing. A few small bands of deer remain in the wooded foothills within five miles of the post during the whole year, and some fifteen or twenty are killed every year within these limits by officers and enlisted men from the post.

The Springfield and other .45 calibre rifles are used for deer hunting. Deerhounds are not used. Stalking is the only method in use here. The mule deer's senses are very keen—especially his sense of hearing, and few men can hunt with sufficient care not to startle him by some unusual noise before getting within range. Consequently among our numerous excellent target shots who hunt deer very few are successful.

There are no whitetail deer in this vicinity. Judging from old antlers found in the foothills, elk were once common here. They are now extinct in all the country nearer than that hunter's paradise, the Grand Mesa, fifty miles north of us.

A few grizzly bears, called here "silver tip," have been killed within fifteen miles of this post, but they are rare. I have not heard of any of them exhibiting any special ferocity.

Two "mountain lions," that is the high sounding title given to the common American panther in this land of exaggeration, have been killed within fifteen miles of here in the past eighteen months. They seem, from the tracks seen, more numerous than the bears.

Mountain sheep, now protected by law, are found in the mountains thirty miles south of us. They are said to be quite abundant.

Antelope are said to be found about Grand Junction, seventy miles northwest of us; I have heard of none nearer.

Of small game only cotton-tail rabbits are abundant. The Springfield 20-gauge shotgun (.61-caliber and not .20-caliber as some of your articles have made it appear) is well adapted for rabbit shooting, and many rabbits fall victims to it almost daily, from July, when the young rabbits are old enough to eat, until April, when they begin to breed. These rabbits, with an occasional deer, constitute the only noteworthy addition to the food supply of the command that is contributed by the game of the vicinity.

Jack-rabbits are much less numerous than the cotton-tail. The jack-rabbit of Colorado seems to be the same as the great northern hare. It is gray in summer and white in winter, a very different animal from the jack-rabbit of California that remains brown at all seasons. Unless one can appreciate a strong wild flavor he had better not attempt to eat a jack-rabbit.

Ducks, mallard, teal and a brown duck of undetermined species, pass over in autumn, and a few small flocks stop on the river near the post. Some are killed, but no large bags are made. The Springfield shotgun is a poor gun for ducks. The more successful duck hunters use 10 and 12 gauge double guns. Sandhill crane and a few English snipe are sometimes seen here.

The only other game birds are grouse. These are more remarkable for variety than numbers. They are rapidly decreasing. Sage grouse have been shot occasionally within a few hundred yards of the post, but they have become very scarce.

Ruffed grouse, also called pheasant grouse, are occasionally found in pairs in the piñon and cedar woods on the foot hills near the post.

Willow grouse are more abundant. They are found on the higher grass-covered slopes from ten to fifteen miles from the post. Blue grouse, called also spruce grouse, spruce partridge, Canada grouse and, in Utah, foal hens, are found on the same slopes in summer and early autumn and higher up in the spruce timber in winter.

This is decidedly the finest table bird of the grouse family, but it should be drawn instantly on being shot, otherwise it acquires a disagreeable flavor from the spruce needles in its crop and gizzard. The sage flavor of the much underrated sage hen can be almost entirely prevented by the same precaution. This bird, by the way, has no crop, but its large gizzard will be found stuffed full of sage leaves so-called, the "sage bush" is really a wormwood.

Ptarmigan, called here mountain quail, are shot in the high mountains around Ouray thirty miles south of us. A

very few upland plover are shot here in the spring. This about completes the list of our game birds.

I have not heard of any wild turkeys being seen nearer than Fort Lewis, ninety miles north of us; nor of any quail in Colorado except where they have been introduced in the eastern part of the State. There are no prairie chickens in Western Colorado.

Brook trout of fair size, one half to two pounds, are caught in the Uncompahgre River and its tributaries. They are not abundant. A dozen fish is here considered an unusually good basket for a day's fishing.

J. C. WORTHINGTON, Assistant Surgeon, U. S. A.

CANTONMENT ON THE UNCOMPAHGRE RIVER, Colorado, March 11, 1886.

CLUB RULES.

FOLLOWING is the organization of the Beaver Dam Ducking Club:

Its purposes are to afford opportunity to its members for healthful recreation and occasional relaxation from business care and pursuit, and to cultivate gentlemanly intercourse and pleasant social relations.

I. The domicile of the club shall be in the city of Memphis, Shelby county, State of Tennessee; its club house or shooting lodge on Beaver Dam Lake, Tunica county, State of Mississippi.

II. Its membership shall be limited to thirty-eight active and five honorary members.

III. The officers of the organization shall be a President, Vice-President and a Secretary, who shall act and discharge the duties of Treasurer.

IV. There shall be an Executive Committee, consisting of the officers and two members, elected at the annual meeting of the club.

V. The President shall preside at all meetings of the club, call special meetings at the request of three members, or when, in his judgment, the interests of the club require it; and he shall also exercise a general supervision over the affairs of the club.

VI. It shall be the duty of the Vice-President to discharge the duties of the President in his absence or at his request.

VII. It shall be the duty of the Secretary to keep a record of all meetings and transactions of the club; collect dues and assessments; keep and have possession of all papers, funds and property of the club. He shall pay all bills, when approved by the President, conduct all correspondence, and as the agent of the Executive Committee employ, control and discharge all employees of the club.

VIII. The Executive Committee shall alone authorize the expenditure of the funds of the club (except the ordinary current expenses), employ and discharge the assistants at the club house; and make such club house rules as may be necessary, which shall be posted in a conspicuous place in the club house.

IX. It is the duty of members to attend all meetings of the club, and to observe all rules while at the club house and shooting grounds; report derelictions on the part of employees to the officers; pay promptly the club house charges, and manifest due consideration for the pleasure of the less experienced members.

X. Honorary membership shall be conferred on those only who have become distinguished in field sports, or have made liberal donations to the club, and they shall be elected by a unanimous ballot.

XI. The privileges of the club may be extended to persons who have placed the club under obligations for favors, courtesies, etc., and to ministers in charge of congregations.

XII. The election of officers shall take place, by ballot, at the annual meeting, on the first Monday in September.

XIII. The Executive Committee shall prepare and submit to the club an estimate of the annual expenses, each and every year, at the annual meeting in September, and no other assessments shall be made during the fiscal year for which the estimate is made, unless authorized by a majority vote of the active members of the club.

XIV. No member shall have any right to or ownership of the property of the club; and on termination of membership, all his rights, privileges, etc., shall cease.

XV. All applications for membership shall be indorsed by two members of the club, and presented at a regular meeting, or at a special meeting called for the purpose, after ten days' notice given by the Secretary to each member; and it shall require a unanimous ballot to elect.

XVI. The initiation fee shall be \$100.

XVII. Failure to pay dues or assessments, after thirty days' notice by the Secretary, shall forfeit membership, without further action of the club.

XVIII. The privileges of the club can be extended only to non-residents of Shelby county, State of Tennessee, except as hereinbefore provided. No member shall be permitted to invite more than one guest at any one time.

XIX. All club house rules promulgated by the Executive Committee shall have the same force and effect as if ordered by the club, until rescinded by resolution of the club.

XX. For any violation of the rules of the club or of the Executive Committee, or for any conduct unbecoming a gentleman and sportsman, a fine of twenty-five dollars shall be imposed for the first offense; and for a second violation of any of the rules after said, the member shall be expelled, and forfeit all rights, privileges and interest in the club.

XXI. The Executive Committee shall employ a manager, who shall reside at the club house, whose duty it shall be to keep the same clean and in order and the boats secure and in good condition; prepare meals; secure paddlers for members and their guests, and care for and exercise a general supervision over the property of the club at the lake, and report promptly the flights of game.

XXII. The charges for meals at the club house, and hire for the paddlers, shall be fixed by the Executive Committee.

XXIII. It shall require ten members to constitute a quorum for business. A majority vote of the entire membership of the club shall be necessary for the expulsion of a member.

XXIV. Members of the club shall be held responsible for the conduct and expenses of their guests while at the club house.

XXV. It shall be the duty of the Executive Committee to prefer charges against any member for a violation of the rules of the club.

XXVI. A register shall be kept in an exposed place at the club house, in which all members and guests shall register their names, date of arrival and departure.

XXVII. The election of persons to membership in the club, or for the expulsion of a member, shall be by secret ballot.

XXVIII. No member shall claim or have exclusive use of

any convenience or fixture on or about the lake; except, that he may provide his own boat.

XXIX. ORDER OF BUSINESS. 1. Roll call. 2. Reading minutes of previous meeting. 3. Reports of committees. 4. Miscellaneous business. 5. Election of officers. 6. Adjournment.

XXX. These articles may be altered or amended at any meeting of the club by a three-fourths' majority of those present.

HABITS OF THE RUFFED GROUSE.—Brookfield, N. Y.—Before market hunting became profitable and the sportsman, so called, became the "pot-hunter," grouse were of the more stay at home kind, inhabiting the same thicket year after year; or you could always flush him down near the swamp where the young cedars and hemlocks are the thickest. I have crept up quickly and cautiously, parting the branches noiselessly, have seen the grouse in its home just in front of me on the south side of an old rotten hemlock log, half buried in the soft, rich brown decayed bark and wood, basking in the mellow summer morning's sunshine. I have watched the mother grouse with her covey of thirteen, unconscious of the picture she formed. For three consecutive seasons an old ruffed grouse reared her brood in the same place. Could I be mistaken in the identity? I think not, so many times have I flushed her, always within a few yards of the decayed hemlock, just thirty-six paces from the spring-hole. You may ask if my gun ever came into position—but fingers that were trained to unloose those hammers became motionless. Hunting one day in the vicinity I came around to that charmed spot. Down near the spring-hole in the soft ground were the foot prints of man and dog. Too well I knew the story.—A. C. M.

SWANS IN THE NIAGARA RIVER.—Ten large wild swan were discovered swimming in Niagara River, just below the falls, at an early hour yesterday morning, some of them apparently in a wounded condition. Mr. Frank Nasoiy, Jr., of this village, succeeded in capturing one of the beauties.—C. E. LEWIS (Suspension Bridge, N. Y., March 21).

A WHITE QUAIL.

Editor Forest and Stream:

Immediately after my arrival here early in January, I was informed that a covey of quail habituated in a certain locality, which among their members contained three pure white birds. A sportsman of the neighborhood who knew the country well, very kindly consented to escort me to the ground so soon as I had got my puppies sufficiently under control to be of much service in the field, neither of them—five in number—having ever seen a game bird before reaching this place. After giving them a little work and having them under fair command we started over to the neighborhood the birds were said to inhabit, and after a thorough search were disappointed in not finding them, although seeing a number of coveys and making a nice bag. As time wore on my anxiety to at least see those birds increased, as I could still hear of a white quail being seen by the negroes; the three being now reduced to one. After repeated trials first with one brace of dogs, then with another, and always finding fair shooting and no white birds, I concluded that either there were no white birds at all or I was on the wrong grounds. Meeting with a sporting doctor of the place he stated to me that he knew exactly where they were raised and proposed that we should go over and have a day's shooting and include this field in our beat. Soon afterward, on a beautiful clear morning we were on the ground and cast the dogs off in a field of cotton stalks and patches of sedge grass in a different locality from that in which I had formerly looked for them. He was hunting a dropper, an excellent dog, while I used Maceod, a young setter by Knight of Snowdon out of Ailsa. His dog had the advantage on coveys while Mac was the superior on single or scattered birds. Nearing the close of a fine day's shooting it again looked as if we were doomed to disappointment even with the negro for our guide who said he had frequently seen the white partridge, when, being some distance from the others and divided from them by a small strip of woods, I heard both barrels go off in rapid succession and then a loud hallo for me to come over there. On going over I learned the doctor had really got up a small covey, and among them the white bird, and the last they had seen of it, it was going over the top of a tall tree away off in the woods. A fruitless search among the dry leaves failed to discover it, and being late we started for home, mortified on my part that I had failed to see the curiosity, but thinking earnestly of to-morrow and what dog or dogs I would take in pursuit of it. My pet Shela was a little sick and off his feed. Mac had had a hard day of it and would be a little stiff in the morning, but there was Prime, a noble and worthy son of the illustrious Druid, and Ben, litter brother to Shela and Mac, both fine rangers, staunch before or behind as anything can be, with excellent noses, and level heads.

The next morning looked threatening for a storm, but off I went, and after a brisk ride of three and a half miles, when nearing the place where the white bird had been sprung the previous evening, I cast off the dogs. Prime was to the left and going with a long, raking, easy stride, with head finely carried when he suddenly wheeled into the wind, crouched, then advanced a few steps and was rigid. Ben, off to the right, saw him instantly and was firm as a statue. Without speaking to the dogs and riding my horse some distance into the field and tying it to a bush and inserting shells into my gun I returned and walked past Prime when up sprung a half dozen quail and among them the white bird; a brown one dropped to the first barrel and the white to the second, a real little beauty. After bagging sixteen more birds and two hares for the negro into whose stable I had put my horse, I got back home just as the rain began to sprinkle, delighted with my prize.

JOHN DAVIDSON.

MARSHALL COUNTY, Miss., Feb. 24, 1884.

A MODEST WOLF STORY.—Lawrence, Kas., March 8—Recently a farmer living in the southern part of this county came into the city with the report that he had discovered a cave on his farm that was inhabited by prairie wolves, and from what he could find out they amounted to about 300. He had killed a few, but they would not come out, and he was afraid to enter the cave. Preparations were at once made to raid the den. A large party arrived at the place yesterday morning and turning the dogs loose, one or two of them rushed into the cave and were at once torn to pieces. A force of men then began operations and in a short time had a hole into the cave, back of the wolves. Two men entered, and all the dogs that could be found, and advanced on the rear of the mass of animals, who had by this time assembled in the front part of the cavern. The dogs became frightened and beat a retreat, and the men, after firing a few shots also got out. After an all-day's skirmish, the hunters decided to make a dash and drive out their prey and kill as many as possible. All drew back from the front and kept quiet, and two men again entered in the rear. This time they succeeded in causing a stampede, and in a short time the cave was empty. The shooters did some good work, and by the time they were through about 100 dead wolves strewed the ground. The others escaped, and the party returned minus four dogs. A grand hunt is proposed. It is supposed the animals wintered in the cave.

Sea and River Fishing.

NEW ENGLAND ANGLING.

APRIL 1 the trout season will open in Massachusetts. In this State prospects are not flattering for the early catch, since the streams, in the northern towns at least, are likely to be locked in ice. But trout will be in market lawfully, and that will be satisfactory to the marketman and the gourmand. By the way, how curious it is that the fish markets all have trout on their stands on the morning of April 1, when the law says plainly that there shall be no having in possession previous to that date. Some trout must be caught very early in the morning, to say the least.

"But," remarked the owner of a fish market on that day last year, when asked how he came by trout which had been dead a week, "the law isn't designed to prevent our having trout for sale April 1, but to prevent early fishing and protect the fish." Very good. The fish must be taken unlawfully, else they cannot be for sale the moment the law is off. But it is the marketman who must be favored under all fish and game protective laws, and it is the marketman who is fast driving the last shadow of the best fish and game out of existence. When will the public come to understand this?

In Maine there is a vast body of snow—greater than usual at this season. The last storm—rain on the seaboard—added to the already heavy quantity of snow in the interior. The chances are that the opening of the trout season in that State, May 1, will find the ground partly covered and the streams full of ice and snow water. In the Androscoggin Lake region, it is not easy to indicate prospects thus early, but there are great trout expectations. A number of Boston sportsmen will be "on the wing" the day the telegraph says "The ice has gone out." A party of three or four Boston merchants propose to make a novel trip "to the fishing grounds" this week. They will go by sleigh, not to fish, but just for the novelty of riding down Ogunassack to the camps, on the ice.

By the way, the rebuilt Upper Dam puts the flowage of Mooselucmagantic Lake some four feet higher, and some of the camps are being moved back. The most of the camps on that lake, however, will be "high and dry." What the new flowage will do for the fishing is a question. At Trout Cove it will doubtless be better, since it has always required moderately high water to bring success at that well-known point. When Richardson Lake—the lake below the Upper Dam—was raised eight feet by the rebuilding of the Middle Dam six years ago, it was followed the second and third years by remarkably good fishing. It is concluded that flowage creates new feeding grounds for trout, but breaks up spawning beds. At the Upper Dam itself there has been no fishing for two seasons. The repairing, begun one year ago, caused the drawing off of the water and the shutting of it off by coffer dam at Trout Cove, so that visitors there last season found the bottom dry where the rushing pool used to be, and a lot of logs, dry enough to burn, at the very spot where the celebrated eleven-pound trout, the largest true *Salmo fontinalis* on record, was taken six years ago.

A recent letter from the superintendent says that the repairs at the Upper Dam will be about completed, and the water, unobstructed, turned on by the beginning of the fishing season. What the long-continued holding back of the water at this point has done for the fishing remains to be told. One experienced sportsman suggests that since "trout always go up stream in the fall and down stream in the spring," there will be no fishing below the new dam, but it will be as good as ever above it. Another theory is that the trout will follow the minnows up from Richardson Lake below the same as usual, but that there will be no fishing above the dam. Probably the true position is that the trout have been driven away and much disturbed by the long absence of water, and it would be singular if they got back in as great numbers as usual in season to be caught this spring.

The popularity of steam launches on the Androscoggin lakes is great. Capt. Fred Barker adds a new steamer to the Mooselucmagantic fleet this year. Messrs. Betton & McKane have put a nice little steamer on Richardson Lake. This makes five steamboats in all on that lake—three private boats and two public. Alas! for the march of improvement. It builds dams and cuts down the forests. Row boats are too slow, and the camp must give way to the hotel and the summer cottage. This march of improvement is like the coming of old age. Both are determined to end our sporting days, and it is sometimes a question which will first succeed.

SPECIAL.

A LARGE TROUT.

Editor Forest and Stream:

Mr. Green, of the city of New York, caught at Sault Ste. Mary, on the 20th day of June, 1845, a speckled trout (*Salvelinus fontinalis*) that weighed on a pair of balances, used in a store, just twelve pounds. It caused considerable excitement at the time. Old resident fishermen of the Sault declared that it weighed a little over two pounds more than the largest that ever before was caught to their knowledge. This was the only fish Green caught that day. He started back to New York with his monster. I was with him when he caught the trout. It was taken near the Canada shore just at the foot of the falls, in a whirlpool caused by the obstruction of a large rock.

As this all happened over forty years ago, I cannot at this day give you Mr. Green's initials or address. I did not know him very well; we were guests in a tavern kept by a Mr. Fowler and there was no register kept at his house. At Mr. Green's request, I accompanied him in an Indian bark canoe. We paddled as near the falls as possible, where he made numerous casts which were unsuccessful. We then landed on the Canada side; he opened his book of flies, which I viewed with pleasure, as it was the first fly-book I had ever seen. He selected a fly of medium grade, I think he called it a "drake," and took his position on a projecting rock which stood at a point where the water was boiling and whirling over a sunken rock, which slightly projected above the angry falls. I had left him and gone a short distance into the woods in search of flowers when I heard him shouting for me to come and assist him, as he had hooked a whale. When I came in sight of him his rod was bent into an irregular ellipse, the line, about twenty feet long, was stretched out to its full extent. Of course, I gave him much unasked advice, how to keep away from the rocks, how to work his fish as far down stream as possible, etc. Finally I got into the canoe and went to his assistance. After

keeping up a steady strain on the line, the fish began to show signs of weariness from its great efforts. I had a landing net ready, and as soon as the fish approached the boat, I slipped it under him, and came near going into the water instead of taking the fish out. The battle occupied fully fifteen minutes at least, although it seemed to be much longer, and Mr. Greene was in a violent perspiration. After the capture he took the evening boat for Buffalo, which in those days occupied much time on the trip, and as there was no ice at the Sault, I had fears that the trout would not reach New York in good condition.

If Mr. Greene is still living, I am in hopes he may see this article. P. R. HOV, M.D.

RACINE, WISCONSIN.

ANGLER, GUIDE AND TROUT.

A NEW YORK man went with his guide to Brandy Point in 1885 to catch trout. After much laborious sitting still the guide managed to hook on the end of a hand line with a struggling worm for bait, an enormous trout which weighed ten pounds and a quarter. When the fish had been safely landed and incontinentally knocked in the head with a club, the unsuccessful but ingenious angler looped a gaudy "toddle bug" fly upon the end of his line, and fastening the hook in the mouth of the gasping fish, he bent his rod double by the strain he put upon it. Upon reaching the Mooselucmagantic house where he lodged for the time, the angler told how the big trout had been caught upon the toddle bug fly and had bent double the plant rod, but he did not remember the guide nor the headline nor the worm. When, however, the New York angler had returned to his home and had put the big trout and the toddle-bug fly in a glass case, the guide remembered the rest of the story and made merry over it.

This fable teaches us how New York can give points to the rest of the country in capturing big Rangeley trout, but it also teaches us that the angler should first set it up with the guide before extolling the gaudy fly at the expense of the humble but industrious red-worm. A. MORCE.

A GAME CATFISH.

Editor Forest and Stream:

I have just been reading the "Adirondack Fishes" and the work has interested me very much. I must differ from Mr. Mather concerning the edible qualities of the black bass, as I am fond of them, but no two persons agree upon tastes and relative value of foods, yet I appreciate with him the common catfish of the East, *Ameiurus catfish*.

There is one of the cats, however, which is very much better; this is the Southern channel cat, *Ictalurus punctatus*, of the South, west of the Blue Ridge—not to be confounded with the catfish, also called "channel" found in Pennsylvania, Virginia, etc., *I. albidus*. The *punctatus* loves clear running streams and likes a bottom of stone or gravel. It is an excellent table fish, and I think is one of our most valuable fishes. It is very gamy and rises splendidly to the fly, and shows, I think, as much and even more fight than some trout. Many, I may say most, people in the Eastern States do not know that this is a first-class game fish, and by first class I mean one that takes the fly finely and fights well. Though mostly fished for with bait, these cats rise splendidly to the fly and are full of game. I have heard of many being caught in Texas with the brown hackle, but I have never been successful with it and have always found a gaudy, bright black bass fly was better. The best fly for these cats is made with a white body. A fly which I have never been able to find in tackle stores, or in dealers' lists, but which is used in the South as a home-made article, is one of the best flies for this fish. It has red wings, white body, white hackles (deer tail hairs) and a black head, like the heads on some of the salmon flies.

The cat in question I believe grows to the weight of thirty pounds—Jordan says twenty to twenty-five pounds—I have never seen them of over eighteen pounds. I cannot help ranking this fish far above the mascalonge and the lake trout, for the deep trolling, spoon trolling and bait fishing these two fish require seems like inferior sport, and any fish that has to be taken in these ways is much below a fish that takes the fly as does this cat.

Unfortunately many good anglers are but poor naturalists, and are not accurate observers of the differences of fishes. This has caused many people in the East to confound and mix up all the catfishes. In their minds a catfish is a mud-loving beast, and the common horn-pout represents to them the whole tribe. I have been surprised at the ignorance existing on this point in the East. I have found skillful anglers and intelligent men who thought that the horn-pout, the great Mississippi cat and one or two others comprised the whole family. They tarred all with the same stick, and thought all the cats had the same habits, tastes, etc., the fundamental axiom being that they all loved mud, were coarse fish, exclusively bottom feeders, and not game. Now all this is very wrong, of course. According to the latest list of North American fishes—published last year, 1885—there are thirty-one species of catfish, divided into seven genera, north of the Mexican line. They differ much in their habits. For instance, the two members of the genus *Ictalurus*, to which the channel cat belongs, love clear water and stone or gravel bottoms, while the *Ameiurus*, certain members of which are the most known to Eastern people, love muddy streams and sluggish water. It is this genus, *Ameiurus*, that has thrown odium on the whole family.

Let me quote from Prof. Jordan, the great ichthyologist, whose opinion on a fish is certainly entitled to consideration: "The flesh of the channel cat when fresh is very superior; it is white, crisp and juicy, of excellent flavor and not tough. When well cooked I consider it superior to that of the black bass, the wall-eye, the yellow perch, or any other of our percid fish. Among our fresh-water fish it is inferior only to the whitefish, the trout, and other *Salmonidae*. The channel cat abounds in all flowing streams from Western New York westward to Montana and southward to Texas. It is perhaps most common in Tennessee, Arkansas and Missouri. It seems to prefer running waters, and both young and old are most abundant in gravelly shoals and riffles. * * * I have occasionally taken channel cats in ponds and bayous, but such localities are apparently not their preference. They rarely enter small brooks, unless these are clear and gravelly. Whether they will thrive in artificial ponds we can only know from experiment."

The channel cat is, as I have said, a southern and western fish, and is found from Montana to Mexico, and to Georgia. On the east it seems to be limited by the Blue Ridge Mountains. Prof. Cope, in his "Fishes of North Carolina," says that the channel cat is only found west of the Blue

Ridge, that is, in the streams flowing into the Tennessee, and so eventually into the Gulf. East of the Blue Ridge another genus of cats—the *Ameiurus*—takes its place. This genus is very different, however, in its habits, haunts and value, either for food or game.

Like many other fishes the channel cat is generally fished for with bait, by those who know of no other way, but it is a first-class fish for the fly-fisherman. CYRTOXYX.

BLACK BASS ANGLING.

Editor Forest and Stream:

Your correspondent "F. W. O.'s" inquiry as to the advantage of using two hooks for bass, and Mr. Leopold's reply in last week's issue have been noticed. My own experience in fishing for black bass (small-mouth) has been confined to still-fishing in the lakes of New England, and principally in New Hampshire, and during a period of several years I have caught a great many. I have used two hooks and sometimes three, but have finally come to the conclusion, based upon my experience, that more fish and larger ones can be caught with a single hook than if more are used. Perhaps in running waters the multiplication of hooks would be an advantage, and the greater display of tackle be a less serious matter than I believe it to be in still lake fishing. I have tested the matter until I am convinced that there is a disadvantage in using several hooks in still-fishing, even though different kinds of bait be used on each hook. I have often used two rods, one having a single hook and the other two or more, and while the fish would freely bite at the single hook, they passed the other assortment of hooks and baits, although one of their number might be baited with the same kind of bait as the single hook. I do not mean to say that they would never bite at the gang of hooks, but my success with a single hook has always far exceeded that when more were used. This in still-fishing from a boat. In running water or in rapids, where the water is constantly in motion, the extra hooks may be of advantage, as the extra display would be less likely to be noticed by the fish than when used in lake fishing, for bass are often very capricious, and although many are caught with coarse tackle, heavy lines without any leader, yet so far as my observation has extended, through several successful seasons, the finer the tackle used and the less display in the water made by the tackle, the more successful has been the result.

Using but a single hook does not by any means prevent the use of a variety of bait, a half dozen kinds can be tried until the right kind is found, if necessary, and if the bass are in a biting mood it will take but a very short time to meet their requirements in way of bait, if it is at hand, "but if they won't bite they won't, you may depend on it." Days there are when, no matter how varied or enticing the display of bait, the prince of game fishes will not be persuaded, days, too, that seem to the fisherman most perfect for the sport. Many a time have I watched them in the clear waters of the lake—big fellows that fairly drove one wild in his desire to hook them—lazily swimming about, and occasionally approaching the baited hook and, stopping within an inch or two of the tempting morsel, suddenly whisk their tail and slowly turn away. Days like those, of course, when the surface of the water is calm, are not the best for bass fishing.

If "F. W. O." fishes in still water, let him try the experiment next season of fishing with two rods, the one having a single hook, the other more, using same kind of leaders and hooks on both, and I think he will become convinced that the rod with a single hook will kill more pounds of fish than the other in the same day.

The note from "B. O. B.," Kalamazoo, Mich., in FOREST AND STREAM Jan. 21, in which he says bass are being caught through the ice there this winter, reminds me of a big one (small-mouth) I caught a year ago the present month in Rockingham county, N. H.

I was fishing for pickerel through ice eighteen inches thick. It was early in the morning, having set my lines the day before, I was that morning rebaiting the hooks. It was exceedingly cold, and nearly three inches of ice had formed in the holes during the night. I had set one line about a hundred and fifty to two hundred feet from shore in water some thirty-five feet deep, where I frequently caught a big perch. I had just put a good-sized live minnow on the hook and before it had sunk many feet something seized it and started in a hurry toward the north pole, and in less time than it takes me to write it had taken out some fifty or sixty feet of line, and I thought it about time to have a hand in the business. I struck—what I could not tell—but something that made things lively for a time. I pulled in the fish, and to my surprise landed a black bass that weighed nearly four pounds (3lbs. 14oz., ten hours later). It was a female, in good condition, and contained good sized roes. I know that several large bass have been caught from the same lake through the ice in mid-winter.

I also notice in a New Hampshire paper received to-day the following: "A black bass weighing seven and a half pounds was caught through the ice in Sunapee Lake a few days since."

If the bass do hibernate, as claimed by Dr. Henshall and others, there are many exceptions to the rule. NOIXOE.

KANSAS CITY, Mo., February, 1886

THE "ICEFISH" OF LAKE CHAMPLAIN.—Editor Forest and Stream: I send you to day some specimens of the so-called "icefish" from Lake Champlain, and should like to know what you determine them to be. If an *Osmerus*, as you suggested in conversation a while ago, what species? I send them as I received them, without examination.—PETERA. [The fish were smelts, *Osmerus mordax* (Mitch.). Gill. They were too far gone in decomposition to determine whether they might be either of the two varieties from Maine lakes, recorded by Jordan and Gilbert—"Synopsis of the Fishes of North America"—or not. Had they been packed in ice, this point might have been determined.]

BASS FLIES FOR MINNESOTA.—Casselton, D. T., March 15. —Will some of the "brothers of the rod," who have tried the fly for bass in Minnesota waters, be kind enough to give me some hints as to what they found to be the most taking "bugs" for those waters? I tried, in a casual way one day last summer, a gang composed of the oriole, Cheney and Seth Green, but found no takers.—H. P. UFFORD.

NORTHERN WISCONSIN.—Eagle River.—This part of northern Wisconsin, on the Wisconsin and Eagle rivers, is a prime fishing country. Muskelonge, lake trout and other fish are caught in profusion. Deer are found and trapping is done near here.—T.

THE CATFISH AS GAME.—We have on several occasions printed letters from correspondents which stated that a catfish had taken an artificial fly. This was regarded as a sort of accident, or in the light of unusual conduct on the part of the catfish, who instincts seldom incline him to such trivial things as flies, but rather incite him to search for both the early and the late worm upon the bottom. Now comes our valued correspondent "Cyrtonyx," who tells us, in another column, of a genus of catfishes which rises like a trout to the lure and fights like a black bass. We know that the writer of the article is an accomplished fly-fisher, who seldom or never uses bait, and is possessed of more ichthyological lore than most anglers dream is known to any man, for the average angler is content to angle and to know a trout from a bass by its general appearance, without burdening his head with such trifles as which has spinous fins or teeth like bristles. Therefore, we commend the observations of "Cyrtonyx" and endorse him as one who knows of what he speaks. By a happy coincidence, Mr. John Davidson, of Monroe, Mich., dropped into the office while we were reading the letter referred to, and began relating what a beautiful, gamy-looking catfish he saw in Spring River, south of Kansas, in the Indian Territory, while down there working his dogs recently. He said that he saw many caught by boys with bait in clear, rocky streams, and that the fish was as shapely as a mackerel and looked as gamy as a trout. His description of the spotted sides agreed with that of *I. punctatus*. Here is a chance for fishculturists.

LARGEST RANGELEY TROUT.—Boston, March 20.—*Editor Forest and Stream:* In your issue of March 18, George Wild calls upon "Stephen Morse, Lawrence Sargeant, Marshall Whitney, and all good honest guides" of the Rangeley Lake region to send in their records as to the largest trout (*Salmo fontinalis*) ever taken in Rangeley waters. In this connection I would like to say that one of the Rangeley guides, Capt. Barker, well-known in Boston for his annual visits and his addresses before the boys of the Chauncey Hall school, gave an address one evening in the winter or spring of 1885, before the Appalachian Mountain Club. At that meeting, in answer to a question from me as to the very largest square-tailed or speckled trout ever taken in Rangeley waters, he stated that the very largest of which there was undoubted record weighed thirteen pounds and some ounces. The exact ounces I do not remember, but am positive that the weight was over thirteen pounds. Will not Capt. Barker repeat his statement to **FOREST AND STREAM** for the benefit of Mr. Wild and all interested?—C. H. AMES.

THE NIAGARA COUNTY ANGLER'S CLUB has been organized at Lockport, N. Y. The officers are: President, David Millar; Secretary, Wash. H. Cross; Treasurer, J. E. Emerson.

Fishculture.

SHORT LOBSTERS.—Recent developments show that the catchers of short lobsters along the Maine and Massachusetts coast have really got themselves into deeper trouble than at first appeared. A recent letter to Deputy Commissioner Shattuck shows that the fines imposed upon one man in Portland amount to over \$1,000. That number of lobsters under 10½ inches in length were found in his possession, and the statute of that State imposes a fine of \$1 each. This man swore that a car containing about half these lobsters were the property of the man who had loaned it to him, and that he had no knowledge of the lobsters in it. But the commissioners say that they shall have no difficulty in proving that the key to the car was in the possession of the man under arrest. They have other cases against him, and they say he will have to give up the short lobster business. At this end of the line a good deal of work is being done. A private detective is employed, and as the appropriation by the State is insufficient, the Massachusetts Fish and Game Protective Association is paying the bills. Its members are determined that the most valuable crustacean on our coast shall be protected to the extent of the statute at least. But the waste from canning is the worst feature. In Maine it is lawful to take lobsters down to nine inches in length during April, May and June for canning. This special privilege, Commissioner Counce writes, will be seriously opposed at the next session of the Legislature of that State. The lobsters are canned for the foreign trade chiefly, since canned lobsters are not popular, even in the West. An earnest endeavor will also be made for lobster protective laws in Rhode Island and Connecticut, since Long Island Sound, one of the best lobster grounds in the country, has been almost depleted by wasteful and indiscriminate fishery. Here the lobster fishermen are coming to Commissioner Shattuck with congratulations at his success in stopping the short lobster business. They say that if it is kept up for only a few years longer the lobster is done forever. They appear to be in favor of protection—the great majority of them—and they would be willing to furnish evidence to convict the few who persist in retaining lobsters forbidden by law, but for the fact that their entire property and living is their lobster pots, and they dare not offend the law-breakers.—*Boston Herald*, March 19.

FISHCULTURE AT BLOOMING GROVE PARK.—*Editor Forest and Stream:* The club here has about twenty miles of good trout streams, such as Shohola, Blooming Grove and Taylor's creeks, and some others. Leaving the railway station we drive up the mountain seven miles to the club house, along the Blooming Grove Creek most of the way from Millville. All along here are found spring tributaries suitable to deposit trout fry in. Ample provision has been made to protect these streams as well as the lakes belonging to the association, by the employment of guardians who also look after the hunting grounds. These men are invested with power to arrest trespassers by the charter of the association given by the State of Pennsylvania. In a former letter, published in your issue of March 11, I gave an account of the hatchery and the fish now in the troughs. Lakes Laura and Giles abound in black bass, but for some reason they will not take any lure in the latter although it has been repeatedly tried. The fry in the hatchery are doing well and will be planted in the streams next month.—WHITE MILLER.

A FISHERMAN'S ASSOCIATION.—A meeting of fishermen and citizens of Duluth, Minn., was held on March 13, and an association was formed. An address on fishculture was made by our correspondent, W. D. Tomlin, Esq., in which he showed how the fishermen should work with the fishculturists for common good. He referred to the millions of whitefish fry being turned out yearly by Mr. Frank N. Clark at the U. S. hatcheries at Northville and Alpena, Mich., as showing what can be done at little expense and advocated the establishment of a hatchery at Duluth. Mr. Tomlin quoted a fishculturist as saying that spawn taken from fish found dead in the nets can be hatched. This is an error; the eggs die shortly after the fish dies, perhaps in a few minutes. A committee was appointed to draft a constitution to be submitted at a future meeting, and the following officers were elected: Martyn Wheeler, Chairman; W. D. Tomlin, Secretary; Capt. E. Smith, Treasurer.

SUNAPEE TROUT.—This fish, which has attracted so much attention lately, notices of which have appeared in our last two issues, has yielded its eggs to Mr. Hodge, Commissioner of Fisheries of New Hampshire. It is no doubt a form of the *Salvelinus ogassaw*, or blue-backed trout of Maine, which grows to a larger size. Mr. Hodge has presented to Mr. Fred Mather, Superintendent of the New York State Hatchery on Long Island, 1,000 eggs of this fish and some hybrid eggs. One lot of the latter are Sunapee eggs impregnated by brook trout, and the remainder are brook trout eggs impregnated by the salbling, *Salvelinus selvelinus*, a fish imported from Germany some years ago.

The Kennel.

FIXTURES. DOG SHOWS.

March 30 to April 2.—Third Annual Dog Show of the New Haven Kennel Club, S. R. Hemingway, Secretary, New Haven, Conn.
April 6, 7, 8 and 9.—Second Annual Dog Show of the New England Kennel Club, Edward A. Moseley, Secretary, Boston, Mass.
April 13, 14, 15 and 16.—First Annual Dog Show of the Hartford Kennel Club, A. C. Collins, Secretary, Hartford, Conn.
April 27, 28, 29 and 30.—Third Dog Show of the Cleveland Bench Show Association, C. M. Munhall, Secretary, Cleveland, O.
May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.
May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2332, New York. Number of entries already printed 3481.

THE UNPAID SPECIAL AT CHICAGO.

Editor Forest and Stream:

In your paper a short time ago appeared an article entitled "Unpaid Special at Chicago," and that the same was paid by the donor into the treasury of the Illinois Kennel Club; also that said amount (\$15) was never paid to the gentleman who won the special. I therefore offer this explanation, and am willing at any time to substantiate the same by oath: That I do not know Mr. Waters; I never asked him for a special; he never paid me any amount of money, nor was the same paid into the treasury of the Illinois Kennel Club by Mr. Waters or any other person; that I never had anything to do with Mr. Waters' special or any other special connected with the Illinois Kennel Club bench show, nor did I know anything of such special until my attention was called to the matter, and by referring to the catalogue I found a special offered by Mr. Waters for the best pair of American standard black cockers. I write this in order to place myself properly, and innocent of having anything to do with this or any other special at the Illinois Kennel Club show. As the letter by Mr. Wade may be taken and understood as reflecting on me, or that I had some hand in the matter, I hope you will insert this at your earliest convenience; and other proof that may be required by the public I will gladly submit in order to clear my character from any stain. JOHN H. NAYLOR, Sec.-Treas. Illinois Kennel Club.

CHICAGO, Ill., March 13.

CANINE LORE.

Editor Forest and Stream:

The New Jersey Kennel Club have offered one hundred dollars reward for a living dog with the rabies. About every dog that is now taken sick, the cry is raised (not only by the urchin in the street, but in the many sensational newspapers now published), mad dog; and as the members of this club know that the disease now raging among the dogs is a malignant form of distemper and not rabies, the club has taken this method to counteract and allay the public excitement over this mad dog scare. I do not believe there is any such disease as rabies. Dogs, like all other animals, must pay the debt of nature and die from disease. A dog's brain may become affected from a disease, and when so affected the animal may even bite his own master, but if the wound is properly treated by a physician, no bad effect will follow. History teaches us that for thousands of years the dog has been domesticated and has become the almost constant companion of man. That man has made the most extensive use of this animal in every way, and I now think it is time we should begin to give the dog his dues, and do justice to him and his race.

I find that David was among the first to show his aversion to the dog. "For dogs have compassed me, the assembly of the wicked have enclosed me. They pierced my hands and my feet." Psalm 22nd, 16th.

Now, evidently, in the days of David they had dogs and dogs would then bite. Yet we will find upon examination of the traditions and writings of the ancients that the disease rabies or hydrophobia is never mentioned. Yet we do find that in the case of persons afflicted with sores it was a very common habit to have the sores licked by a dog, as it tended to heal and soothe the angry flesh, and even to this day in country places where the mad dog craze has not penetrated, you will find the same custom. Whenever a dog has a sore or wound on his body he will lick it, and it is a very common saying "the lick of the dog is good for the bite."

No, the disease called rabies is a modern disease created by superstition and kept alive through the influence of sensational newspapers.

The first authentic case of rabies I find is recorded by Plutarch in his tract on superstition, in which he says that "Aristodemus, the King of the Messenians, was in the war which he maintained against the Lacedaemonians so alarmed at the dismal denunciations of the prophets when the dogs howled like wolves, and a wild herb had grown near the hearth of his house that he laid violent hands upon himself in a paroxysm of despair." Evidently in the days of the ancients the only rabies they dreaded was created out of the "howl" and not from the bite; and those were the days when superstition ruled the world and governed the actions of men.

In Stebelius's rabbinical literature on the traditions of the Jews contained in their Talmuds, and other mythical writings, we are told the two following passages give a very curious rabbinical account of the different behavior of dogs in a town, sometimes grumbling and howling, at other times gamesome and full of play.

In Bechai's exposition of the five books of Moses there is the following passage:

"Our rabbins of blessed memory have said when the dogs howl then cometh the angel of death into the city, but when the dogs are at play then cometh Elias into the city;" and in rabbi Menechem Von Re Ranats's exposition on the same books it is said, "Our rabbins of blessed memory have said when the angel of death enters into a city the dogs do howl," and I have seen it written by one of the disciples of rabbi Jehuda the Just, that upon a time a dog did howl and clapped his tail between his legs and went aside for fear of the angel of death, and somebody coming and kicking the dog to the place from which he had fled the dog presently died."

Le Bruyn says dogs seem to have been looked upon among the Jews in a disagreeable light; yet they had them in considerable numbers in their cities. They were not shut up in their

houses or courts, but seem to have been forced to seek their food where they could find it.

Bunbequius says that the Turks reckon a dog an unclean and filthy creature, and therefore drive him from their houses; that these animals are there in common, not belonging to any particular owner, and guard rather the streets and districts than particular houses, and live off the offal which is thrown out.

In Morocco, says "Host's Travels," there are dogs in abundance, and as the greater part of the Moors have scarcely enough to live on for themselves, much less to feed dogs, they suffer them to be about the streets so starved that they can hardly hang together, and almost devoured by fleas and vermin.

Poiret, in his "Travels in Barbary," says the dog loses in Barbary, as in the East in general, a part of those social qualities which make him the friend of man. He is no longer the domestic, mild, insinuating animal, faithfully attached to his master and ever ready to defend him, even at the expense of his life. Among the Arabs he is cruel, bloodthirsty, always hungry and never satisfied.

The Moors grant him a corner of their tent, but this is all. They never caress him, never throw him anything to eat. To this treatment, in my opinion, must the indifference of the dogs toward their master be ascribed. Very often they have not even a master. They choose a tent as a place of refuge, they are suffered to remain there, and no further notice is taken of them. Refuse, carrion, filth, everything is good enough for them if they can but appease their hunger, and they are lean, emaciated, and have scarcely any belly."

Now, in these Eastern countries we can see the dogs under the most unfavorable circumstances. Dog pounds do not exist. There is no general killing of dogs. They go on from year to year fighting for life, and usually die from starvation. Yet, in these countries the cry "Mad dog" is never raised, and they have never had a case of the rabies. Now, does it not seem strange that it is only in the civilized countries we find the existence of the dreaded disease, and does it not seem that it is only where the dogs are well housed and fed that we find it?

An urchin in the street sees a dog attacked with a fit (produced by worms or distemper), the boy shouts "Mad dog," some enterprising reporter gets hold of the item, which is produced and reproduced by the many sensational papers now published. Is not this the true story of the mad dog scare?

Once upon a time a man confined in a lunatic asylum made the following statement: "We that are locked up here are only called mad, because our madness does not happen to agree with that of the rest of the world. Everybody thinks his neighbor mad if his pursuits happen to be opposite to his own. His neighbor thinks the same of him; but then these two kinds of madness do not interfere with each other. Now and then there comes an eccentric man who, taking a just view of things, thinks them all mad. Him they catch and lock up. That's my case."

Now, don't you think if the boy was whipped and the reporter taken for the eccentric man that you would soon hear the last of the mad dog craze? These enterprising reporters like to see the issues of their paper filled with flaming accounts of canine outrages. The poor dog has become in their eyes the great Cycloplan problem of the age. Consequently my diagnosis of the rabies is this: One part boy, one part dog, ninety-eight parts reporter. These combined will usually produce a very modern mad dog. And if your imagination cannot create a mad dog out of this, read the following copied from the *Jersey City Journal*:

"My name was Kopp; everybody knows me. I live at 144 Bloomfield street," said a bony-looking German, as he led a white, shaggy dog into the Hoboken station house. "I dinks me dot dog is crazy," he continued, as he pointed toward the dog, which frisked about apparently happy. Officer Peter Meehan volunteered to act as executioner. Kopp led the dog to the lumber yard opposite Police Headquarters, and Meehan drew a revolver and cocked it. Kopp wanted to get out of range, but the dog insisted on following him running around his feet. "Look out," shouted Kopp, as Meehan pointed the revolver. Bang! went the pistol, and Kopp from actual observation, leaped three feet into the air. When he landed he started to run, but the dog was constantly making a circle around his master's feet. Five shots were fired at the dog, and every time the revolver was discharged Kopp leaped into the air. Finally, Meehan retreated for ammunition, and Kopp was told to keep the dog in the lumber yard. Blood was trickling down the animal's body from wounds in the head and neck. Kopp tried to escape, but the faithful dog, whining pitifully, followed in his footsteps. The spectators were touched by the sight and cried "shame!" The footmarks of the dog, on the snow-covered street, could be traced by blood. In front of the station house the dog looked appealingly into the face of his master. After the lapse of fifteen minutes, Roundsman Marnell appeared with another revolver. He gave it to ex-Policeman Wright who emptied the contents into the dog, who whined mournfully. Thirty voices were heard to mutter, "Oh! what a shame! what an outrage! If that ain't cruelty to animals, what is? The man is more crazy than the dog." The animal limped toward his master and looked up at him with his dimmed eyes, as though appealing for mercy. The man screamed and jumped every time the animal approached him. Twelve shots were fired at the animal, the majority hitting him, yet he was alive and hobbled around moaning. He was docile as a kitten, and there was not the first symptoms of madness about him. After some minutes the police retreated and officer Meehan appeared with a long night club. When he got within about ten feet of the dog he threw the club to policeman Wright, who clubbed the poor dog to death.

Now think of these, our guardians of the law, murdering that poor dog. I would very much sooner have that poor dog, if alive, guard me and mine than to have the brutes that murdered him.

We find in Grecian mythology that Cerberus, the three-headed dog, was placed to guard the entrance into the infernal regions. I do not think any of these policemen will have any trouble passing should they go that way.

Speaking of the Grecians, they did not always do justice to the dog. As is well known by the learned that there was a temple upon Mount Aetna dedicated to Vulcan, which was guarded by dogs of so exquisite a smell that they could discern whether the persons who came thither were chaste or otherwise. They used to meet and fawn upon such as were chaste, caressing them as the friends of their master, Vulcan; but flew at those who were polluted, and never ceased barking at them till they had driven them from the temple. After they had lived here in great repute for several years, it so happened that as one of the priests, who had been making a charitable visit to a widow who lived on the promontory of Lilybeum, returned home pretty late in the evening. The dogs flew at him with so much fury that they would have worried him if his brethren had not come quickly to his assistance. Upon which the dogs were all doomed to death and hanged, because they had lost their original instinct.

In those days priests and ministers were not tried, and consequently the poor dog had to suffer.

In Africa we find the dog freely associating with the natives; constant companions. The natives go about dressed in their birthday suits, consequently there is no clothing to interfere with the teeth of the dog. Yet here we do not find the dreaded disease.

Pasteur says he can create, produce and reproduce the rabies by injecting some kind of virus into the brains of a dog or rabbit. I think if the French Government would inject some of the same virus within this Prof. Pasteur's skull, mankind would be greatly benefited. C. J. FISHELL.

G. Brown's Topsey; 8d, G. W. DeWolfe's Maud. Very high com., C. W. Tuttle's Cremore. High com., A. H. Aldrich's Heather Lass. Puppies: 1st, O. H. Day's Don.

IRISH SETTERS—CHAMPION—Dogs: 1st, Max Wenzel's Chief. Bitches: 1st, T. G. Budington's Fawn. OPEN—Dogs: 1st, E. W. Clark, Jr.'s Blarney; 2d, I. H. Roberts's Bruce; 3d, Max Wenzel's Tim. WORMS IN PUPPIES.

Editor Forest and Stream:

For the benefit of fellow sportsmen and lovers of the dog, I wish to give a little of my experience in doctoring for worms. These pests have been the bane of my most cherished hopes and ambition in breeding fine setters; my choice pups, evenly marked and best of form, were sure to fall victims of these fell destroyers. I have used most every worm remedy with little success, except one, this remedy in most cases proving as fatal as the disease, my pups often dying after the worms were discharged, and on a postmortem I found a high state of inflammation with effusion of blood throughout stomach and intestines. The remedy referred to is Dr. C. McLane's vermifuge, which I think the great panacea for worms, and with which I have had grand success. I am satisfied many pups could be saved by treatment such as here related. Two of a last litter in my kennel, while in fine form and condition, were suddenly taken with spasms, the fits following in quick succession until they were perfectly prostrate and lay apparently unconscious, my hope of saving them was so slight that I ordered my man to chop off their heads to end their suffering. He begged to be excused the unpleasant task, and I confessed I hadn't the courage to do it myself. I had, however, given each a small spoonful of McLane's vermifuge, and as I left for my office I remarked, "Well, let them live, they will be dead before night any way." On my return I found them living, the spasms had ceased, no worms had been ejected and they seemed nearly dead. I poured a little milk punch down each and gave them an injection of warm water, and the result was like magic, a great number of dead and living worms were at once ejected. In less than forty-eight hours they were on their feet, and are living to-day, fine, healthy dogs. I believe if the above remedy was given in small doses when pups are but two weeks old, before these pests get such headway, very few pups would die with worms.

All druggists keep this old standard medicine, and I hope your readers will try it and report results. If you can't get the vermifuge of your druggist, send to Fleming Bros., Wood street, this city, and I will warrant it genuine. I R. S. PITTSBURGH, Pa.

DEATH OF CHAMPION TURK—Editor Forest and Stream: It is with extreme regret that I announce the death of champion Turk. He died quietly in my office on Tuesday last, of heart disease, without a struggle or premonitory symptom. Turk was a thoroughly good field dog on all game, and his many champion honors are evidence of his bench show form. His disposition was amiability itself. The death of Turk will be greatly felt by breeders of black and tan setters, as he was a remarkably good sire and largely bred to. I have not retained any of the progeny of Turk in my possession, but fortunately lately secured the old imported Gordon setter bitch Nell, who is now in whelp to him. Nell has not made any reputation on the bench in this country, but is the dam of Royal Duke, a young dog that has been very successful on the bench for the number of times shown.—H. CLAY GLOVER (March 20).

THE CALIFORNIA KENNEL CLUB.—At a meeting of the Executive Committee of the California Kennel Club on Feb. 4, it was decided to report to the club a recommendation that a bench show be held in this city in May next. A resolution was adopted that any member losing a dog shall advertise same in a daily paper for three days, after which the Executive Committee will take the matter in hand and offer a reward of \$50 for the arrest and conviction of any person stealing a dog, and \$100 for the arrest and conviction of any person who has poisoned any.—San Francisco Call.

THE HEMPSTEAD FARM COMPANY.—New York, March 18.—Editor Forest and Stream: The Hempstead Farm Company, Limited, of Hempstead, L. I., of which I am president, and A. D. Lewis, Esq., of this city, secretary and treasurer, has purchased my entire kennel of collies. It is a company incorporated under the laws of this State, its business being the raising and sale of the higher class of farm products, and the breeding of thoroughbred live stock.—THOS. H. TERRY.

NEW ENGLAND KENNEL CLUB.—Boston, March 24.—Editor Forest and Stream: The entries to the coming show of the New England Kennel Club closed with 625. Many returned coming after the 20th. Everything promises a successful show. The quality of those entered is of the highest standard, and Mechanics Hall a magnificent building with every convenience.—JOHN READ, Supt.

CLEVELAND BENCH SHOW.—The judges are: English setters—B. F. Wilson, Pittsburgh, Pa. Irish and black and tan setters—Maj. J. M. Taylor, Cleveland O. Pointers—Judge to be announced. Mastiffs. St. Bernards, collies, hounds, fox-terriers, spaniels, and all other non-sporting dogs—John H. Naylor, Chicago, Ill. The entries close April 17.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

RANGE AND GALLERY.

REST SHOOTING.

THERE is a good deal more in rest shooting with a rifle than one at the first glance would suppose. There is no question that it requires skill, knowledge, and a refinement of nerve. If a rifleman will apply the knowledge and experience he may gain at rest shooting to off-hand practice with the rifle, he will become a better shot. Mr. Conlin has introduced rest shooting in his gallery, and many of the crack shots in the city are trying it. It will be seen from the targets below, which are ten shots string measure, that ten shots may be made not measuring over one inch. Those given below show the marvelous accuracy of the human eye, the quality of nerve and the perfection of the gun and ammunition.

Rest shooting is the old time style, and when Mr. Conlin issued his announcement of the new programme he induced one of the New York artists who frequent the shooting gallery to add to the attractiveness of the circular by a sketch of an old-time shooter, no less a personage than Rip Van Winkle, of Catskill goblin fame. Old Rip,

as personated by Joe Jefferson, is here so faithfully pictured that none could mistake him. Had the twenty years of sleep extended to one hundred and twenty, the shooters who gather at Conlin's might have been given the old gentleman coming down the mountains some points on shooting a moose and a deer. The scores were as follows: A 22 short, 100 ft.; shots measured from center to center.

T B Doolittle	13-16in.	D E Marsh	3-16in.
E R Skidmore	15-16in.	L D Huntington	3-16in.
F Schuchardt	15-16in.	Lieut G N Whistler	3-16in.

D A Davis	2-3-16in.	W J Darling	3-16in.
Edward Notbagle	3-16in.	Col M L Riggs	3-16in.
A C Neumann	3-16in.	Lewis Darling	3-16in.

BRIDGEPORT VS. NEW YORK.—At the Morrisania Shooting Park, on March 16, teams of eight men, representing the New York Rifle Club and the Bridgeport Rifle Club, met in a match of 15 shots per man, 200 yds., standard target. The day was all that could be desired for good shooting, and the scores of both teams were well up, as will be seen by the schedule annexed. By the old Creedmoor count, the average per man of the Bridgeport team was 65%, and of the New York team 63%, out of the possible 75. The latter is believed to be the best on record under the conditions. If it is not, the Bridgeport Club would like to be apprised of the fact. Bridgeport's high score by Creedmoor count was 71, their low score 63:

Bridgeport.		New York.	
Hubbard	9 9 7 8 8 7 10 9 7 8 8 10 7 9 4-120	Dolan	9 9 6 10 9 7 9 5 7 7 9 7 8 7-117

WILMINGTON, Del., March 17.—A pleasant day, with scarcely any wind, made every condition favorable to the success of the rifle matches at Schutzen Park to-day. There was a good attendance both of visitors and participants. There were 18 participants in the first match, at which the prizes were distributed according to score classes. The following is the score in full at 200 yds., out of possible 15. Lieutenants Floyd and Jones were each allowed 1/2 point as members of the militia:

J R D Seeds, Spg.	404-4	W C Seeds, Bal.	300-3
Edward Melchior, Bal.	333-9	Chris Bauer, R.S.	323-8
J B Bell, Bal.	443-11	T Jones, Spg.	432-10
H Simpson, Bal.	343-10	Robert Miller, R.S.	445-13
C Heehner, Bal.	344-11	W McKendrick, R.S.	444-12

Charles Heinel, Sr., R.S.	445-12	J E Seeds, Spg.	294-9
William Floyd, Spg.	414-12	D A Greer, Spg.	030-3
C Heehner, Bal.	444-12	J E Seeds, Spg.	514-13
William F Seeds, Bal.	445-13	Chris Bauer, R.S.	223-7

A fine opportunity is offered those who are fond of target shooting at the series of rifle matches which are being held at Schutzen Park. They take place every Wednesday afternoon, and will continue the rest of this month and probably next. For those who take part the entrance fee ranges from 25 cents up, which made into a purse is divided into several prizes. Any rifle is allowed except those with hair triggers, with a fair allowance for military rifles. The equitable feature of awarding the prizes according to score classes gives an inexperienced marksman a fair chance of winning a prize. A fine angle of 200 yds. and the regulation Creedmoor target are used.—W.

P. FENNING, a member of the Zettler Club, died of quick consumption last week. Mr. Fenning was widely known as an expert rifle shot, and was much esteemed for his personal qualities.

BOSTON, March 20.—The riflemen met at Walnut Hill to-day. The attendance was very good, and the weather conditions, aside from the rain and fog, were fair. Captain Souther and Captain Davis chose from among the riflemen present and shot a team match, in which the former won.

SPRINGFIELD, Mass.—In answer to the request of several correspondents we reproduce in full the scores made at the Brattleboro vs. Springfield match of the 23d ult. The Rod and Gun Club sent Lieut. McDonald to Brattleboro to see that they had a fair show in the graphic shooting match between the two teams. J W Smith was sent from Brattleboro to see the demoralization of the Massachusetts men. The new standard Human targets were used. The scores of the two teams are as follows:

Brattleboro (Vt.) Rifle Club.	
W M Farrow	7 8 10 8 10 7 8 8 10-85
G H Reed	7 10 8 10 8 10 7 9 9 8-85
A W Nichols	6 7 10 9 10 5 10 6 6 6-73
H M Wood	6 9 10 9 6 7 6 8 6 5-74
A S Nichols	6 6 8 10 6 7 8 6 9 7-73
H C French	4 8 6 6 9 9 6 6 10 9-73
T Hannon	6 8 6 7 4 10 7 9 7 7-71

J A Sterling	7 6 9 4 9 4 9 6 4 10-68-713

SPRINGFIELD, Mass., March 18.—The 50-shot match between L. H. Mayott, S. K. Hindley and T. T. Cartwright, of the Rod and Gun Rifle Club, of this city and members of the Topeka (Kan.) Rifle Club, was shot to-day by the local marksmen. The Topeka Club will shoot to-morrow. The day was perfect for rifle shooting and the American off-hand target was used for the first time. The marksmen are planning several other 50-shot matches. The scores were as follows:

T T Cartwright.	
5 9 10 8 7 6 7 6 7 9-73	
10 9 10 7 5 8 6 4 10 5-75	
8 10 9 7 4 8 10 9 8 7-80	
8 9 9 5 8 7 8 6 8 7-75	
6 5 8 5 9 9 7 10 6 7-73-375	
9 8 10 4 6 9 5 4 5 9-69	
3 8 6 6 6 6 6 8 8 6-63	
9 9 7 3 6 6 1 6 6 4-64	
5 8 4 10 9 5 6 5 5-63	
10 5 9 8 8 7 9 10 3 7-74-337	
7 10 5 7 4 10 7 7 10 6-73	
5 6 9 5 9 5 9 6 9 6-66	
7 10 6 8 8 4 6 7 10 6-72	
5 5 6 5 10 5 8 6 6 5-69	
5 6 6 7 4 3 5 3 10 7-50-320	

MINNEAPOLIS, Minn., March 11.—The regular weekly shoot of the rifle club occurred this afternoon at their range on the East side. The conditions were 200 yds., off-hand, possible 100. The score was as follows:

Marshall	7 10 10 10 7 6 8 4 5 10-80
Morgan (mil.)	5 9 7 6 7 10 8 10 9 5-77
Weeks	8 8 5 8 7 10 10 9 8 4-77
Jones	6 10 7 7 8 8 7 7 7 8-75
Bush	4 8 8 9 4 6 10 8 10 7-73
Cooley	4 8 7 6 6 7 7 8 5 6-60
Gibbs	9 8 7 7 5 4 4 2 7 10-60

WORCESTER, Mass., March 12.—The following scores were made at the weekly shoot in the Record match of the rifle club at the Pine Grove Range:

White	8 9 6 6 9 10 10 7 10 7-83
Gray	9 5 7 7 9 8 7 6 6 8-72
Norman	9 3 6 10 6 7 7 3 4 6-66
Jones	4 5 6 6 5 8 4 7 2 5-52

In practice shooting White scored 83 and 81, Norman 74 and 70, Jones 68 and 61.

SPECTRE RIFLEMEN.—Cincinnati, March 15.—The case of Fred Kohl against Henry and Rudolph Bleistein for shooting with intent to kill was called in the police court to-day and developed some interesting testimony, showing that a communistic order of riflemen exists in this city, of which the two defendants are members. This group, as it is called, consists of twelve members and meets every other Sunday for rifle practice. The treasurer of the club testified that there were no books kept by the commune in order to prevent any identification of the members; also that there were 500 to 600 of these "groups" in the United States.

LAKE LOOKOUT, Mass., March 18.—The Rod and Gun Club shot a telegraphic match with the Kansas City Rifle Team at the range here this afternoon. The match was shot at the request of the latter club, they selecting three men from the Springfield team to shoot against three of their own. The day was perfect and the attendance fair. The rules gave each man 50 shots. The local result was as follows: T. T. Cartwright 874, L. M. Maycott 338, S. K. Hindley 330; total 1,083. This was the first of a proposed series of telegraphic matches.

SARATOGA, March 19.—Notwithstanding the bad weather a fair number of the members of the Saratoga Rifle Club appeared at the Glen Mitchell Range to-day and took part in the regular monthly shoot. The slight wind prevailing came from the northeast. The snow storm made the light very poor. The conditions included the Massachusetts target, distance 200 yds., off-hand. The score:	
Wm B Gage	12 11 10 11 12 9 10 11 12-109
Wm H Gibbs	11 9 10 10 11 11 10 11 10-103
J N Crocker, Jr.	10 10 10 11 11 11 10 8 12-102
H M Livingston, Jr.	9 10 10 10 10 10 7 11 12-98
R C Fonda	10 8 7 6 7 12 10 11 10 8-89
W F Howard	11 7 9 8 9 10 10 11 10-88
A L Hall	7 6 6 10 9 12 9 11 8-87

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WELLINGTON (MASS.) GUN CLUB.—March 12.—Match at 5 blackbirds.	
Wardwell	11011-4
Snow	11011-4
Stanton	11011-4
Swift	11011-4

THE NEW YACHTS.—Work is going on rapidly with both of the new yachts, and they will, in all probability, be finished in good time. The Atlantic is now planked up with trunk completed, and deck frame, clamps, ceiling, etc., in place. Work on the sails, rigging, joinerwork and ironwork is going on at the same time, so that all will be ready when the hull is ready for launching. Similar progress has been made on the Mayflower. Lawleys are busy with the moulds for the hulls, and the hatch box is ready for the hulls. The rigging, the frames of Mr. E. A. Ford's yacht, is ready for the hulls, and the

CRUISE OF THE COOT.

XVII.

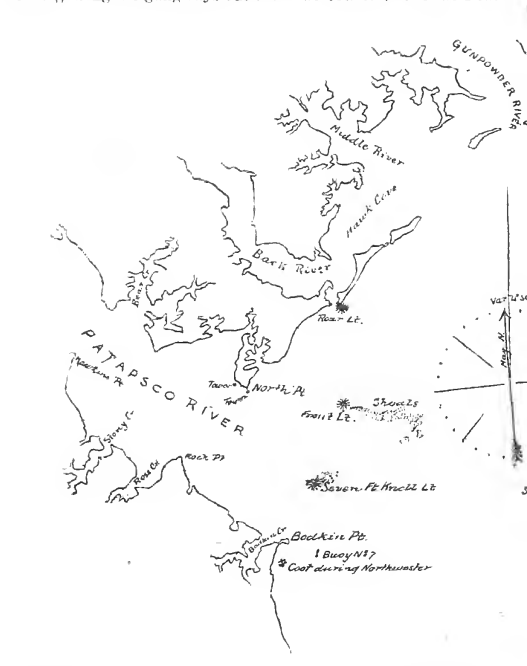

THE Coot was the only one to fetch to windward across the mouth of the Patapsco. But this feat was attended with a risk of being swamped, and scores of hair-breadth escapes from being rolled over in the tripping sea. Prudence would have counseled going round with the smack to the northward for the land west of Pool's Island, but having underestimated the capacity of the Patapsco, that river was well open before I rued the venture. Having started in, however, the Coot proposed fighting it out to the last moment. Matters could not have been so bad had the boat not failed in windward qualities in rough water, and the extreme all that has been said against shoal, beamy craft in critical situations. The wind was blowing N.W. by N., yet the best the Coot would lay was W. S. W., or seven points from the wind. The chart will show that, from black buoy No. 1, below Pool's Island, where the reefing was done, such a course would have led well under shore in smooth water up to North Point, the opening of the Patapsco, and given me the choice of anchoring under a weather shore. But to such an extent did the Coot chop off in the sea that she made good nothing higher than S. W. by S., or nine and a half points from the wind. This was not very efficient and would easily have been surpassed by a keel boat of the cutter kind, to say nothing of the total immunity from capsizing. Finding the Coot falling to leeward so fast, I made a short hitch or two up to the land, but these availed so little that she was finally put at it across the mouth of the river for a smooth on the weather shore to the southward. This took the boat far outside of Front Range Light, of Craigall Channel, and even below the Seven Foot Knoll Light, exposing her to the full brunt of sea and wind, and worst of all, carrying her plump across the 5 and 6 ft. lumps on the Front Shoal.

Everything went tolerably well till the shoal was reached, though the boat had to be carefully watched, as she was knocked down time and again till the water rushed in over the cockpit coaming. She had to be luffed and sheet let go by the run to save her from falling over. Headway, which was scant at best, would be lost altogether and sternboard threatened. Until fresh way was gathered the peril was imminent. Control by the helm was at all times none too certain, owing to the pitching and the way the boat was lifted bodily to leeward by the sea. As the Front Shoal was approached the waves grew very short, steep and hollow, and they alone seemed quite capable of rolling the Coot wrongside up, but for the most vigilant and assiduous watching. What with luffing to these menacing seas, it can be imagined the probabilities of fetching across the river did not to be encouraging.

The northwester also brought with it a frigid temperature. It was not long before I grew numb with the cold. Sea after sea dashing barrels full aboard and buckets of salt water into my face, down my big rubber boot, down my neck and up my sleeves, assisted to make the situation trying to the last degree. The cockpit was speedily afloat and the bilge water sloshed about above the cabin floor in an ominous way. The Coot was settling and becoming dull. My fingers had frozen and steering had to be done with one arm, the sheet often slipping from my grasp, as strength began to give way. Loose ice was driven out of the river and a raft of huge logs which had got adrift above compelled so much extra exertion to keep the boat from pounding holes into her badly wounded sides that I contemplated giving up and letting her drift to an improvised sea anchor till I could pump her clear, warm up below and study the chart, being wholly unacquainted with the pilotage of the sands in the river and not knowing for what I was pointing.

The eastern shore of Chesapeake Bay had in the meanwhile loomed up so prominently, and having no harbors into which the Coot could be maneuvered as a last resort, that idea was abandoned. With the bucket water was bailed out at odd times from the cockpit, though it continued to gain down below, the weight in the lee bilge giving the boat a list to add to other troubles. Once across the shoals and clear of the drift ice, the sea assumed an easier face; but the wind blew down with hurricane strength. The little patch of a close-reefed sail, only 12 ft. on the head and four hoops high on the mast, was more than the yacht could stagger under any longer. Some further reduction had to be made at all hazards. Watching for a lull, sheet was let go after luffing as much as the boat would answer to, and I scrambled forward to the mast, letting go the throat till the jaws of the gaff settled down on the boom, the slack canvas belling out to leeward and almost whipping out of the bolt rope. She plunged stem under, the seas pouring up to the cabin house and rushing along the gangways out over the counter. Just as I cast a

look aft, I saw to my consternation that the last one had floated the handsome mahogany tiller out of its slot in the rudder-head, and with a few uncertain jumps it was tumbling over the quarter. I made a plunge aft and grabbed for it into the icy waters up to my armpits, but without avail, for the tiller was never seen again. The yacht had now got sternboard on her and was falling off fast into the trough of the sea, giving several fearful lurches, which heralded her probable doom unless she could be brought up again. Luckily an old tiller had come with the boat. It was towed in the run. Hereafter I not a thought had been bestowed upon its existence. Now its whereabouts flashed upon me in an instant. A quick dive was made into the cabin between two seas and the invaluable article was fished out in the nick of time, everything else saved in the run being tossed helter skelter on the cabin floor. The tiller, a tough stick of oak, fitted the slot snugly and answered the purpose admirably. The Coot was soon under control. Then a strap was hastily passed around the stock of the main and jib and the boat and the "no-lance reef" thereby perfected, nothing but the peak showing, and that lit her up sitting well and doing its duty even better than the regular close reef.

Troubles were not over. The yacht had backed over the skiff, canting her till she filled and sank unsway to. The oars, a fine pair of 6 ft. spruces, floated away, and clumsy ash substitutes rose before my vision. The Coot was again luffed, the skiff pulled up and lifted on the quarter. This too had to be done between seas. Hastily she was turned up on her side on the Coot's weather rail and plumped overboard again, after which the skiff rode the seas like a bird. Matters were now as snug as could be, barring the ever increasing water in the bilge, the coil, and my exhausted condition. The wind shrieked and whistled and even under nothing but the peak, laid the Coot in to her house, so she required constant bawling, but in the deepening water the seas were more regular. It seemed like an age before the Seven-Foot Knoll light was brought on the Coot's weather beam, one mile distant. What the light meant and the maze of buoys through which we drove I knew not at the time. Black and red spars alternated in apparently inexplicable confusion, the chart being out of reach in the cabin, and I being too cold and used up to care about anything except fetching into the shore ahead, where I spied out the spurs of many schooners and puffers seemingly anchored in comfort under some sheltering point. For these I made, gradually smoothen-

ing the sea, a relief which came none too soon in the condition the boat and I then found ourselves. Slower than a snail the Coot closed in with the shore, and to my great joy ranged in under a low sand spit projecting into the river and breaking the force of the gale.

Summoning what command of motion I had left, the chart was brought out from the cabin. It was held between the clenched fists, use of the fingers having long ago departed. Even in the arms there remained scarce power over the muscles. A black buoy was passed close aboard and this I took to be No. 7, on the edge of the 12 ft. sand spit shown on the chart below Bodkin Point, the southern cape of the Patapsco River. Then I realized thoroughly how far the Coot had brought up to leeward of her true course, for she had originally been headed up for Stony Creek, five miles higher. That is to say, in the distance of ten miles from buoy off Pool's Island to anchorage, the Coot had made five miles of leeway! For seven hours I had stood up to the stick, except as noted above, exposed to the freezing north west gale and drenched to the skin. We sailed in among the puffers and buckeyes, badly waterlogged, boat and myself, but the tribulations of the day were coming to an end and I did feel some satisfaction at knowing that the 20 ft. Coot had stamped a 40 ft. smack and 27 ft. sloop and made her southings for the day which the others did not. Heads poked out of the cabins of the other vessels with curious glances at the cat, a strange rig in those parts, for she had been watched for hours in her desperate strife. The crews aboard working vessels know by experience what a small craft is like in heavy weather, and they understood what the Coot had gone through. Some waved their hats, others received me with broad grins of approval, one skipper hailed, "Glad to get in, ain't you, Cap?" I tried to answer, but beyond a chattering of teeth I could not bring forth a sound and my neck was too stiff from constant peering ahead, so I could not even reward him with a nod.

Sailing inside of all, both anchors were let go to 25 fathoms line, the sail was bunched in some fashion, for a moment I watched the boat to see if the anchors had nipped and then dove below and started a full head on stove, to shift for dry togs while coffee and supper were cooking. The sun had just set and the light shone out from the beacon towers. With the bearings of these and my soundings, I knew for certain that the yacht had made a lee in 2 fathoms under Bodkin Point, bottom sticky. For two days more the gale hung on with great fury, from exactly the same quarter. Not a vessel cleared out from the company. Toward dusk of the third day the wind veered to the northward, and fell rapidly away. The clouds broke, a glorious calm night of quiet succeeded and the mercury rose to agreeable figures.

The third night passed under Bodkin Point was one of quiet, though not without its anxiety, for the Coot lay unprotected from north round to south, and in the event of a fresh gale from the eastward following in the wake of the northwester just blown out, the boat would have had to clear out and make for Bodkin Creek around the point, or try for Magdalen River, four miles down the coast. It was my custom

throughout the cruise to close reef the sails before turning in, and learn from the charts precisely what to do. This night the full moon shown out clear, which would have facilitated an escape. Nothing transpired, however, to disturb peaceful slumbers, though it seemed to be the regular programme at this season for one rule to follow close upon the heels of another, with scarce any respite. In fact, I never experienced such a succession of storms from all quarters as during this cruise. This may be exceptional in a winter of exceptional severity like the past one, or it may be the nature of the Chesapeake latitudes, situated in the belt of transition from cold to temperate winter climates. At an early hour the surrounding fleet of working vessels lifted their anchors and proceeded to the forestal of the schooner below from which they had been forced through stress of weather. Among them, it should be noted, was a genuine example of the yawl rig on the San Francisco plan, that is, with a jib-headed mizzen. The tendency toward the principles of the yawl rig is very marked in the Chesapeake.

Numerous styles can be strictly classed as "ketches," in which the mizzen is stepped forward of the rudder post instead of abaft as in the out-and-out yawl. The buckeyes in general are expressions of the ketch and yawl, differing from the yachtman's acceptance of those terms only in details, but scarcely in principle. Concerning the handiness of these rigs I much cannot be said in their favor. The forestal of the schooner becomes the main sail, to which the mainsail proper is subsidiary, being well aft and much the smaller of the two. A buckeye will handle tip top under any combination. She will stay under the large forestal alone, or under forestal and jib, or under mainsail and jib, though the forestal is always the driving canvas of the boat. Thus the rig of the buckeye offers the choice of cat, sloop or schooner, and is effective in all cases. The sails being jib-headed, have no gaff, and but one halliard each. For simplicity and adaptability the arrangement surpasses anything I know of where a very large area of sail in proportion to length is not required. The buckeyes, being like huge canoes, need only a modest display, not more than from one-half to two-thirds that of beamy or deep vessels, otherwise gaffs would be indispensable to secure the necessary area without too lofty spars and narrow triangular cut. One special feature in the buckeye rig is the great rake given to the masts, even in excess of that of the old time schooner. This rake is a great advantage, because breadth of sail is preserved by the con-sequent large angle between luff and leech at the head. The angle which the luff makes with a perpendicular is often the same, and in some cases even greater than that of the leech. In running free, however, the booms refuse to square off in light winds, and guys from forward are brought into aid. Under such perfect control is the long canoe-like buckeye that Mr. Weed, of New York, often works his 60x44 ft. boat in and out of creek without assistance of any kind. In places the channels were not wider than twice the boat's length, with a lee running tide and the wind fickle at that. The sloop finds little backing in the open waters of the Chesapeake, the long boom being a source of danger running before the sea, and always a clumsy shipmate. Several which I met had double head sail and quarter lifts, showing that cutter influences had spread to these parts. Among the yawling fleet the yawl is likely to become popular, owing greatly to its practical and very successful introduction by Mr. Moriis, an ardent follower of the sport, hailing from the St. Michael's River, and known to your readers as "Sneakbox."

LICENSES FOR SMALL LAUNCHES.

Editor Forest and Stream:

In two recent numbers of the *Scientific American* I have noticed answers to inquiries relative to the licenses required for steam launches. That journal is evidently of the opinion that launches under five tons measurement require no licenses, either for boat or crew. I am the owner of a 20 ft. launch propelled by a Shipman oil engine, and I have been informed by both the Shipman Engine Manufacturing Company and the Customs officer at Socus Point, that the ordinary yacht license is required. Also that there must be a licensed pilot and engineer aboard. Now, as the Customs officers are not always posted in yachting matters, and as small single-hand launches are rapidly coming into favor along the great lakes, it would be a matter of considerable interest to many yachtsmen and pleasure seekers to know exactly what the regulations require. I am not permitted to run my launch on Great Sodus Bay until the boiler has been tested by the supervising inspector and a license issued by the local board. Of course I never use her for other than pleasure purposes, and then only when lack of breeze keeps my sailing yacht at her moorings.

The *Forest and Stream* settled a controversy between yachtsmen and the Revenue Department in relation to commissions for sailing yachts, and here seems to be another question equally important and equally complicated. If you can help us out of this dilemma you will have conferred a great favor upon sportsmen generally and I especially upon.

CALVIN P. H. VANT.

[Under the present laws all steam vessels, of any size whatever, and used for trade or pleasure, must be regularly inspected in hulls and boilers at least once a year, and a certificate of such inspection must be given. She must also carry a licensed engineer and a licensed pilot, each having passed an examination as to his competency and

received a license for one year. We published lately the text of a bill now before Congress, amending the law in favor of launches and small yachts, but which has not yet passed. No special license is required for small yachts other than the proper inspection papers for hull and boiler and license for engineer and pilot.]

YACHTING NOTES.—Romeyn, sloop, Mr. Chas. W. Wetmore, has had her name changed to Isult, and is now enrolled in the S. C. Y. C. ... Polynia, steam yacht, Mr. W. H. Starbuck, has had her name changed to Tillie, the old Tillie, lately sold to C. H. Osgood, being now the Talleman. The lengthened Tillie is now 17 ft. over all, 15 ft. waterline, and 302 tons register. Her freeboard is now 15 in. greater, owing to the added displacement amidships. ... Viking, steam yacht, S. J. Tilden, will go into commission by May 20. She is wintering at New London. ... Wanda, steam yacht, Wm. Woodward, has had her mainmast shortened 6 ft. ... Halcyon, schooner, Col. J. G. Paine, is now for sale. ... Phantom, schooner, E. V. R. Thayer, has been sold to G. Griscom Haven, of New York. She will be towed to New York at once, and will sail under the N. Y. Y. C. flag. ... Coronilla, schooner, E. A. Thorp, has been sold to Tarrant Putnam, and will be enrolled in the Larchmont Y. C. ... She sailed from Boston on Friday last for New York. ... Radha, steam yacht, J. M. Seymour, was run down by a schooner, while at anchor off Hospital Point, Norfolk. No serious damage was done. The loss will fall on the schooner, the C. Phillips, of Bridgeton, N. J. ... Vivid, sloop, formerly Curlew, has been sold by W. W. Tompkins to T. N. Motley, who will give her new sails and race her this season. ... Queen Mab, catboat, will be raced this year by E. L. Burwell, who has bought the interest of his fellow owner, Dr. Litchfield. ... Lurline, steam yacht, J. M. Waterbury, has been greatly altered at City Island by David Carll. Her sides have been raised, giving a flush deck, and a long counter added. ... Vishnu, schooner, lately sold by Hodgkins & Shepherd to Dr. C. B. Kenney, of Brooklyn, has been rechristened Clara. Her new owner will cruise on the Maine coast this summer. ... Eleora, steam yacht, has lately been fitted with new steam steering gear. ... Stella, sloop, has a new and larger rig. ... Dreadnaught, schooner, has had her planking stripped at Port Jefferson, and will probably be rebuilt. ... Gracie, sloop, J. P. Earle, will have her sides raised this spring. ... Lilian, sloop, J. Fraunce, has taken out her trunk and added an iron keel of 1,300 pounds. She has also received a new wheel. ... Clu, schooner, has had her masts shortened 4 ft. ... Hope Leslie, steam yacht, has been built at Bath, Me., for Capt. Wm. Minor, Bar Harbor Y. C. will be fitted out for a cruise abroad. ... Felama, E. M. Brown's new steam yacht, is well advanced, and will be ready for the water soon. ... Rita, A. T. Bliss, has discarded her centerboard for an 18 in. keel, including 200 pounds of iron, and will change her name to Bohemian. ... The lines of Putnam and Griscom have lately been taken from the molds in the N. Y. Y. C. collection for the officers of the Naval Bureau. ... Haverhill, Mass., a new catboat, 21 ft. long, is building by J. Goodell, and also a sloop by G. W. Moulton for E. J. Harris, of Bradford. The latter is 30 ft. on deck and 25 ft. loadline. ... Dreadnaught, sloop, has had a long counter added. ... Williams, of City Point, has her keel cut building for Mr. Scanlon plank-dug. She is 23 ft. on deck, 2 ft. 9 in. waterline, 8 ft. beam, 4 ft. 2 in. draft, with 2,800 pounds of iron on keel and 600 pounds inside. The catboat is 10 ft. long and 14 in. high at sides, with 6 ft. beam under lift. The lift of mainmast is 23 ft., boom 26 ft., gaff 18 ft. The boat is intended for cruising. ... Eddy, of East Boston, is building a sloop for the Neptune Association, to be 37 ft. over all, 33 ft. waterline, 13 ft. beam, 3 ft. 10 in. draft. ... Captain Jake Schmitt is building, at his shop at Tompkinsville, S. I., an open boat, the Jas. T. Carthy, 27 ft. over all and waterline, 11 ft. beam and 3 ft. draft. ... Work has commenced on the new steamer for W. B. Vanderbilt, at Wilmington. ... She has a long string of victories in the East. ... Laurena, steam yacht, has been sold by A. L. Downing, of Concord, to J. H. McGrady, who will refit her completely. Mr. McGrady has lately sold the Firefly, steamer.

ULIDIA—Fais 10-tonner has been sold to Mr. Edward Paddelford, who will bring her across this season. She is now having a new mast at Wicombos.

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

CANOEISTS are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other communications of interest.

"NO BALLAST" CANOE VESPER.

THE utility of some ballast and of boats built to carry it is generally admitted when open water sailing is in question, but there are some locations where a totally different type of boat has come into use, and has found great favor at the expense of the heavier ballasted craft. This has been the case particularly at Albany, where canoeing is confined to the Hudson River, with occasional excursions to neighboring streams of a similar character. The boats first used by the Mohican C. C. were of the Shadow and similar models as built a few years since, but for three years the club has displayed great activity in the hunt for improvement, and besides the sail and fittings generally known by their name, they have devoted much attention to the question of model.

Under the directions of several of their members Mr. Rushton has built a number of boats for the club, some of which have proved very successful. In these the builder was responsible for the model, only building in accordance with the owner's suggestions, but during this past winter some of the club have taken up the matter more thoroughly and have produced several designs for canoes specially adapted to their waters and uses. The accompanying design, by Mr. R. W. Gibson, master of the Snake, is now being built from, Mr. Rushton having two boats on the stocks, one for Mr. Gibson and one for ex-Com. Oliver. Every effort has been made to secure a light boat, and it is expected that the Vesper will weigh not over 75 pounds. She will have an Atwood board, like the Snake, as her owner is well satisfied with it after trial. Her dimensions are:

Length over all	15ft. 6in.
Beam, extreme	30in.
Beam at L. W. L.	30 in.
Draft, excluding keelson	4in.
Draft, including keelson	5 in.
Freeboard, bow	14 in.
Freeboard, amidships	5in.
Freeboard, stern	11in.
Sheer, bow	8in.
Sheer, stern	6 in.
Rake, sternpost	2 in.
Weight of hull, about 85 or 75lbs., if built specially light.	
Crown of deck, about	2 in.
Diameter mast tubes	1 3/4 in. tapered to
Diameter mast tubes	1 1/2 in. about 1 in.

A CHALLENGE FOR THE CUP.

THE secretary of the New York C. C. has lately received the following letter from the secretary of the Royal C. C.:
11 BUCKINGHAM STREET, LONDON W. E. March 8, 1886,
Chas. J. Stevens, Esq., Secretary New York C. C.:
SIR—The Royal C. C. begs to enter for the challenge cup of the New York C. C., in accordance with the conditions contained in your letter of Jan. 19, the date of the race to be fixed at a time most convenient to the N. Y. C. C. after the A. C. A. meet. I remain, sir, yours truly,
T. G. F. WINNER, Secretary R. C. C.

THE A. C. A. TROPHY.

Editor Forest and Stream:

My letter in your issue of March 11 was not in answer to one in your issue of March 4, signed "S." nor was it suggested by that letter. It was merely my view of this trophy business, and as "S." has got several wrong impressions from it (see his letter in last week's number), I will try to clear up a point or two. 1. To be constitutional this trophy must be a donation to the A. C. A., flags only are offered as prizes by the A. C. A. It must be for a special race and it must come to the Regatta Committee for approval and adjustment. This is not the way the matter now stands, and I claim it is unconstitutional therefore. The Regatta Committee is responsible for all racing matters, and they report to the Executive Committee. If the Regatta Committee accept the trophy when it comes into their hands and arrange a special race for it, and decree that it shall become the property of the winner, and the Executive Committee agree to this, then it will be constitutional and no one can object—except on the ground of establishing a bad policy, which objection I will make and "S." will support me. 2. "By having any claim on the trophy," I meant simply, any say in what it is for, or what it should be and what should be done with it—and certainly only subscribers to it have any right to express an opinion till it is finally put in the hands of the Regatta Committee, when any A. C. A. member has the right to express an opinion. Remember, it must be a donation for a special race to be offered at all, and it can't be donated till it has an existence. This explanation of my meaning of those seven words makes it unnecessary to reply to five paragraphs in "S.'s" letter, one of which did pain me a little—suggesting my not having read the resolutions of the Executive Committee. I do not agree with the last paragraph of "S.'s" letter, for I do believe the \$300 trophy to be a good thing, only it must never become the property of any canoeist, it would surely turn his head—over the stern, and his canoe would run foul of something in short order.
C. BOWYER VANCE.

A PLEA FOR THE HEAVY CANOES.

Editor Forest and Stream:

Late numbers of the *Canoeist* have contained articles on large canoes. Similar articles have appeared in the *FOREST AND STREAM*, all of them casting discredit on such craft.

As the owners of these "despised" canoes, and a member of a club, the majority of the sailing members of which believe in such craft for their purposes, I claim permission to say a few words in defense.

In the first place it may be well to ascertain why the members of the Toronto C. C. first built such canoes and still continue to do so. In 1881 we found our then canoe too small for our rough waters, and decided to have something larger. Looking around for information, we found the following in a price list issued by W. P. Stephens, then one of the leading canoe builders. In describing the Pearl, he says: "Besides racing, her owner has cruised in her through the season, and she is thus far the best canoe built for racing and open-water sailing. She can sail in water that no other canoe would venture out in, and is the best boat for the great lakes and the bays and sounds of the Atlantic coast." The writer of the foregoing may have altered his opinion on this subject, but if so, it seems strange that in his late work, "Canoe and Boat Building," he should give such prominence to descriptions of the first-class canoes. About two years ago, the *FOREST AND STREAM* had an editorial of nearly a page on Pearls, praising them highly. Now I am still quite satisfied with such canoes. If I ordered a new canoe to-morrow, she would be—not necessarily a Pearl of the 1881 model—but a large canoe with a heavy centerboard. Mr. Stephens's assertion that such canoes are best for the great lakes is correct. Some of our members have built other canoes, lighter and without heavy boards, but they have since either changed to a heavy board or are no longer doing so.

Now I have to air a grievance that I personally feel very strongly about, and in which I am generally supported by our members. It is this: If large canoes are such thoroughly unserviceable craft, both for cruising and racing, why is it necessary to continually decry them in both of the official organs of the A. C. A.? And why is it necessary in arranging the race programme to single them out from other canoes by making rules which either bar them out altogether or handicap them? In 1884 and '85 prizes for average record were given for the purpose of finding out what was the best all round canoe, and yet our canoes were—in '85 at least—practically barred from one of the record races, and handicapped in another. Our canoes are built to sail with ballast. They need it to bring them down to their true water line, and yet we are not allowed to use it against men—some of whom at least consider it a detriment.

In the March *Canoeist* Mr. Tyson has a letter editorially commented on in a way which is strongly reprinted by one of the members of the Toronto Club. Canoeists of these boats are not so tolerant, but I am sorry to say that such has not been the case in the past, and certainly the organs of our sport have not shown a good example.

In the T. C. C. sailing races last season ten canoes took part; five had heavy boards, the others light boards or lee boards, and three of these regularly carried ballast. One of the five has just bought a new heavy centerboard canoe, and two more will either put in heavy centerboards this season or get new canoes that have them. I consider that such canoes are popular in Toronto, and that they are increasing in number.

Gliding now in hand for a Montreal gentleman a very fine double C. B. canoe. Both boards are to be of brass, and the forward one will weigh 50 pounds. The owner and his three sons intended joining the A. C. A., but when the rules as to C. B. canoes were shown him, determined to wait and see how his canoe was to be treated this season.

If any of the A. C. A. crack sailors sent a challenge to a heavy C. B. and ballast man, such as Messrs. Tredwen or Powell, would they think of stipulating that their opponents should sail with a 15-pound board and no ballast? I don't think they would; but if such was done, the challenged person would be quite likely to demand that if he

accepted such conditions he should also have a race in his way, viz., both to sit on the floor of the canoe.

The A. C. A. have Class B for sailing canoes. Such canoes are clearly defined in all particulars; then let each man—so long as he remains within such rules—sail his canoe in the way which he considers best. Surely the men who have lately been crying out for recognition for larger craft than the present A. C. A. rules allow, must feel that we have a greater grievance than they have. Our canoes are within the class, yet at the last meet we found, out of three races, that we were allowed in one on even terms; practically barred from the second, and handicapped by limited sail area in the third. I do not so much object to the 75 ft., but I do object very strongly to the light board and no ballast rule.

The *Canoeist* goes on to ask—almost in a triumphant sort of way, as if a favorable answer could not be given—if cruises have ever been made in such canoes. I remember reading in the *London Field* that Mr. Tredwen paddled his Pearl on the Thames something like 10 miles in a day. Possibly some of our readers may be able to quote the exact statement. I think such a statement proves that these canoes can be paddled at a fair rate of speed. As to cruises, I am proud to be able to say that such canoes can be used for cruising quite as effectively as, for instance, the Marion B. Equipped for a cruise such a canoe as the Sapphire of our club (or even the old Boreas) will get over in a day quite as much water as the canoe mentioned. When her board is out she will weigh no more, possibly less, and in transportation by steamer there will not be the slightest difference. Members of our club have attended every meet since '81, and in the question of transportation there has been very little difference between the lightest and heaviest canoes of our fleet. During the past season five of our canoes cruised in company for nearly three weeks on Lakes Muskoka, Joseph and Rosseau. Three of us had heavy boards and two light boards; in sailing the heavy boards had the best of it, and in paddling there was no material difference. We cruised all the time; only once did we spend two nights at the same place. We slept in our canoes, hauled out on shore or anchored out. One of the party insisted on doing this anchoring business nearly every night; strange to say, his canoe was fitted with an Atwood board. The whole trip was so enjoyable, it may be taken for a certainty that if our club is not well represented at Grindstone in '86 it will be because the pleasant memories of our Muskoka trip have caused us to go to that canoeist's paradise again.

I doubt if any canoe club in America did more genuine cruising in 1885 than was done by the members of the Toronto Club. One member was four months under canvas, using his canoe every day; another ditto for two months, many for a month, others for two or three weeks, and so on.

Since 1881 a great many changes have taken place in canoes, but none so marked as the gradual increase of size. The canoes now most popular—the 15x30's and so on—are just about as large as a modern Pearl. Solid boards are also being put in; even old hands are following Mr. Tredwen and putting in two boards. It's quite possible we may see these boards get heavier—quite probable if our English visitors should win any races. In the meantime let each man use the canoe that suits him best, and don't abuse him because his views differ from yours.
RICH NEILSON.

A. C. A.—Mr. F. M. Sinclair, Brooklyn C. C., is an applicant for membership. Com. Rathbun has sent out the following circular: DEAR SIR—The interests of the Association were benefited so much last year by the publication of the list of cruises made by different members, it is desirable to continue the record, adding to same each year. Please enter below the cruises you have made during the past year and concerning which you are willing to furnish information upon application, and return this circular to yours truly, F. S. RATHBUN, Commodore A. C. A., Deseronto, Ont. The regatta programme will soon be ready for publication. It will not differ materially from that of last year.

VESPER B. C.—A meeting of this club was held on March 11. The secretary in his report called attention to the increasing importance of canoeing in the club. A new 15 ft. canoe has been added to the club fleet, making two canoes for club use, besides a large fleet owned by individual members. The officers elected are: President, Paul Butler; First Vice-President, A. G. Swapp; Second Vice-President, Gerard Beman; Secretary, E. F. Hemenway; Treasurer, R. F. Brazer; Directors, C. P. Nichols, F. W. Howe, J. P. Battles; Auditing Committee, C. F. Coburn, C. H. Hooke.

HARRISBURG C. C.—This club celebrated their first anniversary on March 1, the programme which we lately published being carried out, making a very pleasant entertainment. The following officers were elected: Commodore, Will W. Sayford; Captain, George C. McFarland; Vice Captain, Martin W. Fager; Secretary, Bert E. Melly; Treasurer, Charles S. Snyder.

THE CANOE EXHIBITION.—Mr. E. W. Brown has charge of the manufacturers and builders' exhibit at the coming Canoe Exhibition. Builders desiring space for their goods should address him at No. 4 Bowling Green, New York.

SHATTENUC C. C.—This club gave an entertainment on March 23 at the residence of one of the members.

ANSWERS TO CORRESPONDENTS.

W. P. C., San Louis Obispo.—The woodcock nests in trees.
E. H. R., New York.—We cannot recommend any special make of boat.

T. L. S., New York.—Write to W. Graham, Newtownbreda, Belfast, Ireland.

H. T. B., Altout, Ill.—Hickory is not suitable for boat work, oak is much better.

H. L. Q., Yonkers, N. Y.—The A. C. A. dues are \$2 per year. Initiation fee \$1.

Geo. WENSTER, Hamilton, Ont.—Ulecosote is made by H. F. Taintor, Pearl Street, New York.

R. S. V. P., Paterson.—Multiply one side of the sail by one-half the least distance to the opposite angle.

H. C., North Ferrisburgh, Vt.—The sail should be triangular, 12 ft. on foot, 15 ft. on luff, and 18 ft. 6 in. on leech.

L. Menominee, Wis.—Unless the bitch is well grown would advise you not to breed her until her second season.

W. D. A., Montclair, N. J.—There is no one who makes canoe aprons for sale. Pith helmets can be had at any large hat store in New York.

HIPPIAS, Boston.—The crown of deck is measured at midships. The length of the beam is laid off on a board and a circle is struck that will give the required round.

V. D. BACON.—We have had no experience with the patent hoists, but they are recommended by those who have used them. There are several "Hard Oil Finishes" in the market, but only a glossy varnish will stand the weather.

A. H. H., Woodstock, Va.—I send you by mail head and leg of a bird I shot yesterday. Please tell me what it is through your paper. Ans. The bird is a coot (*Fulica americana*), which belongs to the rail family, and is abundant throughout North America.

PQT LUCK FROM EXCHANGES.

London Truth says: Here is an advertisement from the *Cork Constitution*. Is it not monstrous that thousands of sea-gulls should be made victims of fashion and woman's whims? Wanted—1,000 dozen sea-gulls; 4s. per dozen for clean birds. "William Kinmonth, egg and poultry merchant, Western Road, Cork."

The authorship of "The Old Canoe," which has been so often attributed to General Pike, is now ascribed to a young man from Pittsburg named Shepherd, who some years ago drifted to New York and became an occasional contributor to the press of that city. He is said to have given high promise as a poet, but died early, leaving only a few fugitive pieces as his legacy, and these not always easy to identify.

The Italian Ministry of Agriculture has just undertaken an interesting experiment. Half a million of fish eggs were artificially hatched, and the young brood has been distributed all over the center of the Lake of Como. If the experiment succeeds fairly well, it will be taken up on a large scale, and the department will undertake the restocking of the Italian waters. Efforts will be made immediately to revive and extend the rearing of lobsters.

A naturalist in the West has concluded either that owls are without memory or that they do not mind going about with owl traps fastened to their legs. He set a trap to catch an owl, and it mysteriously disappeared. He set a heavier trap, and caught in it an owl which had the first trap attached to one of its legs. The phrase "stupid as an owl" seems a fitting reflection upon a bird which would set about making a collection of owl traps in such a manner as this.—*Harper's Weekly*.

The death is announced of Count Emeric Sommsich, a Hungarian magnate, who was known in society for his extraordinary hatred of horses. This aversion amounted to a real hippophobia, and it obliged the Count many years ago to throw up his commission in the army. The Count died at an advanced age on his estate in Slavonia. He was a distinguished agriculturist, an excellent landlord, and on all subjects but that of horses, asses and mules a man of sound judgment. He would not allow any animal of the equine kind to come upon his lands, so that visitors who rode or drove to see him had always to alight at his park gates. He himself for many years used a vehicle drawn by trained deer, but latterly he went about his estate in a carriage with a team of oxen. His horror of horses is said to have been innate, as there was no accident in his life to account for it.

At the winter meeting of the Colorado Press Association recently held in Denver, Mr. Thomas F. Dawson, one of the most prominent newspaper men of Colorado, read a paper on "Personalities in Journalism," in which he had the following sensible words to say to his professional brethren: There is one particular phase of personal journalism that deserves especial attention. I refer to the habit which editors have of abusing one another in their respective papers. What shall we say of it? Not that it is often right or wise, certainly. Yet there are few reminiscences of the press which are so interesting as those of family or professional quarrels. There are few American cities which have not been the scenes of encounters between rival editors, growing out of these little pleasantries. It was George D. Prentice who, when he received the card of his rival on the Louisville *Democrat*, said to the messenger: "Tell the gentleman I'll be down as soon as I can load my pistols." They had been indulging in some slight uncomplimentary remarks about each other. It was Horace Greeley who said in the *Tribune*, referring to some slur in William Cullen Bryant's *Evening Post*, "You lie, villain; you know you lie." It was Park Benjamin who, in the early days of New York journalism, called the elder Bennett by such pet names as obscure vagabond, infamous blasphemous, loathsome slanderer, leprous libeler and venomous reptile. Judge Noah also spoke kindly of Bennett as rascal, rogue, cheat, liar, nuisance, bandit, villain and turkey buzzard, while James Watson Webb considered him "an unprincipled slanderer, a wretch and a moral leper, who published a worthless, vile sheet, and who ought to occupy a cell at Sing Sing." But, for that matter, we have enough of personal journalism of our own without going back to the time of the ancients for illustrations. But does the fact that it is a thoroughly established custom make it a wise custom? Is it not a custom more honored in the breach than in the observance? A smart thing gotten off by one editor at the expense of another is always appreciated by the public in general, but the man who fills his paper one day after another and one week after another with vilification and vituperation—who devotes his columns to epithets directed at a contemporary—becomes, well, to say the least, a bore. The other fellow may be able to stand it, but you do not get any of your income from him and the public, from whom you derive your living, grows weary and disgusted and people are apt to fall into the habit of calling editors fools. On the other hand it is human to strike back and there are few of us who are angels and people should not judge too harshly.

"The fault we partly may confute,
But know not what's resisted."

Often we do not say half we might—half we might tell the truth. The best way is to keep out of newspaper fights as long as possible, but when once in them it is right to hit as hard as you can, always remembering that it is facts and not words that count. The man who is best armed in journalism, as in war, is least annoyed. It is all right to hit the heads that need hitting; to fight the good fight and fight it hard. Serve your conscience and your people. Davy Crockett's rule—"Be sure you are right, and then go ahead"—is the best precept in a few words.

OVER ONE MILLION of Mex have held the accident policies of the Travelers, of Hartford, Conn., and over one in nine have received cash benefits on them.—*Adm.*

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at \$4. Price \$2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price \$1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam callopie to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments train the dog yourself instead of having him broken by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price \$1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicola*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he turned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia*; he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—Extract from Publishers' Preface. Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price \$1.00.

BAKER'S Breakfast Cocoa.

Warranted absolutely pure Cocoa, from which the excess of Oil has been removed. It has three times the strength of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, costing less than one cent a cup. It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

Irish and Gordon setters for work as well as show. dec17,t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. {
SIX MONTHS, \$2.

NEW YORK, APRIL 1, 1886.

VOL. XXVI.—No. 10.
{ Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications, Forest and Stream Publishing Co., Nos. 39 and 40 PARK ROW, NEW YORK CITY.

ANSWERS TO CORRESPONDENTS.

RAILROADS IN THE PARK.

THE Yellowstone National Park is a beautiful reservation which belongs to the people of the United States. Each citizen has in it certain rights which are equal to those of every other citizen. At various times in the past, individuals and corporations have endeavored to secure in this public reservation certain exclusive privileges, which cannot be enjoyed without detriment to the rights of others. Such attempts to infringe upon the rights of the people have hitherto been prevented. A bill now before Congress, and favorably reported by both Houses, gives to a private corporation the right to build a railroad through this Park. The building of a railroad means introduction of settlements, destruction of the forests, driving off of the game, interference with the natural wonders of the reservation. Even more important than this, it means the building of other railroads in the Park, so that the natural beauty of the region will be utterly destroyed forever.

We believe that the people will not submit to this. We believe that this continent is long enough and broad enough to accommodate its population without encroachment on this little spot, which has been set aside as a park, in which every American man, woman and child, and the children of our children, have an equal right.

The bill granting the right of way to a railroad through the National Park has been sent back by the Senate to the Committee on Territories, to which all matters concerning the Park have hitherto been referred. This committee knows something about the Yellowstone Park, and may be expected to take an intelligent view of the matter. Senator Manderson, we are quite sure, understands the situation, and the deep interest which he is known to feel in the Park justifies the belief that he will give the subject a thorough investigation.

The report of the House Committee on Public Lands, who reported a substitute for the original House bill granting this right of way, is almost precisely similar to the Senate Committee report on which we commented last week. The two documents furnish abundant internal evidence that if they were not prepared by the same hand they were at least inspired by the same head, and that the information which they purport to contain came from one source. The same foolish and untrue statements are made in both, the same testimony quoted and the same conclusions drawn. The projectors of the Cinnabar and Clark's Fork Railroad seem

to have prepared both reports, and both are so weak as to show conclusively that no good reason can be furnished for asking for the railroad.

The fatuity of the statements made is utterly incomprehensible. It is distinctly affirmed that there are no objects of interest, nor any timber, nor any game along the line of this proposed railway. Now, every one at all familiar with the Park knows perfectly well that on the line, as proposed to be run, there is at least one great body of timber along the East Fork; that Soda Butte Springs, an exceedingly interesting group, which flows an effervescent mineral water, are directly on this line; that the fossil forest, a locality unequalled of its kind for interest and extent anywhere in the world, is on the line where the proposed railroad is to run; that one of the most important bands of bison in the Park ranges between Slough Creek and Specimen Ridge, or in other words on both sides of the proposed railroad line.

It will not be forgotten that about a year ago, when the report reached Livingston that the Vest bill had become a law, there was a rush of land claimants from that town into the Park, and that one of the first claims taken up was Soda Butte Springs. It will also be remembered that it was stated at the time that plans had been laid by which all the great body of timber on the East Fork would be taken up by a corporation. These steps sufficiently indicate that there are some people who believe that there are objects of interest, game and timber, in the region through which this railroad is to run, and this may furnish a hint as to the eagerness of its projectors to obtain their right of way.

There is good reason for believing that a railroad cannot be built through the Third Cañon of the Yellowstone. This great trough is about 800 feet deep, and is cut out of rock which is in part volcanic and in part granitic. Its sides are in many places almost vertical, it is tremendously rough, and if it be practicable to build a roadbed through it, this can be done only at vast expense. This may not be known to the projectors of the Cinnabar and Clark's Fork scheme, but it is the fact.

On the whole it seems probable that these people desire to obtain a right of way for their railroad in order that they may be able to take up under cover of this grant certain extremely desirable locations within the Park, from which after three years' occupancy—when, the railroad not having been built the right will lapse—they can only be expelled with great difficulty.

It is curious and interesting as showing their methods of work, to note the attempt made by this corporation to get all that they can in the way of a grant. The House bill, introduced and referred Jan. 7, 1886, provides that unless the road be constructed and in running order within one year from date, the franchises granted by the act are hereby declared to be forfeited. The Senate bill, introduced Jan. 11, declares that unless the road be completed and in running order within two years, the right of way shall be forfeited. And the third bill, recommended Feb. 23, 1886, by the House Committee on Public Lands, and favorably reported by the Senate Committee on Railroads, provides that the right of way shall be forfeited unless the road is completed within three years. Given a session of reasonable length, and these people would introduce bills enough to give them a quarter of a century in which to complete the road. This would, perhaps, be equivalent to a twenty-five years' lease of Soda Butte Springs and the fossil forest, to say nothing of other points of interest.

One more point deserves attention—a point which bears directly on the whole question of railroads in the Park. Section 3, after declaring that the right of way shall be forfeited after three years in case the road shall not be completed within that time, continues:

Provided, That the grant hereby shall not be held or construed as exclusive, so as to prevent the allowance of the locating other roads along the valley or route adopted under this act, under such grants and regulations as Congress may make and provide and the courts equitably administer.

This clause is susceptible of more than one construction. It may either mean that other railroads are to be permitted to penetrate the Park, or it may be a practical nullification of the time limit on the building of the road. It was probably introduced with a double purpose. Those who framed it can point to it with an air of conscious virtue as evidence that they are not monopolists, that they ask for no exclusive privileges; and if the bill passes and the road is not completed within the time specified in the act, they can then form another corporation, have another bill passed giving it a right of way over this line, and can then turn over the property of the Cinnabar and Clark's Fork Railway Company to themselves.

The Park grabbers, as we have abundant reason to know, are shrewd. They will bear a lot of watching.

WHY NOT WAIT?

WE have come to the flayed end of another winter. The earth's white carpet is worn to shreds, and nature is making ready to weave her a new one of green, with all sorts of flower patterns that ought not to "fail to please the most fastidious." Some of the bluebirds have escaped the guns and snares of the milliners' collectors, and are with us again, the return of the robin has been announced, and the song sparrow is tuning up his pipe for the spring concerts. The crystal hatches will soon be off the streams, and the fishes will once more get a look at the sky, and at the angler, who is now beginning to overhaul his tackle in anticipation of the opening day of the season.

The ducks and geese and snipe and shore birds will presently be on their way to northern breeding grounds, and too many sportsmen are making ready to give them a most inhospitable greeting as they pass or tarry for a few days of rest. Too many sportsmen will be ready with the old and poor excuse for this wrong doing, "If I do not shoot them, some one else will," which is worth nothing, for it is not at all certain that some one else will kill the bird that you spare, and that it will not go safely to its breeding ground and return to pay ten fold interest in the fall for the lease of life you have given it. You would recoil with horror from the thought of killing a doe heavy with young, for you are an honorable and conscientious sportsman. And yet, all the females of these birds of passage are carrying eggs more or less developed, the hope of the abundant continuation of their species. And your example is worth something, as every man's is, yours perhaps worth far more than another's. If you did not get shooting in the spring, it is not unlikely that some one else would stay at home, simply because you did.

Another excuse and a no better one is, "If we do not shoot ducks and geese and snipe in spring, we shall have no shooting till summer woodcock shooting comes," which ought not to come at all. Why not wait till autumn for sport worth having, and concerning which one need have no qualms of conscience? Is not sport, like love, "the sweeter for the trial and delay?"

Let the gun rest for a few months longer, and then when the steel blue skies of autumn endome the bluer waters and the varied hues of frost-painted woods and russet marshes, you shall reap your reward if it is no more than the consciousness of having faithfully done your duty. It is sometimes nobler sportsmanship to spare than to kill. Assuredly it is so at this season.

SHALL SELFISHNESS WIN?

THE citizens of this State are awaiting with much solicitude the action of the Senate at Albany with respect to the bill repealing the anti-hounding law.

The principles involved are clearly defined; the issue is well understood. The advocates of the repeal at first posed as philanthropists, desirous only of preserving the deer from the market pot-hunters, and contending for the privilege of hounding, only that the deer might be made "shy" and their salvation from the still-hunter thereby assured. The shy theory has been exploded, and by the hounders perforce abandoned. The market still-hunter has been proved a bug-aboo and the hounders have practically given him over. From concealment behind one false pretense and another they have been driven to finally avow their true purpose to be present gratification of their own desire to hound deer.

The issue is one between individual selfishness and public-spirited concern for the true interests of the State. The question for the Senate to decide is whether it will grant to the hounders temporary gratification by permitting them to put the dogs on the trail and exterminate the deer, or whether the deer shall be preserved for the people of the State, a perpetual source of wealth and public benefit, to be used and enjoyed in any manner compatible with its wise conservation.

On the side of the present wise law is public economy, present and future. On the side of repeal of that law are improvidence and selfishness. Between the two the Senate ought not long to hesitate. The bill to repeal the law should not pass. Selfishness should not win the day.

THE RECOLLECTIONS OF A SPORTSMAN, of which the first paper in the series is given in our Shooting columns to-day, will cover experiences in New Jersey, New York, Ohio, Virginia, North Carolina, West Virginia, Wisconsin, Minnesota, Iowa, Missouri and Texas. They are written by a gentleman whose wide acquaintance among sportsmen will make these reminiscences doubly interesting.

A BIRD PROTECTIVE BILL.—That rising young statesman of Franklin, Mr. Floyd J. Hadley, introduced in the New York Legislature on Tuesday a bill to prohibit for five years the killing of "any bird of song, or any linnet, bluebird, yellow-hammer, yellowbird, thrush, woodpecker, catbird, pewee, swallow, martin, bluejay, oriole, killdeer, snowbird, grosbeak, bobolink, phoebe bird, humming bird, wren, robin, meadow lark, or starling;" but especially exempting from this protection the English sparrow. The effect of the bill is to forbid the killing of certain birds, as the robin and meadow lark, which are at present legally regarded for a month or two as game birds. It is a pity that Mr. Hadley's bill had not taken the form of the one recommended by the American Ornithologists' Union, but even in its present shape it will do good by calling attention to the growing evil of indiscriminate bird slaughter. If the graceful eloquence of that old practical hunter of forty years' experience, Mr. Palmer, the silver-tongued orator of Clinton, is not heard in support of this bill, we are much mistaken in our man. It is hoped, too, that Mr. Barnes, of Essex, may for the moment arouse himself from the contemplation of his diseased cat on the back fence, and make a sturdy fight for the birds.

SPITTING ON SHOT FOR LUCK.—Our correspondent, "Bedford," relates that when he was a boy in Middlesex county, N. J., it was considered the proper thing to spit on the shot for luck, just as an orthodox bait-fisherman spits on his bait. We never heard of this before, though familiar with some of the other more or less superstitious but commonly accepted beliefs and rites connected with loading a gun effectively.

The Sportsman Tourist.

SALMON FISHING IN SWEDEN.—II.*

"THE prince of good fellows is Baron Oscar Dickson." So shouted I as I finished reading a polite little note from him, generously placing his far-famed salmon river—the Åtran—at my disposition for the first half of July, 1885. Stockholm was getting hot and becoming deserted; most of my friends had already betaken themselves to their summer villas, and I was longing for the green fields, the salt sea breezes, and the foaming *fosses* of the west coast. So this kind invitation of the Baron was, of all things in the world, just what I most wished for.

I took the night train from Stockholm to Gothenburg. Next morning at 8 o'clock I was on board the superb steamer Halland, coasting southward through the labyrinth of rocky islands that form the Swedish Skärgård. At noon we came inside the stone piers of the snug harbor of Warberg, and after a hasty lunch at the hotel, I jumped into an ancient but comfortable, and no doubt honorable carriage, and rattled away over the rough stone flagging of the village streets.

Soon we were driving through the green fields of the open country.

It was a warm, still, hazy, lazy summer's day, this 2d of July, 1885. The blue Cattegat lay sleeping to the right. The tall winter rye moved slowly and majestically in the soft breeze, larks soared from the meadows and poised on high, with quick-beating wings poured out their little souls in song, the driver beat time with his cracking whip, our little northern ponies trotted sturdily along the dusty highway, and I dozed away on my comfortable seat and fell into sort of a half sleep, through which I saw everything as in a dream.

I awoke as we rattled into the pretty little village of Falkenberg.

Here was my gaffer, Carl Nilsson, in the street. He greets me with a pleasant smile and "lots o' salmon, nobody been fishing here for over a week."

We drive directly to the old inn of the town, Gästgärdsgården, these inns are called all over Sweden, but I should laugh to hear any of my brother readers of the FOREST AND STREAM try to pronounce that word.

I jumped into my fishing costume as quickly as possible, put together my rod, and was on the river bank with Carl at 6 o'clock.

Selecting a small "butcher" from my fly-book, I carefully whipped the stream. No rise in the upper pool, none in the next. In the middle pool at the second cast, ah! the flash of silver out of the depths, the bright splash of spray on the surface, the line tightening in a moment, the whizz of the reel as the line runs across stream, and the leap, leap, leap, of the silver-shining salmon himself, as thrice repeated, he jumps three feet into air near the further shore. Ah! that is what causes the blood to tingle in the veins, again brings back the zest of life in all its keenness.

The salmon was fresh run from the sea and gave good play, but his bright pearly side showed above the wave at last. I drew him in close to the shelving shore, and Carl flung him high on the bank.

Carl hooks my pocket scales into the lip of the fish, raises him up. I lean over and look at the index. He weighs just eleven pounds.

In the lower pool I took another salmon, and on the opposite shore three more.

At 10 o'clock we rowed down stream in the ruddy glow of the northern twilight, with five salmon gleaming in the bottom of our little skiff.

Next morning Carl called me at 3 o'clock, but in these high latitudes it was already bright day. We took a hasty cup of coffee, and at 4 I was casting the fly. The salmon rose well. I landed seven before 9 o'clock. Then we pulled home to breakfast.

The sky was clear, the sun bright, the river low, so after breakfast I turned in for a nap.

At noon Carl wakes me. The heavens were now all clouded over. We hurried back to the stream; I changed flies, putting on a Jock Scott. How the salmon rose to that fly. A fish took or showed himself at almost every cast. From a single post I took five fish, and at 4 o'clock I had landed sixteen.

My supply of Jock Scotts were now frayed out and used up. We paddled back to the village. Yes, the mail was in, and here was the long looked for letter from Scotland, containing a fresh supply of flies. We do not stop for dinner,

but drinking a bowl of milk hurry back to the stream. The salmon are still rising, and I land five more before sundown. Then a group of villagers saunter up the Doctor's way by the river bank to see me fish. I put on a large "silver doctor," and land yet two more salmon before darkness gathers over the turbulent river.

Thirty salmon. A good day's work. More than I ever caught before. More than I ever expected to catch in one day.

Next day I took it easy, landing two salmon in the morning and three at evening. At noon a man drove me two miles over a winding road, through fields of waving rye, to a little bath house at the seaside. Here I took a plunge into the Cattegat and washed the sweat and tire of salmon fishing out of me. I had a neat little room to dress in, clean towels and every attention, and the price was 12 öre, or 3 cents of our money. Wonder what our fashionable bathing places on our Atlantic coast would think of that?

Sunday came round and I was glad to give my rod and myself a rest.

The inn I am stopping at is over 200 years old. I have a large, low-studded sitting room, 22 feet square, and a bedroom opening out of it. The sitting room looks on to the paved street, but the window of the bedroom opens out upon a large flower garden and orchard, which slopes down to the river. Climbing rose bushes are trained up the walls of the house, and my window is embowered with white and red roses in full bloom. The summer wind drifts lazily in, cooled by the river and perfumed by the flowers. Then I walk in the garden, I find a hammock hung between two trees and lie and swing in it. It is noon; too hot to walk with comfort in the sun, but lying here in the shade, swinging between a maple and a cherry tree, the temperature is perfection. The sound of the rippling river just reaches my ear, a bee drones among the flowers hard by. I would like to stay here forever. And where else, pray, can I catch thirty salmon a day, or get a good sea bath for 3 cents?

At evening I rambled over the river to a little cemetery I had seen on the upland, attracted thither by a rude granite shaft that stood like an ancient Rune stone.

I found that this characteristic northern monument marked the grave of the good doctor who planned and secured to the people their beautiful shaded promenade along the river bank.

His epitaph is touchingly simple and beautiful. On the rough granite is chiseled:

"Här hvilar läkaren och meniskövannen."

"Here rests the physician and the friend of mankind."

For ten days longer I had all the salmon fishing my heart could desire or my hands accomplish. The weather was hot, sky clear, sun bright the whole time. The river was low when I arrived and it grew smaller and smaller with every day; rocks showed themselves out of water that had not been seen for many years, but the fishing continued good every day. The salmon left the upper pools, however, but the deep pools at the foot of the falls were full of them. One day some friends fishing on the Nissa River at Oscarström, drove across country and dined with me. I passed my rod to one of them as he came down the bank and he hooked a salmon at the first cast.

On Thursday, July 9, I was very early at the river. All up and down the stream as far as you could see, salmon were leaping incessantly. They were all bright fish, evidently a new run come in during the night. There had been no rain, no rise of the river, no wind and no cause for a run as far as we knew, but here were the fish nevertheless. They rose splendidly. At 9 o'clock I had landed ten salmon. Then I sent Carl to the hotel for a sandwich and kept on. The day was overcast, and using a very small Fairy, the fish rose well, even at noon. At three in the afternoon I had landed in all thirty-one fish. I rested fifteen minutes, ate a light luncheon Carl had brought me and whipped the stream again. But the salmon were not so eager; they rose more warily. At 9 o'clock I had landed thirty-seven and not another rise could I get.

There was a bit of swift water half way from the falls to the village, where I had frequently seen the fish jump, but where I had never succeeded in catching any. Now, we pulled down to this and running the bow of our punt on a rock that was just awash and, slipping on a silver doctor I wound up the day with four more salmon, taking the last one when the clock was nearly at eleven and making my score for the day forty-one.

At noon of July 16, as the village clock struck 12, I reeled in my line for the last time in Sweden. The first half of July was ended, and my time was up. The following is my score for the trip:

July 2, after 6 P. M.	5 salmon.
" 3	30 "
" 4	5 "
" 5, Sunday.	"
" 6	9 "
" 7	8 "
" 8	4 "
" 9	13 "
" 10	21 "
" 11	21 "
" 12, Sunday.	"
" 13	6 "
" 14	15 "
" 15	8 "
" 16, until 12 M.	15 "

The first day and last day were only half days. Counting these two halves as one whole day, the total will be 184 salmon in twelve consecutive days, exclusive of Sundays, an average of over 15 salmon a day.

These fish were not large, to be sure. None of them exceeded 16 pounds, and few of them ran over 12 pounds, though there were a good many that came up to that weight.

It is my firm belief that in point of the number of fish that can be taken by fair casting of the fly, the Åtran is the first salmon river of the world.

Baron Dickson has owned the fishing in the river for many years, and has expended large sums of money in salmon breeding and stocking the river. The Baron is undoubtedly the best fly-fisherman in the kingdom, and has probably taken more salmon with the fly than any other man in Sweden. In fact, he has become almost surfeited with the pastime. He told me frankly that the only sport now to him was to cast the fly and hook the fish; after that he was perfectly willing to pass his rod to anybody. He cared nothing about playing the salmon.

I used a light Leonard 16 feet split bamboo rod, I think the first American split bamboo ever used in Sweden, and a 15 feet Scribner greenheart rod, alternately from one to the other, and finding a certain rest in the change.

I did all the casting, and hooked, played and brought to the gaff or landing net all the 184 salmon, and I must confess I was never so thoroughly tired out as at the end of this glorious twelve days salmon fishing.

Natural History.

THE AUDUBON SOCIETY.

NEW YORK, March 9, 1886.

Editor Forest and Stream:

My reply to your favor of the 18th ult. has been delayed by the pressure of numerous engagements. I beg you, however, to believe that you have my heartiest sympathy in the proposed organization of the AUDUBON SOCIETY. I am of the opinion that you deserve thanks for bringing to the notice of the community the extent to which the slaughter of American birds is going on, a fact which I think few realize. The success of your society will also tend to refine the public taste. Our savage ancestors decorated themselves with the tusks of wild boars and the skins of wild animals. The practice of wearing the stuffed skins or the plumage of birds in a hat is perhaps less barbarous, but is after all inspired by the same primitive fancy. Very truly yours, FELIX ADLER.

Editor Forest and Stream:

Though somewhat tardily, I nevertheless cordially indorse your worthy movement for the salvation of the birds. I should never dare face them again without the consciousness that I had enlisted my name upon the roll of those pledged to protect them. Sincerely yours, with congratulations and hopes of success for the movement, W. HAMILTON GIBSON. AUTHOR'S CLUB, New York.

Mr. George T. Angell, president of the Massachusetts Society for the Prevention of Cruelty to Animals, and editor of *Our Dumb Animals*, is rendering "yeoman's service" in the interest of bird protection.

In the April number of that periodical there will appear a very powerful appeal to its readers, to read the collected statistics of the leucotoms of "bright spirits of the air," annually sacrificed to the fashion, and the impression this heartless sacrifice of innocent life makes on thinking men and women, whose utterances on the subject are quoted; and then join in one universal demand for the legislation asked for in the body of resolutions and petition, prepared for presentation to the Massachusetts Legislature, and having for its object the compulsory introduction into the Massachusetts schools for systematic instruction on the economic importance of protecting insect-eating birds and their nests, and the general importance in its influence on character of treating the lower animals kindly, together with some knowledge of the State laws for bird protection.

That the Legislature may have some expression of public opinion to guide it in its consideration of the proposed act, Mr. Angell addressed the collective bodies of the Congregationalist, Baptist, Episcopal, Methodist and Universalist clergy of Boston and its vicinity, the Massachusetts Horticultural Society, the Saturday meeting of farmers at Massachusetts Hall, and the Unitarian clergy, all of whom passed unanimous resolutions in favor of the movement; the Episcopalian clergy dissenting only to the extent of preferring a similar resolution in the form of a petition to the Legislature.

A second section in the proposed act provides "that all fines collected upon, or resulting from, the complaint or information of an officer or agent of the Massachusetts Society for the Prevention of Cruelty to Animals, for violation of the laws of Massachusetts, relating to the birds and their nests, shall be paid over to said society in aid of the benevolent objects for which it was incorporated."

The Society hinting what it will do, if it succeeds in getting both sections of the act passed, leaves it to be shrewdly inferred, that whatever of taint of inherited destructive impulse or passionate lust of vengeance the president and members of the Society may have received from savage ancestors or leaven of the old Adam, shall all be concentrated on the offenders against the laws for the prevention of cruelty of animals or the protection of birds of importance in the general economy of nature.

SPRING BIRD NOTES.

LOCKPORT, N. Y., March 22.—A large flock of wild geese passed over this city, going north, between 7 and 8 o'clock Saturday morning. The first robin and bluebird were seen a week earlier, and to day I saw a number of male robins, but no females. The first purple grackle (crow blackbird), was also seen on Saturday last, and to-day quite a number were seen. We also had severe lightning and thunder on Friday evening, which is very unusual at this season of the year.—J. L. DAVISON.

MARCH 24.—About two years ago I reported to the FOREST AND STREAM that a Mr. Pomroy, residing about three miles from this city, captured a baker's dozen of wild geese on their being enticed into his barn during a storm by his tame geese—with which they mated and bred—and he now has a flock of about fifty of the original wild and mixed breed. I was informed last evening that for the past few days there had been a flock of about one hundred wild geese feeding on and about Mr. Pomroy's farm—probably this is the same flock that I reported to you on Monday as passing over the city on Saturday morning last.—J. L. D.

RIDGWAY, Pa., March 22.—Robins, bluebirds and yellow-birds are here. Many flocks of wild pigeons have been seen on their way north, also wild ducks and geese. There are but few pheasants left and they are very wild. A few deer and bear were shot during the past season, but are not as numerous as they were four or five years back.—X. TEMPORE.

CENTRAL LAKE, Mich., March 18.—Robins first seen to-day. The first crow of the season appeared on the 15th, and audibly expressed his opinion that spring was at hand. Weather mild, up to 50°.—KELPIE.

NEWFOUNDLAND, N. J., March 22.—A dead woodcock was found to-day near the N. Y. S. & W. R. R., about one-half mile from here. Supposed to have been killed by flying against the telegraph wire. It was in fair condition and a full-sized bird. Saw meadow lark March 20.—S. S. W.

HORNELLVILLE, N. Y., March 21.—Bluebirds arrived March 11; robins, 15; red-wing blackbirds, 19. I believe Meadow larks have been here all the winter.—J. OTIS FELLOWS.

A HAIR SEAL UP THE HUDSON.—Cheney A. Burbans, of this place, had the good fortune to shoot a fine specimen of the hair seal yesterday morning. Mr. Burbans was hunting ducks on the river opposite Barrytown, when he saw the seal on a cake of floating ice, and had no difficulty in getting within gunshot. The animal weighed 65 pounds.—HOWARD BURBANS (Flatbush, N. Y., March 24).

GROUSE IN THE SNOW.

Editor Forest and Stream:

Ever since the day, away back in the ultima Thule of my memory, when I ran into the first flock of grouse and got my first surprise at the flying powers of grouselings the size of two-day-old chickens, no bird on the whole "check list" has possessed for me so much interest, or come in for so large a share of my observation. Therefore, when I read the communication of "Dry Snow" to-day, in your issue of 18th inst., I thought that perhaps a word from me would be "in season." First let me say to your contributor that I come not in my war paint, but as a brother woodsman who has spent the major portion of his life within sound of "the sighing of the pines," and whose woods-lore is not in any way commensurate with his woodland experience. If when we are through with this, we still differ, let us do so in the kindly spirit of fellow-sportsmen, giving each other credit at least for honesty. I preface with these remarks, because I must necessarily show that some of the reasoning in the communication referred to is somewhat illogical, and I thought I detected in it a slightly sarcastic undercurrent, which might come to the surface when the author's opinions were confronted with rebutting testimony. I never trail the tail of my coat on the ground challenging some one to tread on it; but I have sometimes tried to make it interesting for the man who raised his foot high enough to reach it when in its normal position.

"Dry Snow's" letter gives no clue as to the part of the continent from which he writes, or which is covered by his experience, but were I to hazard a guess, I would say: Some part to the south of this and far removed from the sea-board. He has evidently never seen one of our northern "ice storms," loading every tree with tons of ice, and bending some of the more pliant clear to the ground. There is just a breath of wind from the "noath east," the thermometer stands at about 15°. First come four or five inches of the light "goose-feathers," then the snow becomes finer and more heavy; next a few inches of hail. Then there is a lull, the wind shifts a point or so to the east, and a dash of rain strikes, every drop freezing the moment it touches, and it keeps on till it forms a hard smooth crust, from the thickness of a window-pane (and almost as sharp) to the strength and solidity necessary to bear a loaded team. Now suppose a grouse dives into the light snow before the rain comes, what then? He is sealed in like an oyster in a can. If the crust be thin enough for him to break, all right; if not he must die. (Beggins "Dry Snow's" pardon, a grouse's head is not near the surface when he burrows in the snow, for I have put my snow shoe over them many a time; they take their oxygen through two or three inches of light snow.)

"But," says "Dry Snow," "have you any evidence?" Only a little. By referring to my books, I see that Friday, Jan. 29, 1886, treated us to just such a storm as described above, the snowfall being about ten inches with five inches of hail above that. At 3 P. M. my week's work was practically over, and I was six miles from home and snowshoes. I started to tramp it through the sand like hail. At 4 P. M. it commenced to rain, every drop that touched my rubber coat freezing as it struck. Five P. M. found me still a mile from home, on a much used trail leading between two populous settlements. I was staggering along with about as certain footing as I would have had on a pile of apples, when—*burrrrr*—went a grouse from the snow in the middle of the road, right at my boot-toe. The next morning we skated anywhere over the crust, and in two days they drove teams over it. Now where would that grouse have been had I not kicked him out of that? And supposing, for argument's sake, that he had a "diamond-borer" down there with him and tunneled out, would he not have had a gaudy chance to feed, with every bud and twig solidly encased in ice?

Now I will try to answer your correspondent's questions, not, however, exactly in the order they are asked.

(1) "Did any person ever find the remains of a grouse that had been crushed in and killed by a fox?" In the winter of 1868, I was one day on the road to the logging-woods. There had been a thin sleet crust, and the merest suspicion of a fine snow over it. Any "down Easter" will recognise the picture at a glance. I picked up a bunch of black feathers from the crust, and saw it was from the ruff of a grouse. As I advanced I saw more feathers blowing around till about 100 yards from where I saw the first bunch, I came on the scene of a woodland tragedy, about three feet to one side of the trail. The mark made by the bird when it went into the snow could be distinctly seen. The footprints of rye-yard straight down the log trail were as plainly visible in the light, frosty snow. He had turned aside just before he came to the bird, which had burst through the crust fully three feet from where it went in the snow, but too late to escape. Whether the fox scented the bird or recognised the mark, I can only conjecture.

I have snowshoed thousands of miles through the woods, and even now I am lame from an eight-mile tramp yesterday in a rain storm, when the snow accumulated on the rear part of the shoe, till its weight reminded one of the proverbial "leadon heel of justice." I once worked six months, and the gross amount of my wages was just ten cents a mile for the tramping done between stations, and I had to work thirty-five hours per week besides. So I am not speaking rashly when I say "thousands," and the above is all the direct evidence I have collected. To some it may seem like the "Behold this walrus tooth." Of other, the Saxon discoverer of the North Cape; but to me it is conclusive. We should remember that if we knew the remains of a grouse were in a certain piece of woods an acre in extent, we might have trouble in finding them. Anyway, it goes a long distance to show that a man may spend the greater part of his life in the woods and yet not know all about it. Had I not gone to the woods on that particular morning when a boy, and been traveling at an unseasonable time when a man, it would have been all supposition with me.

(2) "Does Nature make any such blunders?" In my opinion Nature never blunders. Every one knows that tender birds, as vireos, for instance, often migrate north before the cold weather is over and get frozen to death, and that ducks and geese sometimes get "frozen in," but are these to be stamped as "blunders" of Nature, or exceptional misapplications of the instinct that Nature gave these birds? To me "nature" in the above connection simply means God, who, the poet tells us, "moves in a mysterious way his wonders to perform." He gives His dumb creatures a good general fund of instinct; but He does not fortify them against exceptional circumstances. He would not leave the grouse liable to be crushed in at every thaw, but He would permit them to perish in an occasional sleet storm, coming once in seven or eight years, and as well might He do so, as to allow them to fall to the gun of some sportsman or in the snare of some pot-hunter.

(3) "If the snow is dry can a crust form over it?" Yes, see above.

(4) "The exact number that came under your observation?" Also answered above.

(5) "How many hens did you ever see go in swimming?" Though the last sounds strangely like what the late lamented "Josh Billings," the prince of phonetic spellers, would call "sarkasm," I will do my best to answer. I can't tell the exact number, but I assure your correspondent that I have often seen them do it—not the mud-hen either, but the common domestic fowl. However, it was like the grouse being frozen in—they had no vote in the matter. Perhaps your contributor would say it was because Nature had "blundered" in not either paralyzing the arms of sundry small boys and old women, who put them in "to take the set out of 'em;" or giving said individuals brains enough to know better than to adopt such a course.

So in my misty mind melt the arguments of "Dry Snow," and with a hearty parting shake of the hand I will let myself down on that last sentence by quoting a remark from the immortal Mrs. Edgar: "Sure we be till be havin' our jokes." L. I. FLOWER.

JEMSE, N. B., Canada, March 25.

TAXIDERMISTS AND MILLINERS' AGENTS.

Editor Forest and Stream:

I have cut the inclosed article from the Boston Globe of recent date, and forward same hoping you will insert it in your columns. It is from the prominent taxidermist in Boston, and is also the voice not only of a class who are supposed to be "dead set" against protection, but it is also the "ground tier" of the Massachusetts Association of Taxidermists and Ornithologists, a society recently formed, and which includes every taxidermist in Boston but one, and some out of town, besides numerous true sportsmen.

"I would like to say a few words in defense of the taxidermists, and show that they are not such a class of bird destroyers as Fish Commissioner Lathrop and others tried to make them appear before the Fish and Game Committee at the State House, on Wednesday last. The bill presented by the Massachusetts Fish and Game Association, for the better preservation of our singing birds, is a good bill, and all legitimate taxidermists are in favor of doing what they can to have a stop put to the wearing of birds on hats or any part of a lady's dress. I, for one, would like to see the ladies discontinue the use of birds as dress trimmings; if they will do this, there will be no need to make laws to preserve our birds, as there would be none killed by men who now make their living by collecting birds for the milliners; and, as birds increase very rapidly, the loss of the few used in the interests of science would not be felt. I have been in business in Boston for the past seventeen years; have had a permit to collect birds, and the largest number collected in one year was some thirty-six or thirty-seven specimens, out of which there were some hawks and butcher birds. Of course, in this thirty-six or thirty-seven birds I do not include game birds killed in open season. Now it is a well-known fact that the sparrow hawk, sharp-shinned hawk, pigeon hawk, Cooper hawk and butcher bird make their living mostly off our small song and insectivorous birds, and when it is computed that every pigeon and sharp-shinned hawk kills on an average at least two birds per day (and they hunt Sundays as well as week days), it will be seen that the taxidermist who offers to buy all kinds of hawks, owls, weasels, etc., is doing more to save the birds than destroy them. There is one thing the Association of Taxidermists and Ornithologists wishes the public to understand, and that is the difference between a legitimate taxidermist and a milliner's collector. A legitimate taxidermist has nothing to do with millinery collections.—Charles L. Goodale, Taxidermist."

The one taxidermist not in the association is one who goes to Florida as much for numbers as for good specimens. It is for the purpose of protecting legitimate taxidermists (upon whom science largely depends), and to show the difference between the slaughterer and true scientific taxidermists. It is a very commendable association. I take pleasure in endorsing them. RAYMOND LEE NEWCOMB.

SALEM, MASS.

SPARROW VS. ROBIN.—*Editor Forest and Stream:* In your issue of the 18th inst., my attention was attracted to the clipping from the Boston Advertiser, in which they venture "to say that not one among ten thousand pretended friends of our birds ever saw an English sparrow kill or maim a native songster." This calls to mind a tragedy I witnessed while in Erie, and one that was looked upon by a score or more of other people: The trees in the park have a number of boxes for the birds, all of which the sparrows have taken possession of. One afternoon while sitting there, I noticed a robin singing on a tree. Soon a sparrow stuck his head out of a box and began scolding. Finding that did not stop the song, he sounded his war cry and was soon surrounded by others of his clan, when a pitched battle was immediately engaged in and carried on with such vigor that they drove the robin to the ground, and by picking and flying against him from all sides soon reduced him to submission. When we drove the sparrows away the robin was so badly used up he could neither stand nor fly, and was carried off by one of the spectators. On another occasion I heard a great commotion among the sparrows in our yard, and looking out saw them attack one of their own species that had a broken leg and pick it to death. I am much pleased with the stand the FOREST AND STREAM has taken in regard to bird protection, and hope the Audubon movement may go on until the slaughter of birds for their plumage is abolished.—ONE OF THE TEN THOUSAND.

THE SPARROW HAWK IN WINTER.—Washington, D. C., March 27.—*Editor Forest and Stream:* In your issue of March 25 Mr. Henshaw says of the sparrow hawk after twenty years study of birds, "He lives almost exclusively on grasshoppers and crickets." What does he do for grub in the winter time? Does he keep a silo or a canuary? About here there are some seven months in twelve when there are a few classic "crickets on hearth stones" around and nary "brown old grasshopper." What does poor *sparverius* do then? Hop in the bare to keep himself warm, and hide his head under his wing, poor thing? I merely ask for information.—M. G. ELLZEY, M. D.

A WOODCHUCK IN THE SNOW.—East Auburn, Me., March 22.—Is it not uncommon for woodchucks to come out of their holes when there are two feet of snow on the ground? Some children sliding on the crust near this place found one on the snow, and tried to kill it by crushing it under their sleds.—W.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

RECOLLECTIONS OF A SPORTSMAN.—I.

I CANNOT begin these reminiscences better than by quoting from the much worn "Old Oaken Bucket:"

"How dear to my heart are the scenes of my childhood,
When fond recollection presents them to view."

Only I should substitute the word boyhood for childhood, for it was in boyhood that my natural fondness for field sports became a passion, that led me to study the habits of birds and animals as a naturalist, as well as a sportsman. I took delight in watching the quail pair, nest, and raise their young; and spent hours of moonlight nights in the early spring, during the first flight northward of the woodcock, quietly watching them feeding, pairing, and performing their interesting gyrations, as from the time they left the ground whistling upward, until they reached the desired elevation to perform the "chip, chip, chip" act in mid-air; then dropping suddenly to the ground, announcing their arrival by the usual guttural note. The whole process of nesting, hatching and raising their little brood was of great interest to me. To learn the call notes of various birds until I could almost call them at will; to witness the battles between the red and gray squirrels; their loves and jealousies during the breeding season; performing of a delicate surgical operation by the old males upon the young ones, was the delight and pastime of many an hour. The study of woodcraft, the location of animals' dens, squirrel and bee trees, were not so well known to any boy of my acquaintance. Yet, I doubt not, many of your readers have found amusement and instruction in the same way, and perhaps obtained greater proficiency. Such will agree with me in believing, in spite of the croaker's and money-grubber's cry of wasted time, we have what many of them would like to buy, but cannot, what nature gives to her ardent admirers—contentment and a field for enjoyment beyond the comprehension of those whom nature has not taught.

It was in boyhood, in the year 1861, that I first became possessed of a double barrel gun—muzzle-loader of course, as it was before the days of breechloaders—an English gun, costing fifteen pounds sterling, handsomely ornamented in German silver. Shortly afterward I secured a fine double-nose English pointer, Dash by name, a dog of large bone and muscle, great endurance and untiring energy. From that time I have unblushingly acknowledged myself a sportsman. Previously, my proclivities in that direction had been limited to a narrow field, bounded on all sides by the fears of my parents, and severely fenced in by my inability to command the necessary amount of currency, then known as shinplasters, to gratify my desires. My experience, therefore, had been much the same as other boys with a single barrel gun and an inborn love of sport. First firing at the ice house door from a rest, feeling proud to find it hit fair and square. Next firing from a rest again into a flock of blackbirds, being delighted to see five fall to the ground, only one of which proved to be dead, the wounded ones appealing strongly to boyish sympathy. It was easy merely to pull a trigger, dealing death and suffering to a number at one stroke, but when it came to picking up the wounded, and putting them out of misery it could hardly be called pleasure.

Then came the delights of squirrel hunting. I use the word hunting because there is more of hunting than shooting in this sport, the pitting of cunning against cunning instead of skill in the use of the gun. I shall never forget a certain wood in Middlesex county, N. J., containing a large number of shellbark hickory trees, where I killed hundreds of squirrels. I would rise before day and quietly creep to a good position among the shellbarks, generally near cross fences, and silently wait until just as day was fairly breaking, I would suddenly hear and see a great commotion in some neighboring treetop, when it took but an instant for me to change my position to within gunshot, as silently as an Indian follows the trail. The next moment the report of my gun would echo and re-echo through the wood, breaking the profound stillness of early morning. A squirrel, sometimes two, would come tumbling through the branches, catching and hanging for a second or two, falling limp and dead to the ground, the victim of a charge of No. 4 shot, which had been carefully spit upon "for luck." There was an ancient tradition among the boys of Middlesex that to spit on the shot made it carry closer and stronger. At any rate my old single barrel, after I adopted this practice, got into the habit of "fetching" almost every time she spoke. I might, however, qualify this assertion by saying I had not then attempted wing-shooting, and thought it a great demonstration of skill when I killed a squirrel jumping from tree to tree or running along the fence. There was also in the wood I speak of a number of tall dead trees, famous resorts for high holders, or flickers, many of which found their way into my game bag. As I have already said, I started on these hunts before daybreak, usually remaining in the woods an hour or so, returning home in time to snatch a hurried breakfast, do my farm chores, and get to school by 9 o'clock, rarely scoring less than four to six squirrels and several high-holders, robins, or a dove or two. If luck was poor in the morning, an hour in the evening brought my bag up to the average.

I soon contracted the habit of keeping my gun always near me while at work about the farm and firing at robins, crows, doves, etc., as they happened to fly within range. I soon had the satisfaction of being able to make certain wing-shots with great accuracy. This knowledge I kept to myself, fully realizing that until I could stop quail, woodcock and grouse I had better keep quiet. I frequently tried them, but as such birds were generally in the thickest cover, my gun long and unwieldy, I never got a feather, and seldom even a chance to shoot at the revelation of brown streak before it had disappeared.

I was invited on several occasions to join hunting parties who had fine dogs and guns, whose bags of game made me almost green with envy. I always declined, determined not to be laughed at, secretly believing were I as well fixed as they I could soon learn. I had one great advantage over them; I could always find the game, even when dogs had

hunted the ground and failed. This came from having many times followed hunting parties, learning to mark, and noticing where the birds took refuge. I knew every thicket and little piece of "cat briar" swamp, almost the number of woodcock and where they sat. All the logs where grouse drummed, and the proper time of day to find them home. They seemed to have but little fear of me or my gun, and always whirled "good-bye" to me in a most sarcastic way. This was why hunting parties wanted me with them. I knew it, and didn't go.

One day one of these parties got into my favorite covey of quail and killed thirteen of them over single points before my eyes. I couldn't stand it any longer. A double-barrel gun of approved pattern and bird dog I must have. Having just formed this determination, I was sitting on the fence sadly ruminating on the havoc made in my quail, when I heard one of the party calling up some of the others as two dogs were pointing in thick undergrowth. I mechanically cocked my gun, when I heard a tremendous whirr, and bang went four shots at a splendid cock grouse, which came toward me like a streak of "greased" lightning. As I had a clear space, I took deliberate aim along my little 16-bore single barrel, held well ahead, and fired. The heavy thud of my first grouse striking the ground sent a thrill of enthusiastic delight and triumph to my heart which could not be excelled.

Two of the men saw the bird fall. One of them rushed toward it and told his dog to fetch. I sprang for the bird just in time to kick the dog off and secure it, when the man excitedly demanded to know why I kicked his dog and violently claimed the grouse, which he said he had hit. In an instant my gun was clubbed and its stock splintered, the bird thrown to the ground, as I had no pocket to put it in. When the third party stepped in as an arbitrator, I wanted no arbitration; I wanted that grouse, and I got it. When it was picked I found only No. 4 shot in it. My gun had been loaded for squirrel.

Thus far I have traveled backward in my recollections, but in future articles I propose to narrate occurrences from the time I came into the possession of Dash and a double-barrel gun up to the present time—an experience of about twenty-five years in the field, woods, and on the water.

BEDFORD.

THE ANTI-DEER HOUNDING LAW.

Editor Forest and Stream:

I am very much amused when reading about the benevolent and easy-going dogs that the deer hounders use in the Adirondacks. The advocates of deer hounding would have us believe that the hound is a slow-going animal that cannot get up to a deer, and would not bite it if he could. Hounds have been bred within rifle-shot of my residence and used all about me.

I have repeatedly heard guides and hunters discuss the training of deer dogs and the best crosses for practical use. The full-blooded hound for deer is not very highly prized here, as they are not fast enough. A deer for some time will not take to the water before a very slow dog, but plays around on the hills and knolls and listens and watches for him. Some so-called still-hunters take one of these dogs into the woods to stir up the deer and are often quite successful in getting chance shots. All hunters agree in saying that the faster the dog and the harder the deer is pursued the quicker it will take to water. The dogs most used in the Adirondacks are a cross between a cur and a hound; but the best dog, and the one most highly prized, is one-half deerhound, one-quarter bulldog and one-quarter greyhound. This dog, properly trained, will trail the deer to the death. It has speed to overtake it, and ferocity enough to catch and kill or eat it alive, which it often proceeds to do.

There are two ways of training deer dogs. One is to put out a young dog with an old one and let it learn by example; but the best training and one that makes the most valuable dog, is done in this way: In February or March, when the snow is deep and crusted, the trainer takes the young dog into the woods and finds a yard of deer. As soon as the poor deer leaves the yard it flounders helplessly in the snow. The trainer then sets on, and encourages the dogs until they succeed in killing it. They are then encouraged to eat a full meal and lap its warm blood. After four or five lessons of this kind its education is considered complete. Afterward, to keep it in proper training, it is only necessary for the hunter to open the deer as soon as killed and give the dogs a meal from its quivering heart and liver. I have seen it done, and it is not a pleasant sight. I must say it is anything but a pleasant sight, too, to see a deer running before one of these fast hounds—to see the poor thing loping along at a slow gait, its head down, its tongue hanging out and its neck and breast white with foam, having run at the top of its speed until it is tired out and can go no further; and then to see the dog overtake it, pull it down, and then hear its despairing and pitiful bleats. This happens very often in the valley where I live, there being no lakes or ponds in the immediate vicinity.

Is it any wonder that dogs of such blood and training make havoc among the deer when they get loose and have a chance to slip away into the woods?

BAINBRIDGE BISHOP.

NEW RUSSIA, Essex County, N. Y., March 22, 1886.

Editor Forest and Stream:

The Massachusetts Fish and Game Protective Association held their regular monthly meeting Wednesday evening at the Parker House, full thirty-five members being present. Thirteen new members were elected, and also three proposals were presented, speaking well as an indication of the prosperous condition of the association. Sympathy for the opposers of the deer hounding bill in the New York Legislature was expressed and the following resolution was adopted:

Resolved, That the association express its appreciation of the good work of FOREST AND STREAM in its opposition of the hounding of deer, and its hope that those efforts may not be made in vain.

The prospect for successful legislation in our own State were discussed, but as a game bill had not as yet been reported by the committee, no definite arrangement can be determined upon. It can be said, however, that the prospects are decidedly better than for a year or two past for the enacting of a better law than is at present in force.

H. J. THAYER, Secretary.

BOSTON, Mass., March 24.

The advocates of the repeal of the anti-hounding law began their campaign by misrepresenting facts, and they seem determined to carry these tactics through to the bitter end. Mr. H. J. Cookingham, of Utica, writes to the

Herald of that city: "Every market man is opposed to it [the bill of repeal], and wants the law to remain as it now is. The chief, yes, almost the entire opposition to the bill comes from that source." In reply to this Mr. John D. Collins says in the *Herald* that Mr. Cookingham's statements are "buncombe." B-u-n-c-o-m-b-e is a roundabout way of spelling it; but it is more euphemistic and less harsh than the commonly accepted characterization of statements not in accord with the truth.

Mr. GEORGE W. PALMER, who made the funny "shy" speech in the Assembly, is jealous of his fame as an old practical hunter, and resents the imputation, in our issue of March 18, that he did not know whether deer were hounded by day or by night. According to the stenographer's report of the oration of the silver-tongued orator from Clinton, Mr. Palmer said: "I assert here that a party of six gentlemen going into these forests with half a dozen dogs, two or three nights on an average, every deer they bring out costs them more than one hundred dollars." Mr. Palmer thinks that he must have said days instead of nights. We take pleasure in taking this occasion to correct the erroneous impression conveyed by the stenographer's report of Mr. Palmer's speech.

From the Utica Herald, March 23.

An esteemed correspondent sends us what seems to be a very honest and straightforward appeal for the deer hounders. While admitting that he has never hunted deer with hounds himself, he declares that his sympathies are on that side, and proceeds with several ingenious arguments in favor of the repeal of the present law. His appeal is largely based on the theory that if the hounding of deer was likely to be the cause of their speedy extermination, the hotel keepers and guides would not favor the repeal of the present law. He intimates that the sentiments expressed in the *Herald* have only represented one section of the sportsmen, and do not represent the regions further north. He alleges that there is a chivalric spirit among the guides, hotel keepers, proprietors and sportsmen, which will and has prevented the slaughter of deer, and the use of unfair means in hunting them. He urges that the use of hounds is no more cruel than still-hunting, and that the number killed that way is no greater.

We shall endeavor to treat these suggestions in the same spirit of fairness in which they have been offered. There is an honest difference of opinion among genuine sportsmen in regard to the matter, though from published evidence the majority against hounding deer is large and eminently weighty.

The argument that the hotel keepers of the Adirondacks and guides always do what is for their highest interests, is unfortunately not proved by the general experience of human nature. As against their true interests in the future, to favor their present interests, they are apt to choose the latter. The extermination of the game in the course of twenty years is a matter of no special moment to the present proprietors, many of whom look at that result as a matter of course under any system. If the principle here laid down by our correspondent held good, what would be the necessity of legislation against taking fish in nets, setting weirs in the streams, and of making laws for the preservation of the forests from ruthless destruction by the lumbermen, whose interests it is supposed to be that the forests be conserved as long as possible? It is evident that all proprietors or all sportsmen can not be trusted to carry out the very chivalric but somewhat too optimistic theory of our correspondent in the treatment of game.

Moreover it will be seen by a glance at the petitions submitted against the repeal of the anti-hounding law, that those guides and sportsmen who are regarded as best representing the interests of the game, are found favoring the present law. The hunters of the whole State, and not of any section, must have their interests consulted. This opposition to the repeal of the law is not gotten up by those who know nothing about the merits of the case, but by men who have tried both methods of hunting the deer and who know what they are talking about. The articles published in this journal have been written by practical hunters and sportsmen, who have hunted deer and who regard them as game, and not as so much venison running wild.

Now as to the final argument of our correspondent, that the hunting of deer with hounds is no more cruel than still-hunting, we readily admit that, when hounding is properly carried on, it is a legitimate and exciting sport and has received the sanction of ages of sporting methods. It is not on this ground that the *Herald* opposes deer hounding. If New York was still part of a boundless wilderness, with an unlimited supply of game, the situation would be such that no restrictions of this kind would be needed. But such scenes as pictured in last Friday's issue* are not the mere results of an artist's lively imagination. The hunter of today is not always as chivalric as he might be. The possible escape of the coveted game is now too much of a stake to hesitate long at using very unfair and unsportsmanlike methods of capturing it. As to the number of deer killed when both methods of hunting are allowed being less than when only one, that of still hunting, is used, the absurdity is apparent. Is not an army with both cavalry and infantry more effective than an army with infantry alone? Which will cause the most destruction? Which will most rapidly annihilate the enemy? The opponents of the repeal law believe that in so doing they are not only serving the best interests of the sportsmen, the tourist and the proprietor, but are also showing a humane and chivalric spirit toward the noblest, and what would soon become the rarest of our native game.

*The "Hounding a Deer" illustration, from the FOREST AND STREAM, March 11.

WILDFOWL IN IOWA.—Burlington, Ia., March 23.—The spring shooting, which commenced at the grounds of the Crystal Lake and Eagle Grove Club grounds about the 15th, has not proved to be as good as was expected. When the ducks came up from the south they found no water in the swamps and no feed. The ice is now out and the spring rise has come, but too late, for the ducks are gone. The game register of the Crystal Lake and Eagle Grove Club was opened on the 15th by Mr. Goldthwaite, with a score of 13, 2 mallards, 1 canvasback, 1 redhead, and 14 blackjacks. From the 15th to the 23d but 373 ducks have been shot on the club grounds, an average of 5 guns shooting each day, not a very good showing. Camp hunters in various parts of the State and on the islands have made very poor scores. Parties who were out from one to two weeks bringing back all the way from 50 to 100. In one instance a party of four, and they are all good shots, who were out two weeks, got only 150.—C. L. E. G.

RIFLES AND BULLETS.

Editor Forest and Stream:

Mr. Van Dyke is quite right when stating, in your paper of Feb. 18, that "J. J. M." "certainly will not assert that a bullet whose axis of rotation is correct up to 40 yards could, without touching anything, begin to wobble before it reach 100 yards;" but I do assert that a bullet may be so slightly tilted sideways when leaving the muzzle, that its deviation from accuracy is hardly, if at all, perceptible at 40 yards, and yet very evident at 100. At extremely short ranges, the great rate of the spin keeps the point of the bullet nearly as straight as when starting, but when the spin becomes slower the pressure of the air forces the point more and more aside, causing a rapid increase in the curve from the true line of flight.

I think this is proved by the fact that many express rifles will shoot well at 100 yards, fairly well at 150, and very indifferently at 200, although the rate of spiral is quite sufficient to keep their short bullets straight up to the last named distance, provided they leave the muzzle with the axis of rotation perfectly coincident with that of the bore of the barrel. The deviation from accuracy is often out of all proportion to the increase in range. For instance, a rifle will hit regularly a 10-inch square at 150 yards may not be reliable for less than a 20-inch square at 200; or, there may be no wild shots discoverable up to one particular distance, and yet they may be very apparent 50 yards further on. A .36 express rifle alluded to by Mr. Van Dyke (printed .80 by mistake), could be depended upon after the maker had improved it, to hit a 6-inch square several times in succession at 100 yards, but at 150 it almost invariably made about 2 wild shot out of every 6 fired.

I have always believed that irregular shooting of this kind is partly due to the bullets in most sporting breechloaders not being held firmly by their bases in the shells, thus becoming jammed slightly aside at the moment when the explosion of powder drives them into the barrel. Even when crimped the shell, through fitting loosely in the chamber, expands so as to leave the bullet without support. With the long bullets used in target rifles this source of error is, to a great extent, avoided by their resting with more than half their length in the grooves when the cartridge is pushed home, and I understood that in some of the American sporting breechloaders, the difficulty had been quite overcome by having shells which fit the chambers very closely and using loaders which drive the bullets with mathematical exactness into the shells, where they are held so tightly that crimping is unnecessary. Why a bullet with its fore part already in the grooves and all the remainder of its length held firmly in this manner until it has entered them, should not be as accurate as in a muzzleloader is difficult to understand.

In large bore rifles made expressly for spherical balls, which, of course, lie in the shells without touching the grooves until fired, there is, according to my experience, no difference in favor of muzzleloaders, and the late Captain Forsyth, of the Indian army, who experimented with sporting weapons more than perhaps many men of his time, stated in his book on "Sporting Rifles and their Projectiles," that spherical ball breechloaders are "equal, if not superior," in accuracy to muzzleloaders.

In a long course of shooting at both targets and game with three of my own sixteen-bore rifles, two being single muzzleloaders and one a double breechloader, I could never discover any inferiority in the breechloader. I certainly cannot oblige Mr. Van Dyke by showing "a breechloader that will hit a half-inch ring at twenty yards with four or five inches of powder and the ball seated in the shell." No shells are made in England that will hold so much powder.

In target shooting I never tried a rifle at so short a distance as 20 yards, but judging by what a good express rifle will do at 40 or 50 yards, I believe it would hit a half-inch ring regularly at 20 yards. The longest shell made in this country is that of the .45 "Magnum" express, which holds 150 grains of powder or barely 3 inches. As the shell is slightly bottle-shaped, this might, perhaps, be equal to 3½ inches in a muzzleloader. More powder is not likely to be tried, because the recoil would be too great in rifles light enough for men of average strength to carry with comfort. Another objection to a heavier charge is that the fouling, in spite of lubricated felt wads, increases to such a degree as to spoil the accuracy, unless the barrel be wiped out after each shot, a nuisance to which few sportsmen on this side of the Atlantic would submit. Rifles of .43-bore and 12 or 14 pounds weight, such as those used in the FOREST AND STREAM trajectory trial, would be almost unsaleable in England.

From the letters of "Mississippi Lowlands," Mr. Van Dyke and others, it seems clear that there is much greater difference between breech and muzzleloaders made in America and those made in the British Islands. At the shooting matches of the North Indian Rifle Association, to which I once belonged, breechloading express rifles were allowed only three points when contending against muzzleloaders for a possible score of 60; six shots being fired at 150 and six at 200 yards, from any position, but without any artificial rest. And these three points were found quite sufficient to equalize the rifles. I have before me now a report of the shooting in 1877. Among the first twenty competitors the three best used express breechloaders, the muzzleloaders coming in fourth, seventh, eighth, eleventh, twelfth, fourteenth, sixteenth and nineteenth. The latter were made by some of the best rifemakers, and were fired by some of the best target shots in India—men who made the highest scores at the long range matches.

I fully agree with Mr. Van Dyke when he says that "the express or high speed system is as old as American rifle shooting." Captain Forsyth, in the book above mentioned said, as long ago as 1862: "With the Yankee rifles no judging (of distance) was required at anything under 100 yards, the aim was taken point blank with the same sight." I myself, when living in Canada about 1865, drew attention in a letter to the London *Field* to the long flat trajectory of small-bore American rifles, stating that the bullets made a curve about 6 inches high when fired at 200 yards. In those days the favorite sizes among British sportsmen abroad were from 16 to 12 bore, and few men used less than 25-bore, or .377.

Within two or three years after my letter appeared muzzleloading sporting rifles of .45-gauge came into fashion, with short bullets and 80 to 90 grains of powder, then considered a heavy charge. The bullets were at first solid, and even in that form were found very deadly when made of soft lead. A noted sportsman, named Colonel Cuppage, wrote to the *Oriental Sporting Magazine*, while I was in India, describing how these small bores gave a large striking surface in consequence of the bullets smashing up into the shape of mushrooms when hitting large animals at great velocity. The hollow bullets came into general use about 1870, through some sportsmen trying to make up for the smallness of

gauge by employing explosive shells, but they often exploded before penetrating to a sufficient depth, and it was soon found that the bullets were much more effective when the hollows were filled with beeswax or plugs of wood. The powder charges have been increased since then to 50 grains in the .36, 80 in the .40, 125 or even 150 in the .45, and 165 in the .500 breechloaders.

This is, I believe, the real history of the discovery of the modern express rifle. J. J. M.

LONDON, England, March 15, 1886.

Editor Forest and Stream:

I was very much interested in your trajectory test. The result rather surprised me in several instances. I wish to ask some of your correspondents who have had experience with muzzleloading rifles to please come out and tell for the benefit of tenderfeet like myself how to load and manage that arm.

I have always had a great liking for the muzzleloader, so last spring when I was in St. Louis I hunted the city over for a good one. At last I got hold of one, it was a 42-inch barrel 10-pound gun, very well put up and was evidently a good gun, but the bullet mould was not good. I have made and have accomplished some very good shooting, but not so good as I think the rifle is capable of. Will some gentleman tell me what kind of a bullet to use (the gun shoots 2 1/2 to the pound) and how to load the gun to get the best results.

I use a .45-caliber Pacific Ballard for deer and find it an excellent gun. As far as accuracy is concerned I think it good enough for anything, but the charges cannot be changed to suit the game as I like to do. C. L. S.

FORT CLARK, TEXAS.

ONTARIO GAME SEASONS.

A NEW law of the Province of Ontario (to take effect July 1, 1886) provides the following open seasons: Deer, elk, moose, reindeer or caribou, Oct. 15 to Dec. 15. Grouse, pheasants, prairie fowl or partridge, Sept. 1 to Jan. 15. Woodcock, Jan. 1 to Aug. 15. Snipe, rail, golden plover, Sept. 1 to Jan. 1. Swans or geese, Sept. 1 to May 1. Ducks and all other water fowl, Sept. 1 to Jan. 1. Hares, Sept. 1 to Mar. 15. Beaver, mink, muskrat, sable, martin, otter, fisher, Nov. 1 to May 1. Quail protected to 1888; wild turkeys to 1889. Imported game may not be shot without consent of land owner. Unlawful to kill deer, elk, moose, reindeer and caribou for exportation.

NEW BRUNSWICK GAME.—Campbellton, N. B., March 25.—Winter still retains its icy hold here, the snow lies deep over the land and the ice remains firm and strong on the lakes. A few caribou have been killed in this vicinity during the past season, but no moose, so far as we can learn, has been bagged. One party claims to have caught a moose in a caribou snare, but he proved a tartar, smashed things up, broke the rope and escaped, a wiser and madder moose. Quantities of fine trout are brought in here, which are taken through the ice on the small lakes in the interior, by the Micmacs. The catch of fur-bearing animals has not been a large one, which proves that they are also decreasing in numbers. Wild geese have put in an appearance down the bay. A woodcock was seen on the 22d near St. John, N. B. —STANSTEAD.

JEKYL ISLAND CLUB.—The Jekyl Island Club is in the nature of a hunting, fishing and yachting establishment on Jekyl Island, on the coast of Georgia, off Brunswick. A meeting of the club was held recently in the Fifth Avenue Hotel, in this city, and the following gentlemen were elected directors: Gen. Lloyd Aspinwall, New York; Erastus Corning, Albany; Wirt Dexter, Chicago; Judge Henry E. Howland, New York; Commodore R. L. Ogden, San Francisco; O. K. King, Wm. B. DeWolf, Thos. W. Pearsall, Lewis Edwards and L. M. Lawson, New York, John Eugene du Bignon, Georgia; Franklin M. Ketchum and N. S. Finney, New York.

LONG ISLAND SNIPE.—The text of Section 2, Chapter 485 of the Laws of 1885 reads as follows, the counties designated being Queens and Suffolk, which comprise the shooting along the Atlantic coast: "Section 2. No person shall, in said counties, kill or have in possession any bay snipe, sandpiper, shore bird or plover, from the first day of January to the tenth day of July in any year, or any rail bird, or meadow hen, from the first day of January to the first day of September in any year, under a penalty of ten dollars for each bird killed or had in possession."

EMMETSBURG, Ia., March 22.—Geese are just commencing their flight. Only one has been killed that I know of so far, but as soon as the weather opens there will be plenty of hunting. Ducks have not made their appearance yet. We had quite a fall of snow on the 20th, but nearly gone to-day. Prairie chickens have wintered well in this section, and the shooting promises well the coming season. Cotton-tails are abundant, with an occasional lone jack. Wolves have not been hunted much on account of the deep snow this winter. —E. H. S.

GAME IN SULLIVAN COUNTY.—Monticello, N. Y., March 22.—Foxes and wildcats have been very plenty the past winter. Rabbits and squirrels are too numerous to mention. Ruffed grouse have wintered finely and in good numbers. The male grouse are now drumming in every direction. To the many gentlemen and sportsmen who have hunted here with me for the past twenty years, I will say that the prospect for next fall's shooting is better than for many years. —CHARLES F. KENT.

POWDER RIVER.—Magnolia, Md., March 26.—President Cleveland was one of a party of gentlemen who to-night partook of a duck supper at the shore of the San Domingo Fishing Club, on the Gunpowder River, a mile from this village. President Cleveland and Gen. Farnsworth came from Washington on the invitation of Gen. Olcott, of Albany, N. Y., and Mr. Wells, president of the club. Among the invited guests were Judge Peckham and Charles H. Raymond, of New York.

MAJ. W. D. FULLER.—Sedalia, Mo., March 25.—*Editor Forest and Stream:* Major W. D. Fuller died at the Siche House, this city, March 11, of heart disease. I have no doubt but that this notice will meet the eye of some old comrade who may be at a loss to know what has become of an old friend. His effects, which are valuable, still remain at the office of the hotel awaiting the claim of legal owners. —OCCIDENT.

MAINE RUFFED GROUSE.—East Auburn, Me., March 22.—I feel quite sure that our ruffed grouse didn't suffer as much from the severe ice storm (that formed an icy crust an inch thick) we had in February, as many of our sportsmen feared. I saw four a short distance from my house since the crust that was lively enough, and my neighbor only a few rods from my house saw three budding his apple trees in his garden a few evenings since. I hope many more escaped.—W.

A DUCK ASTRAY.—Brooklyn, N. Y.—The other morning Mr. Bahr, a butcher, at the head of New York avenue, Brooklyn, saw a large bird on the telegraph wires, opposite his shop. He got a shotgun and killed it. It turned out to be a duck about as big as our common ducks, but with a long sharp bill, plumage black, rather long wings. Nice place to shoot ducks.—E. K. L.

WESTCHESTER COUNTY GAME AND FISH PROTECTIVE ASSOCIATION, organized in 1886, has the following officers: President, Frederick G. Leroy; First Vice President, W. E. Warren; Second Vice President, Wesley H. Wood; Secretary, George Laick, Tarrytown, N. Y.; Treasurer, William E. Tompkins; Counsel, George C. Andrews; Special Game Constable, Oscar Purdy.

CALIFORNIA LAWS.—We have received from S. P. Maslin, Esq., of Sacramento, a compilation of all the California laws relating to game and fish. The compendium is comprehensive, well arranged, fully indexed, and a model in its way. It is published under the authority of the State Board of Fish Commissioners.

MR. XENOPHON CLEVELAND, of Waltham, Mass., has sent to us for exhibition a number of crayon and oil pictures of fishing and camp scenes.

VIVA LOS GACHUPINOS (March 18).—For "Harpads" read Harpado; for "Algava" read Algava.—KEELPIE.

ENGLISH SNIPE have been killed the past fortnight on the Newark meadows.

Sea and River Fishing.

Address all communications to the Forest and Stream Publishing Co.

TROUT SEASON OPENS.

California, April 1; Colorado, July 1; Connecticut, April 1; Dakota, May 1; Iowa, Feb. 1; Maine, May 1; Maryland, April 1; Massachusetts, April 1; Michigan, May 1; Minnesota, April 1; New Brunswick, Feb. 1; New Hampshire, May 1; New Jersey, March 1; New Mexico, May 1; New York, May 1 (in Queens and Suffolk counties, April 1; not to be transported into other counties); Ohio, March 15; Ontario, May 1; Oregon, April 1; Pennsylvania, April 15; Quebec, Feb. 1; Rhode Island, March 1; Vermont, May 1; Virginia, April 1; West Virginia, June 1; Wisconsin, April 15; Wyoming, June 1.

BOSTON'S TROUT DISPLAY.

TO follow the growth of fishing tackle, from the juniper pole, cut green, stripped of the bark and nailed against the woodshed to season out the crooks, up to the beautiful split bamboo rod, is an interesting study. Thirty years ago a few fish rods—stiff bamboo poles or heavy rods of ash—were kept in the country store; but to day the fishing tackle store is one of the most novel and interesting within the limits of our cities. Indeed, his outfit has come to be one of the angler's chief sources of pleasure, and his eye is open for every novelty, and they are numerous, both useful and pleasing. But the tackle window, always attractive to the passer-by, has come to mean something more. Messrs. Appleton & Litchfield, No. 304 Washington street, Boston, have instituted a new department in the display they opened on the morning of April 1, the beginning of the trout season.

Their entire window is a scene from nature. There is the rushing stream, the pool containing live brook, rainbow and Lake Superior trout, with the lake and the forest beyond.

At one side is also an aquarium, in which trout spawn is shown in every stage from the time life begins up to the fingerling.

The entire window is novel and artistic, and shows a genius in love with its calling, which must have been moulded by the magic touch of the departed Prouty.

NEW YORK BASS LAW.

TO-DAY I notice for the first time—simply because I have been obliged to put my FOREST AND STREAM one side of late, to be read at the more convenient season—that FOREST AND STREAM of Feb. 25 purports to give the provisions of the Husted bill. You have been led into the same error that was committed by the Albany Argus, Journal, Express, Troy Times, and a dozen other papers. The Husted bill made no change in the open season for black bass. The season for this fish opens in Lake George and Brant Lake July 20, not July 13; in St. Lawrence, Lake Erie, etc., May 20, not May 13. Bullheads from Lake George shall not be exposed for sale before July 1, not July 18. In short, the only change made by the Husted bill is to permit having in possession of salt-water striped bass. In Section 21 the words "fresh water" are inserted in two instances before the words "striped bass."

The clause reads thus: "No person shall catch, kill or expose for sale, or have in his or her possession after the same has been killed, any black bass or fresh-water striped bass weighing less than one-half pound or less than eight inches in length from end of snout to end of caudal fin, at any time." This clause is then repeated, except for "black bass or fresh-water striped bass" read "salt-water striped." In the next clause "fresh water" is inserted before "striped bass," and again in Section 24 "fresh water" is inserted before "striped bass." I wrote an article for a local paper, quoting the law as you have it. Then followed, in other country papers about here, the greatest rubbish of fish laws that were ever put on paper, so that the people were all at sea.

When in Albany I saw the original draft of the Husted bill and got a certified copy of the law from the Secretary of State. A. N. CHENEY.

GLENS FALLS, March 26.

BASS FLIES.

Editor Forest and Stream:

I notice in this week's FOREST AND STREAM one of your correspondents seeks information on the subject of killing bass flies. I have not fished in Minnesota, but I have had twenty-five years experience in fly-fishing for black bass, and rarely take them any other way. Bass are much more particular than trout in taking flies; often what is good in one water proves useless in another. I would advise your friend to get one or two of each of the following flies: Bass grizzly, match wing ibis, bass miller, Lord Baltimore, Holberton, Whitney, post jungle, St. Patrick, bumble bee, Gov. Alvord, Lottie, turkey.

Use a nine-foot single leader with any two of the above flies, which should be on single gut snells, double at the head. Cast as far as possible and let the fly sink well under water. Then move the fly slowly a foot at a time. Cast near the shore or over reefs, always remembering that bass are very shy fish, and if you get near enough to see them they also see you, and will refuse the most attractive bait. Let him try these different flies; and find out which is the most taking. W. HOLBERTON.

NEW YORK, March 25.

TROUTING.

IN New York the season for taking brook trout opens in the counties of Queens and Suffolk, which comprise nearly the whole of Long Island, on April 1, and by the time this reaches our readers it will have begun. In all other parts of the State the opening day is one month later. A bill allowing fish taken in the counties named to be brought into other counties for use, but not for sale, is now before the Legislature.

On Long Island there is promise of good sport this month, because the season has been early and the trout have been feeding freely for some time. At the different clubs and preserves places have been engaged, and if the opening day is favorable, a great many will wet their lines and many trout will be taken. There is mourning at Massapequa, the famous lake owned by Mr. William Floyd-Jones, where ex-President Arthur, Francis B. Eudicot, and other friends have literally cast their lines in pleasant places, for the lake has been taken by the city water works of Brooklyn, and will swarm with strange men of political "influence" who will get permits to fish its waters under the windows of the late owner, whose pride it has been and whose family have always owned it since the island was settled. Farewell to the glories of Massapequa, with the loss of its springs the trout will soon disappear and give way to the black bass or other fish. The South Side Club always has good fishing in its well-stocked preserves at Oakdale, and the Suffolk Club is ready to entertain its friends at the ponds near Patchogue. All along the south side the streams are already marked by the anglers for a whipping to day.

In New Jersey, Pennsylvania, Connecticut, Massachusetts, and several other States, the season for brook trout opens to-day, but in very few of them will there be much fishing done for a fortnight or more. Long Island, exposed as it is to sea breezes, is always ready for fishing before the streams further inland are. In the Adirondacks the lakes are still covered with ice, which may not leave them all for five or six weeks yet, and there is really little fishing to be done there before June.

THE SUNAPEE TROUT.

Editor Forest and Stream:

Will you allow me a word in regard to the Sunapee Lake trout? The specimen that I sent to the National Museum at Washington, and which was at first pronounced a common brook trout, but is now decided to be a gigantic specimen of *Salvelinus* of the Oquassa or blue-back type, and identical with the little 3-ounce or 4-ounce blue-back of Rangeley, Me., is in no way connected with the plant made by the Commissioners in 1870. These fish are natives of the lake, and were known to have been there over forty years ago. It is an impossibility that in six years the little Rangeley trout would reach a weight of 10 pounds. Such a radical change in size and habits, merely by its transfer from the Rangeley to the Sunapee waters, would imply a deviation from well known and fixed laws in nature.

E. B. H.

PLYMOUTH, N. H., March 23.

Editor Forest and Stream:

In April, 1878, the New Hampshire Commissioners planted in Sunapee Lake 3,000 fry of blue-back trout, the eggs having been obtained from the Rangeley Lakes through the courtesy of the Maine Commissioners. It is probable, therefore, that the variety of trout recently obtained from the lake by Mr. E. B. Dodge, and identified by Dr. Bean as *oquassa*, is not indigenous to those waters, but has been introduced from the Rangeley Lakes. This, it will be remembered, was mentioned as their probable source by Mr. Samuel Webber, late Fish Commissioner of New Hampshire. X.

WASHINGTON, D. C., March 24.

LARGEST RANGELEY TROUT.—A letter from Com. H. O. Stanley, of Dixfield, Me., to Com. Stilwell, Nov. 19, 1884, contains the following note which we are permitted to copy: "In regard to the big trout you want to know about, I cannot vouch for the truth of it, yet I think it is correct. They were caught after I came away. I made arrangements with Frank Hewy to take some blue-backs' eggs for me. He caught the fish with a large landing net attached to a long pole. He was dipping them from under a jam of cedars below the dam on the Rangeley stream, and could not see under the jam. He first dipped the big fish (a female). It was so large that he had the curiosity to weigh it. It weighed 13 pounds. A few minutes later he dipped a male of 10 1/2 pounds. Both were ripe fish. He put them back in the pool below the dam. I am inclined to believe this, though, of course, I cannot vouch for it."

ILLEGAL FISHING.—We have two complaints of illegal fishing in the State of New York, both relating to the same waters. One writer charges a State officer with participation in the work of unlawfully taking fish; but as neither of these correspondents has complied with our rule of requiring name and address to be signed to letters, we cannot publish the complaints. We require this as an evidence of good faith on their part, and with no intention of publishing their names if they desire to use initials or any other signature. They can thus see why no attention is paid to their questions and complaints.

A TRIP TO THE INTERMEDIATE LAKES.

It was in the fall of 1884 that Charley A., from Columbus, O., came to visit me in my new home in Missouri, bringing a rifle, shotgun and fishing tackle with him. Quail, prairie chickens and other small game were abundant, and a part of each day when the weather was good, we spent in hunting. The FOREST AND STREAM came to us every Monday evening, and one or the other would read aloud everything contained in its pages. The reader was often interrupted with "What a scandalous lie," "I should say it was a remarkable shot," and similar remarks. It was during these fall and winter evenings that we planned a trip to Michigan for the coming summer, and it is about this trip that I am going to write. I shall leave out poetry, Indian legends, and what the natives said about the game and fish laws.

Charley and I left home July 12, 1885, and arrived in St. Louis next morning. We were there all that day making purchases to complete our outfit. Left St. Louis in the evening for Traverse City, Mich., via Chicago and Grand Rapids. The weather was very warm and the ride tedious, but we arrived all right in Traverse City on the morning of the 15th. We had ordered a boat but it had not come, so we concluded to go up on the Boardman River trout fishing for a few days, and wait for it. As we were all ready to go into camp, we got aboard the train and the conductor let us off about eight miles up where the river runs close to the railroad track. We selected a smooth place for our tent, and in half an hour had it up. Store clothes changed and tackle ready, for we were determined on having trout for dinner if possible. We started in, going in different directions, agreeing to return in two hours or as soon as we caught enough trout for dinner. The river was only a few yards from camp, and in a few minutes I had waded out into the stream and made a cast, the first for two years. The trout were rising freely, and in an hour I had plenty for our dinner, so I returned to camp finding Charley there. He had caught several good trout and one grayling, which was about ten inches long and weighed half a pound, the only one caught on the trip. We soon had dinner cooked, and it seemed to me I never was so hungry, and thought that meal the finest that I ever sat down to.

The Boardman is a pretty stream and is probably fished more than any other in this section, on account of its being accessible. We stayed here three days and then went back to Traverse City, very much disappointed at not finding our boat, but could not afford to wait any longer, so we hustled around to find a boat that would answer our purpose. Many were found, but none suited. We were getting discouraged when we met a gentleman who had a boat which, from the description, we thought would answer, but it was up at the head of Torch Lake and how to get it down was the question. Fortunately there was a telephone to Eastport, and a message was sent to have the steamer Ida bring the boat down next morning on her way to Elk Rapids, and leave it at Follet's landing. Having arranged about the boat, we then went to Morgan's and engaged a team to take us to Follet's at the foot of Elk Lake. We left our trunks and everything except our camp outfit with Mr. Gowdy at the Occidental. Left Traverse at one o'clock and arrived at Follet's at three, put the tent up on a grassy bank overlooking the lake, and after making everything snug for the night, Charley went after berries and I for trout. The stream is only a few minutes walk from the landing, and I was soon catching the beauties. I had on two flies, and the trout went for them as soon as they touched the water. I kept up the sport for two hours, returning to camp with enough fish for supper and breakfast. The next day at noon the steamer brought our boat. We had been quite anxious about it, fearing that it would not be as good as represented, but we found it a trim little craft and suited exactly. On a trip of this kind an old scow of a boat is a nuisance, while a good and light running boat is a delight all the time. That afternoon we went fishing in the lake. We had not gone a hundred feet from the shore when Charley hooked a two-pound bass. I never saw a fish fight like that one. Five times it jumped clear out of the water. The lake is as clear as crystal, and we could see the fish nearly all the time and, of course it could see us, which frightened it so it had to be completely licked before coming to the boat. We caught several more, all but one small-mouths. Returning to camp at 6 o'clock. The next morning we broke camp and started for Rapid River, intending to fish for bass off Skegee Maugh Poin, but when we arrived there it was so calm and the sun so hot we landed on the point to pick berries and rest awhile and try the bass fishing later.

In an hour we started across Round Lake and reached the mouth of Torch River at 10 A. M.; anchored here and fished, but had no luck, getting only one bass in half an hour. We moved on up the river, stopped at the old log camp and ate lunch. The Rapid comes into Torch River about two and one-half miles up. Arriving here we turned up the Rapid and saw lots of ducks, but we had no shotgun to salute them with. About two miles from the mouth of the river we found a good camping place and hurried the outfit ashore. In a very short time the tent was up, bed made, and everything ready for supper except cooking the fish and coffee. We then got in the boat and went half a mile up the river and landed, Charley going up one side and I the other. This was my first visit to the Rapid, and I was much pleased with it. The water is as cold as ice, and at this time was teeming with trout. We caught nearly a hundred that afternoon, keeping only the largest ones. The river is full of logs and treetops, and one must go very slow. We had fished three or four hours and had gone only about a hundred yards. We were just seven minutes getting back to the boat. It was now almost dark, but it was an easy matter to get back to camp, as the river is quite rapid, and we shot down stream fast enough to satisfy any one. At the landing we scared up a flock of mallards. How we wished for a gun, but we had not brought one, and we had to content ourselves with offering to kick each other for the neglect. The mosquitoes were pretty thick, but they did not bother us much. We used a mixture we got from the FOREST AND STREAM, and after we got our hands and faces well oiled with it a mosquito or black fly wouldn't come within ten feet of us.

During our stay here I hooked a very large trout, but did not save him. I had played him dead, as I thought, and had drawn him up to the log I was standing on, but just as I put out my hand to take him in, he made one last effort to break away and succeeded, taking my hook with him. I felt the loss very much; Charley had caught the largest one so far, and if I had secured this one it would have beaten the record. We enjoyed ourselves here as only our kind can until the morning of the third day, when we pulled up stakes and were once more on the way to new scenes. We reached the head of Torch River at 8 o'clock, and as we

came into Torch Lake we stopped and looked at the beautiful scene. The distance from where we were to Eastport, at the head of the lake, is eighteen miles. Away off to the right is Spencer's Creek. We could see the churches and houses quite plain. We took a bee line for the church steeple four miles distant, and in an hour and a half landed at Spencer's. We put up the tent under some pine trees on a high bank a few feet from the lake and right in town. Some of the ladies watched us get dinner, and laughed when Charley wiped his hunting knife on his boot and then cut the bread with the knife. We gave some trout to one of the merchants and in return he gave us a pan of honey. In the afternoon we fished the two mill ponds, but only got a few trout, and they were quite small. The next morning Charley went up above the ponds and tried the creek. I took the boat and rowed up the lake about a mile to Trautman's Creek. We had been told that no one went there to fish, as it was generally supposed that there were no trout in the creek; but I wanted to see for myself, and was well paid for my trip. The stream, or brook rather, runs through a meadow for half a mile, and I imagined the trout came down from the woods after grasshoppers, for in that half mile there were hundreds of fish. I can truly say I had the finest sport fly-fishing that day I ever had. No trees, no brush, no flies or mosquitoes to bother, and plenty of trout. What more could I ask? When I got back to camp Charley was waiting supper for me. He was feeling blue on account of his poor luck up Spencer's Creek; but his spirits rose when I showed him my catch, and told him I had left lots of trout for him to try his luck on the next day.

By 5 o'clock the next morning we were on our way up the lake. It was a perfect morning, the sun just peeping over the hills when we arrived at the mouth of Trautman's. Charley fished the creek in the opening and I went to the woods. The ground for a hundred yards from the clearing had grown with soft maple brush, so thick that it was almost impossible to get through it. But beyond that the woods were free from underbrush. This stream is only a few feet wide, and is a succession of rapids and falls, just the sort of a place trout love to be on a hot day. Those caught here were the most beautiful in shape and color of any I had ever seen. I got back to the clearing about noon. I had left my lunch with Charley, and was getting anxious about it. I found him so busy with the trout that my fears were needless, and the lunch had not been touched, though he said it had been in danger for an hour. After our lunch we returned to the boat and rowed back to Spencer Creek. At 5 P. M. we left for Clam River, five miles distant, where we arrived at 7 o'clock. Just as we sat down to supper Fred Thayer came down on us, and after shaking hands all around, we fixed a plate for him, put another pan of fish to fry, and all three sat down to eat trout and talk of camp life. Fred's home is on a strip of land between Torch and Clam lakes, and is one of the prettiest places in this country. We had a jolly time, each relating some experience of camp life, and it was late when Fred bade us good-night.

In the morning we pulled up Clam River into Clam Lake, which is four miles long. We trolled along for a while, but caught nothing except pickerel, so we took in the line and moved quickly up the lake with a strong ash breeze. At the head of the lake we landed and caught some grasshoppers, and then started up Grass River. About two miles up Cold Creek comes in. Here we put on our tall boots and waded up the creek, pulling the boat after us. About half a mile up the water became so deep we had to abandon wading, and, making the boat fast, we got our tackle ready and started up the stream. Cold Creek is so hard to get at, and so far out of the way, that very few people take the trouble to come here. The brush and mosquitoes also help to keep fishermen away; but those that do come have rare sport. The trout here take the hook with a suddenness that is likened only to an electric shock, and if you are not on the alert away you go off that log into ice-cold water. The trout we caught here were of a different color from those we caught in other streams, these were not so black on the back, the mottling and red spots were not so marked, and the sides were brilliant orange. In a couple of hours we returned to the boat, jumped in and were soon going down stream at a rapid rate. At the mouth of the creek we turned up Grass River and an hour afterward we were in Grass Lake, where we did not stop to fish, but pushed on across the lake to Intermediate River. The Intermediate was very low and quite rapid, and we had a hard pull of it to get to Bellaire. Often one of us had to jump out and pull the boat over a rapid, and it was late in the evening when we reached Bellaire, tired, hungry and sleepy.

The next morning we were up early and off to the Cedar River, which is about a mile from town, where fishing was excellent, and we enjoyed the morning's sport immensely. In the afternoon we called on some friends, and early in the evening pulled up stakes and were once more on our way up the river. Two miles up we came to the foot of Intermediate Lake, and a mile up the lake Island No. 2, a well-known camping place, was reached, and we stopped here for two days, fishing for bass in the lake and hunting squirrels in the woods on each side of the lake. Bass fishing around here is always fair to good, and we had all the sport we wanted. After dinner the second day we put our traps in the boat and started up the lake, stopping to fish at Deer Point and Johnson's Lake, arriving at Central Lake at 7 P. M. We had read several articles in FOREST AND STREAM by "Kelpie," and as this was his home we wanted to see what sort of a looking man he was; so as soon as we had eaten supper and lit our pipes we walked up town to find our man. Not knowing his name, we had some trouble in finding out who he was. We "got on to him" at the post office, and found him a very pleasant gentleman. "Kelpie" is well acquainted with this section of country, and gave us valuable information regarding the trip around the Ox Bow. In the morning we put our boat and traps on a wagon and started for the Jordan River, twelve miles distant. Six miles east of Central Lake the road crosses the headwaters of the Intermediate Lakes. The boat was left here in charge of Mr. Wilson, who promised to look after it, and also to come to the Jordan River for us the following week. The road from Central Lake to the Jordan is very good, except the last mile, which is on the Jordan Flat, and is corduroy. Soon we were on the bank of the beautiful Jordan again; for a few moments we stood and gazed on the water as it rushed by, and then began to unload the traps preparatory to camping. We had just got everything out of the wagon when Capt. Colburn, the boss of the lumber camp, came along and invited us to come down to his camp and stay with him, said he had only a few men now, and we could be more comfortable than in a tent. The invitation was so strong we concluded to accept. In a few minutes the things were back in the wagon and we were on our way down to

the log camp, which is about a quarter of a mile below the State road bridge and a few yards from the river.

On arriving at camp we were told to put the baggage in the hall and make ourselves perfectly at home. It was now 10 o'clock, and we set up our rods and started for the river to catch our dinner; in two hours we came back with a nice lot of trout. The Captain would not allow us to get our own dinner, made us sit down with them. We were awful hungry and enjoyed the pork and beans immensely, and it is astonishing how much a man can eat when he is roughing it in the woods. We are both good feeders, but to-day we excelled ourselves, and when we pulled out from the table the Captain said, if we did as well every meal he would have to send to town for more supplies before Sunday. The Captain told us we need not bother with cooking our meals, but should eat with them. We did not like to accept so much; however, if he would board us we would keep the table supplied with trout. The Captain laughed, and said it was a bargain. Anxious to make our word good, we struck out for the river. The Captain went part of the way with us and showed us a road leading through the woods, which we followed and came out about half a mile above the State Road Bridge. At first we thought we were not going to get enough for seven men, but as trout after trout came to the creel, that fear vanished, and we felt sure our part of the bargain would be kept. We reached camp at half past six with eighty trout. The Captain and the boys were surprised at our getting so many. We had cleaned the fish at the bridge, so they were all ready for the pan. In a little while supper was called, and we sat down with the crowd to trout, bacon, pork and beans, fried onions, potatoes, bread and butter, stewed prunes and coffee. Charley and I did not go much on the prunes, but otherwise we thought it a royal feast. The trout was a treat to the men; for they rarely get them, though they live where they are to be had at any time; but very few of the natives go trout fishing. Nearly every one we saw fishing were after pickerel. We saw one man who had lived fourteen years five miles from the Jordan who had never seen trout but once and had never caught any. That night we slept under a roof for the first time in two weeks.

The next morning I was up at daylight, and got a couple of hours' fishing before breakfast, for a mile below the log camp the river is very rapid, and two years before I had caught the most and largest fish here, one of them a grayling, weighing twenty-four ounces. So to-day I thought I would try some of the old places, and see if I could hook another grayling. I took a lunch with me, intending to stay all day, but by noon my creel got so heavy I had to return to camp and empty it, returning at once to the place, I continued to fish until night. There is one place a half mile below camp where a big log lying across the river forms a dam. The stream here is quite narrow, and the water runs over this place like a mill race, scooping a hole ten feet deep just below the log, and making as pretty a place as any trout could desire. I took nine out of this hole, two of them weighing twelve ounces each, and lost several flies and also several trout while trying to pull them up over the log. Those lost I imagined weighed from one to three pounds each.

That evening a party of gentlemen from Chicago came up the river in boats; "Nessmuk" would have run and bid if he had seen the amount of stuff they unloaded. Charley came in late and reported fine fishing above, and said he was going back to the same place in the morning to catch some of the big fellows that he lost that day.

We got an early start next morning, following the State road north for a mile, then turning east on an old log road, walked a mile and a half, coming out on the river at an old log camp about three miles above the bridge. We started in here, fishing slowly down stream, enjoying every moment of the time, including the hour we spent in eating our lunch and smoking our pipes. In the evening, when we sat down to clean our fish, we were unanimous in praise of the stretch of water we had fished that day. Indeed a prettier place for trout would be hard to find. The next day Warren, one of the bands, had promised to get a boat, and take us several miles up the river. We had made every preparation for the trip and were all ready to start as soon as we had breakfast. Charley and I walked to the old log camp up the river and waited for Warren who soon came in sight. Warren was an expert at poling a boat and we looked on in wonder as the boat shot up over the rapids. For a mile or two we got along first-rate, then the stream began to narrow very fast and the way became more and more difficult. By noon we had gone about four miles, and as we were tired and hungry, we concluded to stop and rest and eat our lunch.

The scenery here was wild in the extreme. We had seen signs of deer and bear, and were in hopes we could get sight of them, but did not. After lunch we left Warren to look after the boat, and taking our rods we started up stream. Scarcely any one gets up this far to fish, and we got a rise at nearly every cast. It was three o'clock when we got back to the boat. Before starting down creek, fish, etc., were put in the locker in case of a spill. The word came to let go, and away we went on one of the most exciting boat rides I ever took. For a while it took all our time and attention to keep the boat off the rocks and logs, but when we got down into smoother water where Warren could manage the boat alone, we began to fish, and by the time we reached camp many a speckled beauty had been taken in out of the wet. The next morning it was raining, and all day long it poured down. Tuesday morning we found the river quite muddy, and it had risen two or three feet during the night. We tried fly-fishing just below the bridge, but did not have much luck, so we went back to camp and packed the traps to leave. At noon Mr. Wilson came with the team, and after dinner our truck was put in the wagon, and shaking hands all around, thanking the Captain and the boys for their hospitality, we jumped in the wagon and bade good-bye to the beautiful Jordan. We arrived at the Intermediate River at five o'clock, and camped there that night.

In the morning our boat was put in the stream, traps loaded, and were once more afloat, feeling thankful the remainder of the trip would be all down stream. In half an hour we came into Echo Lake. This is the first of the Intermediate Chain. There are about a dozen in all, and the distance from Echo Lake to the Lower Intermediate is about twenty-five miles, and from Echo Lake to Elk Rapids, where these waters empty into Lake Michigan, is about eighty-five miles. All these lakes abound in bass, pickerel and the sun-fish tribe. Passing through Echo Lake and a narrow channel of half a mile in length, we came into Scott's Lake. At the head of this lake we had some rare sport with the bass, the dozen or so that we caught were all big-mouths. We should have camped here, but there is no high ground. After two hours' sport we pulled on down the lake to Mc-

Mullen's Mill and stopped for dinner. While I picked berries Charley got a three-pound bass in shape to eat. It was necessary to make a carry here, and McMullen's ox team, cart and boy conveyed our boat and traps to the head of Six Mile Lake, a half mile below the mill. The cart was nearly in pieces, and the oxen became frightened when we put the boat on the cart and came near running into the lake. We began to think we were not going to make it with that team; but the boy was confident that he would get us through all right, and he did, for in half an hour we were once more afloat at the head of Six Mile Lake. We pulled down the lake a short distance, and set up our tent in a clearing on the edge of the lake and close to a pretty little stream that ran down from the hill. After arranging camp we went fishing in the lake, and came back in an hour with four good-sized pickers. We would not eat these ourselves, so Charley took them to a farmhouse near by, and while there the lady of the house told him of a trout stream a mile from the house. To have a trout stream so close and not visit it was not to be thought of.

Next morning we struck out across the country in the direction the lady had told Charley to go. The woods were beach, maple and elm, and were quite clear of underbrush. In a short time we came to a small stream which we thought must be the one we were in search of. It was such a little brook we thought it could contain only small fish, but concluded to try it before going further. Hastily jointing our rods we began to fish. I had gone but a few yards down stream when I came to a little fall with a deep hole below. I put on a sprightly grasshopper and dropped it just below the fall. With a rush it disappeared, and I got a tug that almost paralyzed me. I was expecting a fingerling and got a twelve inch trout. I hooked another good-sized one out of this place, and then moved on down stream. Every few rods I came to one of these little falls, and got one or two trout from each place. We returned to camp at 11 o'clock with a fine lot of trout, some of which were prepared for dinner. At 9 o'clock we put our traps aboard and pulled on down the lake, arriving at the head of St. Clair's Lake at 6 o'clock. The tent was put up in a grove of beech trees, near a fine spring of water. In the evening we called on Mr. St. Clair, who lives near where we had camped. Mr. St. Clair is an old resident, and his stories of deer and bear hunts are quite interesting. After a pleasant chat of an hour we went back to the tent, rolled up in the blankets and were soon fast asleep.

In the morning the wind was in our favor, and our square-sail carried us quickly down the lake. In the Ox-Bow Lake we laid to and Charley got out his rifle and took a shot at a loon about one hundred and fifty yards away, and by chance killed it. Loons are very plenty along these lakes, and their noise is heard almost constantly. At Central Lake we stopped for dinner, and afterward went up to see "Kelpie" and procured supplies. We returned to the boat in a short time and continued down the lake. When we rounded Blue Point, we saw several tents on the east shore, and at once surmised they belonged to the "Kingfishers." We had intended to camp at this place, so we headed the boat direct for their camp. We did not want to intrude, but we thought it could make no difference to them as we were only going to stay until morning. When we got to shore Charley asked one of the men if he had any objections to our camping there for the night. The answer was not very satisfactory, but we concluded to stop anyway. Perhaps the gentlemen thought they had good reasons for not being cordial. We had been in the woods for five weeks, our clothes were torn and we looked pretty rough. Charley said I looked like the "Old Scratch," and I'm sure he looked worse than I did. So we did not blame the "Kingfishers." We never let anything disturb us, so we hurried the outfit ashore, put up the tent, and got everything ready for the night. We had for supper hot biscuits, honey, trout, potatoes, bacon and coffee, and when we sat down to eat we were as happy as kings.

About sundown Major Sloane, of the "Kingfishers," came in with a nice string of small-mouths, one of them we judged was a four-pounder at least. During the evening two of the gentlemen came over to see us. One of them said their party had intended going into camp on Platt Lake, twenty-five miles southwest of Traverse City, but had changed their minds and had come here instead. We broke camp early next morning and pulled down the lake to Island No. 2. Here we landed our traps, got our rods ready, caught some frogs for bait and went bass fishing. Charley caught a very large pickerel and towed him around for half an hour, until he was quite dead before he got him in the boat. The pickerel was about three feet long and weighed nearly six pounds. We caught one small-mouth and three big-mouth bass. Landing on the west shore Charley took his rifle and went for squirrels and I picked berries. In an hour Charley came back with two squirrels and one pheasant. When we got back to camp we found two strangers there. They were from the South and were stopping at Bellaire to take in the fishing. We told them dinner would be ready soon and invited them to stop and eat with us. They hesitated for a moment and then said they would stay. We were glad to have them, for we were tired for somebody new to talk to. While we were getting dinner ready the gentlemen gave us the news from the outside world and the time passed pleasantly by. Our dinner consisted of bacon, potatoes, bass, pheasant, squirrel, honey, bread and butter, coffee and raspberries. Our guests remarked that it was "a fine lay out" and backed up what they said by eating heartily. After dinner we had pipes and tobacco, then our friends bade us good bye and good luck.

In the evening we moved down the lake and Intermediate River to Bellaire, made the carry around the dam, and camped just below the bridge. We stayed here three days. The first two we fished in the Cedar, having fine sport and taking 150 trout, one of them the largest caught on the trip; it was 13 inches long and weighed 17 ounces. On the third morning we got up bright and early, and after a hasty breakfast struck out on the Mancelona road, following it for three miles. We came to Shanty Creek, which empties into Grass River a little above Cold Creek. This is a pretty little stream and fairly alive with trout. I believe that this and Cold Creek were the only streams where we found the orange-colored trout. At 3 o'clock my creel was nearly full, so I reeled in and went back to the road and found Charley stretched out on the bridge fast asleep. I sat down and cleaned my fish and put them in the creel, fastened the lid down and sinking it in the creek. By this time Charley was awake, and after filling up with berries we sat down on the bridge to wait for the stage from Mancelona, which was due here at half-past 5. The stage arrived on time, and we were soon on our way to Bellaire. The driver was or had been a great hunter and fisherman, and in that three-mile drive we learned some remarkable things about deer and

trout that we never knew before. That evening while eating supper we were surprised with a big pan of pork and beans, which the storekeeper's wife had sent us. We had given them trout several times, and here was a present for us which we fully appreciated.

The next morning early we were on our way down the Intermediate River. By nine o'clock we had crossed Grass Lake and down Grass River to Cold Creek. We tried this stream again with good success, taking about thirty fine trout. At one o'clock we pulled down the river and through Clam Lake. At three o'clock we passed out of Clam River and came into Torch Lake. Our boat was headed toward Spencer's Creek, and after three hours' hard rowing against the wind we landed safely at the mouth of Trautman Creek. The next day we fished the Trautman, and in the evening moved down to Spencer's. As we had more trout than we could use, gave some to friends. The following day we took a trip overland to Leach's Creek, which empties into Clam Lake. The road we took crosses this stream about three miles above its mouth, and four miles northeast of Spencer's. We had a pleasant day of it, and brought home sixty trout. We had intended to leave the next morning, but during the night a storm came up and the lake was so rough that a trip across the lake in our little craft was not to be thought of. None of the steamers landed at Spencer's that morning, all of them keeping close to the opposite shore, as the wind was from that direction. We contented ourselves the best we could picking berries, mending clothes and wishing for the wind to go down. The next morning the sun came up bright and clear, and the lake was as smooth as a mirror. By six o'clock we were ready to start. The boat was headed for Torch River, where we arrived at eight o'clock, and resting on the oars, floated slowly down until we came to the mouth of Rapid River. Heading up the rapid a stiff pull of an hour brought us to our old camp. The afternoon was spent in fishing, but with poor success.

As there had been plenty of trout here three weeks before, we concluded they had gone further up the stream, so in the morning we started for a point about two miles up the river. Here we found good fishing and by noon had caught all we wanted. After eating lunch we struck out for camp, and when we reached there we found some cattle had been fooling around and had knocked everything crooked. They had tramped on our pans and plates and had mashed them all out of shape, had eaten our sugar, salt, bread, two cakes of soap, box of cartridges, two towels, three undershirts and straw hat. Fortunately the tent was unmolested, that was something to be thankful for. This little frolic of the cattle made us considerable trouble, but there was no use to get mad at a little thing like that, so we hustled around and got things in shape again, all the time wishing the cartridges that old cow had eaten would go off and kill her. We had the next thing to the nightmare that night. In the morning our traps were put in the boat, and, jumping in, the current carried us quickly down stream. Hundreds of ducks got up ahead of us, and, circling around, dropped in the river behind. When we came into Round Lake our sail was put up and the boat headed for Sutherland's. The boat fell away some in going across, and we had to row up against the wind for a short distance; but in an hour and a half we reached the landing in safety. There was an empty store-room a few yards from the lake, which we got permission to occupy, and the tent was spread out on the floor for a bed, while the counter served very nicely for a table. After dinner we took our rods and started for the creek, which is about a mile from the landing.

Arriving there we took a hasty survey of the surroundings before starting in. Above us for a mile or so the creek runs through an old clearing, and below through the woods into a swamp. The bed of the creek was hard clay, and slippery as soap. We found the fishing elegant, the best of any place we had been, and caught over fifty in two hours, throwing back all but about a dozen of the largest. Those we kept averaged half a pound each. Returning to camp at 5 o'clock we prepared supper, and after eating took a row up the lake to try our luck with the bass. We caught several, putting them back in the lake as we had no use for them, except the sport they gave us. The next morning the sun rose bright and clear, and after a hearty breakfast we struck out for the creek. We felt sure of fine sport and were in high spirits, prating and prancing along like a couple of boys until we came to the stream, when we sobered down suddenly as though ashamed of our pranks. We intended to take what trout we caught that day to Traverse City, so we kept everything over six inches long. At noon we cleaned our fish and put them into our bread pan, which we had brought along for the purpose. At 5 o'clock we started for camp with both creels and pan full of trout. After supper we made all preparations possible for an early start next day, and turned in for a good sleep. About midnight a storm came up, and for a couple of hours the wind blew and the rain poured down. We felt thankful that we were completely sheltered from the storm, and were off at 6 o'clock in the morning, pulling against a stiff breeze all the way to Skegeemaugh Point, where we landed at 8 o'clock. Taking a view of Elk Lake we decided that it was too risky to attempt to cross to Follet's, so we sat down to wait for the wind to go down, rather uncertain business, but it was the only thing left for us to do.

At 9 o'clock the steamer Ida came along, and we rowed out to her and asked the captain to take us to Follet's; but he had passengers for Traverse City boat, and had to make Elk Rapids as quick as possible. We got very tired waiting on the wind, and at 10 o'clock we made everything as snug as possible in the boat, said our prayers, and headed our craft for Follet's Landing. We felt that we were in danger and scarcely spoke, but watched every movement of the boat. When a big wave struck us, I would head the boat down and run her along in the trough until the next one came. We shipped a good deal of water, but I managed to bail out with one hand and steer with the other. When we landed at Follet's, Charley was almost exhausted, having rowed all the way, for we could not change places coming over. If we had known how rough the lake was, we would have stayed at the Point a week before starting out. It didn't look so awful bad, and we did not realize our danger until we had gone some distance from shore, and then it was too late to turn back. Now that we were safe on land again, we soon forgot our late trouble.

As soon as dinner was over Charley went to get a team to take us to Traverse City, and by the time he returned I had our goods all packed for moving. The team was to come at 4 o'clock, so we had three hours to put in trout fishing. I went to the old mill and fished down, and Charley started in at the bridge to meet me. It was a lovely afternoon, the fishing fine, and the time passed quickly away—too quick for us, for we would fain have had the afternoon drawn out

a few hours longer; but time waits for no one, and with regret we reeled in for the last time, and walked back to camp. The team was waiting for us, and when everything was in the wagon we took a last look across Elk Lake and away beyond to the north where we had spent so many happy days, jumped into the wagon, and were driven rapidly away. Two miles from Follet's we passed the pretty little village of Williamsburg on our left. Six miles further on we came to Acme, a little town on the east shore of Traverse Bay. The drive from here to Traverse City, eight miles, is the finest in the land. The road is perfectly level, hard, smooth gravel, and runs alongside the bay and through groves of evergreen trees almost the entire distance. A more beautiful drive could not be imagined.

We arrived in Traverse City at 7 o'clock and stopped at the Occidental Hotel, where we had left our trunks. We gave the proprietor of the hotel some fifteen or twenty pounds of trout, which we had brought from Sutherland's and Follet's. As soon as we got our store clothes on and had supper, we went up street to get our hair cut and faces shaved. It seemed real awkward to get on pavements again, and we went stepping along like a blind horse in high oats. At 11 o'clock P. M., we took a sleeper for the south, reaching Chicago the next evening at 7; we stayed here until the following evening, arriving in St. Louis Sunday morning, and California at half past two the same day; a twelve-mile drive and we were once more at home. We had been gone just six weeks and twelve hours.

J. O. S.
HIGH POINT, MISSOURI.

OUR BIG BASS.

WE were camping on the Juniata that summer. We had camped on the Susquehanna several times and also on the Yellow Breeches and Conodoguinet creeks, but we were all agreed that along the Juniata River was to be found the most sport.

We were lying stretched out in front of our tents. The hot August sun shone fiercely down on the open river in front of us, but scarcely penetrated the thick foliage of the trees under which our tents were pitched. Right at our sides bubbled up Poorman's Spring, pure limestone water and as cold as ice. In front of us flowed the beautiful Juniata, its usually placid current broken at this point by a jagged mass of rocks which extended clear across the river, and over which the water dashed with a ceaseless roar. Below the falls the water was very deep and afforded excellent fishing. But that afternoon we were lazy and somewhat tired, for in the morning we had climbed four miles across the mountains to visit Simon Girtis' cave, which is said to have been that famous renegade's retreat.

"Hello, boys!" came a voice suddenly from behind us. "Why ain't you out on the rocks pulling in the bass?" "Hello!" we exclaimed, "where did you fellows come from?" "Why, ain't we fishing?" "Oh! its more comfortable here in the shade." "Well, it is nice and cool here. Dave wants to go out to the falls a while. It seems like a good afternoon for bass." "Any one going along?" called out Dave, who was already down by the boat. "What do you say to trying it a while Will?" exclaimed Charlie Horton. "All right," I answered, "I'll go out a while. We might catch something. Tell Dave to wait."

Sam Brown was a farmer living along the mountain a mile below our camp who supplied us with fruit and vegetables, and occasionally a melon or a young chicken. Dave Hardy was a veritable lone fisherman, and he possessed the rare patience common to that class of individuals. The second day in camp we had noticed him at daybreak fishing below the falls. At noon, when we were crossing the river to look for flint arrowheads, which were quite plentiful at a point along the shore, he still sat there with his rod.

"What luck?" I inquired. He shook his head slowly. "They don't bite well to-day. The water is too cloudy. I only caught a couple of flyers. It's no use to fish any more," and picking up his rod and a couple of small bass strung on a willow switch, he began to make his way over the rocks toward shore. He had been a frequent visitor at camp, and his knowledge of the fishing ground along the river had been of great service to us.

We rowed out to the falls. Charlie and I took our position on a rock. Dave dropped down a few yards in the boat and anchored. We baited our hooks and threw in. The fish did not seem to be hungry, for we waited an hour without even a nibble. The sun was intensely hot, and we began to envy the boys whom we could see lying in the shade at camp. Dave did not mind the heat. He sat motionless in the boat watching his line. I was looking at an inquisitive turtle which had come up near me, when a sudden exclamation from Charlie made me look up. Dave had hooked a fish that was engaging all his attention. He was standing up in the boat, grasping the rod firmly, while the fish darted from side to side. "Don't give him any line," shouted Charlie; "hold him in." The stout hickory pole was bent nearly double, and threatened to break under the strain. Suddenly the fish darted straight down stream. Dave held firm. For an instant there was a splash and a huge fish cut the surface of the water. Then the rod flew up with half the line hanging from the end of it. The fish was gone. Dave turned around and looked at us. Then he slowly pulled up the anchor and rowed up to the rock. "Come on," he said, "we'll go over. I knew I could never land that fish."

We started over. I picked up Dave's rod. The line, which was made of link cord, had parted in the middle. As I was stepping out of the boat I observed the tin bucket in which Dave carried bait. It contained two large chubs about six inches long.

"Did you catch those out there, Dave?" I inquired. He looked around. "Those chubs! Why that's my bait," he replied.

"You don't mean to say you fish with bait of that size," I exclaimed.

"Yes," said he, "I don't use any other kind. If you want to catch big bass you must use large bait. I hooked that fish out there on a larger chub than either of those."

We stared at him in amazement. Fish of that size for bait! Why they would have almost made a supper for the crowd.

"Yes," resumed Dave, "there's big fish out in that deep water. Go down along shore here and catch some big chubs. Then go out where I was and fish. You must have patience, though. They won't bite as soon as you throw in."

By this time we had reached camp. The boys had prepared supper, and the loss of the big fish certainly did not impair our appetites. After supper Charlie and I slipped off from camp, and going down the river a short distance succeeded in catching half a dozen large chubs, put them in a small fish box and placed the box in the river near camp. "Now," said Charlie, "we'll see to-morrow how Dave's style

Fishculture.

THE AMERICAN FISHERIES SOCIETY.

WE have already announced that the fifteenth annual meeting will be held in Chicago, April 13, 14 and 15. We are in receipt of circulars saying that it will be held in the club rooms of the Palmer House. Members are requested to forward the titles of the papers which they will read to Mr. Wm. A. Butler, Jr., Detroit, Mich.

MICHIGAN.—At a meeting of the Michigan Fish Commission held at Detroit, resolutions embodying the following propositions were adopted: 1. That a law should be enacted creating a sufficient number of fish inspectors or wardens to properly inspect each portion of the fishing coast and enforce such regulations and laws as may now or hereafter be in force. 2. Demanding the passage of a law to punish any fisherman or fish dealer who catches or has in his possession fish so small as to be unmarketable. 3. That pound-nets for the catching of whitefish should not be less than 4½ inches in the pot, and that pound-nets for catching herring should have a 2½ inch mesh on the sides and a 3 inch bottom; such herring nets to be used only between the first day of September and the close of the year. 4. That discretionary power should be vested in the proper State fishery officers to authorize the use of smaller twine than that prescribed as the legal size, under what may seem to them proper conditions, times and places. 5. That a law be passed to prohibit and punish fouling the waters of the State with will refuse, fish offal or other substances injurious to fish. A committee on permanent organization was appointed; also one to draft laws embodying the above declarations for presentation to the next legislature; one to call the attention of our Senators and Representatives to the importance of the fishing interests of the State; and one to petition Congress to impose a duty on Canadian fresh fish and remove the duty on gilling twine. The improper use of the waters of our State for the taking of fish is a question of public importance as affecting, in a marked degree, an important source of food supply, and legislation upon the subject of inspection and regulation of the fisheries should be considered, not so much with regard to its present effect on any individual or class, as its future influence on the ability of our waters to continue a permanent yield of cheap fish food. No body of water in the world can long withstand the immense drain upon it which the present methods entail.

The Kennel.

FIXTURES.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 22.—Eighteenth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

March 30 to April 2.—Third Annual Dog Show of the New Haven Kennel Club. S. R. Hemingway, Secretary, New Haven, Conn.

April 6, 7, 8 and 9.—Second Annual Dog Show of the New England Kennel Club. Edward A. Moseley, Secretary, Boston, Mass.

April 13, 14, 15 and 16.—First Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

April 27, 28, 29 and 30.—Third Dog Show of the Cleveland Bench Show Association. C. M. Munhall, Secretary, Cleveland, O.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3481.

THE NEWARK DOG SHOW.

THE first annual dog show of the New Jersey Kennel and Field Trial Club was held at Newark last week. In many respects the show was a model one, and the club is to be congratulated upon the great success of their first exhibition. So many of the members of the club devoted their time to promoting the interests of the show that it seems out of place to individualize; but we are sure that the gentlemen composing the club, as well as the exhibitors, will join with us in according to the Secretary, Mr. Vredenburg, the praise justly his due for the very efficient manner in which he performed the duties of his office. The management of the show was in good hands, and everything ran smoothly. The building is not large enough for the number of dogs exhibited, although they were benched comfortably; but there was not room enough for the throngs of visitors, and the building was uncomfortably crowded each afternoon and evening. There were 546 dogs entered, and nearly all of them were present. The average quality was above the average; many of the classes were as good in this respect as we have seen at any show. The St. Bernards were a grand lot. The pointers were also good, the four shown by the Graphic Kennel being exceptionally good. The English setters were not so good as we expected to see, although some of them were very fine. The Irish setters were a nice lot. The best classes in the show were the spaniels. Take them all through, it was the best collection that we remember to have seen. The judging, with the exception of two puppy and the miscellaneous classes, was finished the first day. We are sorry that we are compelled to disagree with any of the decisions of the judges. Our reasons for so doing will be found in the comments upon the dogs. The weather was good, and the attendance all through the show was far beyond the expectations of the management, and we are pleased to note that there is a handsome balance upon the right side of the books. The treasurer commenced paying the prizes at half-past three on Thursday, and on Friday all who had not called were sent the amounts due them. Several protests were made, only one of which was sustained. The special prize offered for the best kennel of spaniels under 25 pounds was awarded to J. P. Willey. The special was offered under the conditions that two or more kennels should compete; but as one of Mr. Rendle's dogs was sick and absent, and as his was the only competing kennel, his protest was sustained. The club voted to pay the amount of the prize to Mr. Willey, but he declined to receive it until he had fairly won it. The Sans Souci Kennel was protested on the ground of misconduct at the Philadelphia show last fall. The club placed the matter in the hands of the A. K. C., but it was referred back, and the club will take action at its next meeting. Two protests were made against winners in the champion classes on the ground that the winnings entitling them to compete were not published in the

catalogue. The owners of the animals protested placed in the hands of the committee a record of their winnings, and as this was satisfactory the protests were not sustained. Exhibitors should carefully study the rules, which are intended for their protection as well as the Association, and comply with their requirements. There was also a protest lodged against the award of the special prize for the best cocker stud dog with one of his get on the ground that it was judged in the absence of the competitor, and that the puppy taken before the judge was not the one he intended to show; but the matter was amicably arranged, and will be decided at Boston where all the competing dogs are entered under the same judge. Following is a list of the judges: Mastiffs, St. Bernards, Newfoundlands and Great Danes, Mr. Edward Dudley, Camden, N. J.; deerhounds and greyhounds, Mr. H. W. Smith, Worcester, Mass.; pointers and setters, Mr. John Davidson, Monroe, Mich.; bulldogs and bull-terriers, Mr. Edward Porter, New Haven, Conn.; collies, spaniels, foxhounds, basset hounds, dachshunds, Chesapeake Bay dogs, wire-haired, Irish, Scotch, Skye, Bedlington, Dandie Dinmont, black and tan terriers and miscellaneous, Mr. J. F. Kirk, Toronto, Can.; beagles, Mr. J. A. Stovell, Philadelphia, Pa.; fox-terriers, Yorkshire terriers, pugs and toy dogs, Mr. James Mortimer, Babylon, L. I.; poodles, Mr. John G. Heckscher, New York; veterinary, Mr. H. Clay Glover, New York. The dogs were fed by Spratts Patent. In commenting upon the dogs we have avoided repetition of description of well-known animals except in case such description is needed.

MASTIFFS—(MR. DUDLEY).

In the champion class Nevison was absent and Prussian Princess had a walk over. She was looking well. In the open dog class David was selected as the best. He is much too small to win in good company with such a head as he has. A dog of his proportions must be exceptionally strong in head properties to successfully compete with fair-headed specimens of good size. Second went to Dread, in elegant condition. He is far removed from first-class form, being faulty before the eye, short between the couplings and cow-hocked. Hector, placed third, is well known, and so is Hildebert. The latter is still leggy and faulty in muzzle. Boss, hc., was much the best dog in the class. He is a large, well-formed dog, and has a good skull, fairly good ears, and stands well on his feet. His fault is in muzzle which is not square enough. While he is not a crack, he is a much better specimen than David, and we shall expect to see the decision reversed under other judgment. Of the three bitches shown, Queen II., although faulty in muzzle, was well placed first, and Dido II., better in head and muzzle but too small, came next, with Nana, faulty in head, muzzle and feet, third. This was a poor class. Hannibal, noticed in our report of the Fanciers' show, was again to the front in the dog puppy class. He will not develop into a winner in good company. Dread, Jr., has a long face and a domed skull of little volume. Rah, vhc., is very faulty in head, eyes and tail, and should not have been given a card. Young Nevison, although much younger than his opponents and faulty in ears, was our choice for second place. The bitch puppies were a very ordinary lot. The winner is domed in skull, has heavy ears and a long face. Beatrice, placed second, is heavy in ears. Madge is not a mastiff.

ST. BERNARDS—(MR. DUDLEY).

These classes were well represented and made a very grand display. The judge by his awards clearly demonstrated that he is not at home with the breed, and we have seldom, if ever, seen the classes so badly handled. Duke of Leeds and Otho were the only entries in the champion rough-coated class. The award was rightly in favor of the Duke. While he is not quite so good in head or so strong in limbs as Otho, he has more length between the couplings and is good behind the last rib (tail excepted), where Otho fails. The open class for dogs was wretchedly handled, the very best dogs in the class being left out in the cold. True to his old love, Mr. Dudley selected First Choice for premier honors. He is too long in face and too light in bone to compete successfully in such company as he met upon this occasion, and he was shown light of coat. Courage II. was the next lucky one. He is a big dog with plenty of bone, and stands fairly well on his feet. He shows little character in head, has no stop, bad eyes, a round skull, and rather heavy ears. He would be better had he more length between the couplings, and his tail is not carried right; vhc. was quite as much as he was entitled to. Konig has not improved upon his puppy form, and was not entitled to third prize. He is small, lacks substance and bone, and was not in good condition. We thought him outclassed. Merchant Prince was absent. Bosco II., a winner at the Crystal Palace, was hc. He was without doubt the best dog in the class. He is a bit cheeky, rather right in bone and faulty in tail, but was far ahead of the winners. Rudolf II., c., was one of the best dogs in the class, and the small but typical Rene was left out entirely; he was worth vhc. Prince Leopold should also have received notice. In the corresponding bitch class Lady Athol, a recently imported bitch, was placed first. She is short of coat, too long in face, and rather light in bone. She is a taking bitch of good size. St. Bride, placed second, was our choice for first prize. She has a fairly good head, is of good size, and has plenty of length of body. She is rather light in bone, and would be improved by more coat. Sheila, placed third, lacks in head, tail and in bone. She is of fair size. Old Regis was in capital condition, and we liked her quite as well as Sheila. Marchioness is a strong-boned bitch, but she is not up to show form, being faulty in head, ears, color, eyes and formation of limbs.

The champion smooth-coats were represented by Leila, Wanda and Verone. The placing of Verone over Leila is the worst blunder we have seen committed by a St. Bernard judge. Leila, the queen of smooth St. Bernards; the grandest specimen ever exhibited in England; the best St. Bernard in America, placed behind Verone, a dog that is not her equal in any one point, if we except tail, where both are faulty. The open dog class was a good one, and the recently imported Apollo and Hector were selected for the blue and the red ribbon. The former, a grand dog, is too much of the bloodhound type in head, but he is a big, well-boned and well built dog. Hector has youth on his side, and we like his head better than Apollo's; he is also good in body, legs and feet, and when fully developed will turn the tables on his more fortunate opponent. He is the better dog. Rigi, placed third, is of correct type, but is too small. Czar is very faulty in head. The first-prize bitch is above the average in good looks, but we would like her better had she more bone and correctly carried ears. Alua II., winner of second prize, is small, but of good type. Her hindlegs are faulty. Snowball is light in bone and faulty in muzzle. Tony, vhc., is a little bitch of good type. Loyal, the winner in the class for rough-coated puppies, is a good one and will be heard from again. He scored a very easy win over Strathmore. Don Hugo got more than he deserved. He has a long, collie face and light eyes. Fleur de Lis was well placed first in the corresponding class for bitches. She is faulty in stop and muzzle, but has good bone and excellent legs and feet, and a body above the average. There was nothing good-looking in the smooth-coated puppy classes.

NEWFOUNDLANDS—(MR. DUDLEY).

Bruno, a fairly good dog, was the best of the lot; his worse faults are in eyes and coat, the former are too light and the latter is not straight. He is about as good as anything we have seen since the days of Mayor of Bingley. Pascha, second prize, is a big, fine dog with a moderate head; his coat is flat but it is much too short. Prince, vhc., is faulty in coat and tail; he is of good size. Major was absent but Othello II. was in his stall. He is almost as close in curl as a retriever and should not have been highly commended.

GREAT DANES—(MR. DUDLEY).

Ramy, placed first in this class, is faulty in expression, too

light all over, and has an abundance of dew lap, which is very objectionable. Cafe-au-lait, a fairly good specimen on the small side, was second, and we liked him better than the winner. We did not see Major. Duchess is small and not of correct type.

GREYHOUNDS—(MR. SMITH).

There were no entries in the champion class. In the open dog class Pembroke, weak in muzzle and badly shown, was the best. Czar, leggy, shallow and faulty in eyes and stifles, was placed second; he is not a show dog. Rex and Don are heavy in head and weak in muzzle, neither was worth a card. Paris was absent. This was a poor class. There were no entries in the bitch class. Pembroke had an easy win in the puppy class. The highly commended Theo was next best. Dixey, placed second, is faulty in head, muzzle, eyes and in ears. It would have been better to have withheld second money for want of merit, as Pembroke alone will be heard of in the future, and he not in the first class. We were sorry to see the classes so poorly represented.

DEERHOUNDS—(MR. SMITH).

There were only six entries in the three classes and Mac, a useful but not first class specimen, was well ahead in the champion class. Chieftain fairly smothered Heather in the open dog class; he is a magnificent specimen and can win in any company; his head is as near perfect as anything we ever hope to see, and he has great size and rare quarters, good shoulders, chest, legs, feet and coat; his ears are a trifle large and he would be improved by more strength of forearm. Heather, just a fair specimen, was his only opponent. Wanda, a grand and game looking bitch, won very easily from Mercia, who was scarcely worth a vhc. card in such company.

POINTERS (MR. DAVIDSON).

There was more interest manifested in pointers than we have seen at any previous show. The contest between Beaufort and Graphic was the all-absorbing topic among the pointer men, even the fanciers of other breeds sagely discussed their merits and shortcomings and glibly reeled off long sentences replete with weighty argument which conclusively proved that their favorite was a pointer and his opponent a duffer. Indeed the erudite pointer lore that one stumbled upon in unexpected places or had thrown at him from odd corners was perfectly bewildering. There were sixty-seven entries with nine absentees, among which were the four entered by the St. Louis Kennel Club. In the champion class for large-sized dogs Beaufort was alone. He was looking almost as well as at Washington, three years ago. His coat was in elegant condition, although he has not shed it yet and it was somewhat faded. He was drawn just a bit too fine and would have appeared more symmetrical had he been two or three pounds heavier. There were no entries in the corresponding bitch class. In the open dog class Graphic had an easy win. He is so far ahead of the average pointer that we are accustomed to see that the mere fact of his winning does not convey an adequate idea of his merit. He is a magnificent specimen of the pointer; very taking to the eye with lots of quality and as good as he is handsome. He was in capital condition and showed up in the ring to great advantage. His faults are few; he is not quite square cut enough in muzzle, and although he has a good head, it would be improved with a little more brow and fullness on top. This would give his ears the appearance of setting lower instead of being a trifle high. He has a clean, well-formed neck, but it is too massive; he is just a bit short coupled, and might be better in stifle and second thigh. His tail is also not straight. Second went to Tammany. We have never seen him looking nearly so well. He has developed in quarters more than we thought possible; this adds greatly to his appearance. Third went to Danby, a fairly good dog in head and chest; he is a trifle too long coupled, and is a little leggy and straight behind. Jimmie was in capital condition and deserved his vhc. Rugby, hc., is good in chest, body, loin, legs and feet; he lacks character in head and has a coarse tail. Dash, c., is plain in head and light in bone with ragged hips. Harry T., unnoticed, was better deserving the card. He is fairly well formed and has good legs and feet. In the bitch class first went to Revel III. She is the best large bitch that we ever saw and one of the most taking to look at. She has capital shoulders, chest, body, loin and quarters and the best of legs and feet. Her head is not so good as her sister's, Graphic, and her muzzle is not so good as his. Her neck is too thick, short and it is a bit throaty, and she has a coarse tail. There is also a line of wavy hair on top of her shoulders that we do not like. Second went to Bellona. She was not looking well. When in condition she is fully as good as any of her kennel companions. Nell, third, was looking well, except that she was too fat, which makes her lack of bone too prominent. Lucille, vhc., was looking fairly well. Polly Varden, hc., was also much too fat. In the champion class for dogs under 55 pounds, Robin Adair had a walk over. He was not quite at his best. In the corresponding bitch class, Vanity, the only entry, was absent. In the open dog class, first went to Bracket, a very nice son of Graphic's. He has a good head, although his ears might hang a little better. He is a little throaty and a trifle heavy in shoulders. He is exceptionally good in chest, body and loin; he also has a good tail, but carries it too high. We would like him a bit stronger in pasterns and second thighs. Take him all round, he is a very hard dog to beat. Second went to Bang Bang. He was not looking his best, but well deserved the place. Third went to Nick of Nasso. He is one of the best bred pointers in the world, and should prove a valuable acquisition to our breeders. He is not quite up to show form, although he is fairly good in chest and body and has a fair amount of bone. He is weak in muzzle, somewhat throaty, and might be better in pasterns. Duke of Bergen, vhc., had an abscess on his throat and was not looking so well as he did at New York last year. He went to Sensation's Lad, rather a nice dog, except that his head is not right. Clifford, c., is a fair dog, but shows signs of mange. There was nothing else in the class worthy of notice. In the bitch class first went to Meally, a capital bitch only a little behind her kennel companion in merit. She has a fair head, good shoulders, chest, legs and feet. She is weak in muzzle, throaty, and might be better just behind back ribs. She also has a coarse tail. Modesty, looking very well, was never in doubt for second place. Happy Medium well deserved her third. She is a nice bitch with badly carried ears and tail. Polly, vhc., is also good. She has a moderately good head and is a bit heavy in shoulders. Montclair, hc., was rightly placed. Vinnie, c., was deserving another letter. She is fairly good except that she stands a little high and was shown so fat that she appears to be lighter in bone than she really is. We also liked Lady Bell, Jersey and Birdie, and thought them worth a card. The puppies, with the exception of the winner in the dog class, were a moderate lot. Tory completely out-classed the others. With the exception of a faulty eye, his head is as good as any. His tail is not right, and probably will not improve. His other faults may disappear with age; he is too young to show what he will be, but if he goes all right he will be heard from again. The rest of the dog class were ordinary. We thought them well placed, except that we should have given Young Rush a card for his good head, notwithstanding his youth and bad condition. Sandy, also unnoticed, was worth more than Bang Up, although we do not intend this as a compliment. In the bitch class first went to Lady Snow. She has a fair head and good chest, but is leggy and lacks substance. Second went to Queen, a taking looking one, with weak head and too long legs. Smilax, the only other entry, was vhc. She is only three months old and was in bad condition.

ENGLISH SETTERS—(MR. DAVIDSON).

There were 55 entries in the English setter classes, with only three absentees. The quality of the winners was very good.

Many of them are well known, and nearly all of them were in good form. Several of the new comers in the aged classes succeeded in winning positions, and two of them got into the money. Mr. Davidson has a wonderful faculty for picking out the good ones, and it is rarely that inferiority can be found among those that receive premier honors at his hands. In the champion dog class Rockingham had a walk over. He was a trifle too fat, and his coat was not quite so blooming as it usually is. Modesta was also alone in the bitch class. She was not quite at her best. In the open dog class first went to Foreman, looking well except that his coat and feather are not fully grown. Next to him came Knight of Snowden. A careful examination showed him to be a much better dog than he looks at first sight. His rather coarse appearance is in a great measure due to the want of grooming. He looks soft, but feels hard and is well muscled. He has a good head that is just a trifle short and fine in muzzle, and his eyes are too light. He is very good in other respects, except that he has too much bend at hocks. Prince Imperial came next. He is of different type from Knight of Snowden. He has slightly the advantage of him in head, and we thought, take him all round, that he was, to say the least, his equal. Vhc. went to Elcho, a big, rather coarse dog not yet mature. Prince Jester, he., is a nice, very well-made dog. His wretched condition undoubtedly cost him a letter. Blue Stem, also he., is quite a fair young dog, but he is rather coarse. There was nothing else in the class worthy special notice. In the bitch class Lady Suffern carried off the honors. She has greatly improved and was in splendid condition. Second went to Juno, a very nice bitch. She is heavily marked, but otherwise fully as good as the winner. Third went to Donner's Bessie. We have never seen her looking so well. Lady May, also in good form, received vhc. Her good head and excellent form place her very close to the winners. Donna, also vhc., is a very well formed animal and fully deserved her card. Next to them we fancied Speck, unnoticed; she is well put together and quite a nice bitch; her very bad condition, however, was greatly against her. Princess Helen, also unnoticed, deserved at least two letters, notwithstanding the unsightly lump caused by a bite over her eye. The others were well placed. In the dog puppy class Prince Dash had it all his own way. He is fairly well formed and a very taking dog to look at. He is not well developed behind, but may improve with age. Prince Phœbus came next. He is of good type, but weak in head and muzzle and is undershot. Glen Roy, vhc., and Toby, he., are fair specimens. The bitch class was better; all of the noticed ones were above the average. Princess Katie was about as good as any, although she was not at her best and did not show up well in the ring.

BLACK AND TAN SETTERS—(MR. DAVIDSON).

Only twelve black and tan setters were entered, all were present except champion Turk, his death was published last week. Argus consequently had a walk over in the champion class. In the open dog class first went to Don, winner of second at the recent Fanciers' show. Buck, winner of second, is a big coarse dog with a heavy head and light eye, vhc. would have been plenty for him; neither of the others deserved notice. Baron, third, is a very ordinary dog with no character in head, he also has a sway back and too much white on chest to say nothing of his white feet. Boy, c., is a poor specimen with a very slack back and without tan markings on head. The bitch class was much better. First went to Nora, winner at Philadelphia last fall; she was looking well except that she was short of flag. Topsey, winner of second, is of the heavy Gordon type; she probably has been a good one in her day, but she is too old for the show bench. Third went to Maud; she has a good head but is leggy and lathy. Cremorne, vhc., has a good body and coat, but is weak in head and has poor markings. Heather Lass, he., was too fat; she has a short body and her condition was greatly to her disadvantage. There was but one puppy shown, he is a big coarse fellow but of good color and markings.

IRISH SETTERS—(MR. DAVIDSON).

The Irish setters in the aged classes were a good lot. There were thirty-eight entries with only one absentee. Chief was the only entry in the champion dog class. We never saw him looking better. In the corresponding bitch class Faun carried off the honors. Lady Clare was much too fat. In the open dog class first went to Blaney. He was not in his usual good form, but well deserved the place. Bruce, looking well, was second, and Tim was third. He has improved since we saw him last. Patsey, vhc., is a nicely-made little dog, and were it not for his plain head and high tail he would have undoubtedly been in the money. The others were not quite up to these; we thought them well placed. Molly Bawn rightly won in the bitch class. Next to her we preferred Miss Nellie Husted, but she has not quite bone enough to please the judge, who placed both Yoube and Jessie over her. There was nothing else in the class calling for special mention, although several of them were fairly good. There was but one dog puppy shown, a big fellow with immense bone. In the bitch class, Nanon, rather a pretty bitch, was the best of an ordinary lot.

IRISH WATER SPANIELS—(MR. KIRK).

There were two dogs entered in this class. First was withheld and second given to Onomoo. He has a poor head and was far from good in coat. Prince was c. This would have been well enough had he been in the miscellaneous class, where he belonged, but in this class the card should have been withheld.

SPANIELS—(MR. KIRK).

The field and cocker spaniels were out in force. There were 58 entries, only three of which were absent. The quality throughout was excellent. This was evidently the opinion of the judge, as with the exception of about half a dozen, all in the open classes received notice. Black Prince was the only entry in the champion field spaniel class. He was looking his very best. In the open class, first went to Newton Abbot Lady, Black Beau Jr. coming second; we liked him as well as Lady. He is a very typical specimen, long and low with a beautiful head and good coat. Lad o' Devon, winner of third, looks a workman all over, but he is a bit too short in body and stands too high. The others were all noticed except one, and were much better than we remember to have seen at the tail end of a class. In the champion cocker class, Compton Brahmin scored a win. He was well shown. The open dog class, liver and black, brought out a clinker in Black Pete. He has a beautiful head, except that there is a fullness about the eyes, his muzzle is much better than we often see. If he does not grow too large, he will make it hot for the best of them. Obo Jr. won second over Young Obo. The latter is better in head, and much better in fore legs. We thought that they might have changed places. Dunrobin, he., and Compton Bedouin, c., are too young for such company. In the bitch class, first went to Shina; she deserved the place although she was not looking so well as usual. Woodstock Norah, winner of second, is a very nice puppy of good type. She is slightly undershot, which is her only serious fault. This was a quality class, every one receiving notice. In the class for "any other color," Little Red Rover scored an easy win. He is a very stylish puppy, and will undoubtedly be heard from again, he is slightly undershot. The puppies were a capital lot, the first and second prize winners being also winners in the aged classes. In the class for Clumbers, Newcastle and Tyne were respectively first and second, both were in good condition.

FOXHOUNDS—(MR. KIRK).

Only four of the foxhounds entered were shown. Vinegar, looking well, won in the champion class. In the open dog class Truman won first; he is getting old and his mouth is bad. He is more the type of the English foxhound than his competitor Ranger, although the latter is much the best looking animal.

There was but one entry each in the bitch and puppy classes; both were absent.

COLLIES—(MR. KIRK).

Ben Nevis, Robin Adair and Jersey Lass represented the champions. Ben scored an easy win. Jersey Lass is short in coat and faulty in head. In the open dog class Glengarry, a well-bred youngster, was the best in the class. His head is not clean enough. He has a good coat, but he gets his tail up too high. Roy Boy is not so good in coat as the winner, but he has a better head and frill. His ears are a bit heavy. Bonnie Scotland, placed third, was a peg or two higher on the list than he ought to have been. He is faulty in brow, ears, coat and tail, and moves with his hocks too near together. Heather, a litter brother to the winner, was our choice for third prize. He is quite as good in head as Bonnie Scotland, and better in coat and legs. Clipper, from the same litter, should beat Heather when in good condition, but he was out of coat. Surbiton is too thick in head, and has a Pomeranian expression that we do not like. He would do with more coat, especially in the quarters. Laddie, c., is short in coat and plain in head. Lady of the Lake, a nice bitch, scored an easy win in the bitch class. She is nicely put together and has a good head. She was short of coat and she gets her tail up too high. A daughter of Rutland came second and Lass o' Lowrie next. We liked the vhc., Gem, better than Lass o' Lowrie. The former is faulty in muzzle and ears, whereas the latter is soft in coat and faulty in head. Glengarry and Bonnie Scotland were first and second in the dog puppy class. Gifford and Heather are better than Bonnie Scotland. Bonnie, a very nice specimen, was first in the corresponding class for bitches. Her ears are a bit heavy. She was in splendid condition, and has a capital coat and a head above the average. Lady Ellis, a sweet little bitch, was our choice for second prize. Lintie, a well-bred one, is a bit off at both ends. Annie Laurie is round in eye, heavy in ears, and faulty in muzzle. Bonnie, he., is too soft in coat.

BEAGLES—(MR. STOVELL).

There were twenty-one beagles entered and the average quality was good. Bannerman, looking well, won in the champion class. In the open dog class, over 12 inches, Little Duke, in good condition, was placed first. Next came Rattler III., also looking well. The two others we thought properly placed, although we expected to see Trifle higher up, as he more nearly resembles Bannerman than any of the others. The bitch class was good. They were well handled, except that Chase and Trinket might have been given another letter each. The class under 12 inches was not large but quite good. Mr. Stovell judged by points and took a great deal of time and pains to place his dogs, and made few mistakes.

BASSET HOUNDS AND DACHSHUNDE—(MR. KIRK).

These classes were better represented than we have seen in some time. Mr. Gilbert was well to the front with Bertrand, and we fancied Canace, from the same kennel, for second place. There was nothing first-class in the dachshund class, but the eight entries were above the average we generally see exhibited.

FOX-TERRIERS—(MR. MORTIMER).

Mr. Mortimer worked hard, but failed to get his dogs right. His awards were badly received in more than one instance. Belgrave Primrose, the only entry in the champion dog class, has grown very cheery; he was in poor condition. Diana, a good bitch, had to succumb to the peerless Richmond Olive in the corresponding bitch class. Delta was absent. In the open dog class the Messrs. Rutherford were again successful with Splaugar, a very ordinary specimen, faulty in skull, muzzle, eyes, ears and loin. There were at least half a dozen better specimens in the class. General Grant was much the best dog in the class. He is at present a little light before the eye, but is a terrier all over. Earl Leicester, he., should have been second. He shows a lot of terrier character and is a better dog than the winner. The others in the class, excepting perhaps Orange Pippin, are well known. He is wide in front and faulty in feet. Cornwall Duchess won in the bitch class. She is rather long cast and is faulty in loin, muzzle and coat. Nina is full at the brow, but in other respects is the better terrier. Warren Winsome is too long, Lady Winnie is also too long and light, Clover Fidget is wide in front and faulty in ears, Clover Bell is long cast and round in skull. There was only one entry in the class for wire-haired. He will be heard from again. How Cocaine ever came to win first in the dog puppy class is more than we can say. His ears are badly carried, he is faulty in skull and muzzle, and is long and shallow in body. General Grant, vhc., is worth a hundred such as he. Nutmeg III., a well-bred one, shows character, but is much too large and leggy for a puppy. He is a big dog now, although entered as seven months old. He should not have received the vhc. card. Flirt was the best of the bitch puppies. She is too full in brow, has beautiful ears, and stands on capital legs and feet. Folly does not carry her ears well, but is a nice terrier. Violet V. is faulty in forelegs, feet and ears, stands too high, and is too big for her age; she shows character.

BULLDOGS—(MR. PORTER).

Only five dogs were entered in the bulldog classes, so that Mr. Porter had an easy task set him. Bellissima was all alone in the champion class, and Remus outclassed Brimstone in the open dog class. We liked Bellona better than Hespian; the latter is very pinched in muzzle.

BULL-TERRIERS—(MR. PORTER).

There were thirteen entries all told, and Grand Duke sustained his reputation by beating Dutch, Jr. and Victoria. The latter was badly shown. Grand Duke has grown very cheery of late, and must soon give way to better and cleaner-headed specimens. In the open class, Count, the best dog before the public, scored an easy win over the thick-skulled and lippy Judas. We would have placed Jack second; he is better in head and muzzle than Judas and as good in body. Little Nell, looking well, was alone in the bitch class. The puppies were a very ordinary lot. Anthony is too wide in skull for a puppy and is long cast and coarse in tail. Alice is cheery, faulty before the eyes and coarse in tail.

BLACK AND TAN TERRIERS—(MR. KIRK).

There were but three entries in this class and the prizes were withheld for want of merit. This was a mistake, as Sprite is above the average in good looks.

IRISH, BEDLINGTON, DANDIE AND SKYE TERRIERS—(MR. KIRK). These classes were badly filled and only one of the exhibits will leave a mark in good company at future shows. Norah, the winning Irish terrier, is soft in coat. Binnie, the first prize Dandie, is faulty in head and coat. Sentinel, the winner in the Bedlington class, is a good dog, albeit too low on the legs for our fancy. Touzie, the winning Skye, is faulty in ears. He has plenty of length and will improve in coat.

PUGS—(MR. MORTIMER).

We were surprised to find but eleven entries in the four classes, and of these two were absent—Master Tragedy and Miss Ruby. Bradford Ruby, shown in elegant condition, was alone in the champion class. It would be no easy task to beat this typical little dog when shown as he was on this occasion. Young Toby had the open dog class to himself until Dick was transferred from the pointer class. The latter is faulty in skull, muzzle and ears. Miss Kitty, well known, scored an easy win in the bitch class after having been transferred from the champion class. Is it not about time exhibitors were held responsible for blunders of this kind?

YORKSHIRE TERRIERS—(MR. MORTIMER).

There were only four entries in the two classes, and all were from one kennel. Ben, short in coat, was the best of the lot.

TOY TERRIERS OTHER THAN YORKSHIRE—(MR. MORTIMER). There was only one entry, Tiny. She was fully described in our report of the last New York show.

TOY SPANIELS—(MR. MORTIMER).

Of the three entries in the King Charles class Nellie was

placed first. We are pleased to notice that the judge has reversed his decision made at the Philadelphia October show, where Pitou was given first. Duke of Edinburgh is a better dog than either Nellie or Pitou, and we shall expect to see Mr. Mortimer reverse his decision if these dogs ever come under his judgment again. King Victor was properly placed over King Pippin, his only opponent in the Blenheim class.

ITALIAN GREYHOUNDS—(MR. MORTIMER).

No entries.

POODLES—(MR. HECKSCHER).

These classes were not well represented. Sabot and Jet II. are moderate specimens.

MISCELLANEOUS—(MR. KIRK).

In this class prizes were awarded to Vixen, a Dalmatian, faulty in head, bone and markings; Black Bess, an English retriever, faulty in head and tail, and to Barry; we did not ascertain what breed the latter represents, although he is said to be a Leonberg. Charley, a Prince Charles spaniel, is faulty in head and lacks in bone and feather, but he was as good looking as anything in the class.

SPECIAL PRIZES.

There were 55 special prizes awarded. In many cases the awards followed the decisions in the regular classes. The event of the show was the coming together of Beaufort and Graphic, to decide which should carry off the honors as the best large pointer. Both were in elegant condition, and the contest between them was watched with absorbing interest. Many intelligent admirers of each dog, while claiming supremacy for their favorite, freely admitted that there was not much to choose between them, and that the victor would by no means have an easy win. Two years ago we said of Beaufort, "He is without doubt the best large pointer we have." We have seen nothing since causing us to change this opinion, although we confess that the first glimpse we caught of Graphic at Philadelphia last fall led us to think him the better dog, but a careful examination and comparison of the two showed Beaufort "still the king." Beaufort has the advantage of Graphic in head, particularly in squareness and proportion in muzzle, beauty of eye, in skull and set of ear. Graphic has a little the best of it in neck, it being better arched and free from throatiness, while Beaufort is somewhat throaty, although his neck is not so thick as Graphic's. In shoulders, chest, back and forelegs both are grand. In loin Beaufort is well arched, while Graphic is comparatively flat. In quarters and stifles Beaufort is the best, and much the best in second thighs, and has by far the best tail. There is not much difference in quality of feet. Beaufort has the largest, but the toes are well arched and the pads are firm and of good thickness. Graphic is just a bit too short coupled, while Beaufort is very good in this respect. In appearance of coat Graphic had a slight advantage in a new coat, while Beaufort has not yet shed his. Both are very symmetrical and full of quality, with the advantage slightly in favor of Beaufort in the former and Graphic in the latter. On Thursday evening, in the judges' ring, Mr. Heath, the owner of Graphic, very gracefully presented to Beaufort the trophy he had won. We cannot agree with the judge in placing Revel III. over Beaufort in the special for the best pointer. She has not so good a head even as Graphic, and not nearly so good a neck as Beaufort, neither has she nearly so good a tail, and she has not enough the best of him in other respects to overcome these. She is a very taking animal to look at, and, as we have before remarked, she is the best large bitch that we have seen. We do not think her, however, quite good enough to beat Graphic even. Mr. Davidson is one of the best pointer judges that we have, and we have no doubt that had he examined and compared Revel III. and Beaufort point by point as carefully as he did Beaufort and Graphic, we should not have had to disagree with his decision.

Leila should have won the smooth-coated St. Bernard special easily, and we thought Little Duke entitled to the special for the best beagle, as he is but a trifle behind Bannerman at any point, and is greatly his superior in head.

We published the awards last week. Below will be found the omissions and corrections, together with a list of the specials:

AWARDS.

In Newfoundland, Major, high com., was a mistake, as he was absent. In deerhound bitches, 2d was withheld. In champion pointer dogs under 55lbs., Robin Adair won. In small pointer bitches, very high com. was won by G. W. Waite's Polly instead of Keswick II. In the open class for black and tan setter dogs, C. W. Tuttle's Don won 1st. In field or cocker spaniel puppies, J. W. Kelly's Woodstock Norah and Little Red Rover were 1st and 2d. W. H. Tucker's May Obo and B. J. Rae's Young Belle were very high com. The only entry in foxhound bitches and puppies was absent. In collie bitch puppies, Bonnie won first.

SPECIALS.

The remainder of the special prizes were awarded as follows: Best smooth-coated St. Bernard in open class, W. W. Tucker's Apollo. Best kennel of pointers, Graphic Kennels. Best kennel of English setters, Ramapo Kennel. Best kennel of Irish setters, Max Wenzel. Best kennel of collies, J. D. Shotwell. Best beagle, A. C. Krueger's Bannerman. Best fox-terrier, J. E. Thayer's Richmond Olive. Best field spaniel, A. C. Wilmerding's Newton Abbot Lady. Best greyhound, C. D. Wilbur's Pembroke. Best bull-terrier, R. & W. Livingston's Grand Duke. Best pug, City View Kennels' Bradford Ruby. Best heavy pointer dog, C. H. Mason's Beaufort. Best English pointer bitch, Graphic Kennels' Meally. Best collie, J. D. Shotwell's Lady of the Lake. Best bulldog, J. E. Thayer's Bellissima. Best English setter, F. Windholz's Rockingham. Best pointer, Graphic Kennels' Revel III. Best mastiff, Winlaw Kennels' Prussian Princess. Best collie puppy, J. D. Shotwell's Glengarry. Best pointer puppy, T. G. Davey's Tory. Best dog, the get of Jimmie, G. W. McNeil's King Dan. Best bitch, V. M. Haldeman's Leila. Best descendant of old Phil, C. J. Peshall's Jimmie. Best get of Chief, C. W. Rodenburg's Chip. Best bitch the get of Dashing Monarch, P. C. Ohl's Juno. Best English setter brood bitch that has been placed at a field trial, with two of her progeny, Ramapo Kennels' Bessie with Prince Imperial and Princess Helen. Best beagle over 12 inches in open class, A. C. Krueger's Pet. Best under 12 inches, W. F. Streeter's March Toy II. Best American bred fox-terrier, C. A. Stevens's Cocaine. Best English setter in open classes, Ramapo Kennels' Lady Suffern. Best Springer, A. C. Wilmerding's Newton Abbot Lady. Best cocker, J. P. Wiley's Black Petie. Best retrieving spaniel, A. C. Wilmerding's Black Petie. Best black and tan setter, H. Clay Glover's New York. Light pointer (two), Graphic Kennels' Bracket. Best English setter puppy, J. Von Lengerke's Prince Dash. Best dog sired by Sensation, A. P. Vredenburg's Sensation's Lad. Best heavy pointer bitch, Graphic Kennels' Revel III. Best brace of pointers, Graphic Kennels' Bracket and Revel III. Best stud pointer with two of his get, Graphic Kennels' Graphic with Bracket and Revel III.

NEW YORK DOG SHOW.

Editor Forest and Stream:

Following is the list of judges for our coming show: Mastiffs, Dr. J. Frank Perry, Boston, Mass. St. Bernards, not yet appointed. Pointers, J. M. Tracy, Greenwich, Conn. English setters, B. F. Wilson, Pittsburgh, Pa. Irish and black and tan setters, H. Clay Glover, New York. Fox-terriers, Messrs. L. and W. Rutherford, New York. Collies, beagles, dachshunde and basset hounds, Dr. Downey, New Market, Md. Foxhounds, A. Belmont Purdy. Newfoundlands, spaniels (all classes), deerhounds, greyhounds, bulldogs, bull, Skye, Bedlington, Dandie Dinmont, Irish, Scotch, Yorkshire and toy terriers and pugs, J. F. Kirk, Toronto, Canada. Poodles, J. G. Heckscher, Esq., New York. Special arrangements have been made with all railway companies, also with all express companies except Adams, to return dogs free from the show on having company's rates prepaid. JAS. MORTIMER, Superintendent.

CATALOGUES OF THE NEWARK DOG SHOW.—Any one wishing a catalogue of the Newark dog show can receive one by sending address with stamp to the secretary, Mr. A. P. Vredenburg, Bergen Point, N. J.

THE NEW HAVEN SHOW.

THE third annual bench show of the New Haven Kennel Club opened Tuesday, March 30, with 400 and odd entries, and is now in progress, closing to-morrow evening. The exhibition is in the drill room of the Second Regiment Armory, a building which is unsurpassed by any other outside of New York for bench show purposes. The quality of the dogs is very good; they are well benched, and the management is excellent in every respect. The rainy weather interfered with the attendance on Tuesday, but a fair number were present. The judging progressed through nearly all of the classes Tuesday, and was completed yesterday. A list of the awards is given herewith:

AWARDS.

Mastiffs.—**Champion**—Dog: Winlaw Kennels' Homer. *Bitch*: Winlaw Kennels' Prussian Princess—**Open**—1st, Ashmont Kennels' Ilford Cromwell; 2d, E. H. Moore's Ilford Caution. Very high com., Wm. S. Johnson's Bread and Winlaw Kennels' Hector. Com., J. A. Haworth's Cedric's Gurth. *Bitches*: No entries. *Puppies*: Withheld.

ST. BERNARDS.—**Rough-Coated**—**Champion**: Dog: Hermitage Kennels' Bonivar. *Bitch*: Hermitage Kennels' Rhona—**Open**—*Dogs*: 1st, J. W. Burgess' First Choice; 2d, E. H. Moore's Merchant Prince. Very high com. and reserve, J. W. Burgess's Rene. Very high com., Chequasset Kennels' Rudolph II. High com., Arthur Wallack's Miranda; 2d, Buena Vista Kennels' Stella. High com., E. F. Mansfield's Venus. Com., Hermitage Kennels' St. Bride. *Puppies*: Absent. **Smooth-Coated**—**Open**—*Dogs*: 1st and 2d, W. Tucker's Rigi and Apollo. High com., Chequasset Kennels' Lodi. *Bitches*: 1st, Hermitage Kennels' Alma II. *Puppies*: 1st, Chequasset Kennels' Lodi.

NEWFOUNDLANDS.—1st, D. O'Shea's Bruno; 2d, L. Sommer's Major.

GREYHOUNDS.—**Champion**—H. W. Huntington's Bouncing Boy. **Open**—1st and 2d, H. W. Huntington's Hawthorn Belle and Harlequin. Very high com., S. H. Crittenden's Fido.

DEERHOUNDS.—**Champion**—Edward Kelley's Mac. —**Open**—1st and 2d, J. E. Thayer's Chieftain and Wanda. Very high com. and com., Edward Kelley's Heather and Merica.

POINTERS.—**Champion**—Dog: C. H. Mason's Beaufort. *Bitch*: No entry. —**Open**—**Large**—*Dogs*: 1st, A. Collins's Captain Fred; 2d, C. A. Parker's William Tell. Very high com., R. Wilson's Zeb. High com., A. R. Morrison's Sancha. *Bitches*: 1st, A. H. Aldrich's Nell. **Small**—*Dogs*: 1st, C. J. Peshall's Nick of Nasa; 2d, W. H. Moller's Van Com. Very high com., D. Scott's Sherida. High com., E. K. Sperry's Dixon and Warwick Kennels' Rex. Com., F. Felber's Dick. *Bitches*: 1st, S. T. Colt's Phyllis; 2d, F. Stevenson's Mistral. Very high com., C. A. Van Wye's Queen Bang. *Puppies*: 1st, 2d, very high com. and high com., F. F. Harris's Songo, Bowdoin, Sachem and Santee. Very high com., Vail & Wilson's Lady Snow. High com., C. A. Parker's Daisy Bell.

ENGLISH SETTERS.—**Champion**—Dog: F. Windholz's Rockingham. *Bitch*: No entry. —**Open**—*Dogs*: 1st and very high com., Blackstone Kennels' Foreman and Mack B.; 2d, Yale Kennels' Yale Belton. Very high com., C. W. Neal's Pride of Orleans. High com., E. A. Todd's Dan. Com., O. L. Washburn's Iva. *Bitches*: 1st, C. O. Chis's Juno. Very high com., Blackstone Kennels' Daisy Laverack and Lulu. High com., Waterloo Kennels' Nancy Dawson and P. C. Ohl's Nettie B. Com., Associated Fanciers' Czarina. *Puppies*: *Dogs*: 1st, Yale Kennels' Prince Belton; 2d, D. O'Shea's Prince Phobus. Very high com., H. Plum's Rock. High com., E. M. Youman's Don Belton, J. J. Carmody's Flash and J. H. Redding's Dick. *Bitches*: 1st, F. D. Freeman's Lulu; 2d, O. L. Washburn's Countess Helen. Very high com., G. W. Neal's Daisy Foreman, W. C. Auger's Pearl Belton. High com., J. E. Evelith's Ramona, Yale Kennels' Belle Belton and Princess Belton. Com., D. O'Shea's Countess, H. Raymond's Meg Belton, W. C. Root's Minka.

IRISH SETTERS.—**Champion**—Dog: Max Wenzel's Chief. *Bitch*: I. H. Roberts's Lady Clare. —**Open**—*Dogs*: 1st, E. W. Clark's Blarney; 2d, I. H. Roberts's Bruce. Very high com., M. Wenzel's Tim. High com., R. A. Spalding's Garry, J. Grosvenor's Banker. Com., H. L. Bruce's Red. *Bitches*: 1st, Mr. Murphy's Molly Bank; 2d, M. Wenzel's Yoube. Very high com., H. Wilson's Jess. H. Roberts's Jessie. High com., Preston Kennels' Nora. I. H. Roberts's Hebe. Com., B. Barnes's Nana, J. Grosvenor's Zella. *Puppies*: 1st, F. E. Watkins's Perdita; 2d, T. Carney's Duke. Very high com., Miss. L. Kunzelman's Lizzie.

BLACK AND TAN SETTERS.—**Champion**—Dog: J. E. Thayer's Argus. *Bitches*: No entries. —**Open**—*Dogs*: 1st, R. M. Seale's Squire; 2d, J. Howe's Gift. Very high com., J. Connor's Black Thorn. High com., A. Collins's Kaehler's Dash. Com., W. L. Spencer's Cliff II. *Bitches*: 1st, H. C. Glover's Nora; 2d, G. O. Terhune's Queen. Very high com., A. H. Aldrich's Heather Lass. High com., E. A. Doolittle's Beauty. *Puppies*: 1st and 2d, G. O. Terhune's Ned and Rex.

SPANIELS.—**Irish Water**—No entries. **Clumbers**—*Dogs*: 1st, M. Richardson's Newcastle; 2d, C. C. Trowbridge's John Halifax Gentleman. *Bitches*: 1st, M. Richardson's Tyne. —**Field**—**Champion**—*Dogs*: A. C. Wilmerding's Black Prince. —**Open**—1st, A. C. Wilmerding's Newton Abbot Lady; 2d, C. A. Brown's Donal Odu. Very high com., F. L. Weston's Onyx, and C. H. Perry's Brahma. —**Cockers**—**Champion**: W. O. Partridge's Helen. —**Open**—**Laver and Black**—*Dogs*: 1st and 2d, J. P. Willey's Black Pete and Young Obo. Very high com., S. R. Hemingway's Dunrobin. High com., G. Lamping's Nig. *Bitches*: 1st, J. P. Willey's Shina; 2d, W. H. Tuck's Alice Obo. Very high com., J. P. Willey's Beauty W. S. R. Hemingway's Miss Nance and W. H. Moseley's Zona. —**Any Other Color**—1st, A. C. Wilmerding's Marion; 2d, E. S. Bird's Sprinkle. High com., S. Bird's Matchem. *Puppies*: Equal 1st, A. B. Treat's Doc and S. R. Hemingway's Dunrobin. Very high com., E. H. Hall's Dorothy. High com., A. E. Rendle's Compton Bedouin and S. R. Hemingway's Doris.

BEAGLES.—**Champion**—A. H. Wakefield & Co.'s Bush. —**Open**—*Dogs*: 1st, 2d and high com., A. H. Wakefield & Co.'s Little Duke, Leader and Trifle. Very high com., Ashburner & McClure's Blue Cap. *Bitches*: 1st, 2d, very high com. and com., A. H. Wakefield & Co.'s Twinkle, Chase, Silver and Vixen. High com., Associated Fanciers' Midget.

DACHSHUNDE.—1st, Associated Fanciers' Judy.

BASSET HOUNDS.—1st and 2d, C. B. Gilbert's Bertrand and Canace.

FOX TERRIERS.—**Champion**—Dog: Absent. *Bitch*: J. E. Thayer's Richmond Olive. —**Open**—*Dogs*: 1st, J. E. Thayer's Baby Jack; 2d, E. Kelly's Earl of Leicester. Very high com. and reserve, E. Kelly's Sealsdale. High com., A. C. Thompson's Bob. *Bitches*: 1st, J. E. Thayer's Nina; 2d, S. D. Collins's Geraldine. Com., E. Kelley's Clover Fidget, J. H. Shepherd's Lady Winale. —**Puppies**—*Dogs*: 1st, F. Hoey's Nutmeg II.; 2d, E. Warner's John High. Very high com., W. H. Hoey's Music. Com., R. E. Warner's Jum. *Bitches*: 1st, J. E. Thayer's Flirt; 2d, F. Hoey's Mace II. High com., F. Hoey's Violet V.

COLLIES.—**Champion**—No entries. —**Open**—*Dogs*: 1st, Associated Fanciers' Roy Boy; 2d, J. Watson's Heather. Very high com. and reserve, J. Lindsay's Stronach. Very high com., J. Lindsay's Bonnie. Com., E. Riley's Mignonette. *Puppies*: 1st, J. Watson's Braw and Bonnie; 2d, J. Lindsay's Little Mac. Very high com. and reserve, H. Forbes's Gypsy. Very high com. and high com., J. Watson's Heather and Lintie.

BULLDOGS.—**Champion**—*Dogs*: J. E. Thayer's Robinson Crusoe. *Bitches*: J. E. Thayer's Bellissima. —**Open**—*Dogs*: 1st, J. E. Thayer's Remus. *Bitches*: No entries.

BULL TERRIERS.—**Champion**—*Dogs*: R. H. Dudgeon's Dutch, Jr. *Bitches*: W. J. Comstock's Victoria. —**Open**—*Dogs*: 1st, F. F. Dole's Count. *Bitches*: 1st, R. Varick's Nell. *Puppies*: 1st, F. F. Dole's White Vic; 2d, P. O. Schwaab's Prince. Very high com., G. E. Vaughn's Belle. High com., F. Harris's Fannie.

BLACK AND TAN TERRIERS.—1st, E. Lever's Britt.

ROUGH-HAIR TERRIERS.—1st, D. O'Shea's Major II.

DANDIE DINMONT.—1st, Associated Fanciers' Kelpie; 2d, G. G. Cleather's Meg.

IRISH TERRIERS.—1st, withheld; 2d, D. O'Shea's Norah.

BEDLINGTON TERRIERS.—1st, W. S. Jackson's Sentinel; 2d, D. O'Shea's Sting. High com., D. O'Shea's Wasp.

PUGS.—**Champion**—Dog: City View Kennels' Bradford Ruby. —**Open**—*Dogs*: 1st, City View Kennels' Master Tragedy; 2d, Chequasset Kennels' Young Toby. Very high com., H. R. Surie's Duke II. *Bitches*: 1st, City View Kennels' Beauty; 2d, Chequasset Kennels' Lady Flossie. High com., H. C. Herz's Pug. *Puppies*: 1st, City View Kennels' Tiny; 2d, Mrs. S. B. Hubbard's Mo. Very high com., City View Kennels' Miss Ruby. High com., S. S. Holliday's Beauty.

TOY TERRIERS.—1st, Dr. H. R. Surie's Dot; 2d, E. E. Pratt's Dott.

KING CHARLES SPANIELS.—1st, Wm. Phillips's Roscius; 2d, Associated Fanciers' Duke of Edinburgh. Very high com., F. B. Fay's Dolly and Milwaukee Charlie. High com., F. B. Fay's Alice,

BLenheim SPANIELS.—1st, W. Phillips's King Victor; 2d, Miss M. Phillips's King Pippin. Very high com., F. B. Fay's Joan of Arc. **ITALIAN GREYHOUNDS.**—1st, Warwick Kennels' Posey; 2d, A. B. Norcross's Spider.

MEXICAN HAIRLESS.—1st, Mrs. H. T. Foote's Mc Too; 2d, M. C. Mayer's Judge. Very high com., S. I. Mayer's Nellie. High com., S. S. Palmer's Meda.

MISCELLANEOUS.—**Over 25 lbs.**—Equal 1st, Glencoe Collie Kennels' Sir Lucifer and Bob, and W. D. Hubbard's Nestor. —**Under 25 lbs.**—Fritz, withheld.

SPECIAL PRIZES.

English Setters—Best kennel, Blackstone Kennels; stud dog, Yale Kennels' Yale Belton; bitch with field trial record, Blackstone Kennels' Daisy Laverack; best puppy, Blackstone Kennels' Lulu; dog or bitch in open class, Blackstone Kennels' Foreman. Irish setters, best kennel, J. H. Roberts'; best dog, M. Wenzel's Chief; best bitch, Mr. Murphy's Mollie Bawn.

Pointers—Best kennel, Fred F. Harris; stud dog, C. H. Mason's Beaufort; best bitch, S. T. Colt's Phyllis; best pointer, C. H. Mason's Beaufort. Black and Tan Setters—Best stud dog, C. H. Redfield's Glen II.; best dog or bitch, H. C. Glover's Nora. Best English setter bitch owned and bred in New Haven, G. W. Neal's Daisy Foreman. Handsome pointer or setter that has run in a field trial, C. H. Mason's Beaufort. Best foxhound, D. O'Shea's Ranger. Best kennel greyhounds, H. W. Huntington; best dog, H. W. Huntington's Harlequin; best bitch, H. W. Huntington's Hawthorn Belle.

Spaniels—Best Kennel, J. P. Willey. Best cocker pup and best owned in New Haven, A. B. Treat's Doc and S. R. Hemingway's Dunrobin. Best spaniel, over 25 lbs., owned by member of Spaniel Club, A. C. Wilmerding's Black Prince. Under 25 lbs., same conditions, J. P. Willey's Shina. Best Clumber spaniel, M. Richardson's Newcastle. Best cocker, A. C. Wilmerding's Marion.

Best bull-terrier, F. F. Dole's Count. Best kennel of pups, best stud dog and best puppy, won by City View Kennels. Best King Charles spaniel dog, W. Phillips' Roscius; bitch, F. B. Fay's Dolly. Best Blenheim, W. Phillips' King Victor. Best Mexican hairless dog or bitch (Mrs. Foote not to compete), M. C. Meyer's Judge.

THE BOSTON SHOW.

Editor Forest and Stream:

We have six hundred and twenty-six entries for our show, as follows: Mastiffs, 31. St. Bernards, rough, 28; smooth, 23. Newfoundlands, 9. Pointers, 34. English setters, 57; Gordon, 17; Irish, 61. Irish water spaniels, 3; field, 10; cocker, 35; Clumber, 4. Chesapeake Bay, 1. Greyhounds, 14. Deerhounds, 13. Foxhounds, 5. Beagles, 23. Bassets, 5. Dachs-hunde, 10. Collies, 41. Fox-terriers, 23. Black and tan, 8. Skye, 9. Yorkshire, 11. Scotch, 3. Dandie Dinmonts, 5. Irish terrier, 1. Bedlington, 4. Bulldogs, 14. Pugs, 20. Toy terriers, 15; King Charles, 13; Blenheim, 2. Italian greyhound, 1. Poodles, 5. Mexican hairless, 5. Miscellaneous, 9. I also inclose additional special prize list. Our entries exceed those of last year, and we look forward to a very successful show. EDW. A. MOSELEY, Secretary.

THE IRISH SETTER CLUB.

A meeting of prominent breeders and owners of the Irish setter at the Continental Hotel, Newark, N. J., on March 29, a club was organized for the purpose of improvement of the breed and the development of their field qualities. Following is a list of the officers: President, William Murphy, Peekskill, N. Y.; Vice-President, Max Wenzel, Hoboken, N. J.; Secretary, Luke W. White, Bridgeport, Conn.; Treasurer, I. H. Roberts, Morristown, N. J. A committee on constitution and by-laws, consisting of Dr. Wm. Jarvis, Claremont, N. H.; F. G. Leroy, New York; H. T. Henshaw, Brooklyn, N. Y., and W. H. Pierce, Peekskill, N. Y., was appointed. The initiation fees were fixed at \$5, with \$5 annual dues. Twenty members subscribed, and undoubtedly many more will join. The meeting adjourned to meet at New York May 5, at 8 P. M.

AMERICAN KENNEL CLUB.

A MEETING of the executive committee of the American Kennel Club was held at Newark on Wednesday, March 24. The clubs represented were: New Haven, by L. L. Morgan; Westminster, by T. H. Terry; Cleveland, by C. J. Peshall (proxy); New Jersey, by C. J. Peshall; Hartford, E. K. Sperry; Philadelphia, W. H. Child; Elliot Smith, President; E. Comfort, Treasurer, and G. E. Osborn, Secretary, were also present. The minutes of the previous meeting and the treasurer's report were read and accepted. Mr. Morgan read a long report as chairman of the committee on discipline, relating his difficulties in getting any business done. The executive committee then took up the St. Elmo and Miro protests. In the former case St. Elmo was disqualified as winner of first at New York last year, and First Choice was declared the winner in the open St. Bernard class. The Miro protest was not allowed.

Mr. Smith being unable to remain longer, Mr. Childs was elected chairman.

The following resolution, proposed by Mr. Peshall, was passed unanimously: "That when a protest has been decided by a club, it may be then and there appealed to the local member of the A. K. C. representing said club, who shall at once decide on the appeal, subject to the final appeal of the executive committee of the A. K. C."

Mr. Wade preferred charges against the Illinois Kennel Club for non-payment of a special prize. As the club had been expelled the papers were ordered placed on file.

Mr. McAlees presented a complaint against the Western Pennsylvania Society for transferring a puppy entered in the open class to the puppy class. The secretary was instructed to inform Mr. McAlees that the transfer was wrongly made, and not in accordance with the A. K. C. rules.

Moved by Mr. Morgan and carried, that the words "and shall be published in the catalogue" be added to Rule 8.

Moved by Mr. Osborn and carried, that a committee of three be appointed to make up a list of shows whose awards shall be recognized by the A. K. C. The committee is Elliot Smith, C. J. Peshall and L. L. Morgan.

Mr. Watson brought to the notice of the committee the case of his having entered a protest at the Pittsburgh show against the Sans Souci Kennels in accordance with a telegram received from Mr. Long, of St. Louis, which protest was withdrawn by Mr. John W. Munson without any authority whatever. The committee having no appeal from Mr. Long, simply expressed the opinion that Mr. Munson's course was perfectly unjustifiable.

The representative of the New Jersey Kennel Club was by vote instructed that his club had power to decide the protest against the Sans Souci Kennels lodged at their show.

The committee adjourned to meet on Wednesday of the New York show week, at 2 P. M.

DANDIE DINMONTS AT PITTSBURGH.—*Editor Forest and Stream:* I see in your last issue that you have got James Rice vhc. in the Dandie Dinmont class, with Bobbie Burns and Cleg II., at Pittsburgh, which should be James Rae vhc., with Habbie II. and Cleg II., as Bobbie Burns met with an accident and I sent Habbie II. in his place. I wrote to the secretary, informing him to that effect, thinking that he would see that the names of the dogs would be corrected.—JAMES RAE (402 Clinton street, Buffalo, N. Y.).

SPANIEL JUDGE AT HARTFORD.—Hartford, Conn., March 30.—*Editor Forest and Stream:* Mr. James Mortimer, of Babylon, L. I., has very kindly taken the cocker, Clumber and field spaniel classes for our show.—A. C. COLLINS, Sec'y.

NEW JERSEY VETERINARIANS.—Dr. Lowe, of Paterson, State Veterinary Inspector and secretary of Veterinary Medical Association of New Jersey, announces that the next meeting will be held at Morristown on Thursday, April 8.

THE CLEVELAND DOG SHOW.—We have received the premium list of the Cleveland Bench Show Association for their third show, to be held in the People's Tabernacle, Cleveland, O., April 27, 28, 29 and 30. The judges so far as appointed are: English setters, Mr. B. F. Wilson, Pittsburgh, Pa.; Irish and black and tan setters, Major J. M. Taylor, Cleveland, O.; mastiffs, St. Bernards, hounds, fox-terriers, spaniels, and all non-sporting dogs, Mr. J. H. Naylor, Chicago Ill. The judge for pointers has not yet been appointed. The premium list gives \$15 in the important champion classes, with \$15, \$10 and diploma in each of the dog and bitch, and \$7 and \$3 in the puppy classes. In some of the less important classes the champion prize is \$10, and the open classes have \$10 and \$5. There are 99 classes in all. There will also be a large list of special prizes. The entries close April 17. The secretary is Mr. C. M. Munhall, room 25, Washington Building, Cleveland, O.

BENCH SHOW RECORD IN CATALOGUES.—*Editor Forest and Stream:* I have a query to put to you which, in the present season of bench shows is, I think, decidedly pertinent. In many catalogues of the dogs entered the performances of some of them are given in full. Now, it is undoubtedly in the discretion of the club whether they shall print these or not. But is it in their discretion, in ordinary fairness and justice, to print the list given of performances of one entry and to omit those given in another? Has not every exhibitor the same right in this respect? I know of three instances where this has been done, and I wish to know if it is right.—T. B. DORSEY.

BELGRAVE PRIMROSE.—New York, March 27, 1886.—*Editor Forest and Stream:* We hear that at the Pittsburgh show it was asserted that Belgrave Primrose was not eligible for the champion class. We had not noticed that it was necessary to put the winnings in the entry form. We beg to state that his winnings in this country are: First, open class, New York; first, open class, Philadelphia, 1884, and first, open class, Non-Sporting show, New York, 1885.—L. & W. RUTHERFORD.

AMERICAN SPANIEL CLUB.—March 24.—*Editor Forest and Stream:* Through an oversight the Cocker Produce Stakes for 1887 have not been duly announced. Members will please take notice that entries for the same will be accepted by the secretary for puppies whelped between the 1st of January, 1886, and date of this announcement if mailed, with entry fee of \$2 for each bitch, not later than the 7th of April next.—J. F. KIRK, for Committee.

THE SPECIAL POINTER PRIZE AT THE ALEXANDRIA TRIALS.—*Editor Forest and Stream:* In your report of the Alexandria field trials it was not mentioned that the special prize of a \$25 silver collar to the pointer displaying best natural qualities was won by Mr. Amy R. Starr's black pointer Wat (Bronco-Fan II.), who also won second in All-Aged Stake. Will you kindly make this insertion.—J. R. THORNTON, Secretary Alexandria Rod and Gun Club.

PRICE PAID FOR GRAPHIC.—New York, March 27.—*Editor Forest and Stream:* You will greatly oblige me by informing me what Mr. Charles Heath paid Mr. Anthony for the imported pointer dog Graphic. I have been informed that he paid over \$2,700 for it. Am I correctly informed?—GEO. T. LEACH. [Mr. Heath informed us at the time of the sale that the price paid was \$2,000. See FOREST AND STREAM Nov. 19, 1885.]

AN ABSENTEE.—*Editor Forest and Stream:* I see that the daily papers and you, in your last issue, give my Major as having received hc. at the recent Newark dog show. The dog was somewhat out of condition just previous to the show, and I did not send him to Newark. He could not, therefore, have been passed upon by the judge.—W. BURKE (New York, March 27).

THE HEMPSTEAD FARM CO.—We understand that the Hempstead Farm Co., which was noticed last week as having purchased the collies owned by Mr. Thomas H. Terry, will pay special attention to the breeding of these animals, and that no expense will be spared to procure the best, and to maintain the high reputation of the kennel.

THE HARTFORD DOG SHOW.—We are informed that the prospects for a good show at Hartford are very flattering. Intending exhibitors should bear in mind that the entries close to-morrow, April 2.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Publishing Co.

RANGE AND GALLERY.

CINCINNATI O., March 21.—Cincinnati Rifle Association, Four-Mile House Range, day dark and stormy, with a strong 4 o'clock wind, which tore two of the targets from their frames, and delayed the shooting for some time. Standard target, 200yds., off-hand.

WORCESTER, Mass., March 29.—There was a fair attendance at the regular meet yesterday at Pine Grove Range under the auspices of the Worcester Rifle Association. The standard American target was used. The result in detail was as follows:

Record Match.									
Leighton.....	8	10	8	7	9	8	7	7	7-77
Jones.....	4	10	9	9	7	6	10	7	7-73
Fuller.....	6	5	7	8	6	4	7	8	8-68
Clark.....	7	6	8	5	7	8	7	7	6-66
White.....	4	7	6	9	5	6	5	6	5-57
Norman.....	10	5	7	4	5	7	5	4	5-57

Practice Scores.									
Jones.....	7	9	5	8	10	5	7	10	7-97
White.....	5	8	5	9	8	10	10	8	7-70
Fuller.....	9	8	8	9	9	8	4	7	7-74
Clark.....	9	6	8	9	5	6	7	8	7-74
Leighton.....	9	5	9	7	8	9	5	2	8-74
Norman.....	8	8	5	4	7	9	9	5	6-66
Bernard.....	2	0	3	9	5	5	8	5	1-7-45

At the regular meet last week in the record match the totals were as follows: Fuller 74, Clark 70, Rice 64, Norman 62, Jones 58. The totals in the practice scores were, Fuller 73, Clark 77, Norman 72, Jones 69, Rice 68, Brown 34.

TO SHOOT 4,000 BLOCKS.—Rome, N. Y., March 25.—There is some talk here concerning an attempt to break 4,000 wooden blocks with a .22 Winchester, using but one magazine, in one day. The balls will be thrown up at between 15 and 20 ft. rise, and Wm. A. Parker, one of our best rifle shots, will make the attempt to make 4,000 hits. To accomplish this he must average nearly 7 hits each minute for 10 hours including the time taken in loading the gun. It is a task he is little aware of, we think, but it is not likely he would try to do it unless he had some hopes for success. He will probably shoot this next summer. It is no small job to stand and hold up a 9-pound gun long enough to make that number of hits to say nothing of misses. He has made some very good scores, ranging from 75 to 98 per cent. hits, and once he made 100 straight. The gun he will use, if he shoots, has been ordered through Geo. Payne, a prominent gun dealer of our city. Has any record ever been made by any one in New York State as the one I stated? When was it? Where? By whom? How many in how long a time?—Dot. [See in FOREST AND STREAM, Jan. 23, 1885, report of Dr. Carver's match to hit 60,000 flying targets with rifle in 6 days. His score was: 64,861 shots fired, 4,865 misses, 60,016 hits.]

FITCHBURG, Mass., March 25.—The Fitchburg Rifle Association have now had four meets at their River Street Range, and have decided to make public the results of their meets. The results at each in shooting clay pigeons with a possible 30 were as follows:

	Jan. 18.	Mar. 5.	Mar. 17.	Mar. 24.
E N Cummings.....	23	25	22	22
G W Weymouth.....	19	19	19	19
A W Baker, Jr.....	17	10	15	29
J P Sheldon.....	11	9	9	9
H E Houghton.....	9	9	9	9
W J Fox.....	9	20	9	9
G J Wallace.....	9	9	9	9

The tie between Weymouth and Baker was won by Baker, and the tie between Fox and Wallace was won by Fox.

HAVERHILL RIFLE CLUB.—Badge shoot, Mar. 27, standard target, Creedmore count.

SPRINGFIELD, Mass.—The recent telegraph rifle match between the Rod and Gun Club of Springfield, Mass., and the Rifle Club, of Topeka, Kan., was won by the former by 16 points.

THE TRAJECTORY TEST.—Editor Forest and Stream: In your issue of the 4th inst., "W. Z." commenting upon the late trajectory test between the 40-90 Winchester, and the 40-70 Bullard, claims that the latter, owing to its sharp twist—one turn in twenty inches—made the flattest trajectory at 300 yds., "each being loaded practically in the same proportion." I fail to see the point, as the former threw 3½ grains of lead to 1 of powder, while the latter only threw 7½ grains of lead to 1 of powder. Secondly, the former had a 28-inch barrel, while the latter had been cut down to 20 inches. Thirdly, they used different brands of powder, with shells unlike in shape. The only gun tested that came near the Winchester in length of barrel, powder and lead—as I view the report—was the Whitney-Kennedy 40-90-20, with one turn in 22 inches, but which failed to make as flat a trajectory by more than half an inch as did the Winchester at 300 yards. So far, therefore, as a settlement of the question whether a quick twist is superior to a medium one—for 200 yards at least—is to my mind an open question, and to be fully settled only by testing several arms of like caliber, length and weight, loading both with ammunition from the same box, practically alike in every respect except the twist.—CAR LOCK (Frewsburg).

PLAISTED VS. ZEUGNER.—New York, March 22.—Contest at Greenfield Schutzen Park, \$100 a side, between George Plaisted of the famous Zettler Rifle Club of New York, and August Zeugner of the Greenfield Rifle Club. Many riflemen were present; C. G. Zettler referee; count of 25 shots, German rig target, 300 yards off hand, any rifle: Geo. Plaisted—21, 24, 25, 20, 21, 10, 20, 16, 18, 24, 23, 24, 25, 22, 21, 17, 19, 22, 20, 25, 24, 18; target, 217. August Zeugner—19, 20, 18, 17, 21, 16, 11, 16, 22, 18, 22, 18, 23, 20, 21, 20, 17, 24, 19, 20, 22, target, 466. After the shooting the marksmen and invited guests, marched to the Belvidere House, where a fine collation was served with Mr. Kattenstroth as host. Speeches were made by several invited guests. The next match will probably be ten members of the Zettler Rifle Club against ten of the best riflemen of the State of New Jersey, for \$500 a side.—G. W. B.

LAWRENCE, March 27.—The Lawrence Press Rifle Club challenged the Lowell Press Club to shoot a team match on Fast day, and the latter has accepted. The conditions of the shoot are: 300 yards, off hand; team of eight men; five shots each; Creedmore target; military rifles allowed two points in score. The prize is a silver cup, 20 inches high, lined with gold, presented by Birdall Bros. of this city, to be held by the winning team until won back by the opposing team, and to be shot for annually.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

MIDDLESEX GUN CLUB, Dunellen, N. J.—This new shooting club numbers about 60 active members, with Mr. E. Robinson as the president. The shooting ground is only a short distance from Dunellen station, nicely laid out with a new club house, which will be enclosed by a high board fence, making one of the best shooting grounds in this State. The club will soon issue a challenge to the crack Jersey City Heights Gun Club to shoot a friendly team match, 15 or 20 men a side, 10 birds each. Shooting meetings are held every Saturday at live birds, glass balls, or clay birds. Appended is to-day's score at live birds shot at in a binding rain. First sweep, handicap rise, one barrel, ties off miss and out:

First Sweep.		Second Sweep.

SAN FRANCISCO.—An interesting shooting match took place on March 13, at Bird's Point, Alameda, between Kilgariff and Hamilton, and Beck and Woodward, for a \$50 dinner, 24 single birds, Hurlingham rules. Hamilton and Woodward 12-bore and allowance of 2yds. Kilgariff and Beck at 9yds. The birds were a fair lot, and among them were some of the hardest.

Kilgariff..... 1111011100-9 19 Beck..... 1111101111-11 20
Hamilton..... 1110110111-10 19 Woodward..... 1110110111-9 19
Match between O. K. Hopkins and John Kerrigan, on the afternoon of the 11th, at Bird's Point, Alameda, 36 single birds, 30yds., \$150 a side:
Hopkins..... 0111111111011111111111111111-32
Kerrigan..... 11101101011110001111111111111111-25

Hopkins throughout had the hardest birds, and he was inclined to increase the difficulty on waiting on them to the detriment of his chances with the second barrel. Mr. Hopkins is not satisfied with his defeat, and is to shoot Kerrigan again at 50 singles. The winner yesterday used a 12-bore Parker; the loser a 10-bore Scott.

BOSTON, March 24.—The trapshooters were out in full force at the range at Walnut Hill to-day, to participate in several events, including the contest for the individual clay pigeon badge of the Massachusetts State Glass Ball Association, which was won by Mr. O. R. Dickey, who also won in the last match. The results of the day were as follows: 1. Five pigeons—Eager first, Nichols and Aldoes second, 2. Three pairs birds—Eager first, Allen and Nichols second, 3. Five straightaway—Eager first, Nichols and Stark second, 4. Seven pigeons—Eager first, Stark and Nichols second, Allen and Laws third, 5. Three pair clay pigeons—Stark first, Allen second, 6. Merchandise match—Eager first, Allen second, Dickey third, Stark and Witham fourth, Lewis fifth, Russell sixth, 7. Individual badge match—Dickey made a total of 40, Stark 39, Wardwell 36, Allen 32, and Perry 33. 8. Five straightaway—Eager first, Allen and Stark second, Wardwell third, Snow fourth, 9. Three pairs pigeons—Aldoes first, Eager second, Nichols third, Stark fourth, 10. Five pigeons—Eager first, Adams second, Wardwell and Bancroft third, Lawson fourth, 11. Novelty match—Eager, Lawson and Nichols divided first, Davis second, Wardwell, Stark and Aldoes divided third, Russell and Allen fourth, 12. Three pairs pigeons—Eager first, Snow, Wardwell and Lawson second, Stark third, Adams fourth, 13. Five pigeons—Lawson first, Dickey and Nichols second, Stanton third, Snow fourth, 14. Six pigeons—Eager, Bancroft and Stanton first, Dickey second, Russell, Adams and Lawson third, Nichols fourth, 15. Miss and out—Swan, Dickey and Aldoes, 20. Miss and out—Stanton won, 21. Five pigeons—Stanton first, Dickey second, 22. Six pigeons—Nichols first, Snow second, 23. Three pairs pigeons—Stanton first, Snow and Dickey second, Adams third, 24. Five pigeons—Stanton first, Snow and Dickey second, 25. Five pigeons—Stanton won.

STANTON, Va., March 24.—Match shot by the Stanton Gun Club, 3 angles, 18yds.

DOMINION GUN ASSOCIATION.—Ottawa, March, 1888.—A pigeon shooting tournament, under the auspices of the St. Hubert Gun Club of Ottawa, will be held in this city May 4, with prizes to the amount of \$1,000 in gold, entrance fee \$10, 21 birds each, 30yds., 100rds. boundary. Dominion rules to govern, the entries to close on or before the 15th of the month. It is proposed to hold during the meeting a convention of the various Canadian gun clubs for the purpose of organizing a Dominion Gun Association, to frame and adopt a constitution for the same, elect officers and decide when and where the next meeting of such association shall be held. It is thought desirable that a shooting tournament should be one of the principal features of the annual meeting of this proposed association, also that the provincial game laws generally should be discussed and the opinion of the members of the various clubs taken in regard thereto, and that should any changes be in the opinion of the majority, considered desirable some united effort might be made to have such changes carried into effect.—W. L. CAMERON, Secretary (Box 385).

MILFORD, Mass., March 35.—At the annual meeting of the Milford Sportsmen's Club, held last evening, officers were elected as follows: President and Treasurer, C. B. Fletcher; Vice-President, George Whitney; Secretary, J. W. Jones; Executive Committee, G. W. P. Hancock, Frank Mann, W. Dickinson, O. Joslyn. It was voted to have a shoot at their range on Fast Day, April 8, and to invite all persons interested in the sport to participate.

SCORE BLANKS have been prepared for the convenience of club secretaries who may wish to send their reports to the FOREST AND STREAM for publication. These blanks will be sent free on application.

BURLINGTON, Ia., March 23.—In my last I said Mr. C. H. Wyman used a .22 Bullard; it should have been Ballard. He will attempt this week the feat of breaking 500 out of 1,000 glass balls, tossed in the air 5yds. The sportsmen's tournament in June probably will be a larger affair than was expected. A number of the prominent "shotgun artists" have already signified their intention to attend, and the management is daily in receipt of letters from manufacturers tendering shotguns, reloading tools, ammunition, traps, targets, etc. A cordial invitation is extended to all sportsmen. Any information will be cheerfully given by addressing A. H. KUHLEMEIER, Secretary, Burlington, Ia.

BUFFALO, March 24.—Pigeon shooting match between Geo. Luther, of Syracuse, and George Rogers, of St. Catharines. The Canadian was victorious, as the following score will show:
Rogers..... 11110111110111011111111111111111-34
Luther..... 00100101011111010101010101111110-23
Koch and Rogers then entered a match, \$35 a side, 10 birds each, with the following result:
Jacob Koch..... 1110010110-6 George Rogers..... 1110010111-7

CAPITAL CITY GUN CLUB.—Washington, D. C., March 25.—Editor Forest and Stream: At the annual meeting of the Capital City Gun Club, the following officers were elected for the year 1886: E. L. Mills, President; J. A. Goldsborough, Vice-President; J. E. Hosford, Secretary; C. M. Taylor, Treasurer; Burridge Wilson, Comptroller. The club has a prosperous condition financially, although by reason of the changes which have taken place in the political and social world, our membership has been somewhat reduced. But the loss is not serious and will soon be regained. The club voted to join the National Association for the Protection of Game Birds and Fish.—J. E. HOSFORD, Sec'y.

THE WELLINGTON GUN CLUB has been presented with an elegant hand-painted vase by the Wellington ladies as a reward for the changing of its name from the Malden to the Wellington Gun Club. The vase will be shot for by the members of the club. Mrs. B. N. Marks and Mrs. C. H. Bird are the artists.

JOIN THE NATIONAL GUN ASSOCIATION.—Send 10 cents, for handbook giving all information, to the Secretary, MATT R. FREEMAN, General Manager, F. C. ETHERIDGE, Secretary and Treasurer, Macon, Ga. Board of Directors: Dr. L. E. Russell, Springfield, O.; C. M. Stark, Winchester, Mass.; J. Von Lengerke, New York City; Washington A. Coster, Flatbush, L. I.; Wm. G. Cooper, Savannah, Ga.; E. A. Crawford, Tallahassee, Fla.; M. R. Freeman, W. W. Parker and F. C. Etheridge, Macon, Ga.—Adm.

Canoeing.

FIXTURES.

pounds of bass is taken in. Tries again, another of the same size. Tries again, and just at the edge of the lily pads something strikes with the vim of an express train. "Great Scott!" ejaculates Boston as the reel fairly hisses. "I've got a!" "Guess not," said Capt. "at least you haven't him yet." "Well, I'll have him if you'll only keep the canoe steady," and Boston spits on his hands. The fish was well hooked, and with the vigorous tactics of Boston was soon in the canoe, a little over ten pounds. "Great Scott!" said Boston, as he takes the fish by the upper and under jaw and looks down his throat. "You don't call this a big-mouth, do you?"

By this time the sun was low down among the trees and the idea of bass for supper was considered good. Back to the snug camp where Toronto, with an eye to a possible fry, has faithfully kept the fire supplied with live oak and hickory, and now a bright bed of coals welcomes the fish as soon as cleaned. What a supper that was, and what appetites were satisfied that night.

But all things have an end; the hungry ones are filled, the fire put in shape, and lying back on the blankets we watch the sparkle of light among the treetops, listen to the thousand and one voices of the night and swap lies.

Across an arm of the lake and some thirty rods from camp is a cormorant roost. The perches were all filled by dark, but there has been a steady stream of birds since, all trying to find resting places, and so they keep on, ever coming, those that have obtained a foothold trying to keep it, and the newcomers trying to dislodge them, yelling, scolding and chattering, till it seems as if pandemonium had broken loose.

Paton can stand it no longer. Seizing the 10-bore, he jumps in the canoe and paddles away. Soon comes the roar of his field piece, then the second barrel, and there was the sound of trouble; if the other was pandemonium, what is this? The air is fairly black with birds; for fully five minutes they are passing the camp in an unbroken stream, and then, as the last detachment flit from sight, there comes a silence almost as oppressive as the clamor was unbearable. But here comes Boston, and with a chuckle tells how he broke up "that town meeting." Bed time comes at last, everything put in shape, fire attended, and rolled in our blankets, we sleep as only men can sleep in the great outside.

Morning comes as bright and cheery as they have anywhere. The men who have slept so well sit down to their morning meal with an appetite which no denizen of the crowded stuffy city ever feels. What is it to day? A little fishing, a little hunting, and a good deal of quiet enjoyment. Verily, those who woo nature in her chosen haunts are never disappointed.

On the morning of the third day we organize for a trip to a large orange grove near by. There was no trail, and only the Cape had ever been over the ground; but we found our way through the pine forest without any trouble, and a very pleasant walk it was. Some quail were flushed, a few squirrels seen, bluejays calling to one another, a white heron swinging away to the sea, while off to the right, over a marsh, are a flock of buzzards. They are circling round and round, and evidently have a dinner in prospect.

After an hour's walk we reach the grove. One year ago I was here and the place was a marvel of beauty. Now the cold war has been here and left desolation in its path. The ground is fairly covered with oranges, but they have been frozen and are ruined. The flower garden that I saw in such splendor a year ago is now a mass of dead shrubbery. The guava trees, lime trees, and all the tender shrubs are killed. Jack Frost has collected his tithes. We fill a bag with oranges, but Boston and Toronto say they are no good; but they eat their share after they get in camp.

Going back we pass a spot where we had passed on the way out. One makes the remark, "That's the same one we saw coming over."

"Yes," says another, "that proves that we didn't go far out of our way."

"Kick him out," says Boston, "he's too cunning for anything." But here we are at the camp. It really looks like home. There is no trace of frost here, save in the water maples, and they have improved with its touch.

And so the time passes away, and all too soon we have to stow the canoe for the homeward trip. This is the saddest part of our breaking camp; but it must be done. We have no time for regrets. Blankets are rolled, tents struck, canoes launched, and with a last look at the now forlorn spot we are off. A few hours' paddle, a short carry, and we are at home, with only the memory of our trip to Unknown Lake. TARPOX.

A NEW CRUISING AND RACING CANOE.

THE owner of the Grebe, Mr. B. W. Richards, of Brockville, is well known to most of the visitors, a most enthusiastic sailor, and thorough racing man. Last year he had a very fine canoe, mainly built by himself, but not entirely satisfied with her he sold her in the fall and has since built another boat. The new craft, 15ft. 11in. x30in., is built from a design for a 15ft. x30in. canoe by Mr. W. P. Stephens, N. Y. C. C., the moulds being spaced a little further apart to make the extra length. She has been built with the greatest care, the materials being of the best quality, while the workmanship is equally fine, her builder being Mr. Sauve, who did part of the work on the Grebe. The hull is of white cedar, smooth lap, and filed and sanded down until the laps are almost flush. The keel is of 1in. oak, with a brass shoe 1-16in. thick and full width, from stem to stern. The stem and stern are of oak, natural crook; the knees, bulkheads and two centerboard trunks of white cedar; deck beams of pine; ribs of oak; inwale of ash; decks of mahogany, with walnut knees on edges and down the center. The cockpit is 6ft. 10in. long, 18in. wide, with a flaring beam of black walnut 3in. high at the bow and 1 1/2 in. at the stern. The after end of the cockpit is round. The mahogany hatches are four in number, covering the well completely and locking up. The two forward mast tubes are 10in. and 26in. from fore side of stem, and the mizzen tube is 4ft. 6in. from the stern. The rudder is of 1/4in. teak, coming down 3in. below keel. The fore board is of brass, 3/4in. thick, and weighing 38 pounds. The after board is of 1/4in. brass, weighing 8 pounds. All her trimmings will be nickel plated. The bulkheads are made of mahogany, the latter being removed before completing the tank. Each tank is inflated before soldering. She will have a trial suit of lateens, 55ft. and 30ft., and after some use under them her racing suit will be planned.

CANOEING IN FLORIDA.—Jacksonville, Fla., March 21.—*Editor Forest and Stream:* Canoeing matters here excite considerable interest among the members of the boating fraternity, owing to the arrival of Mr. Barnett's new boat, a beautiful one, and probably the first one of that model which has been launched and which will be really sailed much before May 1. She has proved very fast, and has been sailed every afternoon this week, and been in two races, one in light airs and one in a very strong puffy breeze. Off the wind this model leaves every canoe and the various cats about here very badly. Her owner has not yet got her in perfect trim for windward work. In yesterday's blow she proved herself a perfect sea boat, going easily through waves which stopped the Aurora here, and under the stimulus of Mr. Barnett's skillful sailing and enthusiasm there promises to be a strong club formed here. Dr. Neidé is cruising around Cedar Keys with "Nessmuk" and Kendall. Munroe was also heard from cruising at Charlotte Harbor, and working up the west coast. He may even be with Neidé now. He misses Psyche badly he writes. Make the A. C. A. Cup a challenge one by all means.—GUENNY.

HARTFORD C. C. WINTER CAMP-FIRE.—On Saturday evening, March 27, at residence of Dr. Geo. C. Farnell, Messrs. Nickerson, Shedd, Knappe, Bowles and Bliss were present from Springfield, and Vaux from New York. Mr. Abbott, of the H. C. C., presided. Arrangements for the Calla shasta (Springfield) Decoration Day meet were talked over, and the expenses were agreed to be borne equally by H. C. C. and S. C. C., to be raised by subscription. Mr. Nickerson was the lecturer of the evening; canoe sails his subject. A very choice light supper was served after the lecture, and then canoe talk was indulged in till it was time for the Springfield men to go for their train at 1:30 A. M.

A NEW RADIX BOARD.—The success of the Radix board in canoes has led to a demand for a larger size suitable for sailing boats. The makers of this device, the Radix Manufacturing Company have lately placed on the market a larger board, 36in. long and dropping 18in., the area being 24sq. ft. This board is admirably suited for rowing and sailing boats, especially for yachts' yawls, as it takes up no space in the boat, and is very effective in operation. There is still a good demand for the small or canoe size, which promises to retain its place as a cruising adjunct, owing to the many advantages in the way of increased space which it possesses.

A. C. A.—The following letter has been received by Secretary Neidé: 11 Buckingham street, London, W. C., 8 March, 1886. C. A. Neidé, Secretary A. C. A. Sir—The Royal C. C. begs to enter for the challenge cup of the American Canoe Association, to be sailed for during the autumn meet of 1886. I beg to remain, sir, yours truly, T. G. F. WINSER, Secretary R. C. C.—Messrs. F. B. Hibbard, of Rondout, Walter H. Barry, of Montreal, and the Rev. N. R. Everts, commodore Shattennue C. C. of Newburg, are proposed for membership.

CANOE LITERATURE.—The committee on canoe literature of the Canoe Exhibition, will be glad to receive any loans of books, charts, drawings or models from publishers and canoeists. Articles may be sent to W. P. Stephens, care FOREST AND STREAM, 39 Park Row, New York, not later than April 21.

HAMILTON C. C.—This club has lately been organized at Hamilton, Ont., with twenty-five members.

SAIL PLAN OF CANOE "VESPER."

Yachting.

July 3-4.	Knickerbocker Y. C., Annual Cruise.

MR. ISLIN'S NEW YACHT.—This yacht is now partly planked, the deck frame laid and cockpit floor and sills of the cabin house in place. Those who are interested in the very important questions of yacht construction will find much that is worthy of a careful study in this craft, as her framing has never been equalled in any yacht of the kind built about New York. If some of the "experts" to whom in their own estimation the yachting world owes so much, were to visit her now they could gather many good ideas to be palmed off some day as original inventions. There is really nothing specially novel or amazingly ingenious in her construction, but every part shows a thorough adaptation to its special place, the result being lightness and strength. The yacht is deserving of a more thorough and critical notice, but at present, as illustrations, may be mentioned the quarter timbers and general construction of the stern, the use of oak instead of mahogany for the through fastenings of copper and the conspicuous absence of galvanized spikes and wooden treenails, as well as the shaping of the floor and hanging knees, forged to a correct shape instead of being bent out of plain bar iron.

SEAWANHAKA CORINTHIAN Y. C.—The Seawanhaka C. Y. C. held a meeting at Delmonico's on March 30, with Commodore Canfield in the chair. Mr. Frank S. Lawrence, of the sloop Vixen, was elected vice-commodore, in place of Mr. W. E. Iselin, who has declined to serve. The secretary read his report showing that notwithstanding the late differences in the club it is still in a prosperous condition. The present membership is 192, compared with 212 at this time last year, and eight new names were also presented for admission. The club will retain their present anchorage and club house until June 1, and probably will lease it for another year, until May 1, 1887, and the club yacht Venture will soon be in commission for the use of members. The date of the spring regatta will be set by the flag officers. The same amounts were appropriated for prizes as were given last year. The Decoration Day race will take place as usual, the prizes being the same as last year.

THE ALTERATIONS TO THE GRACIE.—The sloop Gracie is now on the ways at Piepgrass's yard for extensive alterations. Her sides will be raised 1ft. amidships, reducing the sheer, as the height at the bow will remain unchanged, and the height aft will be increased but little. The stern will be narrowed in and altered in shape to conform more nearly with modern ideas, and a new deck and cabin house will be added. Sister keelsons will be worked along the keel, jogged down over the heels of the floor timbers, as this part of the boat has been weak ever since the alterations to her centerboard trunk. The new trunk, a large one, put in a few years since, will be cut down to the after end, the board being shortened to correspond. The interior will be refitted throughout. The rig will not be materially changed. The alterations will be made by Mr. Piepgrass, under the superintendence of Mr. J. F. Tams.

MR. VANDERBILT'S STEAM YACHT.—The contract for the steel for Mr. Vanderbilt's yacht has been awarded to the Linden Steel Co., of Pittsburgh. The specifications are for the best quality, the tensile strength being 84,000 pounds. The dimensions of the yacht are: Over all, 285ft.; waterline, 233ft.; beam, 33ft. 3in.; depth, 21ft. 6in.; draft, 16ft. 8in. It is said that the name Alva has been decided upon.

YACHT AND CANOE FITTINGS.—Messrs. Topping & Fox, 96 Chambers street, have now a large stock of ship hardware of all kinds, including blocks, chains, and anchors. Their stock of brass goods includes many handsome patterns of rowlock and other boat and canoe fittings, and they are adding to the latter to meet the wants of canoeists.

A NEW STEAM YACHT.—Mr. John Harvey has just completed the design for a steam yacht 52ft. over all and 7ft. 6in. beam, drawing 3ft. 6in. The yacht, which will be planked with mahogany and probably double-skinned, will be built by John Munn, The Westinghouse Co. are the owners and will fit her with one of their engines.

AMERICAN STEAM Y. C.—Messrs. Frank R. Lawrence, W. B. David and George W. Hall have been appointed a committee to arrange for an international race of steam yachts. Designs for the A. Y. C. Cup have been presented to the club.

YACHTING NOTES.—The Providence schooner. The frames of this boat are partly out, the lead keel is cast, and the keel logs are being shaped, so that the vessel will soon be in frame. She is to be ready by the middle of May. Dagmar. The new steel yacht building at Newburg is for Mr. Geo. Beck, of Poughkeepsie, owner of the Miriana, Mr. C. D. Miller being the designer and not the owner as we previously stated. It is proposed to name her Dagmar. Far Niente, sloop, has been sold to Mr. John Hatch, of New York. Norma, steam yacht, has been sold by Mr. Munroe to Mr. Horace Daniels, of Providence, R. I. She has been taken to Manning's Basin for an overhaul. This summer she will fly the pennant of the American Y. C. Vision. This old and well-known sloop, after lying idle for several seasons, has been sold to Mr. A. Weston, of Yonkers, N. Y. Mischief, sloop, will not fit out this season, and Capt. Clock will probably have command of the new schooner Avon, built for Com. Valette, Quaker City Y. C. Estelle, cutter, is having her cockpit removed and a full flush deck laid, the space gained aft being converted into a stateroom. Her mast will also be shifted aft to its former position, and the cabin will be refitted. Montauk will be stripped at once and fitted out with her summer rig. Sasqua, sloop, will have a larger sail plan and new mast this summer. Sappho, steam yacht, lately bought by Dr. W. S. Webb, is now at the foot of East Twelfth street, where she will have some repairs made. Seneca, yawl, J. B. Triken, Brooklyn Y. C., has received a housing topmast, and new luizes in place of the old leg of the mainmast sail. A steam launch 52ft. long, 6ft. beam is now building by Mr. James Lennox for the Harlem Rowing Association. Vivienne, sloop, has been sold to Mr. W. C. Bolton, of New Haven, to which port she belongs. Adelaide—Wood Bros. are now finishing Mr. Underhill's sloop. Mr. R. M. Wood will sail her for a time. Union will be the name of a catboat lately built on Staten Island for Mr. R. J. Behringer, Brooklyn Y. C. She is 35ft. 6in. long, 9ft. 6in. beam, and 3ft. depth. Concord, sloop, is at Pollon's yard for a lead keel of 5 1/2 tons and also for general repairs. Wanda, steam yacht—The changes in rig have been completed and the engines have been run at the dock preparatory to a trial trip. Lawleys have the keel and frames of Mr. Fay's yacht all ready. J. H. McManus & Son will make the sails. Rival, steam yacht, lately purchased by Mr. Field, will be altered by Pollon Bros., her deck being raised 8ft., with a plot house and smooth room forward. Some changes will also be made in her boiler. Mr. E. A. Willis, of Port Washington, has about completed two open centerboard boats, the Nahle, for Mr. W. E. Connor, 25ft. long, 11ft. beam, and 1ft. 7in. draft, and the Negle, 20ft. long, 9ft. beam, and 1ft. 3in. draft, for W. S. Alley. Mr. L. C. Young, of Bridgeport, is at work on a 21ft. open sloop, with counter stern and lead ballast. The Delamater Iron Works are making a steel boiler for Mr. J. M. Vaternburg's yacht Lurline. Mr. Pierre Lorillard, proprietor of the New York Yacht Club, has ordered a 40 ft. sloop for Florida waters. Mr. Hillman will design the hull and Mr. W. W. Scott the engines. Thos. Kane & Co. will put out of their three-cylinder valveless engines and petroleum motors in a launch for Mr. George Poppert, of Milwaukee.

SAVANNAH Y. C.—On the 3d inst. our club held its annual meeting at our club house, Thunderbolt, with Commodore Wm. Hone presiding. The Commodore, in presenting his annual report, congratulated the club on its increasing prosperity. Five new members were elected. Officers for 1886 were then elected: Commodore, Wm. Hone; Vice-Commodore, John N. Johnson; Rear-Commodore, Thos. P. Bond; Secretary, Frank Winter; Treasurer, M. H. Cohen, Board of Stewards—Henry D. Stevens, Isaac Beckett, Julian Schley, Alfred M. Martin, Jr., Theodore Gordon, Wm. G. Morrill, Commodore William Hone, Lawrence Hartshorn, Geo. J. Baldwin, Wallace Cumming, Henry H. Hull, Wm. D. Simkins. On March 6 the new Board of Stewards met and Alfred M. Martin, Jr., was elected chairman and Frank Winter was re-elected secretary of the board. The following committees were appointed to serve until the annual meeting, Wednesday, March 2, 1887: House Committee—Henry D. Stevens, chairman; Wm. G. Morrill, Wallace Cumming, Wm. Hone, Alfred M. Martin, Jr.; Sailing Committee—Lawrence Hartshorn, chairman; Isaac Beckett, Julian Schley; Committee on Membership—Geo. J. Baldwin, chairman; Wm. D. Simkins, Theodore Gordon, Henry H. Hull, Wallace Cumming; Timers—W. D. Simkins, chairman; Theodore Gordon, Henry H. Hull; Measurer, William G. Morrill. At present there are 171 members to our club. The new constitution, by-laws and sailing regulation will shortly be printed.—FRANK WINTER, Sec. S. Y. C.

MARINE BOILERS.—It is somewhat remarkable that little or no improvement has been made for many years in the efficiency of the marine boiler. At the present time, over 40 per cent. of the total heat due to the combustion of the coal is completely wasted. Here is a fine field for economy. Several engineers are now directing their attention to the improvement of the boiler, considered as a steam generator, by the use of a forced draught. The Howden plan, which consists of blowing air, heated by means of the waste gases from the boiler, direct into the furnaces, has given promising results in the steamship New York City, where the boiler has been working under air pressure for about eighteen months. Mr. Howden claims that he can largely reduce the size of the boilers required for any given power at the same time effect a great reduction in the consumption of fuel. Probably he is a little too sanguine; but as the improvement of boiler efficiency is a matter of the greatest importance, not only to the mercantile marine but also to the Navy, we should like to see the Admiralty authorities give the Howden plan a searching trial and make known the results to the shipping world.—The Shipping World.

GENERAL PAINE'S YACHT.—The new yacht is planked and decked and the joiners are busy inside. The manual will be made by J. H. McManus & Son, while the jib, jipopsail and staysail will be made by Wilson. General Paine is now on a visit South. The yacht will be ready for the launch by the latter part of this month.

CRUISE OF THE COOT.

XVIII.

THE contemplated run for the Coot this day was the short distance of fifteen miles round Sandy Point, up the Severn to Annapolis, the capital of Maryland. The day was fine for a wonder, with a moderate wind from S.W., which made it a comfortable full and by down to the shoal, which makes out three-quarters of a mile from Sandy Point. A new screw pile lighthouse, white light varied with red flashes, has been erected on the extremity, the old tower still standing on shore as a landmark. The Coot passed inside the light and found spots several feet shoaler than figured on the chart. Two miles above this point you pass the narrow mouth of the Magdalen River, an estuary in which oyster fishing is carried out extensively. The entrance is buoyed. After passing in, Deep Creek, on the port hand, affords anchorage, with the wind from E. round to W., while Dobbin's Island, in a large bight on the starboard hand, acts as a breakwater for everything from W. N. and E. There are also many other coves and creeks further up. The river itself is a large sheet of water, five miles long and a mile wide, with two fathoms of water and nine feet on the bar between buoys. The shores are bold bluffs, alternating with low ground, and very attractive. This affluent itself, though but one out of scores of similar stretches connecting with the Chesapeake, will supply weeks of interesting cruising and sport to a catboat like the Coot. In local vernacular the river's name is pronounced Maggoty, with the stress on the first syllable.

From Sandy Point the coast line turns in almost at right angles and trends away southwesterly to Hackett's Point, which you give a tolerable berth if bound round into the cove, with Mill and White Hall creeks at the head for snug anchorage. But if bound for Annapolis, you haul up to S.W. for Greenbury's Point across the cove. On the headland, the northern extremity of the Severn River, there is a small lighthouse, with building attached, and a clump of green trees. With less than 7 ft. draft, give the point a fair berth and cut across to pick up the channel buoys, which will lead you up to the city. If drawing 7 ft. or more, keep well out coming from Hackett's and make the red can buoy off Greenbury to starboard, as it marks the tongue of sand projecting to the S.E. from the Point. Leave it on either hand, as there is 10 ft. inside of it for some distance before it shoals fast.

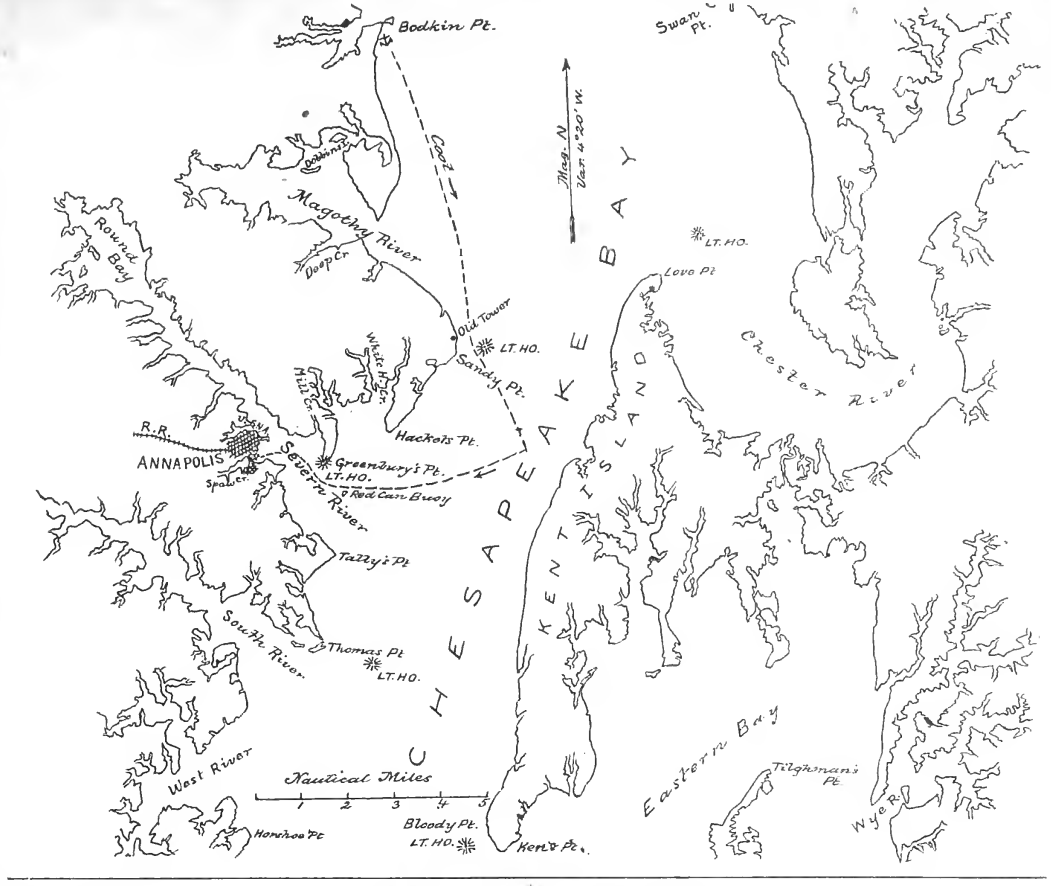

The Coot having been knocked off by the wind backing to the southward, stretched well across to Kent Island from Sandy Point, then hung round for the harbor, with the dome of the historic old State Capitol towering majestically above the town clustered beneath and radiant in the sun in the many-colored tints of its houses. Prominent objects, familiar objects, met the gaze ahead. Right up the channel, in full view, the trim park of Uncle Sam's far-famed Naval Academy caught the eye with pleasing effect. Broad lawns, handsome buildings and public edifices, officers' quarters, armories and gunnery ships, splendid in fresh paint, spoke of the care and solicitude bestowed by a great nation upon this seat of nautical training and instruction. To me the sight was one of utmost gratification. It was fifteen years since, to the tune of "The Girl I Left Behind Me," we "broke ranks" from the final dress parade on the sward facing the Admiral's quarters. Amid cheers we rushed for our quarters to don full regimentals, frock tail coats with gold lace and shoulder knots, gorgeous swords and smart naval caps, each one of our grand old "class of '70" armed with a parchment certifying our graduation and admission to "the line" of Uncle Sam's bold navy. From the hands of General Grant we had received these documents in person, with a few commendatory words from the great chieftain, which made the day doubly precious. From that hour we were ready to fight tooth and nail through Uncle Sam's battles, but as the generous-minded soul had no particular quarrels on hand, we drew our pay with utmost promptitude in fact. As the day approached and the ports of the old Santee could be counted, the very muzzles of the guns which had many a time sent volleys across the waters and shot and shell at targets in the bay at my command to my "division," peered from the noble frigate's shrouding like so many old friends welcoming back the wanderer to their fold. One by one objects of great interest were made out. A whole row of buildings was gradually opened, then a particular dwelling, then a particular door, and last, a particular window with which had for years a much and an acquaintance.

A window on the ground floor which served me well, from which you could jump when belated to slip unobserved into the rear rank of the breakfast "formation" before the roll call had reached your name; a window from which the juicy lemon cakes—"snots" we then called them for short—could be deftly purloined from "Freuchy," who had the privilege from high quarters of wheeling us out of spare pennies through his dainty sweets piled on top of his basket, which was, of course, empty below, like shot in a pyramid; a window from which one could see the old flag of the old day on its round mast at sight still the noisy tumult within and send us flying to our books to meet the stern official's "inspection" with the looks of innocent babes, guileless as the angels above; a window from which the "plebs" could be twitted, for it was in the good old days when hazing was still a legitimate institution; from which fair damsels could be cut up when passing to and fro; from which rose cheer upon cheer from the spectators on the shore, and from which one could see the pig down from the creased pole, or sent the big, puffery leather ball through the goal by a dexterous kick, or made a home run round the three bases; a window which, if it could speak, might many a tale of youthful pranks and conspiracy unfold. And yet a window which once played us shamefully false, as the cloud of smoke leaking through its sashes betrayed the sacrifice to the fragrant weed going on within, and put us all on the "tobacco pledge" and brought us down to smoking ten fifteen years ago, but it came back as it were but yesterday, and the inclination to dodge round the corner and hide my cigar as the headless, juvenile officer of the present day sauntered down the brick-laid walk was an almost irresistible inclination on the part of the Coot's solitary crew.

Round the last black buoy the Coot swept with a rush, as sheet was got in for a berth well up the harbor, in close company with a score of swift, keen-nosed caucers returning from their day's tongue. These boats were all manned by an officer, by a midshipman and a crew of twenty men, their craft almost gunwale with their freight. They were racing to get alongside the piers first to unload at the oyster houses and larger vessels awaiting the filling of their holds before casting off for more distant markets. As the colored brother neared the aim of his day's ambition, he hurriedly took in sail and set up a vigorous shouting and hailing and mouth-fighting in his eagerness to maintain his right of position, that the waters rang with noise and near and far his African rival secured imminent. Of this nothing came, the colored citizen being happily free to fight it out with much obfuscation and then accepting the inevitable with philosophic resignation. The Coot came in for a large share of their obnoxious powers. She struck them most favorably, as any yacht is likely to do, for paint and a large cabin go a great way by comparison with the rougher looks and more restricted conveniences of working vessels. I ran the yacht close up to a shell beach below the county bridge, passing Spaw Creek, and dropped the hook in 9 ft. The nearest the last man to the shore being near enough with the harbor through former residence at the Academy.

The port is easily entered night or day, and is snug and perfectly protected. From 12 to 18 ft. at low water is found all over, unless you anchor close inshore. The Severn River extends 8 miles in a north-westerly direction, ending in Round Bay, a mile and a half diameter. The shores are bold, pretty bluffs and undulating country. You carry from 8 to 5 fathoms clear up to the head, and 15 ft. in the lateral creeks. In days gone by we used to head, and in the country of war, square-rigged, all the way up to Round Bay for practice. An idea can be formed of the magnificent and imposing nature of the Chesapeake's tributary arms, to which Long Island Sound pales by comparison. There is no such cruising water as the Severn anywhere about New York or Boston short of the Maine coast, and that is intricate, rock bound, blustering, uncongenial and foggy, except for a few short months in undiscovered. Yet in the Chesapeake, we have said, concerning the Severn, the water is equal to hosts of similar estuaries, bays, rivers and so-called creeks, cruising being, moreover, enjoyable all year round, unless an exceptionally severe winter, like the one just passed, should be experienced. Occasional cold snaps may cause a few days' interruption, but the way is always clear to escape in the south. Still these latitudes remain practically unexplored, and strange to say, the sport has scarcely found a following among the natives. One would suppose that a wealthy city like Baltimore, the largest city on the coast, and that the country would boast its yachts by the hundred, and that Norfolk would come here at fifty at least. With the exception of the Chesapeake Y. C., recently organized by a few gentlemen of the eastern shore, there seems no inclination whatever on the part of men to the manor born to take to the water, and they are ignorant of the splendid opportunities thrown in their way. Perhaps with the fashion once set by the more frequent appearance of yachts from the North, the discovery of what has been a far misapprehension, made, in the Chesapeake towns may take their proper rank in a sport to which their location especially invites them.

Annapolis is a quaint little toy town, which appears to have been dropped into the present age out of the basket of bygone times. It is still in the main a remnant of Washington's era, and contrasts in its small scale town with the huge planning we are accustomed to in the cities of modern descent. Evidently Annapolis grew and got ripe before the age of steam. It represents labor by hand from cellar to garret, from stone stoop to carved dormer window. It is neat, tidy and thrifty. Neat and tidy because nothing is going on to keep the grass from growing between the identical stone pavements which were laid in revolutionary period, when Annapolis was a central sun to politics and society. Tiny, because you can almost reach to the

corner of its little but very complete buildings. They show by their ornamentation in brick and wood that once a fashionable class ruled from the streets converging at the capitol, and no doubt with all and more of the imperiousness, cabals, vanities and competition that characterize the *nouveaux riches* of New York's pet Murray Hill. Once upon a time Annapolis had its "up town" and "down town," its "west end" and its "city." But in these days of big distances and things, it does not even rank a mile-off line, and scarcely rises to the dignity of more than a village. The old dwellings have become stores, and small stores with a small assortment of goods. Some have degenerated into boarding houses, though where the people are expected from to join the festive hall is hard to say. The legislative sessions bring a few stragglers from the country, and the Naval Academy furnishes the bagels of some support. The State capitol, a fine structure even in the eyes of the present generation, must have represented such an enormous effort and prodigious outlay when first planned, that the handwork of our worthy sires must command respect, though the town itself fails to arouse admiration. The capitol is situated on an elevation in an open circle, recently marred by a stupid attempt at modernization, totally out of harmony with the building itself. From it radiate the streets, avenues of the olden time, and these are covered by sundry little back alleys, probably the Five Points, Minetta lanes and Baxter streets of a century ago, the reveling hordes of which were also probably a source of constant anxiety to the one town watchman, with his smoky oil lamp and lame rattle. The capitol is replete with historic memorials and relics. It is enough for me to remind the reader that Washington the immortal resigned his commission as General of the Revolutionary Army in this same building. For further information let him come and see himself, as it is not a guide book I am writing. In rear of the capitol stands an ugly mansard-roofed "mansion" of modern date, already out of date, flopped down among the remnants of an interesting past, an uninteresting reminder of the insipid taste and lack of conception characteristic of our own years. Then there are some very respectable church edifices, one solitary dwelling of the Americanized Queen-Anne-Swiss Chateau-Pagoda-Rhine Castle conglomerate red-painted order, a large Catholic college for priests of some sort, a baby gas works, and a very few fairly commodious modern residences of some of the old first families, "left behind." There is also a railroad. If there had been no railroad, there would have been no railroad. Gen. Butler built the 20 mile connection with the Baltimore & Ohio Railroad for the transport of troops. When hands had been clasped across the chasm, it had to be sold. Somebody was rash enough to buy it. As I knew the road, it still retained the old U rails of aboriginal device, or what was left of them, and the consumptive engine of the line ran at intervals on mud. The rolling stock consisted of two cars tottering to the grave. A shanty or two passed for depots, and one lonesome-looking side track of a few yards length furnished the chance for imitating real roads and a rush of business by furious backing up and shunting off the two lame cars, the engine straining itself at whistling and bell clanging for an hour before departure. I heard at the time ugly rumors that this ghost of a road was made the stalking horse for some of the wildest stock manipulations and capital watering on the most approved Wall Street plans, but of course on a very tiny scale to correspond with the road's bucolic surroundings. Time has done wonders, however.

A general renovation has overcome the road and now the bold engine, with a fine new headlight, sweeps into the new shed at a two-mile rate, whistling loud and long for the crowd to make way, whereupon the single small urbin within hearing walks off the track with his hands in his pockets. A steamboat also makes daily connection with Baltimore. Industrially considered, Annapolis would be only a small country store but for the trade in oysters, which has assumed considerable magnitude. Socially considered, the place has some attractions, and the outlying country is studded with fine farms, some of them held by wealthy men from Northern cities. The country is very healthy, and along the shores excel and romantic sites for dwellings are plentiful. I know several gentlemen from the North who have settled here to escape the rigorous winters of higher latitudes and to pass their age in quiet contentment and fresh supplies reaped from a small patch of ground, chickens, cow and oyster beds. Sport is good, birds and fish plentiful. From a purely yachting point of view, few places can surpass or even equal the regions about Annapolis. Shelf-red or open water, with all the variations imaginable, with depth enough for any type of boat, with shores clad in sylvan beauty, with harbors in every direction, with stores and water at hand and the route to the North or to the South open as you like, with Baltimore and Washington within handy reach for metropolitan excursions by land, combine to make the ancient colonial settlement named in honor of Queen Anne a charming and inviting headquarters for yachting purposes. I did grant my longing eyes upon one nice little black cabin sloop of about 30 ft., called the *Elfin*, belonging to a gentleman owning a farm on Hackett's Bay. It is the sole representative of the sport for many a mile around.

To the attractions of the town itself the Naval Academy, of course, lends the lion's share. Within the high walls of the Government grounds is a city by itself, half military, half civic in character; a city in which dwells refinement and intellect of the highest degree. All that is agreeable in the amenities of social life, all that is attractive to the student of the art of warfare or of the sciences of peace is within easy reach through the iron gateway granting admission. Fine buildings, situated in a well preserved park, engineering and gunnery establishments, museums, libraries, laboratories, observatory, model rooms, collections of great historic value, armories, monuments, churches, hospitals, public music by the most proficient band in America, the fine arts—all are well represented and accessible in one form or another, with scholars and experts and specialists presiding. Practice ships for drills, including frigates, a monitor, torpedoed and steamers, a steam fire engine, gas works, and all the make up the institution which has long been a pattern to all other nations. The flash of nobly uniforms, the parade of the smart cadets, the soldiery marine corps, the fashionable fair sex, form an ever-changing kaleidoscope of brilliant color and delightful form,

upon which the amateur mariner, fresh from a great city, can feast his eyes without stint as a relief to his rough roaming at sea.

The Coot swung round her anchor for three days, during balmy weather and light southerly winds, which were an unnatural but welcome break in the monotony of winter gales for which she subsequently paid dearly. Provision for two weeks were laid in, a mast was hacked about the edges to keep the water from penetrating below, and sundry odd jobs performed. New oars for the skiff were purchased and the water breaker refilled. To a light northwester she got under way the morning of the fourth day and sailed out past the Herreshoff steamer *Glean* and the gunboat *Gov. McLane*, of the Maryland oyster police. The Coot was bound south for a harbor as far as wind and weather would permit.

C. P. K.

NEW JERSEY Y. C.—The annual meeting of the New Jersey Yacht Club was held at their club house foot of 10th street, Hoboken, N. J., on March 25. Commodore John H. Longstreet presiding, forty members being present. The reports of the various officers were read, that of the Treasurer being the most important, showing the club to have a large surplus on hand. Mr. Charles I. Rogers, in his annual report stated the amount of cash on hand at the beginning of the past year, and the amount at the present time, and said that the club was in better financial condition now than at any previous time, since its organization in 1873. The trustees in their report through their chairman, Com. Dilworth, spoke of their improvements made in the past year and of those contemplated, and said that on or about May 1st the ferry from 14th street, New York, to 14th street, Hoboken, will be in operation, and will be a great convenience to members living in New York city. The time it will take to get to the club house being about seven and a half minutes. He also spoke of the electric light that had been placed at the entrance to the club grounds, at the request of one of the trustees. After concluding his report, on a motion to that effect, the trustees were constituted a committee of the whole to procure plans and specifications for a new clubhouse. The present ways are rather ancient, and by their yachts are hauled out over rollers. The proposed ways will have a truck and cradle, and by the cradle a boat may be moved anywhere on the grounds. It is calculated that the ways will cost less than \$500. On a motion to that effect, a ballot for officers was taken, and the following gentlemen elected for the ensuing year. Commodore, William H. Dilworth, of yacht *Derave*; Vice Commodore, Henry E. Ozden, Duplex (cannary); Recorder, Secretary, William S. Dilworth; Corresponding Secretary, George E. Gardner, Treasurer, Charles I. Rogers; Financial Secretary, John D. Goetschius; Messurer, Arnold Jeanneret; Regatta Committee, Edward W. Ketcham, chairman, John Curtin and Martin V. B. Everson. Trustees, Theophilus Butts, chairman, Edwin A. Stevens, Edward W. Ketcham, James A. Reed and William Stone. Commodore Dilworth assumes the reins after an absence of three years from the chair, and being heartily interested in yachting, and all that pertains to it, will infuse new blood into the club. The fifteenth annual regatta will be sailed on Monday, June 14, over the club course, starting from Bedloe's Island, buoy 13 and 18 (red can off Cone Island), leaving both to port, passing to the westward of buoy on Robbins Reef going and coming to place of starting. The committee talk of chartering one of the Iron boats, for the guests of the club. The fall open race will probably be sailed the latter part of September or first part of October, but the new regatta is a great measure on the cup races. The resignation of Mr. Abram Hennum was tendered and accepted. On motion of Commodore Dilworth, Mr. Hennum was unanimously elected an honorary member. Mr. Hennum was one of the charter members and is at present in Florida recuperating lost health. He was formerly the owner of the sloop yacht *Estelle*. He is the first honorary member that has been elected in about ten years, and it is only on rare occasions that one is elected.

NEW YORK Y. C.—A meeting of the club was held on Mar. 25, with Com. Gerry in the chair. The annual reports of the officers were read and accepted. A telegram was received from the Hon. Perry Belmont, announcing that the Sub-Committee on Commerce and Navigation had reported favorably on the bill relating to steam yachts and pilotage. The Regatta Committee reported that a letter had been sent to Lieut. Henn, giving the same terms and conditions to the Galatea as were accorded to Genesta last year, namely, three races over the same courses. The following members were elected: F. A. Schermerhorn, George L. Ingraham, Richard Henderson, J. Hyslop, D. A. Levy, George Lawrence, Leroy King, Ransom Underhill, Edward Ward, George M. Hand, Wright Duryea, J. S. Tappan, J. Seward Webb, B. Farley, Jr., J. D. Grant, Edward Anuan, C. C. Marsh, W. K. Vanderbilt, John F. Lovejoy, Charles W. Thomas, A. Young, Jr., Effingham Lawrence. The list of yachts now includes 60 schooners, 50 sloops and cutters, 35 steam yachts and 10 launches.

BURLINGTON ICE Y. C.—The third regatta of the Burlington Ice Y. C. took place Saturday, March 27, and the prize was a year's subscription to the *FOREST AND STREAM*, offered by W. B. McKillip, a prominent member of the club. The pennant was sailed for on the 23d, and as no cash prizes are allowed the club, the *Forest and Stream* seems very appropriate. The *Mudjokeevis*, owned by T. P. W. Rogers, took the prize, covering the course in 15 min. The course was 2 1/2 miles to windward. Distance sailed about 3 1/2 miles. Wind W. by N. and rather light.

A HANDY YACHT BUCKET.—A new and convenient style of bucket has lately been devised by a yachtsman for use about yachts. It is made entirely of rubber, the outside being protected by three stout hoops 3/4 in. square in sections. The ball is also of rubber, very strongly made, and is fitted with a galvanized thimble. The makers are the Goodyear Rubber Co., 503 and 255 Broadway, New York.

A NEW IRON SCHOONER.—The little *Winn*, designed last year by Mr. A. Cary Smith, has proved so successful that Mr. Smith has now an order for a large schooner of similar design, 80 ft. on waterline and not over 6 ft. draft. She will be built of iron and will be used about Florida, her owner being a Massachusetts yachtsman.

A HANDY KEEL SLOOP.

THE accompanying drawings, for which we are indebted to Mr. J. A. Wylie, of Newburgh, N. Y., show an excellent boat of moderate proportions that will commend itself to many who desire a keel craft, but who hold initial stability and moderate draft as of the first importance. The accommodations are very good for so small a craft, while the draft, 4 ft., is not too great to permit a very wide range of cruising. The centerboard is entirely dispensed with, and the space is increased largely in consequence. The headroom in the cabin is good and the galley is very fair. The Gipsy was built in the winter of 1884-5 by Daniel C. Bernard, of South Brooklyn, for Mr. Theodore C. Hall, of Newburgh, N. Y., and her dimensions are as follows:

Length on deck.....	26ft. 6in.
Length on leadline.....	28ft. 0in.
Beam (extreme).....	9ft. 0in.
Draft.....	4ft. 0in.
Least freeboard.....	1ft. 8in.
Ballast (iron cast to fit).....	5,000 lbs.
Mast, deck to bouds.....	25ft. 0in.
Boom.....	27ft. 0in.
Gaff.....	14ft. 2in.
Bowsprit, outboard.....	12ft. 0in.
Topmast, above masthead.....	11ft. 0in.
Hoist of mainsail.....	23ft. 0in.
Jib on huff.....	25ft. 0in.
Jib on foot.....	16ft. 0in.
Area of lower sails.....	749 sq. ft.

Stem, keel and sternpost are of oak, the keel being 14in. x 6in.; frames bent 3/4 x 3in. at heels, and 2x1 1/2 in. at deck, spaced 12in. between centers; floors of hackmatack, natural growth; bilge strake (inside) of white pine, 1x4in.; deck beams, 2x3 1/2 in.; wales of Georgia pine 1 1/2 in. thick; planking of cedar 1 1/2 in. thick; deck of white pine 1 1/2 in. square. The cabin slide and runners, cabin doors and cockpit rail are of cherry.

The interior which is finished in clear pine with cherry trimmings and varnish, is unusually roomy for a boat of this size, there being 5ft. 1in. headroom and 3ft. of floor between the transoms, which is all available as there is no centerboard trunk to cut it up into two narrow alleys.

The cabin is arranged with a view to accommodate two, and there is a berth forward in case a hand should be shipped for a long cruise. There is an ample supply of locker room, the benefits of which will be appreciated by all who have cruised in a small yacht.

Under the cockpit and accessible from the cabin by a sliding door, is the refrigerator, 2ft. square, and each side of this is a water tank, the two tanks being connected by a galvanized iron pipe, in which is placed a cock, so that the water may be kept from running all to leeward when the yacht is heeled over, there is also a cock just within the cabin, under the companion ladder, by which the water may be drawn off for use. The two tanks hold thirty-five gallons.

At the after end of the cabin on each side is a locker 18in. long without shelves, but provided with hooks so that clothing and oilers may be hung at full length. Back of these lockers are small doors, leading under the deck on each side of the cockpit, and as the cockpit floor runs all the way out to the planking of the boat and back to the archboard, this makes a narrow closet about 8ft. long, suitable for awning stanchions, boat hook, mop, broom, etc., which are usually knocking about on deck and in the way. Then comes a berth on each side, 6ft. 3in. long and with plenty of width for comfortable sleeping. The lockers under these berths are accessible by doors in front of the lockers, which, being hinged, let down, opening outward into the cabin. Forward of these berths on each side is a closet with shelves for the reception of crockery, glass and silverware, bed and table linen, towels, etc., etc.

The forecabin contains a berth which can be turned up against the side of the yacht when not in use, while opposite is a Monitor oil stove with three burners, capable of cooking anything that can be mentioned. Over the stove is a rack for tinware and cooking utensils. The forecabin also has ample locker room, including chain lockers in the eyes.

In the after end of the cockpit floor and just forward of the rudder trunk is a small hatch leading to a large open space under the cockpit and aft of the refrigerator and water tank, where may be stored spare anchor and cable, extra sails, awning etc.

The Gipsy has proved a weatherly and able boat and in the matter of speed, in both light and heavy weather, has also proved herself exceedingly satisfactory to her owner.

TORONTO SKIFF SAILING CLUB.—This club has opened its doors to its members about six weeks earlier than last year, the ice having left our several bay weeks earlier than was expected. Several members have been out sailing already, and it is proposed to have a club cruise on Saturday, March 27, which in all probability will open skiff sailing on our bay. Several are having new boats built this spring which they expect will leave astern everything else in the club, but there are some good boats in the club yet, which will make it pretty hot for some of them. The officers will be elected for this year at annual meeting, which will take place on the 6th prox.—**HAMILTON S. HALL, Sec'y-Treas.**

The White Mountain Hammock Chair is a useful article for camp life in the woods, as well as for the house or lawn. It is self-adjusting to any position, and the weary sportsman can recline at full length, or sit upright as in an ordinary chair. It is strongly made, and can be stowed in very compact shape. See advertisement in another column.—*Adv.*

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

M. E.—See Shot columns.
A. Quiz.—For Long Island snipe law see Shot columns.
E. H. F. City.—The gun can undoubtedly be so altered.
N. Y., Belleville, Ont.—Write to J. C. Greeley, Jacksonville, Fla.
W. E. S.—Le Page's Liquid Glue will probably answer your purpose.
T. H. Easthampton.—Try a beagle; see advertisements of breeders elsewhere.
J. D. G.—The diameter of a "10-inch circle," as understood in target shooting, would be 10 inches.
H. F. M., Quebec.—The .32-caliber will do, though if you have the choice, choose a larger one.
D. C. W., Patterson, Ont.—Long's "American Wildfowl Shooting" is a good book on the subject. Price \$1.50.
STRANGER.—1. There is no law on snipe. 2. The season for summer duck in New Jersey is Sept. 1-Jan. 1.
A. B. H., St. Mark's.—Norris's "American Anglers' Book" is best suited to your needs. See price elsewhere.
C. M., Dauphin, Pa.—The trap may be ordered through any of the gun dealers; we do not know address of makers.
B. C. W.—Spring snipe shooting is forbidden in Suffolk and Queens counties, N. Y., by the law which is given in our Shot columns.
R. W. R., Boston.—Call on E. M. Messenger, Bromfield House, Boston, and he will post you on the angling waters you want.
G. L., Tarrytown, N. Y.—You can probably procure the jack rabbits upon application to Chas. Reiche & Bro., Chatham street, New York.
J. B. B.—The county supervisors of New York State have authority to increase the close season of any game fish, bird or animal, but not to decrease it.
A. P., Louisiana.—A special rubber cement is supplied by dealers in rubber goods. You can order it through any of the sportsmen's goods' dealers.
G. H. T., New York.—1. For largest Rangeley Lakes trout see correspondence in last and current issues of this paper. 2. The fish were brook trout.
F. R. R., New York.—There are trout streams on Long Island. Perch may be caught in Croton Lake, bass in Greenwood and Hopatcong lakes. To be taken in proper season.
G. B. P.—Either one of the rifles you name is an admirable arm and will give you satisfaction. The Lyman sight will answer better than any other for the work you contemplate.
E. P. L.—1. "Jacking" means hunting with a jack-light to show presence of game by reflection of eyes, or fishing with a jack-light to reveal the fish in the water. 2. No law on pickerel in this State.
A. K. T.—Moose rut in September and October. The does bring forth in May. Caribou rut in September and October; bring forth in May and June. The antlers of all deer are best in the rutting season.
C. B. S.—1. The Roper is not manufactured. You may find one in some of the stores; write to them. 2. There is little practical difference in the wearing qualities of the two; either one should outlast the shooter.
A. C. J.—Ashmont's book has some useful hints on care of dogs, but the bulk of it refers to management and treatment in disease. Hammond's "Training vs. Breaking" is the best in its field. 2. The rifle will do well for deer.
CANUK, Ottawa.—Will you kindly give me a receipt for blueing gun barrels? Ans. The better plan for you is to put your gun into the hands of a competent gunsmith. The process is a difficult one for an amateur to work successfully.
J. N. P., Springfield, Mass.—Can you inform me of any one who owns a good salmon stream that would rent it in the season to a small party for a week or ten days? Ans. We do not know of any such stream. Try an advertisement.
E. T., Long Island.—The rule about shooting off for ties in a match must be agreed upon before the match is shot. Sometimes the shooters who tie shoot off and the one finally making the highest score takes the prize; sometimes they divide on ties.
J. A. L.—If you wish a book treating briefly of the game birds and animals the "Gazetteer" will answer. For fuller descriptions consult such works as Judge Cates's "Antelope and Deer," Baird, Brewer and Ridgway's "Water Birds," etc.
W. B. C., Lakeland Park, Fla.—We cannot tell you which is "the best" shotgun. By paying a reasonable price you can get a good gun if the black bass can be found in Greenbrier county or in Mecklenburg county, Virginia, also what flies or bait are proper to use in that section, what other fishes are to be found (or caught) in Virginia, and what tackle you would advise taking. My primary object in going to Virginia is to drink the spring waters, but I wish also to put in some days or weeks of fishing. Ans. Black bass may be found in the Greenbrier River, West Virginia, and also in Mecklenburg county, Virginia. There are also brook trout in the streams of Greenbrier

county. You will sometimes find that black bass are called "chub" in that region. Pike, locally called "jack," are found in Virginia. Take a trout rod and tackle and an assortment of bass and trout flies. If you use baits you will get them there.

Wooncock, Bridgeport, Conn.—Please inform me what time of the year is best for planting small trout in brooks and where I can get the trout? Ans. This is the proper time or as soon as they begin to take food. It is possible that the Connecticut Fish Commission may have them to spare. Write Dr. W. M. Hudson, Hartford. If they have none you may purchase of Mr. W. L. Gilbert, Plymouth, Mass.; Livingston Stone, Charlestown, N. H., or James Annin, Caledonia, N. Y.

P. D. D., St. John county, N. B.—1. Probably the best course is to send the gun to a reputable firm and have the locks repaired or entirely replaced. Correspond with the gunsmiths who advertise in the FOREST AND STREAM. By application to your customs officers you may learn what will be required in the way of bonds to pass the gun into the U. S. and back again, duty free. 2. The shells are not difficult to reload, and the manufacturers will furnish the necessary appliances; send to them for descriptive catalogue.

VIRGINIA.—To waterproof silk line, Mr. H. P. Wells, in "Fly-Rods and Fly-Tackle," says he has personally used with success 2 parts boiled linseed oil and 1 part best coach-body varnish mixed together and warmed until it will singe a feather. Soak twice and rub once, the mixture being at a temperature not exceeding 100° Fahr. Finish and polish with paraffine candle (page 50). But it is suggested that the better and far more satisfactory way to secure a waterproof line is to go to a reputable dealer and buy it already prepared. For first-class rod makers consult our advertising columns.

H. B., Jr., New York.—1. Is there any good map of the interior of Newfoundland? 2. Is a license required to shoot in Newfoundland? 3. What is the fastest rate of speed made by any hawk? Ans. 1. There are vast tracts of unexplored country in the interior of Newfoundland. The usual map has "conjectural mountains and hypothetical lakes." You may find some help in the British Admiralty chart of the island, to be consulted, we presume, in the Astor Library. 2. No. 3. Probably the peregrine falcon is as swift on the wing as any hawk. We have seen it overtake the passenger pigeon, but how fast it flies is not known.

G. W. B., New York.—Our gun club by-laws allow both barrels to a bird, and do not count half birds. As we are going to have new by-laws, I think it would be better to count the second barrel one-half bird. What is best in this case? Ans. The credit of only one-half to second barrel will give stricter record of each shooter's performance. It is more progressive than the ordinary way; and is adopted by the members. You will find it more satisfactory than the old way. A man who scores with his first barrel does better work than the one who scores with his second.

BLUEFISH, New York.—The bluefish is taken in various kinds of nets, but we presume that you refer to angling for them. The fish will bite at anything smaller than itself which moves and has the appearance of life. Artificial "squids" of bone or metal are trolled behind a sailboat or are thrown into the surf from the shore and hauled in quickly. The best way is to "chum" for them. "Chum" is finely chopped menhaden or other fish scattered in a tideway to toll bluefish to the anchored boat, where baited hooks are used in connection with rods and reels. Menhaden are best because they are oily and make a "slick" on the water which the fish see or smell. A strong tide is needed for this sport.

INFORMATION WANTED.

1. Reader, of Detroit, wishes good small game shooting in Ontario, with trout fishing.
2. G. W., Dunellen, N. J., writes that a party of sportsmen who design to build a wagon to serve as a portable camp for deer hunting, wish information as to cost, mode of construction, etc.
3. C. H., Birmingham, Conn., would like information in regard to the fishing in the neighborhood of Pembroke, Can. This is on the Canadian Pacific Railway and on the Ottawa River.
4. W. C. G.—Whereabouts in Maine can I have the best general lake fishing—black bass, pickerel and perch?
5. E. F. H., of New York, wants to examine a gun which has been changed from a hammer to a hammerless principle.
6. ENQUIRER.—Please tell me, if you can, whereabouts east of the Ohio River is the best pheasant shooting to be had in the month of September?
7. M. B. H., Baltimore, Md., wants to know the address of the persons manufacturing portable houses with canvas walls in place of wood? They are mostly used in camping out.
8. C. H. S. wants place in New Brunswick for trout or salmon fishing, with some small game.
9. L. L. wants locality where fur is abundant, beaver, otter, fisher, etc.
10. "Avis," who contributed, Vol. VII, p. 395, note on occurrence of Hudsonian titmouse at Utica, N. Y., is requested to send us his name.

IN DAYS OF HEALTH prepare for sickness; in youth prepare for old age; which means insure in the Travelers, of Hartford, while you are healthy and can get insurance, and while you are young and can get it cheap.—*Adv.*

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name on any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most liberal manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

ABBIEY & IMBRIE,

18 Vesey Street (Fourth door from Astor House), New York City.

WINCHESTER FELT GUN WADS.

THE BEST.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price \$1.00.

BAKER'S Breakfast Cocoa.

Warranted absolutely pure Cocoa, from which the excess of Oil has been removed. It has three times the strength of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, costing less than one cent a cup. It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

HANNAFORD

Ventilated RUBBER BOOTS.

The only boots made that WILL NOT sweat or chill the feet. WILL KEEP the feet dry and warm. These boots have been in use for two seasons, and given entire satisfaction. Hundreds testify that they can be worn with comfort.

Will be sent C.O.D. Ask your dealer for them, or send for circular.

HANNAFORD VENTILATED BOOT CO. 79 Milk Street, Boston.

MOLLER'S
FOR General Debility, Scrofula, Rheumatism or Consumption, is superior to any in efficacy of taste and smell, medicinal virtues and purity. London, European and New York physicians pronounce it the purest and best. Sold by Druggists.

Hartford, Conn.

NEW HAVEN KENNEL CLUB,

THIRD ANNUAL BENCH SHOW OF

DOGS,

At Second Regiment Armory,

March 30 and 31, April 1 and 2, 1886.

Entries close Saturday, March 13, 1886.

Entries must be made to

S. R. HEMINGWAY, Secretary,

New Haven, Conn.

BENCH-LEGGED BEAGLES.

These hounds were originally a cross between the English beagle and the baset or dachshund, but they have been carefully bred for many years in Pennsylvania, Delaware and Maryland, until they now may be classed as a distinct breed.

For very rocky, or briery country where a rather slow hound is required, they are exactly the sort of hound wanted.

In body they are longer than the true beagle, usually a tri-color, good length of ears, splendid voices, height from 10 to 14 inches, very strongly built, front legs slightly bowed, and for keen scent and staying powers are believed to be superior to the English beagle.

We can furnish broken dogs or bitches, 2 to 5 yrs. old, at \$30 each; 1 yr. old, not broken, \$15 each; and pups of either sex, \$10 each. They make excellent coon and po-som hounds.

ASSOCIATED FANCIERS,

237 South Eighth Street,

PHILADELPHIA.

Buena Vista Kennels.

ST. BERNARDS

Fashionably bred and of the best

known strains, Correct in color,

markings, etc. Grown dogs

and puppies for sale; full and

guaranteed pedigree sent with

each dog sold. Only superior

specimens sent from the Kennels.

Address, with stamp,

KENSICO STATION,

WESTCHESTER CO., N. Y.

For Sale—Hornell Spaniel Puppies.

The best in the world; 142 prizes in two years proves it. From 3 to 10 mos. old. No culls or \$5 pups ever sold.

In the Stud—Black cocker champion Hornell Silk. Fee \$30. Address J. OTIS FELLOWS, Sec., Hornellsville, N. Y., or G. W. LEAVITT, Pres., 32 Hamilton street, Boston, Mass.

FOREST CITY KENNELS.

St. Bernards and English Pugs.

IN THE STUD.

Champion rough-coated St. Bernard Caesar (A.K.R. 22); fee \$25. English pug Sam; fee \$10. Pups for sale. Address with stamp, Portland, Me.

Claire-Reeta Kennels.

PALMYRA, N. Y.

Irish and Gordon setters for work as well as show. dec17,1t

IRISH SETTERS.

Young stock for sale, and orders taken for choice puppies from trained bitches of the finest breeding.

BRUCE { CHAMPION ELOHO

CHAMPION NOREEN

In the stud. Fee \$25.

sept17,1t P. O. Box 153, Moorestown, N. J.

BLACK POINTERS.

For Sale.—A fine litter of strong, healthy puppies, whelped Jan. 28, 1886, by my black dog Croftstone (A.K.R. 3357) (Doe Pope ex Nellie Pope), out of my black bitch Doris (A.K.R. 3389) (Pete, Jr. ex Kate). Price \$25 each if taken soon. Address E. C. ALDEN, Dedham, Mass. mch25,3t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, APRIL 8, 1886.

VOL. XXVI.—No. 11.
Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 138 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications,

THE AUDUBON SOCIETY.

THE interest in the movement to put an end to the slaughter of song and insectivorous birds is increasing every day, and the work is constantly gaining momentum. Local secretaries have been appointed in many cities and towns, and the membership is already large. The plan of effort is very simple. There are no elaborate forms of local organization to cumber and hamper. The Society seeks to accomplish its end by moral suasion and the creation of right sentiment. It does not work in a roundabout way.

The hearty enthusiasm with which the plan of the AUDUBON SOCIETY has already been received and the activity displayed by friends of the birds in different localities give abundant promise of the achievements sure to follow the efforts now put forth. The extent of the evil sought to be remedied is of such startling magnitude that the bare statement of the actual facts is sufficient to command attention to the movement and win approval of the methods adopted. After a vexatious delay the certificates of membership are almost ready to be issued.

Circulars of information and pledge forms will be furnished upon application. As the ultimate success of the Society will depend largely upon the extent of its membership, it is hoped that every reader of the FOREST AND STREAM who is concerned for the welfare of our birds, may actively co-operate in the effort and either act as a local secretary or bring the matter to the attention of some one else who will.

THE DEER HOUNDING BILL.

THE Senate Committee on Game Laws favorably reported the bill to repeal the non-hounding deer law, and the measure was made a special order for yesterday; owing to the protracted discussion of other bills, however, it was not reached. It will probably be voted upon this week.

The full text of the bill is given in another column. The Senate Committee amended the hounding clause so that the season contemplated will be from Sept. 1 to Oct. 5. A fortnight more or less of lawful season will make little practical difference. If hounding be permitted for a month only, that will mean the maintenance of deer dogs all the year through to kill deer at all seasons. Nothing short of absolute prohibition of hounding will secure for the game the protection

essential to its conservancy. It is only a question between deer and dogs.

The provisions against marketing venison are plausible, but the good to be achieved by them is purely imaginary. Venison bounded in September and October is not fit to market. So long as the law permits city "sportsmen" to water-butch deer in September and leave the carcasses to rot in the woods, legislation against market-hunting is foolishness.

In like manner the shortening of the season is only a pretext. The number of deer saved by this provision will amount to nothing compared with the numbers destroyed by the hounds. These clauses are offered by the hounders only with the deliberate intent to mislead the Legislature if it is in earnest in its purpose to properly protect the game, or to furnish it an excuse if it is more eager to heed the clamor of the water-butcher than to consult the true interests of the community. The real purpose of these agitators is not to secure any better protection for Adirondack deer. They are eager only to gain permission to pursue their own selfish sport, to be let alone in their indecent scramble for the game while it lasts, and to enjoy their brief term of hounding and exterminating.

CANADIAN SALMON RIVERS.

THE transfer of the salmon rivers from the Dominion, or general, to the Provincial, or State, governments, has proved very unfortunate as regards their protection and improvement. A gentleman residing in the Dominion, and who is exceptionally well posted in this matter, tells us that, with the exception of such streams as have fallen within the private control of moneyed men, chiefly Americans, the rivers are rapidly deteriorating. The local, or provincial, authorities confine their efforts to collecting rents from them, without making any adequate provision for their protection and guardianship. In fact, their limited funds will not allow them to do this. At various times we have heard reports that in consequence of this state of things all the old and destructive practices are reviving with marvelous rapidity with fatal effects.

We remember that this is just what Mr. W. F. Whitcher, late Commissioner of Fisheries of the Dominion, predicted would follow the changes made by the Hon. A. W. McLean, late Minister of Marine and Fisheries, who turned a deaf ear to all the suggestions of Mr. Whitcher, who was perfectly familiar with all the facts, and had labored to build up the system of protection which worked so well under his fostering care. Mr. McLean let slip the command of the resources from the rivers, and to this may be attributed their decline. This is much to be regretted, but whether it is past remedy by legislation or not, we cannot say. Certain it is that with the exception of a few rivers which are under private control, the salmon streams of Canada are failing fast.

SPRING SHOOTING is now in order wherever the wildfowl can be intercepted on their way to the northern breeding grounds. One by one the different States are coming to see the folly of permitting the untimely destruction of breeding creatures. The New York law forbids snipe shooting on Long Island; the same prohibition ought to hold all along the Atlantic coast and on all inland waters. It was hoped that the new Ontario law might stop spring shooting, but it did not.

NO SOUL IN IT.—The daily press reporter who is detailed to write up the "opening of the trout season" may make a readable story of it, and pack it full of information; but did you never note that there is no soul in such an article? For the true affluant one must write of angling *con amore*; and a simple bit of actual experience told in plainest words by an angler is worth more than all the gaudy rhetoric of the space-writer.

BEARS.—Harper's Weekly of April 3, has a page of illustrations of the Central Park bear pit, the pride and glory of which are the FOREST AND STREAM's grizzly cubs. The bears and their fame are growing daily; iron bars contain the one, but a continent's range is limit all too pent for the expansion of the other.

IN A NUTSHELL.—"I've had lots of fun in the Adirondacks myself, and when my boy is old enough I want him to have some deer hunting there, too. That's why I'm opposed to the repeal of the anti-hounding law." This was said to us by a Syracuse gentleman last week. It states the whole case in two sentences.

RAILROAD ROUTES TO COOKE.

THE results sure to follow the building of a railway in the Yellowstone National Park will be most disastrous to that reservation. On this point there is but one opinion among those who are familiar with the region, and whose knowledge best qualifies them to pass judgment on the subject. The Park has been set apart as a pleasure ground for the people, and to devote any part of it to commercial purposes at this time will be to do a grievous injustice to all for the benefit of a few.

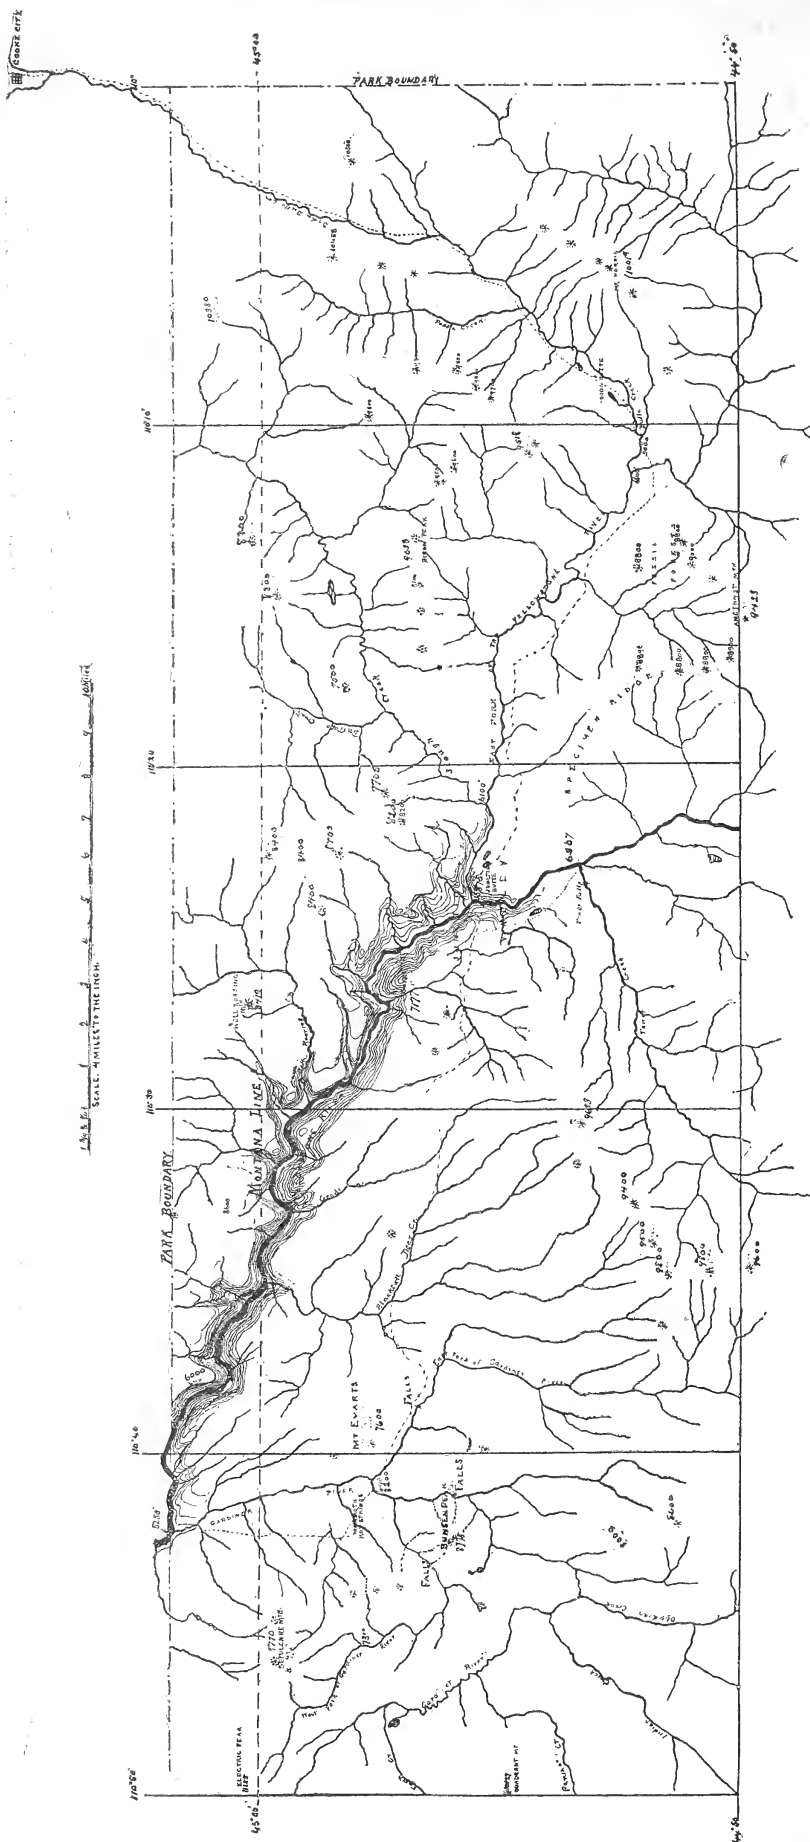

We have more than once pointed out the evils which would follow the construction of any railroad within the Park, and have shown how it would neutralize all the benefits which are certain to follow the wise action of Congress in setting aside the reservation, and the efforts which have of late years been made in the direction of a proper conservancy of this wonderful region. The inestimable economic importance of the forests about the headwaters of the Yellowstone and Snake rivers, the popular and scientific interest in the preservation of the various species of wild animals and of the natural curiosities of the region have been sufficiently insisted on, and are generally understood. They furnish the strongest possible reasons against the building of a railroad in the Park.

On the other hand we have the urgent demands of certain mine owners, interested in the development of a mineral region, situated in the mountains, in which rise Soda Butte Creek, Clark's Fork, and Stillwater Creek, for a railroad which shall enable them to bring their ore to a point where it can be reduced at comparatively small expense. These mine owners assert that a line up the Yellowstone, the East Fork and Soda Butte Creek is the only one practicable for a railroad. We have already shown that such a route presents enormous engineering difficulties, and have the testimony of reliable engineers to prove that there are other routes running up the streams which flow down the eastern slope of the range which present fewer difficulties of construction, lighter grades and less rock work and which do not infringe upon the territory set apart by Congress for the people's pleasure. Cooke City is not, as it is supposed by many, the center of this mining camp. It is on the extreme southern border of a mineral region, which extends about fifteen miles to the north and northeast. The only mines of any importance near to the town are the Great Republic and the Iron Clad; early discoveries of the region. The natural center of this district is some miles east of Cooke, in a little park on the head of Clark's Fork, a basin through which passes all the traffic from the east to Cooke and to the mines at the foot of Henderson Mountain. From this little park there are practicable wagon routes to nearly all the mines in the district.

There are three possible ways for a railroad from the Northern Pacific to the Clark's Fork mines, none of them crossing any portion of the National Park. These are (1) from Billings up Clark's Fork; (2) from Park City up Clark's, and then up Rocky Fork to a point near its head, thence across by a tunnel to Bear Tooth Creek to its head, thence across to Davies' Ranch and up Clark's Fork, and (3) from the mouth of the Stillwater up that stream to a point three miles above the upper west fork, where a considerable group of mines have been located. These routes have not been made the subject of detailed railroad surveys, but each of them has been carefully gone over by a civil engineer with a view to the possible construction of a railroad, and each one of them is pronounced perfectly practicable.

The Stillwater route is about the same length as the Cinnabar and Clark's Fork; but it is an easier one, and, as we have already shown, entails but little heavy work. The Clark's Fork route is longer, and there is but one difficult piece of work on it. This is at the cañon. By commencing to climb the hill some distance before the cañon is reached, however, it is practicable to reach a point some three hundred feet above the water and above the cañon, where a roadbed could be built along a steeply sloping, grassy hillside, which further up the stream runs into a flat bench. From this point to the head of the river there appears to be no difficulty in building a roadbed. About the Rocky Fork route less is known.

If there is any practicable way for a railroad to the Cooke City mines without infringing on the Park, Congress has no business to grant permission for a tie to be laid within that reservation. That such routes do exist on the eastern slope of the range can be easily shown, and until the most searching investigation has demonstrated their impracticability, Congress should refuse even to consider the proposition to lay rails within the Park.

MAP OF NORTHERN PORTION OF YELLOWSTONE PARK.

SHOWING ALONG THE COURSE OF THE YELLOWSTONE, EAST FORK AND SODA BUTTE CREEK THE PROPOSED LINE OF A RAILWAY THROUGH THE PARK FROM GARDINER TO COOKE CITY.

There is a hidden motive for the eagerness with which this grant is sought; a motive that has not yet been acknowledged. It has probably to do with the natural wonders which lie along the proposed line, and which may be included in any grants of land which may be made to the Cinnabar & Clark's Fork Railroad for stations and other purposes. We notice among the names of those who urge the granting of this right of way that of C. F. Hobart, who has before reached out an eager hand for the National Park, happily without much success. An inspection of the map will show that the proposed line would pass close by Soda Butte Springs and not very far from the wonderful fossil forest.

We print this week a map, carefully compiled from the best sources, which shows the falsity of the statement made by two committees of Congress, that the proposed railway line which follows the Yellowstone River and Soda Butte Creek will only pass through the Park for twenty-five miles. If any one cares to take the trouble to measure the Yellowstone River from the point where it leaves the Park up to the East Fork, and then up that to and up Soda Butte Creek

to where the latter enters the Park, he can readily calculate for himself what distance will be traversed by this line.

Lieutenant Daniel C. Kingman, Engineer-in-Charge of the Park, has been quoted in committee reports as favoring the railroad line up the Yellowstone. Let us see what he says about it:

HEADQUARTERS DEPARTMENT OF THE PLATTE,
ENGINEER'S OFFICE, OMAHA, NEB., March 25.

Editor Forest and Stream:

Your favor is received. I am surprised that my report of 1883 should be quoted as in any way favoring the construction of railroads for any purpose whatever within the Yellowstone National Park.

I think this must be a mistake. I have always been opposed to the construction of railroads in the Park. I have given this subject the most careful thought and study, and I should regard their introduction as the most serious injury that could be inflicted on the Park. And the construction of the Cinnabar and Clarke's Fork Railroad would be specially deplorable because it seems so unnecessary.

There is every reason to believe that the route up the Stillwater (lying wholly outside of the Park) is a better one for a railroad to the mines than that via the Yellowstone River and Soda Butte Creek.

DAN C. KINGMAN,
First Lieut. of Engineers, in charge of Improvement, Yellowstone National Park.

The Sportsman Tourist.

SIGNS OF SPRING.

[From Mrs. Huldah Lovel's Rag Bag.]

MORE 'N a month the crows ha' ben a-jawin'
Where they'd hev corn planted;
Naow they've got it settled wi' their cawin',
An' appears contented.

Snow banks is a-gittin' siled an' gritty
All along the fences,
An' the bluebird 'long the stakes his ditty
In these days commences.

The phebe on a mullein sets a-watchin'
For the fust flies a-wingin',
Frequent 'twixt her frequent scoops o' ketchin',
Tew short notes a-singin'.

The woo'chuck's top o' the world agin
A-thawin' 'bout his whistle,
A-wishin' the clover's growth to begin
As spry as the thistle.

The pussy willers where brooks is runnin',
An' a-prattin' busy,
Is yallerin' some, an' their tails so cunnin',
Is a gittin' fuzzy.

From his ellum I hear the high-hole's cackle,
I s'pose he calls it singin',
An' in alder swamps the sputterin' crackle,
O' the frogs is ringin'.

The maples their slow sweet rain is drippin'
Int' one dish or nu'her.
When the blanket of the snow is slippin'
From last year's leaves o' luther.

Onkiv'rin' logs for the patridges' drummin',
An' liverworts a-blowin';
Where sunshine's sot wild bees to hummin',
A-comin' an' a-go-in'.

O, spring hes come! The long days o' wishin'
Is ended fairly,
If the wind is saouth I'll go a-fishin'
In the mornin' airly!

S. L.

NOTES FROM KEY WEST.

AS the "Key of the Gulf" entirely escaped the frost of the last cold snap which played such havoc with the fruit crop on the peninsula of Florida, and blighted the usually verdant foliage of Jacksonville's semi-tropical vegetation, everything in the way of plant life here is green and flourishing, and would look fresh if the absence of rain for nearly two months had not allowed the whitish dust to settle on all the trees and shrubs and somewhat dim their beauty.

Key West is a low coral island which lies about 50 miles southwesterly from the South Cape or end of Florida, and the Dry Tortugas island lies southwesterly from Key West 70 miles. Key West is a chief naval station of the United States. The town now contains about 10,000 inhabitants about one-half of whom are Spaniards from Cuba engaged in the tobacco business. Fort Taylor is on Key West and Fort Jefferson on the Dry Tortugas; both are small islands of the sea. Southern prisoners were confined at the Tortugas during the late civil war.

The natural or indigenous flora of the island is rather scanty, and at this season there are less than twenty plants in flower. None are more striking to the eye of an inhabitant of the Northern States than the cactus (*Cereus monoclados*), which attains quite majestic proportions and a height of nearly twenty feet, presenting with its ascending, columnar branches, ridged and armed with closely set spines, as formidable an obstacle as man or beast cares to encounter. It is not, however, in bloom. The botanical feature of the island is the large number of foreign palms and shade trees which are to be seen about the dwellings. The cocoanut palm grows almost everywhere in the settled portions, and the date palm, though not so frequent, is very luxuriant. Figs, limes, bananas, tamarinds, sapodillas, sugar apples, and other semi-tropical fruits are produced in abundance. Most interesting of all, perhaps, is the banyan tree, which occurs in many of the house yards, and, though small, as a rule, has attained great proportions in one specimen growing within the inclosure of the barracks. This covers with its outstretched branches an area of fifty feet or more in diameter. Its later descending shoots firmly rooted in the ground are interlaced and entwined about each other and about the older ones with the firmness of the serpents enfolded the ill-fated Laocöon, and unpoetical though it be to tell, a numerous flock of poultry nestle between its roots with as much enjoyment and complacency as if banyan trees had been introduced into the United States for the express accommodation of domestic fowl.

The usual occupations of the seafaring inhabitants—sponging, wrecking and fishing—are quite dull at present. The high duty on fish at the Cuban ports renders this pursuit unremunerative, and there have been no wrecks for some time. Moreover the high winds of the present month have stirred up the fine coral mud through the constant agitation of the water so that the sea is quite milky and the sponger, even with his glass, cannot see bottom.

The wrecking vessels, which are employed in summer in carrying fruit to New York, are able smacks of 35 to 50 tons register and schooner rigged, some rigged with a main-topmast and some with none; they carry but one jib and sometimes set a maintopmast and maintopmast staysail. With a generous but not very large spread of canvas and often 8 feet draft of water, they will stand up and fly with a good breeze in a style that would make many a yachtsman turn green with envy. And right well the wreckers know how to handle them. The crews consist of a captain, mate, cook, and four or five men, none of whom receive any compensation, but share in the salvage. Out of about 400 shares the captain receives 4, the mate 2, the cook 1, and the men 1 share each. In some cases a share will amount to a small fraction of a dollar. The smacks are provisioned by the owner, and go to the Dry Tortugas, some 65 miles west from here, where they usually lie at anchor in the harbor of Garden Key till something turns up. During the past season four wrecks have occurred, but so many vessels have been on hand that the individual receipts were small.

During the past week I made a very enjoyable trip to and from the Dry Tortugas, on wrecking smacks which happened

to be on the point of sailing. At Garden Key the whole island is covered, or rather inclosed, by Fort Jefferson, a Cyclopean structure of concrete faced with brick comprising an area of about six acres, of which the sea wall outside the moat has a length of nearly seven-eighths of a mile. The edifice is in the form of a hexagon, with towers at the angles, and consists of three tiers of casements (only the lowest one of which has been completed), and is surmounted by a parapet. Within are two large brick buildings for the quarters of officers and men. As the foundation was laid on piles, the fort is settling in many places, and its unfinished condition permits the weather to act freely and hasten the impending ruin. The roofs of the buildings within are also out of repair, and the floors are rapidly decaying with the consequent leakage. At a distance the great inclosure looms up, a monument of apparently misdirected energy, as it is impossible with the unaided vision to determine why such an immense fort should ever have been deemed necessary to protect so insignificant a harbor.

The Tortugas have long been noted as a collecting ground for corals, and large quantities are shipped yearly to dealers in New York and other cities. The constant search for good specimens, however, during the past sixteen years, by Mr. Messina, keeper of the lighthouse at Garden Key, has rendered it impossible to gather anything desirable within three or four miles of that point. Bird Key, one of the group, was long famous for the immense number of gulls and other sea fowl which came there during the early summer to lay. At this season the fishermen and others used to collect the eggs for food, and when the fort was occupied they formed an important element in the rations of the garrison. Such wholesale interference with the domestic affairs of the birds has rendered the locality less popular as a summer resort for them, and Bird Key now owes its name chiefly to history. At Loggerhead Key, the largest of the group, is a light of the first order, and here, as well as at the other islands of the group, turtles are very abundant in season. Rare shells are occasionally found on the beaches, but few are prettier or more interesting than the inathina, or purple snail, a fragile univalve shell, whose occupant passes the time floating about on the coral seas, the female towing after her a raft many times larger than herself, which supports the numerous young in cells attached to the lower surface.

On the voyage back from Tortugas it was my fortune to experience a norther, which at the present season is somewhat of a rarity. We left the mooring at Fort Jefferson about sunrise, and with a light but favorable breeze were plunging over the heavy swell produced by the strong wind of the previous day. Toward noon the breeze began to die out and for several hours we flapped along eastward, barely making headway, the reef points rattling on the canvas with the sound of a distant volley of musketry and the sheet blocks every moment being jerked along the travelers and slammed on the deck with a violence somewhat prejudicial to the quiet enjoyment of a day. A few Portuguese men-of-war floated along with purplish sails on the greenish white water and half a dozen porpoises followed us closely in search of provender. So we lingered, the wooded group of the Marquesas gradually coming into view and drawing nearer until by some imperceptible agency, in the course of long hours we were nearly abreast of them. At last we began to feel the influence of the flood tide and the southerly wind freshened until we were making fairly six knots. Meanwhile the sun had set, the northern horizon had darkened and clouds were gathering fast.

"There's some wind off there," remarked the skipper, "and I'd as lief get in before it reaches us."

But Key West is a good twelve miles away, its watch towers and steeples appearing indistinctly above the water and that rolling cloud bank will reach us within an hour. Ominously and majestically it comes; in front and above two lines of white cloud like a folded veil; below the dark gray nimbus stretching east and west with indefinite extent and hanging with uniform depth over the dark green water as it advances. We are moving slowly along with a southerly breeze abate the beam; but gradually the air becomes still, and the norther, now only a few miles away, seems to increase in speed. Orders are quickly given to unbend the staysail and take in the foresail, and are as quickly obeyed. Oilskins and sou'westers are donned, and everything made fast. A moment's utter silence and the squall is upon us. Yielding gracefully to the pressure of the wind, the smack heels over until the water boils in at her scuppers, and, under jib and mainsail, flies over the water like a teal startled from its cover. To windward the water is greenish gray, with the reflection of the cloud, save where a rift allows the twilight to enter dimly on the scene, and flying white caps fleck its surface. To leeward a narrow band of leaden sky appears below the border of the fast flying storm cloud. On we scud, the able craft dashing the spray from her bows. At this rate we shall be at our anchorage in less than an hour. At last we near Fort Taylor. Now comes the tug. There are five men-of-war lying at anchor in the channel, and we have to work our way among them with a head wind. Now we are driving straight at the starboard quarter of the Swatara, and a collision seems inevitable. "Ready about!" commands the captain. A rush to the sheets, a moment's overhauling of sails, the smack quivers an instant in stays, and now we are flying past the Swatara, seemingly turning our backs on Key West. Again we tack and threaten instant destruction to the antiquated paddle wheels of the Powhatan. So it continues until after a long series of tacks we reach the anchorage and make fast. The boat is hoisted out and the passengers are ready to go ashore.

"Captain, how much do I owe you?"

"Nothin' at all, sir. Why wrackers always carries people up from Tortugas, an' I never heerd of any of 'em chargin' a cent."

The fishing in this vicinity has been so well described by Dr. Henshall that it would be superfluous for me to add anything on the subject. During the present season many dead fish have washed up on the shore, and their destruction has been attributed by some to the low temperature of the past winter. A similar mortality is said to have prevailed among the sponges, and is attributed to the same cause. Having had no opportunity to investigate the matter, I can offer no reliable explanation, but I doubt the probability of the recent cold weather having to any injurious extent lowered the temperature of that portion of the equatorial current which flows through the Gulf of Mexico and unites with the Gulf Stream north of the Bahamas. Some of the residents here advance the theory of poisoned water coming from some of the swamps of the mainland of Florida. Apropos of this an anecdote is related of a former well-known citizen of Key West. A number of gentlemen were discussing the cause of mortality in fish and sponges, which has occurred before. Mr. S. attributed it to cold weather, while Mr. B. asserted

that it was owing to a volcanic eruption in the Everglades, which had caused the swamp water to flow into the gulf and poison the fish. The well-known citizen referred to on being asked his opinion replied, with a sententious air, "Gentlemen, there's no doubt but what Mr. B. is right, and there's been a vulgar corruption in the Everglades."

F. J. H. MERRILL.

KEY WEST, Fla., March 12.

Natural History.

THE AUDUBON SOCIETY.

WE had thought that Boston and Philadelphia were the chief centers of extended work for the AUDUBON SOCIETY, but Buffalo, N. Y., bids fair to rival these larger cities in the interest which it shows in the movement. At a meeting of the Buffalo Field Club, held on Friday last, Prof. Linden read a report on the proposition to join or otherwise co-operate with the New York AUDUBON SOCIETY, and the following was adopted by the club:

"The Buffalo Field Club declares its unqualified indorsement of the announced aims and purposes of the Audubon Protective Bird Society, and pledges hereby its hearty co-operation in any case that the same is requested for the furtherance of any legal measures which may be adopted to prevent the reckless decimation of our useful birds. Their skins or feathers are still permitted to be exposed abroad like any other legitimate article of commerce, or are freely sold in the home market by unscrupulous vendors for exclusive purpose of ornamentation, and in open defiance to the true spirit of existing legal restrictions which are on our statutes to insure the protection of our useful native birds."

On Saturday Dr. John Parmenter delivered a lecture before the Woman's Union, at the close of which he devoted some time to our cause. His hearers were greatly interested and were almost unanimous in their wish to support the movement. This was no small triumph and a great compliment to the powers of the lecturer, for the majority of the audience were bird wearers. The greatest energy is being displayed by the Buffalo members, who have before them always the destruction of birds constantly taking place at Niagara for ornaments. From all over the country warm expressions of interest are heard, and many thousands of pledges have been sent out in response to letters asking for them. Of these a large proportion have been returned signed. The press as well as the people give most cordial support to the movement and all are agreed that the birds must be saved.

Editor Forest and Stream:

I do not think that the milliners' assistants have invaded this region yet, but no one can tell how soon they may, if the abominable traffic is not presently checked. I think the effect of the ruthless slaughter elsewhere is noticeable here, however. Orioles were scarcer last season than for many years. Forty years ago it was something worthy of note to see a "hang-bird" about, but they kept increasing in numbers, and till last summer, almost every roadside and door yard elm had one or more of their hammocks swung in it. And bobolinks grow fewer year by year; and so do meadow larks, though perhaps "sportsmen" are partly to blame for the falling off in the number of these.

This winter there have been no chickadees about our house, when for many winters past they have come in dozens to be fed with scraps of fat, along with many nuthatches and hairy and downy woodpeckers. A few nuthatches and woodpeckers are daily visitors, but not one chickadee. This might be attributed to the English sparrows that are becoming altogether too plenty; but in a long tramp in the woods a few days since I heard but two of my little black capped friends, when in no day of any other winter do I remember going without having an inquisitive company of them about me every time I halted to light my pipe, or took my stand upon a runway. I heard and saw a few nuthatches and two or three bluejays, but these were noticeably scarce. Our farmers have a foolish prejudice against the jays, but for all that they seldom kill one, and their absence is not to be accounted for on that score.

I have seen but one large flock of snow buntings, and that flock but once. In past winters hardly a day, certainly not a week, went by that a flurry of these birds did not drift over the fields, or settle on the tops of the dead weeds. The Canadians have been slaughtering these winter visitors for years for market. A friend told me that he saw strings of them six feet long in the Montreal markets last winter. Such slaughter there, with the work of our skin collectors here, with whom, I see by Mr. Chapman's list, they are greatly in favor, must make sad havoc with them.

Something or other is thinning off all our birds except the crows and English sparrows. I did not think it necessary to tell you that I for one am very heartily with you in your efforts in behalf of our harmless birds. I am, and if you will send us the circulars, etc., my wife and I will do what we can to help.

In the "woods loafing," before mentioned, I saw three ruffed grouse, and the tracks of four more, a pretty good showing, I thought, for this season and these years.

AWAHSSOISE.

FERRISBURGH, Vt., March, 1886.

Editor Forest and Stream:

Your letter with accompanying circulars of the AUDUBON SOCIETY, has been received. I took the papers home to dinner, and while disposing of my rations, discussed with the mistress of my affections and household, the tenor of three pledges submitted for signature.

Said I: "I don't wish to kill any 'wild birds' not used for food; in fact I haven't done such a thing in a long time. You remember when, last summer the blackbirds were devouring our corn, and I charged the little muzzelcloader and went forth to sweep them from the face of the earth, and when they rose in a mass from the corn and settled in the dry top of a tree and when I had walked up to a point distant about thirty yards and cocked both barrels of little Jenny, the impertinent things just sat there and chirped and glittered and flourished their tails, as if to say, 'Shoot if you can,' and—well I couldn't. I just stood there looking at those birds, and I suppose looking like a fool to my neighbor Watts who, with his myrmidons, stood glowering open-mouthed across the fence, and wondering why I didn't cut a swath right through the flock. I do not think it would have been an easy matter to explain to him just why I lowered the hammers and stalked back to the house, and my reputation for possessing some skill with firearms must have made the thing seem all the more odd."

"I don't like to have the birds killed," said the lady, "and

I think that we can manage to protect our crops more easily without a gun than without the birds. I do not see how I can manage to sign all the pledges just yet, though, for my hat has some feather ornaments on it and I must wait until I can get a new one. There shall be no wild birds' feathers on that; but you know that if I were to tear the trimming off this hat it would look awfully."

"Very true," said I; "and now I come to think of it, I selected that hat myself. The feathers seem to have belonged to some wild bird, though of no variety against which I ever pointed gun. The hat does not trouble my conscience, however; but there is one point on which I feel a little like kicking. Do you remember when we lived on our old place, Riverwood, that a great hawk one day made a descent upon our chickens, and that you came running out of the house with my old 12-pound deer gun in your hands, just in time for me to catch the piece and take a snap shot at the robber as he sped away through the trees in the direction of the river? Three feet ten inches was the distance across that fellow's wings. It does seem to me that the A. S. might let up a little on birds of prey. However, I am going to whack down my autograph beneath the three pledges, and let this matter take care of itself. When your new hat arrives you can do the same."

It is no time to hold back in this matter. The senseless fusillade which has been kept up along our lakes during the past five years has so far destroyed the bird-life of this region that I have repeatedly paddled for many miles without seeing a single song bird, hawk or owl. I hope ere long to see the day when stringent laws shall teach the wanton butchers of our feathered friends to seek some substitute for any pleasure they may now find in this needless slaughter, for which the perpetrators appear not to have found, in this region at least, the poor excuse of a scanty pecuniary compensation.

I shall endeavor to bring these matters before the public through the medium of our local press, and shall feel obliged if you will send me more circulars for that and similar purposes.

KELPIE.

CENTRAL LAKE, Mich., March 28.

NORTHAMPTON, Mass., March 15, 1886.

Editor Forest and Stream:

Being at home only for a moment, I have but scant time to say that I am heartily in sympathy with your AUDUBON SOCIETY.

I offer but one limitation; the wearing of feathers as ornaments may be indulged in, if I am not mistaken, to some considerable extent without blame. For example, ostrich plumes, got from ostrich farms do not, I believe, stand for any suffering inflicted anywhere. Cock feathers, worn as military or millinery adornment, are not evidence that any creature has suffered appreciably in yielding them. The wearing of hawks', jays', owls' and other predatory birds' wings, I see no more harm in than in sporting a belt or pair of slippers made of snakeskins, or a tiger-skin saddle cover. But the use, for ornament of person or drawing-room, of feathers, wings, heads, etc., cruelly got from harmless birds, I think should be discontinued everywhere as unworthy of any people professing to be humane.

I have five little daughters—quite an AUDUBON SOCIETY in numbers, and avowedly so in their intentions—to wage war against no innoent, and make peace with no harmful, practice. Yours truly,

G. W. CABLE.

Frank Leslie's, of March 27, had an effective full-page illustration, entitled "Slaughter of the Innocents." It showed a gunner shooting song birds, and a corner sketch illustrated the bird feather hat ornamentation of the day. The page tells its story very effectively.

WILD CELERY.

TAPE GRASS—VALISNERIA SPIRALIS.

THE following account is reprinted from the FOREST AND STREAM of Jan. 5, 1882, in response to a number of inquiries:

Mr. Robt. O. Morris, of Springfield, Mass., to whom I sent seeds and roots, Oct. 6, 1881, sent me an extract from Prof. H. D. Butler's history of the wild celery, as follows: "Tape Grass, which may be had in the Hudson River, especially near Newburgh, or on the Delaware and Raritan Canal, where it becomes seriously abundant occasionally, about Princeton, N. J. [Add: In the Chesapeake, Delaware and Sandusky bays; in several of the interior lakes of Wisconsin, and in portions of Lake St. Clair.] The *Valisneria spiralis* came originally from Italy, and is named after Valisner, an Italian naturalist, who wrote on insects and plants in the last century. As the male and female flowers of the plant grow from different roots, care must be taken to secure both for propagation. They may be distinguished without difficulty. The female flowers are found on long, spiral foot-stalks, the male ones on straight, short flower-stalks. The female flower ascends by the assistance of a coil, and floats on the surface of the water. The male flowers, when matured, gallantly detach themselves from the plant stalk and follow their feminine relatives to the surface. Here they expand, float among their favorites, and impart to them the pollen with which they are laden. The female plant then descends to the bottom, and the process of reproduction goes on agreeably to the order of nature. The wild celery is also propagated by offshoots. A lateral shoot (a rhizoma) branches from the mother plant and pushes forward until it discovers some suitable spot in which it may strike a root. Here it fixes itself at once, and in its turn assumes all the characteristics of the parent plant, and devotes itself to the same functional performances."

While the above is undoubtedly substantially correct in a scientific and botanical sense, yet, by careful observation of the growing plant, I have been unable to discover the "straight short flower stalk" of the male plant.

What I have observed is this: There are a great many of the plants that bear no seed. In fact, in deep water there may be found acres of such, while in water from three to five feet deep, large patches are found, nearly all bearing seed pods. Why this is so I cannot tell. It may be that they are all male plants, but as that would appear unreasonable, I conclude that it is owing to the depth of the water affecting its temperature and the influence which the sun would have in deep water, while in shoaler water it would aid in warming and maturing the spiral flower stem, the flower and the seed. The growth of the narrow green blades, three or four from each root, is very rapid. They reach the surface early in August, where the water is from six to eight feet deep. The spiral flower stems, eight to twelve feet long when the numerous coils are stretched out, also come to the surface in August, bearing a little three-leafed flower, not bigger than a field-pea.

Behind the flower the spiral stem (which, at the roots, is

not as large as a common knitting-needle, and grows slightly larger up to the end) enlarges into a seed-pod, which grows to the length of from three to five inches, and to about the diameter of a clay-pipe stem. This seed-pod, if undisturbed, floats on the surface until the seeds are fully ripe, when it sinks to the bottom, and as the stem is very brittle is easily detached. This seed-pod is also very brittle, and is easily broken into fragments—a wise provision of nature, as each pod contains numerous little black seeds. The seeds are surrounded with a tenacious pulp, transparent and glutinous extending the whole length of the pod; and by averaging ten pods, it was found that each pod contained about 412 seeds.

The roots are similar to those of common lawn grass. On the upper sides of the roots the spiral stem shoots up, and beneath the roots a lateral stem (a rhizom) shoots out—similar to that from the roots of a potatoe—on the end of which grows a bulb about the size and shape of a small top onion. This bulb is the principal food of the canvas-back duck. If undisturbed, no doubt a new plant is produced from it.

To find and secure these bulbs in water from three to eight feet deep appears to be easy enough for the ducks; but so exceedingly brittle are the stems connecting them with the roots that I have found it very difficult to gather them in quantities sufficient for planting. Whether the roots themselves die out every year or are perennial I am not now prepared to say, but I have experiments in progress, which I trust will enable me to determine the fact next fall.

The canvas back ducks and the innumerable mud hens begin to dive for the bulbs and to pull up the roots of the wild celery about the 10th or 15th of October, in Sandusky Bay, Ohio, but generally the bulbs are not all then fully matured. They grow on until the heavy frosts come. The seed-pods generally complete their growth about the 1st of October, and continue to float on the surface, or near it, until fully ripe, and until severe cold frosts set in. Then they sink to the bottom, and to gather them then is a very difficult task. It is almost necessary then to gather the seed-pods during the month of October, and generally in the early part of that month. If the proper means could be contrived I have no doubt that both seed-pods and bulbs could be gathered from the bottom at any time before ice comes, if the water could be found clear enough to see the bottom. With us at our club grounds (bays) the water is seldom clear after the fall storms set in and the tops of the celery have fallen to the bottom. As long as the tops stand up there is little or no sea in our bays, and the water does not get roiled.

To plant the seeds, the pods, I think, should be broken into small sections and planted where the water is never less than six inches nor more than eight feet deep. It is believed (it is so in our bay) that generally it thrives and goes to seed the best when the water is pretty still and about 3½ to 4½ feet deep.

It does not matter much how hard the bottom may be, whether of clay, gravel or solid rock, provided there be, undisturbed by currents or waves, a deposit of mud from two inches to two feet deep. I do not think the plant will thrive in sand. It may do so, but, as yet, I have never seen it. The common mud of the marshes, mostly formed from decayed vegetable matter deposited on hard clay deep enough for the plant to take root, and in water so still that the deposit of mud will not be removed, is probably the best place to plant the wild celery. I think warm water is best, and should the lakes or ponds or marshes selected for the experiment be very deep and cold, or supplied from cold brooks and springs, it might be found best to look for some shallow bayous where the wild rice and the lily-pods will grow, and where the warm sun will have the most influence on the water, away from shade trees and cold springs. If there be any set and swift currents or swift tides avoid them if possible. If currents are moderate plant up stream. The current will then help you scatter and extend your growth.

The wild celery is exceedingly prolific and will crowd out nearly all other water vegetation, although its leaves are brittle and tender and the roots easily pulled up.

It is difficult for me to give the best mode of planting the seeds, roots or bulbs, when I have no experience myself in the business. But I would suggest that several ways be tried, and among them the following: Drop some of the seed-pods in the water and let them sink and bury themselves in the mud, as nearly as they would naturally be deposited as possible. Be sure that they sink to the muddy bottom. Break the seed-pods up into small sections and scatter them broadcast over the grounds selected. I think they will sink.

But what I think is the surest and best way to plant both seeds and roots is as follows: Prepare a tin tube a foot longer than the depth of the water; prepare a plunger a foot longer than the tube. Make the tube 1½ to 2 inches in diameter. Place the seeds, or bulbs, or roots in one end of the tube; run the plunger down close to them; plunge the tube in the water, and the pressure will hold the seeds against the plunger until the tube reaches the bottom. Then gently press the seeds into the mud with the plunger, and your plant is safely deposited just where you want it. A little mud or clay might be put into the mouth of the tube to prevent the seed from falling out before reaching the bottom, if thought best.

D. W. CROSS.

CLEVELAND, O.

HAWKS AND GAME BIRDS.

Editor Forest and Stream:

In your number March 25 I carefully read "Food Examinations of Hawks." Thinking the matter over I concluded that the test was not a fair one for this reason: During the summer months frogs, snakes, field mice and insects can be caught by the hawks more readily than birds. But during winter and cool weather, my opinion is, they live almost exclusively on birds; and I believe they destroy more quail, young and old, ten times, than are shot, to say nothing about chickens. I also believe one quail, as an insect destroyer, worth forty hawks. To illustrate, while I was walking over a wheat stubble a year or so ago, a terrier dog started a covey of small quail; one attempted to hide and he caught it, and before I could stop him maimed it so it died. I noticed that its little crop was very full, and taking it to the house I examined it. To my surprise I did not find a grain of wheat, but (if my memory serves me) some fifty or sixty insects of small size and different kinds. Since then knowing hawks to be their greatest enemies, I have waged war against them. I have yet to see something more to change my views.

B. B. D.

SUFFOLK, Va.

A HAWK-CATCHING DEVICE.—Take a pole 12 or 15 feet long and about 3 inches across at the top, bore an inch hole through about two inches from the top; set the pole firmly in the ground near where the quail feed. Get a light ladder

which can be kept near at hand. Take a common steel trap, one with the spring working under the jaw preferred; set it on top of the pole; pass a strap or cord through the lower part of the trap and through the hole in the pole, and fasten it. A farmer to whom I told this plan caught six hawks after the snow came, by setting traps on top of his stack poles. The quail came there after grain, and the hawks would alight on the poles to watch for them.—X. (Smithburg, N. J.).

AS TO CRAWFISH.—Looking over a file of FOREST AND STREAM the other day, I ran across the following in "Habits of Crawfish," by Ralph S. Tarr, printed in the issue of Oct. 22, 1885: "In New England there are none (crawfish) except in a river in the north of Maine, where one kind is found. That such a large area should be uninhabited by these animals, while the much less favorable place, the Mammoth Cave, has a peculiar blind kind of its own, is certainly remarkable." It was, I think, during the summer of 1884, that a number of specimens of *Cambarus bartoni* were taken from a cold spring in Grafton, Mass., and placed in the museum of the Worcester Natural History Society, where they now are. This is, I believe, the only capture in Massachusetts on record, though of this I am not positive, being too far from books to verify the assertion. The crawfish were found, as before mentioned, in a spring at the head of a small clear brook, in a similar situation as the "brook species" Mr. Tarr refers to as being found in Virginia. I have found one species of *Cambarus* here in Florida. It was taken from a "sink," and is pure white and nearly three inches in length. Of its habits I know nothing. I kept it alive for some time, but could not see that it took any food, although I placed several small water beetles (*Dytiscidae*) in its globe. I do not know to what species it is to be referred, though it is probably not the *Cambarus bartoni*. I hope this will meet Mr. Tarr's eye, for though the capture was published at the time, he evidently has not seen it.—HENRY A. KELLY (Bellevue, Fla.).

BREEDING OF THE BRANT.—Sackville, New Brunswick.—Can any of your readers tell us where brant breed? They leave here about June 10 and return Sept. 1 with their young fully grown. Old salts who have sailed as far north as the southern coast of Greenland claim that the brant go further north than that point to nest.—STANSTEAD. [The brant breeds in the far north, and their nests have been found by the naturalists of various polar expeditions. Messrs. Evans and Sturge found it breeding on the island of Spitzbergen, and it was also found breeding by Sir James Ross's expedition at Parry's Island in latitude 74° and 75°. During the British arctic expedition (1875-6) Mr. Fielden reports finding a nest with eggs in latitude 82° 30' N., and subsequently many more were found.]

ALBINO GROUSE.—A friend writes me that R. B. Millard, of Cornwall Bridge, Conn., caught an albino partridge last fall, which he had mounted, making a beautiful specimen. A hen, and by the way, are not albinos usually females?—C. [Albinism is not known to be more common among females than males.]

WOODCOCK IN THE CITY.—A woodcock flew against a telegraph wire in New street, just back of the Stock Exchange, New York city, last Thursday afternoon, fell to the street stunned, was captured, put into a basket and exhibited in a restaurant; lived a short while and died.

HANOVER, N. H., April 4.—Cedar birds, robins and blue birds have arrived in considerable numbers, although the snow has not entirely disappeared. Crows spent the winter with us, a rare incident.—E. C.

Game Bag and Gun.

THE TRAJECTORY TEST.

THE full report of the FOREST AND STREAM's trajectory test of hunting rifles has been issued in pamphlet form, with the illustrations and the tabular summary, making in all 96 pages. For sale at this office, or sent post-paid. Price 50 cents.

OUR TRAJECTORY TRIALS.

Editor Forest and Stream:

In reference to the experiments made by your journal in rifle trajectories, the London *Field* account of which is copied in your issue of the 11th inst., I would like to inquire whether the .50-bore Bullard used in the competitive trials was of the caliber advertised by the Bullard Repeating Arms Co., on page vi of your paper as the ".50-115-346?" And, if so, do you regard any American repeating rifle as safe with a charge of 115 grains of powder? I say "American," because I have no acquaintance with any repeating rifles that may be made abroad.

In the next place, if you regard the Bullard repeating rifle as safe with a charge of 115 grains, is such a cartridge made by any of our factories? The catalogue of the Union Metallic Cartridge Co. is not accessible to me, but the list contained in the latest catalogue of the Winchester Repeating Arms Co. makes no mention of any such cartridge. My inquiries, therefore, are two: First, is the Bullard ".50-115-346" repeater safe; and secondly, if it is, can a factory-made cartridge be obtained for it? I have no interest in the matter except as an amateur sportsman.

SAN FRANCISCO, Cal., March 25.

[Our correspondent should provide himself with a copy of the pamphlet report of the trial, where he will find his inquiries fully answered.]

Editor Forest and Stream:

Having but recently returned from the West, I note a copy of your trajectory test in pamphlet form, and will say: Riflemen seem to be well posted in this line and rather look ahead, as they say if one kind of ammunition was used in all makes of rifles it might be of some use to a man who is about to purchase a rifle for his own use; but instead, all kinds of ammunition were used and the result of same is not novel or instructive. Anybody knows, who has had any experience with a rifle, that a heavy charge of powder and a light ball will fly faster in the air, and of course with less trajectory or curve, for a given distance, say 200 yards or under. This is an important point in a hunting rifle, allowing the sights to be stationary on rifle, as are invariably used on the Pacific Slope, where the largest game of this

country are found; and many an old grizzly, both mountain and valley, have I made to chew the dust with my Wesson rifle, caliber .45, 310-grain ball, 120 grains powder.

F. WESSON.

WORCESTER, Mass., March 15.

Editor Forest and Stream:

Since the publication of the results of your recent trajectory tests the trouble with our .45 caliber Marlin rifle, which you experienced at that time, has been the subject of much comment, both in private letters to ourselves from as far away as India, and of articles in the sporting papers.

As this apparent inaccuracy of the rifle was entirely beyond our comprehension, we have submitted the identical arm, No. 9,449, to Mr. George Joiner, of Brooklyn, a well-known marksman, and requested him to give the rifle a fair, impartial trial. Accompanied by Mr. Henry Vetter, an expert gunsmith and also an excellent marksman, he proceeded to test the gun on Jan. 8, 1886, using the .45-85 cartridges manufactured by the U. M. C. Co., being the same ammunition as was used in your tests.

He returned the rifle to us (it is now in our sample rack) with the following communication:

BROOKLYN, Jan. 10.—Marlin Firearms Co.: Gentlemen—I have made a trial of rifle No. 9,449, as you requested, and I return the rifle with some targets made at 200 yards, at the Union Hill range on the 8th inst. The rifle was to my notion one of the best shooting sporting rifles I ever had to my shoulder. The day was quite gusty and unfavorable for very accurate shooting. The ammunition I used was .45-85 cartridges of U. M. C. Co. make, which I took from a case of the same standing in Schoverling, Daly & Gales's stock. If I could have loaded them myself I am certain I could have kept them in a four-inch circle. Truly yours, GEORGE JOINER.

NEW YORK, Jan. 10.—I was present at the testing of the Marlin rifle referred to in above letter of Mr. Joiner, and certify that the shooting was done with factory ammunition, .45-caliber, 85 grains of powder, 285 grain bullet, at Union Hill, Jan. 8, last, at 200 yards range, and that the targets to which I have put my name were made by Mr. Joiner as stated.—HENRY VETTER.

We mail you an electrotype made from one of these targets and respectfully ask, in justice to ourselves, that you publish this communication and accompanying target.

THE MARLIN FIREARMS CO.

NEW HAVEN, CONN., March 30.

[It is entirely possible that the rifle may have acted well at Union Hill. It is certainly true that it acted in the manner described at Creedmoor during the tests. No rifleman of any experience would jump from an isolated case of this sort to a condemnation of a class of rifles. Our report of the trial was one of facts only. The experiments at Creedmoor were open to all, and invitations freely extended. Many who were present saw the stubborn Marlin .45; several tried it a few rounds, but it seemed entirely out of sorts, and we were regretfully compelled to content ourselves with a single round for the trajectory figures. We regret that there are not more data about the Joiner test; whether the shots shown in the cut are consecutive, and whether the circle shown is the bullseye fired at or only a circle struck about a group of shots, and what scale the cut is made to. We give space gladly to the further report on the arm used in the trials. It simply shows that after all there is a good deal of intelligent cussedness about pieces of machinery at times, and a rifle is no exception.]

A TURKEY AND CHICKEN SHOOT.

Editor Forest and Stream:

"Turkey and chicken shoots" are always interesting in the country. Having but recently purchased a muzzleloader rifle which the maker said would kill the turkeys, I concluded that on New Year's Day last I would go to a turkey and chicken shoot at Salesville and try it. My rifle was all out of the shining fashion, to be sure, but I did not care for that provided it would only bring me in the turkeys, reward the ten cents a shot, and thus make the children smile around the savory table. The day was mild, not much wind, a little a times, and we shot in an open field without any fire. Besides my muzzleloader, there were two old German muzzleloaders on the ground which shot very well, but they did not get any turkeys. There were present also the following breechloaders: One Winchester, .44-cal. one Ballard, .38-cal.; one Remington, .32-cal., and one .32 Ballard. The breechloaders did most of the shooting; they commenced early and shot late; bang! bang! bang!

The turkeys were very small, larger than spring blackbirds and most remarkable for flaxseed-shaped bodies, short pinfeathers, and a wonderful display of very long feathers, as if to say we are actually larger than spring crows. They were decidedly of the genus "ten cents a shot" and of the order "turkey shoot."

I will pass over most of the chicken part of the shoot. The shotguns were engaged in this—chickens, or rather tough hens, twelve rods distant and to kill dead, is generally the rule—but to kill dead requires large shot, and these scatter so much at twelve rods that killing hens at this distance dead is not as easy as many suppose—not many were killed. The shoot at turkeys opened in the morning by shooting off-hand at their heads at fifty yards. I took no interest nor stock in this shooting, but looked on. They, that is, all the other rifles on the ground, after many shots got but four turkeys at this kind of shooting. Thus ended most of the forenoon part of the shoot, and you will see the breechloaders did not mow down more than a regiment of these turkeys at fifty yards. The trouble was, you see, the heads of these birds were not large enough; if they had been much larger more meat could have been won for the family and children at home. The breechloaders sometimes hit where aimed.

A STUDY OF BULLETS.

Editor Forest and Stream:

My memory and knowledge of gunpowder projectiles extends back to the days of the flintlock musket of old Revolutionary fame, the old-fashioned single-barreled shotgun, and the long, slender-barreled smooth-bore, designed primarily to shoot a single patched ball, but used occasionally for shot. In those palmy days the musket did duty on "general training" days, and roared its ancient patriotic salute on every Fourth of July, and couldn't get over the habit as long as it lived. The shotgun was exclusively a boy weapon, to be left behind when the youth had passed the period of adolescence and the suspicion of down had appeared upon his face. Then the smooth-bore, with its single ball of lead, was to be taken up, to be laid down no more till old age forbade its further use. But the love of the tried and true old piece lived in the warm heart of its owner, though the arm had grown weak and palsied and the old eyes too dim to see the dust gathering upon it. The old gun still lay in the hooks when the old man was laid away, and ever after reverently and tenderly cared for as it descended from generation to generation in the same family. There are a few of those old guns in the country to-day which a million couldn't buy.

But the spirit of improvement and progress was abroad in that day as now, and one fine day along came a man with the smooth-bore, rifled with a twisting cut, and as he beat them all shooting at the paper pinned against the trunk of the beech tree, the innovation took and spread.

With the experimenting in guns commenced the experimenting in projectiles, and it is not done yet. It was natural that the primitive form of bullet should be that of a sphere (1) for obvious reasons. The earth is spherical, falling rain drops assume the same form; besides, the ball was handy to charge and always right side up, and even to this day there has been found no truer or more deadly projectile for its range than the simple sphere of lead.

It was not long before the devotees of the rifle began to experiment to reduce the number of grooves, and the result was the production of a bullet (2) in the form of the planet Saturn—a bullet with a belt around its middle which should engage with the two grooves. No great advantage was gained by the use of this bullet, and in time it was practically abandoned as not being quite so easy to load with.

The next attempt was in producing a bullet (3) which would increase in range though using the same quantity of powder. Then the conical bullet came into existence. The rifle, with its twist, made it possible. The men who designed this form of bullet had used wedges in splitting rails and sharpened the prows of clipper-built boats. They judged correctly that air was more easily divided than pushed. Some of them got to thinking that it might be possible to shoot a conical bullet from a smooth-bore and cause it to revolve on its own axis by means of a saw-toothed riding on its outer side (4). But the attempt was abandoned and they returned to the plain conical. There was a great increase in the range of the bullet, but a decrease in its killing power. The cone gave no such paralyzing shock to large game as the sphere, and the latter is still preferred by many old hunters in hunting in dense forests. A twig will not turn a ball out of its course, but the same cannot be said of the cone.

In those years there was another, though obscure, attempt to increase the range and penetrating power of the conical bullet. It was cast with a long lead neck or stem, solid to its base (5). The powder charge surrounded this neck, and upon its explosion broke off the neck just at the base of the cone and sent it out with terrific force. It was said that one-fourth of a dram of powder had sent one of those cones out of a Harper's Ferry rifle entirely through a solid piece of hemlock timber twelve inches square. The breech pin had been shortened to make room for the flange of the stem.

By this time the attention of the Government was drawn to the new form of bullet, and experiments were tried which caused the adoption for a while of the Minie pattern, with some modifications (6). This form is cylindro-conical, with grooves around its cylindrical part, and with a hollow butt, in which was sometimes placed a sabot. Being a heavy projectile, it could be dropped down the muzzle of the gun on to its powder charge, and when fired the base of the bullet expanded so as to fit the grooves tight, and the projectile would have no windage. It was a bullet of great range and terrible in its destructive effects, but not of fine accuracy. During our late "unpleasantness" it was used on both sides, but our humane English cousins of the Alabama variety sympathized so tenderly with the failing fortunes of our Southern brethren that they supplemented the Minie with another which would present an unsolvable problem for the surgeons. It was a cylindro-conical bullet (7), composed of

two pieces so arranged as to come apart when entering a body and tear in different directions. But if the whole happened to stay together, the probe had a job to get them both out at once. Major Willison, of Creston, Ia., now has one

of those beauties which he picked up on a battlefield South.

But, as if that bullet was not infernal enough in its ingenuity, a further present was made to the South by the same benevolent hand of another more deadly still. This bullet (8) was constructed with a tapering plug fitted into its base, which was to be driven home by the explosion of the powder, causing an enlargement of the body of the projectile and thus swaging it into the grooves of the gun. The conical end of this innocent little thing was hollowed out to form a receptacle for poison. To the eternal honor of the South be it said, that the instances were exceedingly rare of its ever having been used in that way.

The attempt to use an explosive bullet was accompanied with so much trouble and danger that it was soon abandoned. One of the simpler forms (9) was that of a hollow, elongated cone, charged with a low grade of fulminating powder, and fired by a common cap placed on its point.

With the advent of the breechloader, the changed conditions seem to have resulted in the adoption of a new set of projectiles, the best the world has ever seen, for special purposes.

For long-range target shooting the long, heavy, cylindro-conical bullet (10) is found to be the best, theoretically and practically. Its weight gives it an irresistible momentum in the air, its conical front meets with the least resistance, and its flattened point insures the greatest accuracy.

For high speed, a very flattened trajectory, and great paralyzing, killing power in the pursuit of large game, the cylindro-conical express bullet (11) has no superior.

More humane than this, the Government has adopted for its service the cylindro hemispherical form (12), which stuns and wounds or kills without barbarously scattering fragments of ragged lead where it strikes. Its killing space is not so great as the sporting bullets, but owing to its form it is not so easily turned out of its true course. Recognizing the fact that it is better to wound men than to kill them to insure the winning of a battle, it is likely that the caliber of the projectile will be reduced and its trajectory thereby decreased.

COMMON SENSE.

WASHINGTON, D. C.

DEER HOUNDING.

FOLLOWING is the full text of the deer hounding bill now before the New York Senate:

An act to amend chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, entitled "An act for the preservation of moose, wild deer, birds, fish and other game," and to repeal chapter five hundred and fifty-seven of the laws of eighteen hundred and eighty-five, entitled "An act for the better preservation of wild deer."

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section one of chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, entitled "An act for the preservation of moose, wild deer, birds, fish and other game," is hereby amended so as to read as follows:

SEC. 1. No person shall hunt, kill, chase or take alive any wild deer in any part of the State save only from the fifteenth day of August to the first day of November in any year. No person, corporation, association or company shall transport or have in his possession in this State, after the same has been killed, any wild deer or venison, save only from the fifteenth day of August to the fifteenth day of November in each year. No person, corporation, association or company shall sell, or expose for sale after the same has been killed, any wild deer or venison, save only from the fifteenth day of August to the first day of November in each year. No person shall at any time, in this State, kill any fawn, or have in possession the carcass or skin of any such fawn after the same shall have been killed. No person shall, in any part of this State, set any trap, spring gun or other device at any artificial salt lick or other place for the purpose of trapping or killing wild deer. It shall not be lawful to hunt or pursue deer with dogs in any county of this State, except from the first day of September to the fifth day of October in each year. [It shall not be lawful to pursue deer with dogs in the county of St. Lawrence at any time.] It shall be lawful for any person to shoot or kill any dog while in actual pursuit of any deer in violation of the provisions of this act. It shall not be lawful for any person to kill or cause to be killed any wild deer in the counties of Suffolk and Queens at any time within five years from the passage of this act. No person, common carrier, corporation, association or company shall at any time carry or transport in this State, or have in possession for the purpose of transportation, any wild deer or venison, taken, caught, killed or captured in the counties of this State, or in either of them, except the counties of Queens and Suffolk, and any person, common carrier, corporation, association or company which has in his or its possession any such wild deer or venison, taken, caught, killed or captured in any of the said counties of this State as aforesaid, or in either of them, except the counties of Queens and Suffolk, shall be deemed to have them in possession in violation of this act, except, however, that they may transport or have in possession for the purposes of transportation, from the fifteenth day of August to the fifteenth day of November, not more than one carcass of wild deer or venison, taken, caught, killed or captured in said counties as aforesaid, or in either of them, for each owner of said carcass as aforesaid, provided that such carcass be accompanied by the owner. This section shall not apply to the head or feet of wild deer when severed from the carcass. Any person offending against any of the preceding provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of one hundred dollars for each wild deer or fawn so killed, hunted, pursued or trapped, or for each carcass or part thereof transported or had in possession for transportation in violation of this act, and for every spring gun so set, or wild deer or fawn skin or venison had in possession, and may be proceeded against therefor in any county of this State in which the offense was committed or in which the offender or prosecutor may reside, or have an office for the transaction of business.

SEC. 2. Section three of said act is hereby amended so as to read as follows:

SEC. 3. No person shall hunt, kill or take alive any wild deer by the process or mode commonly known as crusting, or enter any place where wild deer are yarded with intent to kill, take alive or destroy the same at any time. Any person offending against any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of one hundred dollars for each wild deer so hunted, killed, taken alive, or destroyed.

SEC. 3. Section thirty-six of said act is hereby amended so as to read as follows:

SEC. 36. Any person may sell or have in possession any hare or rabbit or any woodcock, any ruffed grouse commonly called partridge, any pinnated grouse commonly called prairie chicken, and any black or gray squirrel during the month of December, and any quail from the first day of January to the first day of February, and any fresh venison from the fifteenth day of November to the fifteenth day of December, and shall not be liable for any penalty under this act, provided he proves that such game was lawfully killed during the period

Then came the crowning efforts—the shooting at turkeys at 175 yards, any rest. I shot 20 shots and got 4 turkeys, each weighing from 3, to 3½, to 4½ pounds only. The 20 shots include 6 or 8 sighting shots. I did not get my gun trained for good work until toward the last; I was shooting a little too high every time and made the feathers fly, and they said, "If you can bring feathers do not alter things," but I soon found that to get turkeys I had to get down to the finest point, even below the pin feathers, which I did at last. This fine work was in my fourth and last small turkey.

At this very time the turkey man and my brother were near the turkey and marking my shots, he saw the bullets fall a little lower at each shot among that deceitful bunch of feathers, and very much feared the next shot. Behold it came certain and sure when I centered the poor bird, and it gave one grand spring and lofty flop into the air and was dead. I had, you see, finally found the center of this flaxseed figure below the pinfeather, and I was now ready with my muzzleloader to proceed to business. The turkey man saw this, for he had been at the turkey stand watching my progress.

Sequel.—When he saw the last shot, and witnessed the last jump and flop of that little turkey, he said, "I'll be hanged if I put up any more turkeys for that rifle." "Then you rule it out, do you?" "Yes." "All right. I have nothing more to say, except the maker (when I bought it) said it had been to one turkey shoot, where it was ruled out, and so it happens you are only following the fashion in ruling it out again." Nine turkeys in all were killed this day, and I got four of them while shooting my strange rifle. This will do for an unfashionable weapon, and one rejected by the modern tyro.

I left the others shooting at this same turkey; they brought it up nearer for three times, when one fellow finally got it. It cost him \$2 60 and it dressed 4½ pounds. The others got no turkeys at 175 yards, but four at 50 yards. The trouble was their rifles were too fashionable, and scattered too much. I beat them all with mine, and mine was a second-hand one, which had been exchanged with the maker by the fashionables for a more fashionable one. You see the man of fashion must have a fashionable gun, and no old-fogy muzzleloader will do for him. All right; the world moves, and some go empty-handed while others reap.

I forgot to say my brother shot my rifle 60 cents worth (10 cents a shot), and he took it all out, much to his mortification, in feather. He is a kind of mathematician, and can find the center of a small circle very readily; but you see the flaxseed center of this bird was too much for him, he did not get down below the pin feathers. The other shooters, full of pluck, banged away until near dusk, as fast as they could push in the loads, but all this to little effect.

The proprietor of this shoot cleared \$23 as his profit, besides entertaining his good friends. You see the breechloaders contributed more than their proportion to the \$23 most manfully. All praise to them and to mine good host, and may he long live to give us many other good shoots in the coming years. But leave the muzzleloader at home.

While I consider my report now ended, yet many of your readers will no doubt take an interest in a little more detail. The breechloader men marked the striking of their own bullets. I could see them throw the mud at 175 yards plainly. They all used fixed ammunition, except they loaded the Winchester shells.

My rifle was made by J. C. Welles, of Milwaukee, Wis., who is an elegant rifemaker, and the same who made my other good M. L. that was stolen, but never returned. He is the maker of very many close shooting M. L. rifles of the old type and style and taste, when a uniform accuracy was considered of far more importance than fashion. I cling to extreme accuracy always, as accuracy is about all there is of value in any rifle.

Where game is so small as it generally is in this country, I do not want nor will own an unsteady and weak-shooting rifle, or one making a high trajectory and throwing its long, gyrating bullets (many of them) wildly down the range, as shown at the recent FOREST AND STREAM trial of hunting rifles.

A majority of the elongated bullets fired from American breechloaders have more or less a gyratory flight, and hence they cannot hit the object aimed at, but fly around it or the line of sight from the beginning to the end of the range, and consequently we cannot hit what we aim at even by chance.

My caliber is .42, length of barrel 33 inches, barrel of iron, twist increasing, sights peep and globe, metallic bullet starter, bullet conical-shaped, weight only 230 grains, with but two-tenths inch pulled (displaced), lead-bearing in barrel and only eight-tenths of an inch long.

The breechloaders of this caliber cannot shoot such a short bullet from the shell with any degree of satisfactory accuracy.

I used about 55 grains of FFG powder at the turkey shoot. I will simply say I have got as good a "crow gun" as I want. It has got a marvelous way of shooting; not up to the fashion of these dude times, but as formerly, when accuracy was regarded as paramount to convenience or fashion.

It does not give the wild, corkscrew motion to its bullets, but sends them with great velocity just where they are wanted to go. Proof positive; read the correct result of its shooting at this turkey shoot. Witness how I was ruled out just when I had got the rifle fairly ready, to prevent my "wiping out" the man's turkeys.

I was willing to stop shooting, for I did not wish him to lose his turkeys; besides, I felt sad for the other shooters and wished to give them a full chance to get a turkey to carry home to their families.

Lesson.—To get small game or turkeys at 175 yards you must have a good rifle. One that scatters its bullets will not begin to answer, nor can any amount of fashion make it answer.

NAPOLEON MERRILL.

WAUKESHA, Wis., March, 1886.

MAINE DEER IN MARCH.—William Crocker and Charles Beatham, of Chester, and George Kimball, of Woodville, were found guilty of hunting, killing and destroying one deer on the 9th day of March ult., and Matthew Spencer, of Chester, was acquitted. Hon. Thomas W. Vose, of Bangor, appeared for State, and Alexander McLain, of Mattawamkeag, game warden, was the complainant. Jere E. Estes, Esq., of Winn, appeared for the defense. Crocker, Beatham and Kimball appealed to the August term. The parties were fined \$40 and costs. The deer was put into Charles Beatham's barn and died, as claimed, a short time afterward from exhaustion. John B. McAlpine, of Winn, was brought before the justice, with the same counsel, for simply hunting and capturing a deer alive. He was found guilty, fined, and appealed. The deer captured was released some time since.

allowed by this act and not transported contrary to the provisions thereof.

SEC. 4. Chapter five hundred and fifty-seven of the laws of eighteen hundred and eighty-five, entitled "An act for the better preservation of wild deer," is hereby repealed, and all other acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

SEC. 5. This act shall take effect immediately.

Editor Forest and Stream:

Your discussion of the subject of deer hounding reminds me of the method adopted by an old friend of mine, who settled in Michigan many years ago, to prevent deer hounding in his vicinity. Settlers at that time were few, and deer being plenty afforded them much of their animal food.

Late in the fall his quiet and solitude were broken for several weeks by the bellowing of two hounds in pursuit of deer, and the frequent sound of the shotgun as it belched forth its charge of buckshot, generally wounding but seldom killing its game at once. By chance meeting the owner of the hounds one day in the woods, he quietly told him that he did not like the hounding of deer in his neighborhood, but the man indignantly replied that he should be there again the next fall. The settler quietly told him that he would get more deer if he left his dogs at home, and they parted.

When the season came round, sure enough, the woods again rang with the baying of the same hounds. Hearing them coming one day in his direction, he took a station, rifle in hand, and in a few minutes the deer swept past within twenty yards of him. The deer had not been long gone when the hounds came up on the trail, and when the first one reached the opening he leveled his rifle and shot him dead. The other one turned and retraced his tracks, and he never heard his voice again or saw his owner. He said he hated awfully to shoot the dog, but he wanted to stop deer hounding in some way, and that seemed to be the only way for him to do it.

This was nearly fifty years ago, when such a thing as a game law was unknown in that country, except the law of necessity; and while no one would advocate such a course in a law-governed country, it worked well in his case, and the injustice in any country would be confined entirely to the dog.

CHICAGO, ILL.

MANAGEMENT OF MUZZLELOADING RIFLES.

Editor Forest and Stream:

Your correspondent, "C. L. S.," of Fort Clark, Texas, asks for information upon the above subject from those having experience.

Your correspondent says he hunted St. Louis over for a good muzzleloading rifle, and finally obtained one having a 42-inch barrel. Now if "C. L. S." will excuse my modesty and accept my advice, it is this: Go at once to a good gunsmith and have just 12 inches of his rifle barrel sawed off, send the piece to me by express at my expense to remember him by, and I will fit up a rifle from it to carry in my valise. If "C. L. S." does not find himself well paid by the improved shooting qualities of his 30 inch barrel rifle, I will pay all damages.

Now, premising that "C. L. S." will follow my advice thus given, I will advise further as follows: If he wishes to use his rifle for small game at short range, have the gunsmith turn off the sharp corner of the bore at the muzzle to the depth of the grooving in order to facilitate loading with a round ball. Have a heavy bullet mould made of brass or gun metal. Have the bullet fit so tightly that when it is driven through the rifle barrel the grooving will be well defined upon the bullet. Use pure lead for the bullets. Heat the moulds quite hot before casting any bullet. This will insure a full flow of lead into the mould. Use cutting nippers for clipping off the bullet necks and clip all close to the bullet. Use the Hazard FG Sea Shooting rifle powder. For ordinary ranges, a quantity which will fairly cover the bullet when resting on a level surface, is about the right charge. If a flask is used, do not chuck the powder violently into the charger, but let it run in and fill gradually. For patches, use the finest quality and most even texture of brown Irish linen. Cut them with a No. 13 wad cutter upon the smooth end of hard fine-grain wood. Wet the patch with the mouth and lay it upon the muzzle, centering it carefully over the bore. Place the bullet upon it, neck down, and placing the rod in contact, keep it there and force the bullet down gently upon the powder; stop as soon as it touches the powder. The end of the rod should be burred half round with the same burr used for the bullet mould.

Now, if "C. L. S." desires to use his rifle for very fine work, and especially at long range, then the barrel should be left, say 31 inches, so as to admit of a patent detachable loading muzzle, which any first-class gunsmith can fully explain and prepare for him. The bullet mould should be made with extreme accuracy in a solid block of metal of the thickness of 2½ calibers of the rifle. The shape of the projectile which has given the best results with me (and I have tried all in use during the past forty years) is defined by the following cut:

It is two calibers in length. The base fairly fills the grooves and at once tapers to receive the folds of the patch. It is cast from the point, the neck being cut squarely off with nippers. For fine work I always leave the neck full in trimming, and then with a sharp knife trim all to a uniform weight by a delicate scale. In selecting linen for patches I always use a magnifying glass, and I do not find one piece of linen in twenty-five sufficiently even in texture for reliable patches. In forcing the projectile down the barrel I am always especially careful to let it barely touch the powder. When commencing the firing of a string of shots I take a pencil and run a mark around my loading rod where I have seated the first projectile, and watch this mark every time I load. I use a small, long charger, filling it with powder poured gradually without shaking until heaped, then tip the charger to an angle of forty-five degrees and let the surplus powder fall off. By actual and repeated tests I secure in this way the same uniformity as by weighing. I pour the powder into the rifle through a long funnel. I use a hair-trigger delicately set, and I would as soon do without a rifle as without a telescopic sight, whether for target or general game shooting. I have had over forty years' experience, have attended innumerable "turkey shoots" and other

matches, and have never been beaten. I credit my success to the above stated practices and the non-use of liquor and tobacco.

MILTON P. PEIRCE.

PHILADELPHIA, Pa.

Editor Forest and Stream:

For use in his muzzleloader let "C. L. S." try the 32-caliber bullet made for the Smith & Wesson revolvers of that size. I think his 42-inch barrel will burn about 40 grains of powder. Use a chamois or kid patch, ¼ inch in diameter, well greased. The 32-caliber bullet is the closest fit he can obtain ready made. If the above is not satisfactory, a well-made mould and swedge for a bullet of about 90 grains need not cost more than \$4.50, and will add much to his pleasure in using an M. L. rifle.

BETHLEHEM, Pa.

J. S. D.

SPRING WILDFOWL.

HARRISBURG, Pa., March 30.—A flock of about twenty swans was discovered early yesterday morning on the river opposite the town. Four of them were bagged by local sportsmen. Ducks have not been coming in any great numbers, but quite a number of snipe have been killed the past week.—B.

SACKVILLE, N. B., March 27.—Wild geese have arrived here and the booming of ducking guns is now heard along the line of the north coast, and many a mother goose and festive gander have, within the past few days, been laid low.—STANSTEAD.

KANKAKEE SWAMPS.—La Fayette, Ind., March 29.—A party of four of our local sportsmen returned yesterday from a two days' hunt in the Kankakee Swamps, near Beaver Lake, this State, bringing with them 250 ducks and six very large swan. They report hunting very fine.—W.

SHINNEDOCK BAY.—March 30.—There are very many ducks—broadbills, redheads, sheldrakes and whistlers—on Shinnecock Bay; also a few geese and brant, but they are very shy. Was out all day Saturday and shot nothing. No snipe have come along as yet.—J. W.

ANOTHER CLUB CONSTITUTION.

ARTICLE I.—This society shall be known as the "Westchester County Game and Fish Protective Association."

ART. II.—Sec. 1. This society has been formed for the stocking of farms and streams of Westchester county with game birds and fish, and for the enforcement of the game laws of the State and county.

ART. III.—Sec. 1. The officers of this society shall consist of a president, two vice-presidents, secretary, treasurer and counsel. Sec. 2. There shall also be two vice-presidents in each town of the county, who, with the other officers shall constitute a board of directors. Sec. 3. All officers of the society shall be chosen by a ballot at a regular annual meeting. An annual meeting of the members of each town shall be called by the vice-presidents of each town for the purpose of electing two vice-presidents for the next ensuing year for said town. The officers shall hold office for one year.

ART. IV.—Sec. 1. In the absence of the president from any annual or special meeting of the society, the first or second vice-presidents, and in the event of their absence, the secretary or treasurer shall call such meeting to order. In the absence of the president from any meeting of the board of directors, the senior member of such board shall act as president, pro tempore; neither the secretary nor the treasurer, however, shall so preside.

ART. V.—Sec. 1. The society shall hold an annual meeting which shall be called by the president, between the first and fifteenth day of January of each year, and the vice-presidents of each town shall be and act as delegates to said meeting, for their respective towns. There shall also at such meetings be held the regular annual election of officers for the next ensuing year, and a distribution of game and game fish, and such other business as may properly come before the society.

ART. VI.—Sec. 2. Special meetings of the society may be called by the president, when he shall deem the same necessary, and shall be called by him, or by a vice-president thereof, in the event of his absence or failure to act, upon the written request of any nine members of the society. And at such special meeting, vacancies in office may be filled by election. Sec. 2. The secretary shall give the vice-presidents of each town at least ten days' notice, in writing, of any meeting to be called.

ART. VII.—Sec. 1. A list of membership will be in the hands of each vice president of each town, and any person wishing to become a member can do so by applying to said vice-president, signing the list of membership, and paying dues.

ART. VIII.—Sec. 1. The annual dues of this association shall be two dollars in addition to an initiation fee of one dollar, to be paid on or before the first day of January of each year in advance.

ART. IX.—Sec. 1. Officers shall hold over in office until the election and qualification of their successors.

ART. X.—Sec. 1. The society shall have power to make all by-laws necessary or proper to the carrying out of the provisions of this constitution or the purposes of the society, which by-laws shall be of equal binding force with the constitution, except when in conflict therewith; and such by-laws shall not be altered or amended except at a meeting of the society, nor upon less than a majority vote of all of the members present and voting in person, provided, that no alteration or amendment of the said by-laws shall be made except upon notice thereof, given at a preceding regular meeting of the society.

ART. XI.—Sec. 1. Each town shall select one or more of the members of this association to be appointed by the sheriff or board of supervisors as special game constables for the county, with full power to enforce the game laws of the state of New York and Westchester county.

ART. XII.—Sec. 1. The president shall cause to be published in all newspapers published in Westchester county, a full copy of the game laws of the state of New York and Westchester county, at such time of the year as the president may deem proper. Also any changes that may be made in said laws.

ART. XIII.—Sec. 1. Each member of the society shall pledge himself to give the special game constable, for the benefit of the society, any information he may have of the violation of any of the game laws of the state or county. Sec. 2. The special game constables shall receive from the association, five dollars for each and every person arrested and convicted for such violation of the laws.

ART. XIV.—Sec. 1. At a regular or special meeting of the

association, five members shall constitute a quorum to transact any business which may be brought before them.

ART. XV.—Sec. 1. Persons may be proposed and elected as honorary members in this association by any member thereof, and honorary members so elected shall be exempt from the payment of any initiation fee or annual dues, but shall not be entitled to fill any office or vote at meetings of the association, and shall not be deemed as forming any part of a quorum at any meeting.

ART. XVI.—Sec. 1. No person, residing in the town of his predecessor, shall be eligible to fill any office until after the expiration of three years, except in the case of vice presidents and two constables.

BY-LAWS.

Sec. 1. At the time appointed for a meeting of the society the president, or in his absence, the first or second vice-president, the secretary or the treasurer, shall, in the order named, call such meeting to order as soon as a quorum shall have appeared. Sec. 2. At the annual meeting of the society the order of business shall be as follows: 1. Reading minutes of previous meeting. 2. Reports of officers. 3. Reports of committees. 4. Reading of communications. 5. Deferred business. 6. New business. 7. Election of officers. 8. Adjournment, and such order shall not be departed from, except by the unanimous consent of the members present.

Sec. 3. The presiding officer at all meetings of the society shall be the president, or in his absence the first or second vice-president, the secretary or the treasurer. The presiding officer shall have no vote, except in case of a tie, when he shall have the casting vote.

Sec. 4. All money shall be first paid to the secretary, who shall keep a book, in which he shall at once record the receipt of all moneys to him paid; and it shall be his duty to transfer all such moneys to the treasurer, within one week after receipt thereof, and to take from the treasurer a proper voucher therefor. It shall be the duty of the secretary also, to keep a record of all of the transactions of the society; to draw all orders for the payment of bills contracted by or under the direction of the society or the board of directors, and by them or either of them ordered to be paid; to keep a list of members in a book properly bound and arranged for the purpose, with the place of residence of each member and the date of his election, and a suitable space for the entry of general remarks. He shall give ten days notice of all meetings of the society. He shall make an annual report to the society of his acts as secretary, and of the transactions of the board of directors, giving such details as shall be necessary to show the financial and general condition of the society. He shall act as secretary to the board of directors, and shall preform all other duties appertaining to his office.

Sec. 5. The treasurer shall receive from the secretary all moneys belonging to the society, and shall upon receipt thereof give to such secretary proper vouchers therefor. He shall pay out all moneys of the society, but no such moneys shall be by him paid out except upon the written order of the president, drawn and signed by him, under and in pursuance of a resolution of the society or of the board of directors. He shall make an annual report to the society showing the amount in detail, of all moneys received and disbursed by him.

Sec. 6. The counsel to the society shall attend to all the legal affairs of the society, and shall under the direction of the board of directors or the proper committee, bring prompt suit against all offenders against the provisions of the game laws of the state and county. He shall report to the board of directors upon request, and to the society at its annual meeting, all of his acts and proceedings as such named, and should pay over to the secretary all fines and penalties by him collected or received, after deducting his necessary disbursements.

Sec. 7. The annual dues shall be two dollars for each year, to be paid by each member in advance, the first such payment to be made upon the application for certificate of membership, and subsequent payments to be annually in advance upon the commencement of each succeeding year of membership; and in case of non-election such first annual fee shall be returned forthwith to such applicant.

Sec. 8. No member or officer shall be expelled or removed from office except at a special meeting of the society, called to act upon the question of such expulsion or removal; and whenever any such meeting shall be called for any such purpose, it shall be the duty of the secretary to forward to the member or officer to be proceeded against, a copy of the notice of such meeting, together with the specification of the charges to be tried, which copy and specification shall be sent to said member or officer at least ten days before the convening of such meeting. At such meeting testimony may be taken to prove or disprove the charges to be tried; the presiding officer shall rule upon the admission or rejection of evidence, and shall be entitled to consult with the counsel upon such points; no vote of removal or expulsion shall be taken until all proofs offered in support or disproof of the charge to be tried shall have been duly considered.

Sec. 9. The executive affairs of the society shall be managed by the board of directors, who shall meet at such times as shall seem proper. The board of directors shall have the power to appoint all proper committees, and to do all acts and pass resolutions necessary or proper for the conduct of the affairs of the society; which acts and resolutions shall be binding, except when in conflict with the constitution or by-laws of the society.

Sec. 10. Whenever the funds of the society shall permit, the board of directors may purchase and distribute game and fish at such points within Westchester county as they shall select, and may employ all necessary agents therefor.

Sec. 11. The board of directors may by unanimous vote elect honorary members, and any proper person, who shall pay \$100 into the treasury of the society, shall be elected an honorary member for life. Honorary members shall be exempt from all dues, and shall be entitled to a voice, but not to a vote, at the meetings of the society.

AMENDMENTS.

Sec. 11 of the by-laws amended so as to read: Any person who will pay into the treasury of the society one hundred dollars shall be elected by the directors a life member, which said life member shall thereafter be exempt from all dues.

WELLSVILLE, O., March 29.—The Amateur Sporting Club of this place have elected officers, as follows: President, E. K. Taylor; Vice-President, Wm. Stevenson; Secretary and Treasurer, C. R. McDonald. They anticipate going into camp this fall on Cheat River, West Virginia. Any of your readers who are familiar with that section of country and can designate a good location, or other information, will confer a favor in so doing. Game in Eastern Ohio is becoming very scarce. Quail almost extinct.—Bvz.

BRainerd, Minn., March 30.—A number of gentlemen met Monday evening and took initial steps for the organization of a sportsmen's club. There were about fifteen present. The meeting organized by electing Mr. A. J. Halsted as chairman, and Mr. W. S. McClenahan was called upon to act as secretary. Dr. J. L. Camp, who had taken a prominent part in bringing about the meeting, explained at some length what was sought to be accomplished by the organization, the prime object of which would be the protection of game and fish in this vicinity, and the enforcement of all laws relating thereto. The wholesale destruction of game and fish in Northern Minnesota is becoming alarming, and active and vigorous measures should be taken to check it. Therefore the Doctor thought a strong organization should be effected, and every possible effort made to enforce the laws and bring the guilty parties to justice. The existence of such an organization, he believed, would materially check the evil, if it did not stop it altogether. At Dr. Camp's suggestion, a committee of five was appointed to correspond with other associations of the kind, for the purpose of obtaining all necessary information in regard to organization, by laws, etc.; also to arrange for another meeting, to be announced in the newspapers, together with an urgent request for all citizens of the county interested in the object of the association to be present. The chair appointed upon this committee Messrs. Geo. Keene, Dr. Camp, Wm. Seelye, S. H. Relf and A. A. Greene.

ANTRIM COUNTY SOCIETY.—The Bellaire, Mich., *Breeze* reports that the citizens of Antrim county, Mich., propose to organize "the Antrim County Society for the Preservation of Fish and Game, and that the movements and aims of this society shall be in the direct interests of the farmers and other inhabitants of this county. The society shall take every means in its power to enforce existing laws looking to the protection of our fish, game and birds, and endeavor to procure the passage of other statutes looking toward the same ends. It shall use its best efforts to discourage and prevent the wanton waste by tourists and others, who have repeatedly made our shores offensive with the tons of valuable food fish they have left to rot near their camps. It shall see to it that every butcher who, out of season, shall slay his scores of deer in the deep snows, shall not get off scot free, as in times past. It shall endeavor to stop the hounding of deer, and shall seek to obtain information to guide its actions as best it may in all kindred matters looking to the benefit of the inhabitants of Antrim county. Twenty-five persons gave in their names as desirous of being enrolled as members of the association, and a committee was appointed, consisting of F. H. Thurston, Secretary, of Central Lake; Robert R. Wilkinson, of Eastport, and Roswell Leavitt, of Bellaire, to draft a constitution and by-laws, and give public notice of the time and place of a future meeting, at which the organization of the society may be perfected."

GEORGIA DOVE SHOOTING.—Columbus, Ga., March 31.—The finest dove shooting of the season has just taken place. A party of gentlemen, consisting of Messrs. O. C. Johnson, Kyle Nuckolis, J. S. Wilcox, Fred Gordon and Henry Burrus, went down into Alabama on the McMillan plantation last Thursday afternoon, where they were royally entertained by Mrs. McMillan and family. The party was joined by Mr. Will Nuckolis and Mr. McMillan, who, with some of the neighbors, took part in the shooting. It must not be overlooked that all the participants are amateur sportsmen, as the party made no pretensions whatever to shooting. The total number of doves which were actually bagged, as far as can be recollected, is 783. There were only ten in the party. The most remarkable feature of the occasion was the shooting of Mr. Kyle Nuckolis, as it was his first attempt. Of the total number of birds killed Mr. Kyle Nuckolis killed and bagged 174. The whole party was surprised and dumbfounded, and are very much inclined to think that this champion shot was playing off. The party did credit to themselves and are to be congratulated on having made what the *Enquirer-Sun* says is the finest record of the season.

CASPAR MOUNTAINS.—In November, 1884, I met at the forty-two mile crossing of the Little Medicine, a government outfit of mule teams, besides pack mules, from Fort Russell, loaded down to the guards with elk hindquarters. Last November, while in camp at the same place, in the Caspar Mountains, Wyoming, we discovered that a large band of Indians were camping just over Mud Mountain engaged in killing elk and deer for the hide. We were informed by some ranch men that these Indians were from the Pine Ridge Agency. Caspar Mountains are the best place for grouse I ever saw, have seen more than one hundred in a bunch, mostly willow grouse. A great deal of game is annually destroyed in these mountains by hunters going in there too early in the fall for fear of being snowed in later, and their game spoils. I saw last fall a large number of elk hindquarters that had spoiled, but this is done mostly by tenderfoot hunters; the old hunters know better how to save their game. I have hunted there for the last three years, about three weeks in October or November of each year, and have never lost any meat yet, except by bob cats or mountain lions.—ELK.

COLORADO.—Berthoud.—In this country game is tolerably plentiful. Blacktail deer can be found in a half day's drive. Ducks and geese are very plenty. In a radius of five miles of my house are fifteen small lakes or reservoirs for irrigation, ranging from five to one hundred acres each, and in these the ducks and geese have a picnic. Jack rabbits are also abundant. Most of our lovers of the camp and gun have their regular fall hunt in Northwestern Colorado or Wyoming. Some three years ago North Park was a great resort for antelope hunters. I have seen many a wagon load of from 50 to 100 antelope each brought out from there to be shipped from Larima City to Denver; but that is now a thing of the past. The elk and antelope are fast following the buffalo. One good thing I can say for the Rocky Mountain hunters, they don't hound the game "to make them shy."—ELK.

JESSE CONKLING'S BURNED.—"Castle Conkling," one of the old and popular resorts on the Great South Bay, was struck by lightning Wednesday morning, March 31, and burned to the ground. For the past twenty-five years "Jesse Conkling's" has been a household word with the lovers of the rod and gun. It was situated on Whig Inlet, not far from Sammis's summer hotel on Fire Island and Havemeyer's on Creekree Island. For two generations the Castle has been a landmark, and few sportsmen will hear of the destruction of the old place without regrets. The loss was about \$3,000.

WISCONSIN GAME BIRDS.—Black River Falls, Wis., April 2.—We have good prairie chicken shooting through this country in season. By traveling considerable quite large bags, as well as fine sport can be had. I have to-day talked with a party who is traveling through the country almost every day surveying, and he tells me that he has not seen prairie chickens so plenty at their season in years as they are this spring. So we anticipate fine shooting the coming season. He tells me he flushed a nice flock of quail of some eighteen or twenty one day last week. He also raises many partridges in his travels. All this goes to show that notwithstanding the very severe weather and unusual large fall of snow, game birds of all classes in this vicinity have wintered unusually well, and if nothing happens from now out shooting will be good this fall.—G. J. S.

FISHER'S ISLAND HARE HUNT.—Hoboken, N. J., April 4.—*Editor Forest and Stream:* You will oblige us by publishing in your next issue an invitation to all the friends of the club members, and also to any of the gentlemen of the Eastern Field Trial and Westminster Kennel clubs to join the members of the Fisher's Island Club in a grand hunt for the two breeds of European hares, which we are obliged to exterminate on account of their interference with garden crops. We will leave New York city, April 14, by the 8 A. M. train, N. Y., N. H. & H. R. R., and go aboard boat at New London, 12 M.—MAX WENZEL, Sec'y F. I. Club.

GROUSE IN WISCONSIN.—Egg Harbor, Door County.—Having occasion recently to visit the resorts of the ruffed grouse I find they have wintered well, notwithstanding the cold days and deep snows of January and February, and if they are not molested during the breeding season by men and boys who care little for the future of this noble bird, we can look for good shooting next fall. Robins and meadow larks have made their appearance, which indicates that spring with us is close at hand.—CORONA.

BRIDGEPORT, Conn.—A new club has leased grounds, 1,500 acres in extent, for a term of years, and already 200 quail have been turned down, and a like number will shortly be added. The land will be strictly preserved, and none but members allowed the use of it.

Sea and River Fishing.

CASTING THE FLY.

IT is a very difficult matter to teach fly-casting by mail or in the columns of a newspaper, still there are some general principles which may be laid down, and in the absence of a teachersome proficiency may be acquired by observing these rules and by practice. THE FOREST AND STREAM has a letter from a young man who has been trying it alone, practicing diligently on the roof of a four-story building, making casts at an imaginary pool with a small shot tied on for a fly. An ordinary tin roof with its seams would probably use up a waterproof silk line in a short time, and the shot on the end of it is worse than useless. We would advise him, if he can't get a pool of water, to try casting on snow or grass without flies or anything beyond a simple knot in the end of his line to keep it from fraying out. The first thing to be impressed upon him is not to attempt long casts; these are for the distant future. Water is by far the best medium to learn to cast upon, for the resistance to the line when retrieving is exactly what he will experience in actual fishing. Let him procure a good trout rod, of such material as he may choose or may suit his purse. It should be of moderate stiffness, yet with action enough to do its work without violent exertion. The selection of this rod is something he should consult an expert upon. Between one stiff as a bean pole and one of the "limber-go-shifless" things so weak in the back that when one strikes a fish with it, the tip gives down instead of striking, such as are called "double action rods," we would choose the bean pole.

The line and the rod should fit each other in the exact proportion with which the Mikado attempts to make "the punishment fit the crime." A heavy line on a light and limber rod is almost as bad a combination as could be made. Presuming that he has his line, rod and reel all in proportion and fitting each other well, the reel always below his hand, he takes his position where there is no obstacle behind him to interfere with his back cast. It is entirely upon this back cast, or the retrieving of the line, that his success depends. It must on no account touch the ground or water behind him. Let him begin with about fifteen feet of line, his rod in an erect position, and then make a forward cast; his elbow close to the body and the movement mainly with the wrist. As the line lies out upon the water, with the rod parallel to its surface, he should draw it back a foot or two slowly, gradually increasing its speed, and then with the spring of the rod send it up behind him with an upward motion of his wrist, stop his rod at nearly a vertical position; then allowing just as much time for the line to be straightened out behind as it occupied in going forward, let him make the cast again with his wrist and send it forward. He should practice this until he can lay his line straight upon the water in the spot where he wishes it to land.

When he has accomplished this to his satisfaction, let him take his left hand and reel off a few feet more line while it lies upon the water and before he retrieves it. The resistance of the water will then draw this extra line through the rings, and he must allow a little more time for the line to get behind him than he did before. He must also bear in mind that his rod must not stand at a greater angle than forty-five degrees behind him, and if he attempts to stop it when it is vertical he will find it will go back to about this angle. It would be well to count one, two, three backward, timing it as a musician counts his beats. As he gets out more line, it will be necessary to draw it slightly nearer him, in order to start it from the water, than when he was making shorter casts; but in all cases he must start it slowly, increasing the speed until he gives it a twitch which sends it back, always bearing in mind that it is the rod which is to do the work by its spring, and not entirely his muscles. The cast of a fly is a sleight which is only to be acquired by practice. Should he fail in giving it time to straighten out behind him, he will hear a snap like the crack of a whip, which, in case he had a fly upon the leader, would be snapped off; yet, should he give it too much time, he will find that the line falls in the water behind him and impedes his cast. A longer cast can

be made without flies than with them, as a rule, and only when he attains the proficiency of having his back cast go straight out behind him and can start it just at that moment when it straightens, without looking behind to see where it is, should he attempt to use the fly.

There is a peculiar upward motion of the wrist attained only by practice which sends the fly, instead of straight behind the caster, up into the air, and an expert can do this without danger of catching low bushes, such as alders, etc., which may be close behind. It is during these early days of practice that the novice will acquire a sleight of hand, good or bad, which will stick to him for a long time. Practicing alone he cannot judge of his faults of style. He should beware of slashing his line forward in the hope of getting it out by main strength; remembering that the elasticity of the rod is the projecting power and that the physical strength of the caster is a very small factor in sending a fly to a distance. Again we would impress upon him the necessity of keeping his elbow close to his body in the beginning. This will teach him to depend upon his wrist more than upon his arm. We have many times cast while sitting in a boat and have seen others do the same, with the elbow resting on the knee; this was a favorite mode with the late Ruben Wood.

A beginner should never attempt to cast beyond twenty-five or thirty feet, until he can lay his line straight and without kink upon the water for that distance. He should then pay attention to the falling of the flies upon the water. The first efforts will doubtless be accompanied by a splash. He can, however, soon acquire the trick of checking the line and so regulating the tip of his rod that the flies will fall gently. This is one of the most difficult things to explain, but quite easy to do. It is perfectly possible, at a distance of forty or fifty feet, to cast, check the line, and raise the tip in such a manner that the flies shall alight before the line does. In actual fishing we do not often do this, and it is perhaps more ornamental than useful. In long casts the line will strike the water beyond its middle and gradually follow out until the end is reached, even the point where the leader is joined to the line being in advance of the flies, until this point touches the water, where the flies go on beyond and straighten out to the full length of the cast.

The beginner should, by all means, have a friend to watch when the line goes behind him, and caution him to give more or not quite so much time, although it is seldom the latter caution will be used. Our own experience in teaching novices has been that they fail in not giving the line time enough behind them in order to have it perfectly straight and no whip cracking in the rear. In practice haste should be made slowly, and a certain distance should be well covered and cast with certainty every time before any increase is attempted. Casting with the wind is by far the easiest, and one should begin in this way if there is any wind; afterward he should cast against the wind, when he will find that with a moderate breeze he requires more vim in the cast than he does in the recovery when the wind helps him to get his line well behind. He should by all means learn to cast with both hands, that in actual fishing he may rest one arm by casting with the other, a very great advantage, as he will find in a day's work. No amount of teaching will make him a good caster, practice alone will do this.

HINTS ON BASS ANGLING.

Editor Forest and Stream:

Your correspondent "Noinoe," in your issue of March 25, gives a very interesting description of his method of still-fishing for the small-mouth bass. He advocates fine tackle and one hook, which is apparently exactly the opposite of my advice in a former communication. I believe that the difference in our views of the matter is caused by the different character of the waters habitually fished by each. For still, clear water, I believe his plan is better than mine; but for the kind of fishing I have been accustomed to, I still think that two hooks on one line is the correct thing. More than nine tenths of my bass fishing has been done just below a dam, where the water swirls and boils, and where, early in the season, the black bass is found in all his glory and in full fighting trim. Under such circumstances you cannot see Mr. Bass and he cannot see you. If he sees you he won't bite. Of course you need a heavy sinker to keep the bait where you cast it. I have about made up my mind to try another style of bait-fishing, viz.: casting the minnow, or other bait, as described by Dr. Henshall in his book of the "Black Bass." I believe that to be the best method for most waters when the bass will not take the fly. For this style of casting a very free running reel is necessary, and I believe that those now on the market, that permit of long casts being made in this style, are very expensive. My former inquiries on this point failed to bring any response through the columns of FOREST AND STREAM, but I have received a number of letters containing valuable hints, and have been experimenting with a view to producing something that would cast a very light bait without resorting to metallic swivels or other weights to assist in starting the reel and keeping it in motion, and so far as my very meagre experiments have gone I have been very successful. E. A. LEOPOLD.

RANGELEY LAKE LARGE TROUT.

Editor Forest and Stream:

I was very much surprised to notice in the last issue of FOREST AND STREAM, Mr. Ames's statement quoting me as saying that a trout of thirteen pounds or over was ever taken, to my knowledge, in Rangeley waters. It is surely a mistake. Either Mr. Ames misunderstood me or I said what I had no intention or remembrance of saying, and if the mistake is on my side I am very glad of this chance of correcting it. In speaking in Boston of the catches of trout that have been made at our lakes, I have no doubt referred to what has been done at one cast, but I am very sorry if I worded my remarks so as to give any one to understand that the weight of trout landed at one cast meant the weight of only one trout. As far as I know the large trout taken near the Rangeley Dam a few years ago, by the men fishing for breeding purposes, still stands at the head of the list of our large trout. I did not see the fish weighed, but a man who did told me this afternoon that the weight was an honest twelve pounds and two ounces. A birch bark out of the fish with the weight marked on it adorns the wall of one of the lake cottages. What a pity that that fine specimen of a trout could not have been nicely mounted, its history written up and placed with it in a conspicuous place. It would have told two stories, one, what the Rangeley Lakes could do to grow fine trout; the other, what artificial hatching could do to stop their growing. CAPT. BARKER.

RANGELEY, Me., March 23.

THE TROUT OF SUNAPEE LAKE.

Editor Forest and Stream:

Mr. Livingston Stone, whose name is well-known to all your readers, called to my notice a day or two since, a letter from Dr. C. A. Kingsbury, of Philadelphia, in which he pronounces my suggestion, that if they be Oquassa trout, which have been lately discovered in the Sunapee Lake, they may be the descendants of the plant of 4,000 fry of that variety made by Mr. A. H. Powers in June, 1879, when we were both members of the N. H. Fish Commission, as "quite improbable, if not absolutely impossible." Also another letter from Mr. John D. Quackenboss, of New York, who has had for a dozen years a summer cottage on the shore of the lake and is well versed in its inhabitants and who warmly indorses my suggestion, for which I hereby return him my thanks.

Now, Mr. Kingsbury's statement as to the impossibility of my suggestion, seems to be rather an ex-cathedra assumption inasmuch as the landlocked salmon from the Schoodic eggs have increased in weight from two to twelve pounds by the same change of habitation, and as I now believe that what I first suggested as a possibility is extremely probable. I will give my reasons for such faith.

In the first place, let me premise that I was born and brought up in this village within thirty miles of Lake Sunapee, and although I went away from here, when seventeen years old, more than forty years since, I have always when practicable made an annual visit of more or less duration to my birthplace. When a boy I was familiar with the Sunapee trout, and have seen them of three or four pounds weight, which was considered very large and was, I think, as large as they used to grow in those days. When Mr. Stone handed me these papers, he asked me, "to what cause do you attribute this abnormal growth of these fish in Sunapee Lake?"

"To the abundance of smelt food," I answered, and he then asked me when the smelt spawned and what was their size. I told him early in April or as soon as the ice was out of the lake, and their ova were not much larger than a mustard seed or a No. 8 shot. "They are small enough then," said he, "for the young trout just planted in May or June to swallow?"

I told him that they were, that a young trout could easily dispose of half a dozen of them.

"Then," said Mr. Stone, "I think this may account for the increased size of the trout, if they are those which you planted in 1879, for I have noticed in my experience in fish-culture that the size of the fish depended very much on the quantity of food which they could obtain during the first six months of their existence, and if these young trout just planted in the lake, could obtain an unlimited supply of young smelt for food, I do not see why they should not have grown to this unusual size."

Mr. Stone has promised me to give you his own opinions on the matter, and I will not forestall him any further, but simply say, that the growth of the landlocked salmon in Sunapee has been surpassed by that of the plant of the same date in Squam, where one was taken last year that weighed sixteen pounds from the same lot of Schoodic eggs, and that in both these cases the lakes are well stocked with fresh-water smelt, as is also the case with Sebago Lake, where the great size of the landlocked salmon has long been known.

This plant of Oquassa trout referred to was part of a lot of eggs, 20,000 in number, which were divided between Sunapee Lake in the west, New-Fond and Squam lakes in the center, and Cook's Pond in Brookfield and Lovewell's Pond in Wakefield, in the east of the State.

The first possible discovery of them is that of Mr. Hodge, when on the spawning beds in Sunapee last October; but it will be interesting to ascertain if they can be found in the other waters the coming autumn, and I shall urge the present Commission to examine them.

If they can be found of equal size in Squam, it will give some additional ground to the smelt food theory, and it will then become desirable to stock all trout waters with smelt also, for they are a very prolific fish.

I will say no more for the present, except that if any extraordinary variety of trout had existed in Sunapee Lake forty years ago I should have been as likely to have known it as any one, and I am very sure that the swarm of poachers who have infested the lake would have found them out and stripped the spawning beds, as they have those of the lake trout in Winnepesaukee long ago, and by lake trout I mean *Salmo namaycush*, for the dwellers around all these waters call their fish lake trout, even to little Dublin Pond, which has been rechristened Lake Monadnock.

SAMUEL WEBBER.

CHARLESTOWN, N. H., March 30.

Editor Forest and Stream:

Ten pounds in six years is certainly a phenomenal growth for a trout, but is it impossible or only phenomenal? The capacity of a young trout for digesting and assimilating food is so great that it is hardly safe to set a limit to it anywhere. When a trout breeder has six boxes of young trout fry to feed, the first lot is hungry and ready to feed again by the time the sixth lot has been fed, so that the breeder could keep going the rounds of the six boxes all day without finding a single fish that had had enough food to satisfy it.

This digestive power of a trout is something marvellous and it so rapidly destroys the animal tissues that have been taken into its stomach as food that, as Col. Lyman suggested, its operation more resembles that of fire than anything one would expect from any kind of organic action.

Now, the more the fish eat, the faster they grow. Indeed their amount of growth seems to be in direct ratio to their amount of food, other things being equal, and this is particularly true, or rather particularly noticeable in the first few months of their lives, when their capacity for taking and disposing of food is so enormous.

In fact the difference in size between well fed young trout and poorly fed ones is sometimes so great as to be almost incredible, and I can testify from personal experience that I have seen many a well fed yearling trout that could and would eat for his breakfast a dozen poorly fed trout, such as I have also seen, of his own age.

Now to bring my remarks to a point. Do we really know that it is impossible for an Oquassa trout to get a ten pound growth in six years? May it not be possible after all that with a trout's prodigious capacity for eating and growing, there may be favorable circumstances which would enable the fish to accomplish this growth in the time given. My friend, Col. Webber, to whom New Hampshire fish-culture is so much indebted and whose efforts to improve the fish of Sunapee Lake are so well known, has told me of something which has certainly prepared the way in Sunapee Lake

for this extraordinary growth of ten pounds in six years and has made it possible, if anything can make it possible. Col. Webber says that fresh-water smelts have been plentifully planted in Sunapee Lake. This being the case and the introduction of smelts being supposed to be a success, I can hardly imagine anything more likely to furnish for the trout just the right kind of food to give them a rapid and extraordinary growth. The smelts hatch out just enough later than the trout and are just enough smaller to provide the trout in their infancy and early life with the very best growing food that they could possibly have. This must increase their ultimate growth immensely, for this depends more upon the feed and growth they get during the first six or eight months than during any other similar periods of their lives. If after this they have all the food they want, and if smelts are abundant in the lake, I do not see why they should not. Then I cannot help thinking that it is still an open question about the extraordinary growth that is claimed for the Oquassa plant. At all events I do not think that any positive evidence in favor of the Oquassa theory should be set aside, or would be even much weakened by any *a priori* argument based on the supposed impossibility of the alleged growth, it being generally conceded, I believe, that *a priori* arguments are at best extremely hazardous and fragile weapons against evidence resting on established facts.

Some day it may be proved that Oquassa cannot grow ten pounds in six years, but it has not been proved yet and it does not seem to me that the alleged impossibility can be fairly used yet in the present state of this good-natured controversy against the advocates of the Oquassa explanation of the appearance of the new fish.

On the other hand there appears to be, from Mr. Hodge's statements, conclusive proof in his possession against the Oquassa theory, viz., evidence that the fish was caught in the lake before the Oquassa were put in in 1879. The establishment of this fact would settle the question forever in Mr. Hodge's favor, and it now seems to be in order for Mr. Hodge to produce this evidence.

LIVINGSTON STONE.

CHARLESTOWN, N. H.

A TROUT ANGLER'S FIRST SALMON.

I HAVE been a trout fisherman for many years, but have always had an ambition to try salmon fishing, and last summer was able for the first time to gratify that ambition.

My friend B. and I are members of the Sainte Marguerite Salmon Club, and on our arrival at the river last summer found ourselves assigned to the home pool as our station on the stream. We arrived at the pretty little cottage, which was to be our home for some time, on Sunday afternoon, July 5. After inspecting our very pleasant quarters and resting from our four-mile tramp over the portage, we went to look at the lower pool, which is just in front of the cottage, and found it an ideal place to hook and play a large fish. At the upper end the water comes rolling and tumbling from the heavy rapids above, and all through the pool it is swift and boisterous in mid-stream, with comparatively smooth water on either side. While watching the water, out in the middle of the pool a large salmon came handsomely out of the water, showing his bright silvery sides, and fell back with a splash, "like a Frenchman falling off a wharf," as one of the old Oswegatchie guides used to say. It was a sight to make a fisherman's heart beat a little quicker than usual, and make him look around for his tackle; but it was Sunday, and the Canadian game laws are strict, and we felt it was best to observe them, although it was hard work to sit still and not just try those new rods for a few casts on that water where we knew there were such good fish.

Monday morning bright and early found us stirring, and after a hurried breakfast we carefully examined our rods, lines, leaders and flies, which had been made ready the night before, and started to kill our first salmon.

The lower pool fell to me for the morning's fishing, and, with my pulse beating rather more rapidly than usual, I began casting from the shingle beach at the head of the pool. At the third cast one of the Frenchmen stopped me, and on reeling up showed me my beautiful Jock Scott broken off at the head of the hook. Not being accustomed to a rod sixteen feet long and weighing over twenty ounces, I had struck the fly against the stones behind me and the quick-eyed Frenchman had immediately noticed it. Putting on another Jock Scott, I began casting again, and at the third or fourth cast saw a fish come up out of the rushing, surging water, not over thirty feet away, that looked to me—a trout fisherman—as large as a porpoise. As he turned to go down, in my excitement I struck hard enough to have broken something if he had taken the fly, but fortunately he missed it.

I sat down and rested him for the orthodox five minutes, and then when the fly reached the spot where he rose before, up he came again, only to disappoint me once more.

After another rest, as the fly went over him he came up with a rush, throwing himself out of the water and taking the fly back with him, and started with a fierce rush across the pool. It was my first experience of the rush of a salmon when first hooked, and I found it something simply magnificent. It seemed almost impossible to get the rod up straight enough to give the fish the spring necessary to keep him from breaking line or leader, and the rod in my hand felt as though I had hooked a "limited" express train. He went straight across the river, and when within twenty feet of the opposite bank threw himself out of the water fully six feet. I dropped the tip of the rod quickly, as I had been so solemnly warned to do by all the old salmon fishermen, and he returned to the water still on the hook, and nothing parted. After a run of twenty feet out he came again, and as the sun struck him he looked like a bar of burnished silver. By this time my heart was beating like a trip-hammer against my ribs, and the excitement was intense. After some lively rushes about the upper part of the pool he started for the rapids below, I making quick time over the rocks, but just as he reached a point where I should have had to take to the canoe the men had ready for me, he changed his plans and rushing up stream faster than I could follow to the point he first rose from, he went to the bottom and sulked. This gave me time to fill and light my pipe, which tended to quiet my rather excited nerves. When at last he started, it was to rush to the surface and throw himself out at very close quarters—not over thirty feet away—and it startled me tremendously, and I am afraid the rod was not lowered as quickly as it should have been, but the tackle was new and strong, and as he started off I found he was still "thar," and I began to feel easier. After a few more circles about the pool he began to show he was not as fresh as when he was first hooked, and as the line was reeled in he finally showed himself not over fifteen feet from the shore, where it was quite shoal. One of the men stole into the water with the gaff, but before he was within reach the fish saw him

and made a last desperate dash out to the middle of the river. My hands and arms by this time had become fairly sore from the long strain, and it was really hard work to reel him in again across that strong current. But this time Pete was successful, and as he thrust the gaff in the water, bubbles and blood came up and the pressure was taken off the rod. He raised the struggling fish from the water, and I would not let him stop until he had taken the salmon full twenty feet from the shore. And now I had killed my first salmon! Time fifty minutes from strike to gaff. The scales were brought out and the fish found to weigh twenty-four and a half pounds.

I took my salmon over to the shade of a tree and told the men I had had all the fishing I wanted for that morning, although it was then only half past seven. I lighted my pipe, and throwing myself on the grass, "visited" with my beautiful prize until I knew every inch of him from head to tail, and if I had been an artist could have drawn his portrait from memory.

On the trip I struck altogether 28 fish, saving 19 of them; the largest weighed 33 pounds, the smallest 8, and the average was 17 pounds. I made up my mind that a trout fisherman could readily learn to kill salmon, even on such a rushing, tumbling stream as the Sainte Marguerite is the whole forty miles from Upper Forks to the Saguinay. GARD.

OSWEGO, N. Y., March, 1886.

DEATH OF IRA WOOD.

WE are pained to chronicle the death of our friend and companion of boyhood, Ira Wood, the well-known angler and genial sportsman. Mr. Wood died very suddenly of bilious colic at Albany, N. Y., on Tuesday last. He was born at Greenbush, opposite Albany, about the year 1833, and was consequently close to his fifty-third year. While yet a boy his family moved to Syracuse, where for a long time Ira was chief of the fire department of that city. He served with credit during the war, and a few years ago returned to Albany, where he was in the employ of a large house dealing in stoves. Within a month he opened a store for the sale of fishing tackle, and hardly a week ago he was in our office, cheery as ever, and with bright hopes for the future. Those who met him at the recent fly-casting tournaments in this city were impressed with his manly, straight-forward way, and the unselfishness with which he coached amateurs and helped his opponents when their lines became tangled.

Mr. Wood was a brother to the late Reuben Wood, so renowned as an angler. He leaves a family.

To A FIRM in Gloucester, Mass., who have named a new schooner in his honor, Mr. Whittier has sent a note in which he writes: "I have always been interested in the New England fisheries, and am glad you have honored me by giving one of your schooners my name. I thank you for the compliment, and send you my unasked-for autograph on the sheet inclosed." On the sheet inclosed he had written:

Luck to the craft that bears this name of mine,
Good fortune follow with the golden spoon.
The glazed hat, and tarry pantaloons:
And whoso'er her keel shall cut the brine,
Cod, hake and mackerel quarrel for her line.
Shipped with her crew, whatever wind may blow,
Or delays daily, my wish with her shall go.
Fishing by proxy. Would that it might show
At need her course, in lack of sun and star.
Where icebergs threaten, and the sharp reefs are;
Lift the blind fogs on Anticosti's lee
And Avalon's rocks: make populous the sea
Round Grand Manan with eager funny swarms,
Break the long calms, and charm away the storms.

JOHN G. WHITTIER.

OAK KNOLL, 3d mo., 1886.

WHAT FISH HAS THIS HABIT?—*Editor Forest and Stream:* For several years, in my fishing tours around Montauk Point, Oyster Bay, Sea Cliff, and several places about Long Island Sound, I have noticed in small fishing that I would catch two fish on one hook, the cause of which I attributed to their being frightened by larger fish of prey. So last season I determined to find out, in order to be sure that this statement would be right. I was accompanied by an angler, and by careful watching came to the conclusion that, seeing one of their school taken in an opposite direction, they take hold of the unfortunate's tail to keep him back from a supposed current, as they are used to this habit in streams of opposite currents; and after being out of water, exhaustion causes them to tighten the bite, thus enabling the angler to land them. I would like older anglers than myself to publish their experience of this.—E. FRANK ROSS.

MASKINONGE.—*Editor Forest and Stream:* I see that I am quoted as using the spelling "muscollonge," but in the manuscript of my article mentioned (see FOREST AND STREAM, Vol. XX., page 490), I certainly wrote maskinonge, but the printer made it read muscollonge. In the Province of Quebec there is a Maskinonge county, also several villages, rivers and lakes by the same name, and as it is to be supposed that they there have the correct pronunciation of the word, its glossic is as follows: M-a-s-k-i-n-o-n-g-e. (the sign + stands for the glide from the sound of a letter to the next following). Some years ago I attempted to learn the origin of the above word, and after most diligent inquiries among the best informed habitants, I could only learn that it was the Indian name for the largest of the pike family, *Esox nobilior*.—STANSTEAD (Sackville, N. B.).

BASS FLIES.—Will Mr. Holberton give a little information about the dressing of the bass flies he mentions as taking ones in a late issue of FOREST AND STREAM, if it is not asking too much, so that we will know what to purchase or how to tie? He speaks of a "bass grizzly" and a "bass miller." Are these any wise different from the regular grizzly king or white miller, save that they are tied on hooks of a size suitable for bass? And wherein does a "match-wing ibis" differ from the red ibis, so well known? And will he give the tying of these flies that he mentions—Holberton, post jungle, St. Patrick and Lottie? These may be common species, but there is such a woeful looseness in fly nomenclature, that they, in name at least, are new to me.—PERCYVAL.

AN UNIQUE ANGLING WORK.—For the past three years Mr. Wakeman Holberton, well-known as an accomplished angler and artist, has been engaged in writing a book on his favorite sport. The volume is entirely engrossed by Mr. Holberton's pen on vellum. The illustrations are in pen and ink and in water colors, while the initial letters are illuminated in mediæval style. It is calculated that three more years will be required to finish this volume, which will be a treat to those who are so fortunate as to see it.

FISH AND GAME IN THE ADIRONDACKS.—Mr. A. R. Fuller, of Meacham Lake, Franklin county, writes: "The winter has been a good one for game. My deer have wintered well, and we saw two of them a few days ago, near my log house at the other end of the beach. They did not look thin, and could run well. We see partridge (ruffed grouse) often, and a few days ago I saw three foxes at one time. I cannot hear of any killing of deer in this section, and think there has been none. There has been no fishing. The new fish law for the Adirondacks I think is a good one. We have just finished getting in ice, which is about 22 inches of solid blue, and our next job is to get in wood, and then we are ready for the fishers."

TROUTING ON LONG ISLAND.—Comparatively few trout have been taken on the island during the first week of the open season. Cold northeast storms with rain have prevailed, and but one decent day occurred in the week. This was on Friday, the 2d. At the South Side Club many members have been waiting for better weather, while a few have fished. At times the wind has blown a gale in which no fly-fishing could be done. But few fish were taken on the south side of the island and few or none on the north side. There are plenty of trout in the streams and ponds, which will rise to the fly when better weather comes.

TIP-UP FOR PICKEREL.—"Awahsooge" sends us a modification of "Yager's" tip-up, illustrated in issue of March 4: "Here is a rough sketch of a 'jack' or 'tip-up,' which I think is more convenient than any of those you gave. The two pieces pivot on a screw, and can be folded into very compact shape for carrying. The end of the upper stick that rests upon the ice may be painted black or red to make it show plainly when raised by a fish biting. 'W. J. C.'s' slot might easily be adopted, and would doubtless be an improvement. Any stake arrangement seems troublesome and unnecessary."

MOOSELUMMAGUNTIC LAKE.—I think your correspondent, "Special," is mistaken about the new flowage on the Mooselummaguntic Lake. I have it from good authority that there will be no new flowage this spring. When the wings of the new upper dam are finally completed, as I understand it, there will only be two feet and three inches more water on the lake than there has been for the past two or three springs. —CAPT. BARKER.

KEUKA LAKE.—Keuka Lake has just received into its deep waters 500,000 Halsey trout and 80,000 black bass which were placed therein by Jack Sheridan, of Penn Yan, State fish protector. The trout are from the spawn of trout taken by the late Wm. L. Halsey from the mountain lakes of Oregon, and given to Seth Green to propagate. —*Elmira Gazette, March 27.*

PENNSYLVANIA TROUT SEASON will open April 15, as stated in list of seasons at head of this column last week.

RE STOCKING WITH SALMON.

Editor Forest and Stream:

I wish to obtain answers to the following inquiries:

(1) Has the planting of salmon and trout eggs in any of the Maine rivers resulted in a commercial success; that is, has a river from which the fish had been exterminated, been restocked so as to afford good sport again within, say five years, at a reasonable figure?

(2) What is the cost of eggs and young fish per 1,000 of salmon, trout and landlocked salmon and where can they be obtained?

(3) Is it better to turn in mature fish ready to spawn, young fish or eggs?

(4) What are the best practical works on fishculture?

I should further be glad of an expression of opinion from experts on the following question: Given a river in which salmon are known to have been abundant, but are completely exterminated at present, all obstruction being now, however, removed and ample spawning grounds. Would the expenditure of a sum of money in fish or eggs be likely to result in a success financially in the sale after a few years of fish or fishing privileges?

JOCK SCOTT.
[We will answer the questions hoping to hear from others treating the subject at greater length. 1. Yes. 2. We cannot give cost of eggs or fry, write to Mr. Charles G. Atkins, Bucksport, Me.; Mr. E. M. Stilwell, Bangor, Me., or Mr. Henry O. Stanley, Dixfield, Me. 3. Young fish just ready to feed. 4. The Reports of the U. S. Fish Commission, some twelve volumes.]

BROWN TROUT EGGS IMPORTED.—This spring, Herr von Behr, President of the German Fishery Association, made a shipment of 64,000 eggs of the brown trout, *Salmo fario*, to be divided between Prof. S. F. Baird, Mr. E. G. Blackford and Mr. Fred Mather. This lot was a total loss on arrival. A second shipment of 40,000 from Herr von Behr to the same persons arrived in good order. The steamer Elbe, of the North German Lloyd, will bring a further shipment of 50,000 from Herr Max von dem Borne, the well-known fishculturer, to Messrs. Blackford and Mather, but by agreement will be divided with Prof. Baird. Some of the eggs already received were sent to the U. S. Stations at Northville, Mich., and Wytheville, Va. Mr. Frank N. Clark, in charge of the former hatchery, reports their arrival in good order. Some 30,000 eggs are now in the troughs at Cold Spring Harbor, L. I., and are doing well. Mr. W. L. Gilbert, of Plymouth, Mass., has imported 25,000 eggs of this fish from England, and has sent some to the Blooming Grove Park Association of Pennsylvania, and to other places, reserving 5,000 for himself. The merits of this fish are rapidly becoming known to our anglers and the fry are in great demand.

THE ADIRONDACK HATCHERY.—Some time ago we published a pledge signed by one hundred guides, hotel-keepers, and others, condemning the depredations of the vandals who cut up the nets of the Fish Commission at Little Cedar Pond (now Lake Brandon), and agreeing to sustain any efforts to bring the offenders to justice. We have now received from Mr. J. M. Wardner, proprietor of the Rainbow Lake Hotel, a printed list of as many more names from St. Regis Lake, Bloomingdale, and Loom Lake. Mr. Walters, the superintendent of the hatchery, is now at Cold Spring Harbor, Long Island, hatching land-locked salmon, lake trout, brown trout and smelts, for the Adirondacks, in consequence of the breaking of his dam. He will return with these fish in May.

SHORT LOBSTERS SEIZED.—Damariscotta, Me., March 30.—Fish Warden John L. Thompson seized about 1,000 undersize lobsters in Boothbay and Bristol yesterday. He chartered a small steamer and took the canning factories by surprise.

SHORT LOBSTERS.—The Rockland (Me.) *Courier-Gazette* reports: "Fish Warden Thompson made a seizure of three barrels of lobsters consigned to parties in Boston at the steamboat landing at Wiscasset, Tuesday. Forty out of the two hundred and forty lobsters were found to be less than the law allowed. The seizure has made a great stir among the fish dealers in that vicinity. Warden Thompson is too much for them. The short lobster business has cost a Portland man \$1,300, according to Deputy Fish Commissioner Shattuck of Boston. It is claimed by friends of the lobster law that the lobster fishermen are coming to the commissioners with congratulations on their success in stopping the short lobster business. They say that if it is kept up for only a few years longer the lobster is saved. They appear to be in favor of protection—the great majority of them—and they would be willing to furnish evidence to convict the few who persist in retaining lobsters forbidden by law, but for the fact that their entire property and living is in their lobster pots, and they dare not offend the law breakers. In the case of the Portland man who swore that a car containing short lobsters was the property of the man who had loaned it to him, and that he had no knowledge of the lobsters in it, the commissioners say that they shall have no difficulty in proving that the key to the car was in the possession of the man under arrest. They have other cases against him, and they say he will have to give up the short lobster business. Fish Commissioner Counce, fish warden Thompson, of Newcastle, Nichols, of Winnegance and Despreaux of Brunswick, and others, held a private meeting in Bath, Tuesday, and action was taken concerning the future course to be pursued by these officers of the law. It was the decided expression of all to push things to the fullest extent of the law."

FIXTURES.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary. Kansas City, Mo.

Nov. 22.—Eighth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

April 6, 7, and 9.—Second Annual Dog Show of the New England Kennel Club. Edward A. Mosely, Secretary, Boston, Mass.

April 14, 15 and 16.—First Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

April 13 to 18.—Bench Show of the Buffalo S. P. C. A., Main Street Rink, Buffalo. E. H. Rounds, Secretary, 75 White Building.

April 27, 28, 29 and 30.—Third Dog Show of the Cleveland Bench Show Association. C. M. Munnhall, Secretary, Cleveland, O.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1812, New York.

May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3481.

THE NEW HAVEN DOG SHOW.

THE third annual dog show of the New Haven Kennel Club, held at New Haven last week, was a first-class show. Although there were not so many entries as last year, the average quality was much better. The management was as good as we have ever seen; everything in connection with it ran smoothly, and the exhibitors were warm in praise of the manner in which the show was conducted. There is a genuine ring to the words of welcome with which the New Haven boys greet their visitors that makes them feel at home. There has always been at the New Haven shows an *entente cordiale* among the visitors that renders the reunions there very pleasant. At no show has this been more apparent than at the one just held. The armory of the 2d Regiment, in which the show was held, is very roomy, well lighted and well ventilated. The dogs were comfortably benched, and there was ample room for visitors. The attendance was fairly good at all times, notwithstanding the disagreeable weather of the first two days, and we have no doubt that the receipts of the show will exceed the expenses. The judging in nearly all of the classes was satisfactory, although some mistakes were made. We are pleased to record that not a single protest was made. The performance of the trick dogs was eagerly watched by delighted crowds. Nep, one of the performers, is a nondescript terrier possessed of wonderful powers. He performed many difficult and pleasing feats, displaying in some of them a degree of intelligence that was astonishing. His owner informs us that Nep has been trained entirely by the humane method, and that he has not been struck a blow.

Spratts Patent had charge of the feeding of the dogs, although the club furnished free to those who desired it any description of food called for. We questioned many of the exhibitors in regard to Spratts biscuit, and found that those who had not previously used them complained that they physicked their dogs, and consequently they were not favorably disposed toward them. On the other hand, we found many that feed them at home who like them. One of our most prominent kennels makes a practice of feeding the biscuit for at least a week previous to attending a show, and the kennel man in charge strongly recommends this course, and says that if this is done nine dogs out of ten will thrive on the food.

The judging ring was in the center of the building. It was commodious enough to allow the largest classes ample room. The judging commenced on Tuesday and was completed on Wednesday at noon. We published a list of the awards last week. The list was more accurate than could be expected. The corrections will be found below, together with the remainder of the specials. The judges of the different classes were as follows: English setters, black and tan setters, Irish setters and pointers, Mr. John Davidson, Monroe, Mich. Mastiffs, spaniels, greyhounds, deerhounds, Newfoundland, bull-terriers, pugs, Yorkshire and toy terriers, toy spaniels, Italian greyhounds, Mexican hairless and miscellaneous, Mr. C. H. Mason, Bay Ridge, L. I. Beagles, Mr. L. D. Sloan, Philadelphia, Pa. Foxhounds, Messrs. Sloan and Davidson. St. Bernards, collies, bulldogs, poodles, fox-terriers, basset hounds, dachshunds, black and tan, Bedlington, Irish, Skye, Dandie Dinmont and rough terriers, Mr. Ronald H. Barlow, Philadelphia, Pa. Trick dogs, Messrs. A. H. Wakefield, Providence, R. I., and Jas. Lindsay, Jersey City, N. J. Veterinary, Dr. Edward C. Ross, New Haven, Conn.

MASTIFFS.—(MR. MASON).

There were sixteen entries in these classes, and the quality was decidedly good. Homer, looking very well, represented the champion dogs and Prussian Princess and Rosalind the opposite sex. The judging of the next class was eagerly watched by admirers of the breed, and both the Ifords found numerous friends. Caution's beautiful color and excellent condition were not of themselves sufficient to outweigh the finer lines of Cromwell. The latter is a truly formed dog,

longer and stouter than his opponent. He stands on the best of legs and feet, moves well, and has plenty of bone. He is rather long from eye to nose and lacks depth of muzzle, and his eyes are not the correct color. He is above the average in skull and has small ears. Caution has plenty of skull, and it is fairly well formed, but his ears are much too large, and he is underhanging more than we like to see. He would do with more length of body; and his hindlegs are weak and of faulty conformation. Hector and Dread took the vhc. cards, and they were looking well. Hector is the truer-formed dog of the two. Boss was absent. Cedric's Gurth is a big, long-legged dog, short between the couplings and faulty in head, muzzle, ears and feet. Maidus is faulty in head, muzzle, eyes, ears, size and color. Court is leggy, light of bone, shallow in body, houndy in head, and faulty in ears and feet. Laylass is faulty at both ends and is light of bone. Nero is deficient in head, size and color. Hannibal was looking so tucked up that the prize was withheld from him in the puppy class. Dread Jr., in the same class, shows little mastiff character. There was a sharp tussle between Iford Cromwell and Prussian Princess for the handsome prize offered by Mr. Wade, and after a very careful inspection of the two dogs the blue ribbon was handed to Cromwell's owner. Princess has the best of it in muzzle, wrinkles and eyes, but in other respects Cromwell is the better dog. He stands over more ground, is much truer formed in body, and has by far the best limbs. The judge kept well to type, and discarded houndy specimens.

ST. BERNARDS.—(MR. BARLOW).

Bonivard and Rohna were the entries in the champion classes for rough coats. The former is a most typical dog. In the open dog class First Choice was selected for premier honors. We cannot indorse the decision, and would have given the prize of place to Merchant Prince. These dogs have been fully described in our previous reports. Rudolph II., not looking so well as he did at Newark, deserved his card, and the others were well placed. Miranda was well selected as the pick of the rough-coated bitches. She is a good one, but was not in full coat on this occasion. Stella was overrated. St. Bride, c., should have been second. Venus is sour in expression and lacks the necessary markings. Lady Athol and Margery were absent, as was also Loyal, only entry in the puppy class. There were no smooth-coated champions, and in the open dog class Rigi was placed over Apollo. Rigi is a very little dog of good type, but he lacks bone, is not sufficiently square in muzzle, and has a badly-carried tail. Apollo is too houndy in head, but should have been first. Mt. Velan is faulty at both ends and lacks character. Bernice was absent from the corresponding bitch class, leaving Alma II., fully described in our Newark report, to win. Lodi was alone in the puppy class. He is faulty in head, ears and coat.

NEWFOUNDLANDS.—(MR. MASON).

Bruno, looking well, scored an easy victory. Major, placed second, is faulty in head and coat. Joe is a long way removed from bench show form, being faulty in head, coat, limbs and tail.

GREYHOUNDS.—(MR. MASON).

Bouncing Boy, looking well, scored a bloodless victory in the champion class. In the open class Hawthorn Belle, a racy little bitch, not quite stout enough for our liking, beat Harlequin, whose worst faults are in feet and back. Fido would have been higher on the list but for his plain head and light eyes. He stands on capital legs and feet, has good propellers, and was well shown. Hush Money was badly shown, and has not improved on his puppy form. The special prize offered by the club for the best greyhound bitch was a splendid trophy, and fell to the share of Hawthorn Belle.

DEERHOUNDS.—(MR. MASON).

In the champion class Mac, looking well, beat his old opponent Bran, who, as usual, was short of coat. The open class for dogs and bitches was undoubtedly the best ever seen in this country. Chieftain, a magnificent specimen, remarkably good in almost every point, was first, and his kennel companion Wanda, a great bitch, was properly placed second. Ignorant persons have stated that Chieftain's head is too thick. It is sufficiently wide at the base to prevent the dog from slipping his collar before he is sent out of the slips, and this is just what it should be. Heather, a fair specimen, took the reserve card. He is much below the winners in good looks. Mercia is far too small and is faulty in head, ears, and coat. The winner in this class took the special prize for the best dog or bitch entered in the classes judged by Mr. Mason.

POINTERS.—(MR. DAVIDSON).

There were thirty pointers entered, with five absentees. Beaufort was alone in the champion class. In the open class for large dogs first went to Captain Fred, rather a taking looking dog, with a fair head, muzzle and eye; his ears set a trifle high, and he is too throaty for so small a dog, being very close to the dividing line. He has a fair chest and back, moderate shoulders, good loin, quarters and tail, except that it is carried too high; he has rather weak pasterns, and is too straight behind; he also has dew claws. Second went to William Tell, first at Boston last year. He was looking well, except that he was much too fat; this magnifies his worst fault—too much width in front. Had he been in good form he would probably have beaten Fred. Zeb, vhc., is a big, rather coarse dog, with a fair head, except that he is undershot and has too large an eye; he is too wide in front and is a bit slack in back; he has lots of bone, good legs, feet and tail. Sancho, hc., looks a workman, but is not a show dog. He has heavy shoulders, is too wide in front and round in barrel; his head is moderate. He is quite fair in back, loin, legs and has a good tail. In the corresponding bitch class Nell, looking well, was alone. In the small dog class first went to Nick of Naso, winner of third at Newark the previous week. Second went to Bon Ton, winner of first at New Haven last year. He does not improve with age, and his head has decidedly gone the wrong way. Ned, vhc., has a good loin and tail, but otherwise has not much to recommend him. He is weak in head with heavy shoulders, light bone and poor feet. Dixon, hc., has a fair head, although his ears set too high. He is rather lathy and shallow and weak in pastern and is also straight behind and has too long a tail. Rex, also hc., has fair shoulders and loin and a good tail, but is faulty in head, a bit shallow, and has ragged hips and might be better in bone. In the corresponding bitch class first and second went to two fairly good blacks. There was not much to choose between them. Both have fair heads disfigured by light eyes. Phyllis, placed first, has a trifle the best of Mistrel all round, except in feet. The puppy class brought out four good ones, all of one litter, by Beaufort. They carried off the kennel prize, which they well deserved and also won the stud dog prize for Beaufort. Songo, placed first, is a fine upstanding dog with no serious faults except that he is not right in pasterns and in consequence does not move so well as Bowdoin, winner of second. We liked him better than Songo, he has no conspicuous faults, and has full as good a head as his brother, and moves much better. He is a very nice dog and shows lots of quality. We shall expect to see him among the winners next year. Sachem, vhc., is a bit light in muzzle, and not quite so good in head as the others, but otherwise nearly their equal. Santer, hc., is also well up with them, except that he is a trifle heavy in head, throaty, and a little too straight behind. All have good legs, feet and tails, and are a credit to their sire. Lady Snow, vhc., winner of first at Newark, is not so good as either of the four, and should have been content with the two letters. Daisy Belle, hc., was in too good company. She is very good in chest, body and tail, but is weak in head, light in bone, and faulty in pasterns, with turned out toes.

ENGLISH SETTERS.—(MR. DAVIDSON).

Rockingham and Plantagenet graced the class for champion English dogs. Plantagenet being out of coat left his formidable opponent to score an easy victory. There were no entries

Jessie. Black and tan bitch, age and pedigree not given, by Warwick Kennels, Bridgeport, Conn., to S. Jordan, same place.

Quittie. Black, white, tan and ticked beagle bitch, age and pedigree unknown, by Warwick Kennels, Bridgeport, Conn., to William Russell, same place.

Jim. Black, white and tan beagle dog, age and pedigree unknown, by Warwick Kennels, Bridgeport, Conn., to J. Ellis, Milford, Conn.

Rex. Liver and white pointer dog, whelped August, 1884, by Mike out of Lena, by Warwick Kennels, Bridgeport, Conn., to William C. Russell, same place.

Joe. Liver and white pointer bitch, whelped Aug. 14, 1885, by Fred out of Fan, by Warwick Kennels, Bridgeport, Conn., to J. Ellis, Milford, Conn.

Dandy. Blue Skye terrier dog, whelped Feb. 15, 1886, by Joe out of Gyp, by Warwick Kennels, Bridgeport, Conn., to G. W. H. Powers, same place.

Bessie A. Lemon and white English setter bitch, whelped Aug. 10, 1884, by Dashing Lion out of Arminda, by Memphis & Aven Kennels, Memphis, Tenn., to E. E. Pray, Denver, Col.

Luffa. Black and tan, little white, collie bitch, whelped June 19, 1884 (A. K. R. 2490), by B. Holmes, Jr., Mountville, N. Y., to H. B. Everett, Riverside, Cal.

Rosie. Lemon and white fox-terrier bitch, whelped August, 1885, by Foxie out of Cate, by C. H. Dole, Lynn, Mass., to Chas. W. Nutting, same place.

Duke de Fuard. Black, white and tan English setter dog, whelped Jan. 1, 1885, by Glen Rock (A. K. R. 1616) out of Leah II, by E. W. Jessup, St. Charles, Del., to D. W. Evans, New York.

Hero-Fanny whelps. Newfoundland, whelped Feb. 11, 1886, by Warwick Kennels, Bridgeport, Conn., a black, white on chest, dog to W. J. Hills and a black dog to J. Evans, same place.

Kaiser-Lisette whelp. Black and tan dachshund dog, whelped November, 1885, by Wm. Loeffler, Preston, Minn., to F. G. Stewart, Hoosick Falls, N. Y.

Waldmann II.-Coral whelp. Red dachshund bitch, whelped December, 1885, by Wm. Loeffler, Preston, Minn., to F. G. Stewart, Hoosick Falls, N. Y.

Gaffa II. (A. K. R. 2323)-Floss (A. K. R. 2457) whelps. Black, tan and white collie, whelped Nov. 21, 1885, by B. Holmes, Jr., Mountville, N. Y., a dog to Geo. Rudd, New York, and a bitch to W. A. Mitchell, Hathers, Pa.

Roy-Princess Trice (A. K. R. 1092) whelps. Red Irish setter dogs, whelped March 10, 1886, by W. Holberton, Hackensack, N. J., one to W. D. Chase, same place, and one to E. E. Williams, New York.

Scottish Queen. Iron gray Skye terrier bitch, whelped Feb. 22, 1885, by Scott out of Highland Mary, by Dr. Wm. F. Sanderson, Philadelphia, Pa., to N. V. Ketchum, Savannah, Ga.

Chica. Black, white and tan English setter bitch, age not given, by Royal Blue out of Diana, by Walter B. Peck, Central Falls, R. I., to Wm. Talman, South Attleboro, Mass.

Betsy D. Blue belton English setter bitch, age not given, by Druid of Dodge's Rose, by Walter B. Peck, Central Falls, R. I., to Jos. H. Brady, Pawtucket, R. I.

Murlock. Black, white and tan English setter bitch, whelped March, 1885, by Foreman out of Pet Berwyn, by Walter B. Peck, Central Falls, R. I., to Theodore Reble, Providence, R. I.

Dorcas. Red Irish setter bitch, age not given, by Gleuco out of Syren II, by Walter B. Peck, Central Falls, R. I., to Jos. S. Barber, same place.

Chip. Red Irish setter dog, whelped Jan. 19, 1885, by Arlington out of Dorcas, by Walter B. Peck, Central Falls, R. I., to Dr. Stephen F. Lee, Pawtucket, R. I.

Nellie Laverack. Blue belton English setter bitch, whelped June 7, 1885 (A. K. R. 2764), by Henry Sturtevant, Medina, N. Y., to T. H. Adams, Pawtucket, R. I.

Vaida. Black, white and tan beagle bitch, whelped Nov. 18, 1885, by Little Duke (A. K. R. 1994) out of Mischief (A. K. R. 2592), by Joseph H. Brady, Pawtucket, R. I., to Wm. Talman, Tarrytown, N. Y.

Mikado. Black, white and tan beagle dog, whelped Nov. 18, 1885, by Little Duke (A. K. R. 1994) out of Mischief (A. K. R. 2592), by T. H. Adams, Pawtucket, R. I., to Wm. Talman, Tarrytown, N. Y.

Lola. Black, white and tan English setter bitch, 6 yrs. old, by Bake out of Fannie, by H. E. Hamilton, New York, to A. E. Burch, Washington, D. C.

Bethus. Blue belton English setter dog, whelped March 17, 1881, by Rock out of Mez, by S. L. Boggs, Pittsburgh, Pa., to H. F. Schell, Brookline, N. Y.

PRESENTATIONS.

Dash. Black, white and tan Llewellyn setter dog, whelped June 29, 1885, by a brother of Morning Star out of Lady Bright, by T. J. Flack, Washington, D. C., to D. Gilbert Adler, Philadelphia, Pa.

OUR MILITIA MARKSMEN.

ADJ. GEN. R. C. DRUM, in his report to Secretary of War Endicott for the last official year, accompanies it with a series of reports made by officers of the army detailed during the past summer and fall to inspect militia encampments in the various States as follows:

Alabama.—At Mobile, by Capt. W. H. Powell, Fourth U. S. Infantry, and First Lieut. C. B. Satterlee, Third U. S. Artillery, at Montgomery, by Second Lieut. J. T. Thompson, Second U. S. Artillery.

Illinois.—Near Ottawa and near Springfield, by Capt. T. Schwan, Eleventh U. S. Infantry.

Maine.—At Augusta, by Major W. H. Graham, Fourth U. S. Artillery.

Massachusetts.—At South Framingham, by Major A. C. M. Pennington and Capt. J. Egan, Fourth U. S. Artillery, at Higham near Lake Chebaco, by Major A. C. M. Pennington, Fourth U. S. Artillery.

Minnesota.—At Fairbault, by Capt. G. Lawson, Twenty-fifth U. S. Infantry.

Mississippi.—At Greenville, by Capt. F. B. Hamilton, Second U. S. Artillery.

New Hampshire.—At Concord by Major R. H. Jackson, Fifth U. S. Artillery.

North Carolina.—At Asheville, by Col. H. M. Black, Twenty-third U. S. Infantry.

Ohio.—Near Cleveland, by Lieut. Col. R. H. Coffey, Seventeenth U. S. Infantry.

Pennsylvania.—At Harrisburg, by Major W. J. Volkmar, assistant adjutant general, at Fairmount Park, by Major R. H. Jackson, Fifth U. S. Artillery, Capt. W. Mills, Second U. S. Infantry, and First Lieut. C. Chase, W. E. Birkheimer and C. B. Satterlee, Third U. S. Artillery.

Rhode Island.—At Oakland Beach, by Capt. J. S. Egan, Fourth U. S. Artillery.

Texas.—At Centerville and Creston, Clear Lake and Dubuque, by Second Lieut. C. J. T. Clarke, Tenth U. S. Infantry.

Vermont.—At St. Albans, by First Lieut. C. P. Miller, Fourth U. S. Infantry.

California.—At Santa Cruz, by Major R. T. Frank, First U. S. Artillery.

Illinois.—At Centerville, etc., by Second Lieut. C. J. T. Clarke, Tenth U. S. Infantry.

Alabama.—At Selma, by Second Lieut. J. T. Thompson, Second U. S. Artillery.

Nebraska.—At Lincoln, by First Lieut. E. S. Dudley, Second U. S. Artillery.

The report of course covers a great many matters of detail not particularly interesting to readers of FOREST AND STREAM, but the reports and accompanying criticisms upon the arms and rifle practice of several bodies of State troops are worth reproduction in a compact form.

ADJ. GEN. DRUM calls the special attention of the Secretary to the subject in his general report, saying:

"I beg to invite your attention to the subject of the obsolete arms and ammunition in the hands of the State militia or stored in the several State armories. Many of the men are armed with the discarded caliber .50 Springfield rifle musket, for which it is difficult to obtain cartridges, and some of the obsolete weapons in the hands of the militia for improved arms and ammunition, I beg earnestly to recommend it to be urged to grant authority for returning to the United States, at a fair valuation, all obsolete guns in hands of States, the money value thereof to be placed to their credit and to be drawn against in form of issue of improved weapons. Until this is done the usefulness of the State militia, in either State or national emergency, must remain sadly impaired by the great disadvantage under which

From Alabama Capt. Powell reports that "a number of the companies were supplied with the Springfield safety notch rifle, and these were, as a rule, in excellent order. A majority of the companies were, however, armed with the old rifles, model of 1873, and though serviceable, were not in as good condition as they might be. But there is an excuse for this, for the opportunity does not present itself to these men for any extra care of arms, almost all the time that they can be spared from their respective professions being consumed in perfecting their drill." There was no mention of any rifle practice either at the camp or otherwise.

The New Hampshire report by Major Jackson says of the arms and their use: "The arms are Springfield breechloaders, caliber .45, with the cartridge box is of the breech-loading pattern (the inside a block of wood with holes bored in it for the reception of the cartridge). It could not be used to advantage in active service for obvious reasons. There was no ammunition for these arms brought to or used during the encampment. Target practice, which is now neglected in consequence of the want of ranges and ammunition, should, in my opinion, be begun at once. I was informed that rigorous efforts are to be made in this direction before the next camping season."

Mississippi makes a much better showing than the last named State, and Capt. Lawson says, under head of arms: "Springfield rifle, caliber .45. With but few exceptions the guns are old and badly cared for, some having been in use for five years, and have the appearance of having been kept in a dark room or cellar."

Touching the 21st Regiment Minnesota militia, the same officer says of arms: "Springfield rifle, caliber .45, and in most of the companies were in good condition; some, however, had old rifles, which have been in use for several years. It is rather discouraging to a soldier who expects himself on presenting a good appearance to be armed with such a weapon. Target practice was under the direction of Lieutenant (or Doctor) Skinner, the instructor of marksmanship for the regiment. The Doctor is an enthusiast on the subject, and had everything pertaining to the range in fine condition. He has a system of signaling from the firing point to the range by means of a mirror set in a frame between the target and the firing point. It reflects everything that occurs at the firing point. Some large numbers are painted on canvas, and are placed in a box at the firing point. When a shot is fired and there is any delay in marking the shot, the officer in charge says, 'Mark No. —,' when a man near the box displays a figure that corresponds with the target he wishes examined. The number is instantly seen at the pit, and the target turned down, examined, and signaled. I have seen this system work as far as 500 yds., and it did well. The distance was 100, 300 and 500 yds. The companies and the field staff and band fired at the same time. There were 100 marksmen and 32 sharpshooters qualified during the encampment."

The Pennsylvania report covers much space. Major Volkmar says generally of the arms:

"I carefully examined the property remaining in the arsenal, and this seems to be a proper place for me to most earnestly invite attention to the wretched stock of obsolete arms and ammunition in the hands of the Pennsylvania National Guard. Armed with the discarded caliber .50 Springfield rifle musket, for which it is difficult, if not impossible, to obtain cartridges, I found the State reserve of ammunition marked with the stamp of manufacture in 1871—material now as unreliable as it is cumbersome. In all other respects well equipped and self-sustaining, this fine division of troops is in a situation little better than if armed with clubs. It is remarkable how, with such miserable means, they have attained the creditable record they have in target practice. In one of the companies I found a company in which the commanding general assured me that every man was a qualified marksman; while in another company of the same regiment I discovered the captain to be a retired colonel of cavalry of the Regular Army, who had emerged from his well-earned repose, at the call of his neighbors, in order to give them the benefit of his military experience and knowledge."

"To be so poorly armed as are these troops would discourage the most heroic officer of the Regular Army, and in view of their possible usefulness at any day to the general public, it is no longer seem a most wise measure if, at the approaching session of Congress, a general act was passed providing for immediate exchange, when requested, of all obsolete arms now in hands of National Guards of States, for improved Springfield (caliber .45) rifles and appropriate ammunition therefor."

"I have been informed that at the close of the last fiscal year there were on hand in the United States Ordnance Department upward of 125,000 Springfield rifles, caliber .45, and that about 30,000 of these guns are manufactured annually; while on June 30, 1885, over 5,000,000 caliber .45 rifle ball cartridges were on hand."

"If, notwithstanding the foregoing exhibit of facilities for replenishing the national reserve of ordnance, Congress should not deem it advisable to pass a general act looking toward absolute exchange of obsolete weapons in the hands of the militia for improved arms and ammunition, perhaps another remedy might be granted for reducing the United States, at a fair valuation, all obsolete guns in hands of States, the money value thereof to be placed to their credit and to be drawn against in form of issue of improved weapons. Until this otherwise efficient National Guard of Pennsylvania is better armed than it is now, its usefulness in either State or national emergency must remain sadly impaired by the great disadvantage under which it suffers."

Springfield Carolina Col. Black reports and says: "They are armed with Springfield rifles, caliber .45, safety notch, which are in good condition, highly prized, and ready for any service. They have 3,000 rifles, with full sets of accoutrements for the same. There was no target practice during the encampment. Little or none this year. Regulations provide, and they hope to indulge during the coming year."

The Rhode Island militia were inspected by Capt. Egan, and he reports: "There was no target practice. There was no range or time limit, nor is a brigade encampment of a few days, where the men and combinations of large bodies of troops should be of the first consideration, the place for it. Though its importance is thoroughly realized, the brigade is behind other States in shooting. It had to be neglected (reason, no money to pay its expense); but last year \$2,000 was appropriated for target practice, a State range was established, and all the companies, under the instruction of Capt. Howe, an expert marksmanship instructor, had one day's practice in target and firing five shots. This year the same or more practice will be had, and gallery practice introduced. The muskets were received last year, are the latest improved ones, and are all in good condition."

The Massachusetts report went into camp at several points, at South Framingham Maj. Pennington found the First Brigade, and of it he says:

"Target practice received no attention in the camp of this brigade, except that the officers of one of the regiments were permitted to practice at their own request. There is a fine 200 yds. range, with twelve iron targets, near the camp; but, inasmuch as the companies have ample opportunities for practice at home stations (the law requiring the towns where companies are located to provide a suitable range), it was not regarded as important that time should be taken from other duties for this purpose. Target practice receives considerable attention at this time, as it is attested by the presence of the companies, a State inspector of rifle practice has charge of this branch of military instruction, and teams from the various commands assemble at certain times and places designated in orders for practice and competition. The infantry is armed with Springfield rifle muskets, caliber .45, and arms are in good serviceable condition."

At the Lake Chebaco camp Maj. Pennington found:

"Target practice was indulged in every day until the whole command had been at the range and each man had fired his score."

In Vermont Lieut. Miller does not find things in a very encouraging way. He reports:

"The arms were of the old .50 caliber, Springfield pattern, some of the first that were altered from the muzzle to the breech-loader. The cartridge boxes and belts were also of a very old pattern. I understand that the companies are not only not drilled, but are not even drilled. Target practice appears to be almost entirely neglected in this State, and a large majority of its National Guard know little or nothing about the actual use of the guns with which they are armed. We may feel assured that if the State will provide her troops with good arms and ammunition for target practice, it will take this class of men but a short time to become good shots. In my judgment the usefulness of the Guard would be promoted if they were armed with the present service rifle, caliber .45, and the National Guard, Vermont, with their zeal and efficiency, should be furnished with guns and equipments that they could feel would be of some use to them in service, and they should be taught to use them effectively. One day should be devoted to target practice; and to excite an interest and a spirit of emulation among the companies, prizes should be offered for teams of ten men from each company; also for individual marksmen. Ammunition should be provided, and each man of the National Guard required to fire a certain number of rounds each year. With this encouragement the companies would soon provide

themselves with ranges and the target practice and matches, would be a useful feature of the muster."

Ohio men come in for inspection by Col. O'Leary, who simply says: "The arms used by the Ohio National Guard are Springfield rifles, caliber .45, the same as used in the United States army."

In Iowa Maj. Abraham found much to report upon. He found in the lower part of the southwest corner of the encampment was the target practice ground, giving a range of 200 yds. one way and of 400 yds. the other. At the lower end of the 200 yds. range an emplacement has been constructed in front of a high embankment, and serves as an excellent purpose for instructing men in firing along the crest of an enemy's earthwork, as well as for the protection of the markers. "The troops were armed with the Springfield .45." Of the target practice drill he reports: "This most important branch of instruction was very thoroughly conducted by Col. E. C. Farrington, State inspector of rifle practice. Under his personal supervision competition took place each day of the encampment, to which I was a most interested spectator. The results, I consider, demonstrate a high degree of proficiency, alike most creditable to the inspector and the officers and men under his command. The instructions contained in Blunt's Rifle and Carbine Firing have been adopted by these troops, and were followed as closely as could be expected. The militia speak in the highest terms of Blunt's book, and in every respect have adopted his rules for classification, which raises the standard reached by the militia of any other State. There is every reason for holding out inducements to this fine body of marksmen to send teams to compete at Creedmoor, and it is to be hoped that the State authorities will not delay in taking steps to that end."

The Illinois report was inspected by Capt. Schwan, who reports of the First Brigade: "The infantry regiments were armed with .45 caliber Springfield rifles. In the 4th Infantry five of the seven companies, and in the 3d Infantry about one-half of the men had rifles unprovided with the safety notch or improved rear sight. The cavalry battalion was armed with the United States Springfield carbine, caliber .45, with safety notch and new sight. There was no formal inspection. Great interest was manifested in target practice, in which the troops were drilled for the first time. The only firing points were on the north side, and quite close to the edge of the Rock, scarcely a quarter of a mile from camp, and about 300 yds. to the northward were placed five vertically sliding targets, constructed after the Brinton pattern. The Illinois and Michigan Canal was immediately in front and the Rock Island Railroad closely in rear of the targets, the centers of which were only about 8 yds. apart; a high bluff north of the targets formed an effective butt. The markers' shelters, though well built, were not continuous, owing to the shortness of the time during which the range was expected to be in use, and the amount of labor which would have been required to make them so. Lookouts were posted at elevated points at the sides of the range to give notice to the markers of the approach of canal boats or rail way trains, and to warn off passers by. A more extensive range, or one affording intermediate firing points, was not obtainable within a convenient distance from camp. The erection of at least one pole, near the targets, flying a streamer to indicate the prevailing strength of the wind, might have added to the success of the practice. The place on the 'Rock' from which the firing was done was considerably above the level of the ground on which the targets stood, but this could not be avoided. The practice, which lasted four days, passed off without accident, and was well conducted by Col. J. A. Shaffer, general inspector of rifle practice, a very capable officer, and by the officers of the regiments. The targets were done by details, forty men from each regiment belonging to different companies being on the ground at the same time, under the immediate supervision of the regimental inspector of rifle practice, who has the rank of captain, and is a member of the regimental staff. The men not having had any previous experience, Col. Shaffer thought it best, in order not to discourage them at the beginning, to allow to each a sighting shot, and to permit the prone instead of insisting upon the prescribed position. For the purpose of making the targets more numerous in place of the short-range target was used. The average number of points made by each regiment, out of a possible 25, was as follows: 4th Infantry 10.81, 3d Infantry 10.51, 1st Infantry 9.92, and 1st Cavalry 5.88."

About the Second Brigade Capt. Schwan says:

"The infantry was armed with .45 cal. Springfield breechloading rifles, about one-third of them having the improved rear sight and safety notch. In some instances pieces of both kinds were found in the same company. The target practice was under the direction of Col. J. A. Shaffer, general inspector of rifle practice, and by the officers of the regiments. The targets were done by details, forty men from each regiment belonging to different companies being on the ground at the same time, under the immediate supervision of the regimental inspector of rifle practice, who has the rank of captain, and is a member of the regimental staff. The men not having had any previous experience, Col. Shaffer thought it best, in order not to discourage them at the beginning, to allow to each a sighting shot, and to permit the prone instead of insisting upon the prescribed position. For the purpose of making the targets more numerous in place of the short-range target was used. The average number of points made by each regiment, out of a possible 25, was as follows: 4th Infantry 10.81, 3d Infantry 10.51, 1st Infantry 9.92, and 1st Cavalry 5.88."

The following rules determine the classification of officers and men: "The men of the marksman's class were those who made 23 or more points out of a possible 25 in a score of 5 shots at 500 yds. For the first class at least 15 points, or 92 per cent, at 200 yds. were required. Those who fired at either range but failed to qualify for either of the classes named constituted the third, and those not firing at all, whether present or absent, the fourth class. The majority of those reported as belonging to the latter class were absent from camp. There seemed to be no reason for this. Multiply the number of marksmen by 100, of first class men by 60, of third-class men by 10, of fourth class men by 0, and divide the sum of the products by the number of men contained in all the classes."

The general results of the firing during the encampment are indicated by the figures of merit of the several regiments, which were as follows: 6th Infantry, 38.20; 9th Infantry, 23.50; 8th Infantry, 22.43; 5th Infantry, 21.17; 7th Infantry, 15. The entire brigade's figure of merit was 18.17.

As showing the progress made in rifle firing, it may be stated that at last year's encampment but 22 qualified as marksmen, while this year more than five times that number (113) made the requisite qualifying scores.

"I heartily concur with Col. Rice in his recommendation that since a thorough instruction in sighting, position and aiming drills and gallery practice is an indispensable prerequisite to good work on the range, the month of June be exclusively devoted to these preliminary drills at the armories, and that regimental and company commanders be impressed with the fact that instruction in rifle firing is at least as important a part of the soldier's education as tactical instruction, and that they are as much responsible for the one as for the other."

Lieut. Thompson reports from the Montgomery camp of the Alabama troops, 3d Regiment: "The importance of rifle practice seems to be realized, but practice is impossible without ammunition. The purchase of which the State makes no appropriation. By reloading the shells, the cost of practice is reduced to a sum which cannot be complained of in consideration of the benefits derived. Gallery practice with reduced charges and ranges could be had at the company armories during the winter months. Besides, this practice would add much to the interest and attractiveness of the service if it were properly conducted."

"By strategy the soldier is brought to the vicinity of a fight; by the maneuver he is placed up the line of battle; and by skirmish tactics he is put in the exact position to do good work. But of what benefit is all this if, after getting there, he is unable to use his rifle with precision and rapidity? At the next encampment I would recommend that a competent officer interested in the subject be detailed on special duty in charge of rifle practice. Every man should be practiced in the theory, pointing, aiming, and estimating distance. The best marksman in each company should be held."

"The regiment is already armed with the Springfield rifle, caliber .45, which is satisfactory in every respect. A certain number of rounds of ammunition should be issued to each company, to be kept on hand for emergencies. I would also suggest the necessity on the part of the State of making a suitable appropriation so that each officer and man should be allowed to expend fifty cartridges, at least, in rifle practice during camp."

The California report is made by Major Frank, and he found at the Santa Cruz camp: "The arms are the Springfield rifle muskets."

caliber .45—the oldest model of this caliber. They were clean, with some exceptions, and free from rust, but are very old, much battered and bruised, and appear at some time, perhaps while in store, to have been injured by rust.

Some target practice was had, but it was not general, and there appeared to have been no regular or systematic instruction in this important branch of a soldier's duty. It is recommended that an inspector of target practice be appointed, who should visit periodically every armory and institute a regular system of armory instruction in target practice, which should be required of every soldier in addition to the practice required upon the range. The present powerful arm is of little avail in the hands of troops not skilled in its use.

The Nebraska troops were found at Lincoln by Lieut. Dudley, who reports: "The troops are armed with the Springfield rifles, caliber .50. These have all been very rusty at some time, and show signs on their exterior of effort on the part of the soldier to get them clean. An inspection showed, however, more or less rust still inside the bore. A few guns were exceptionally well cared for, but the large majority were not entirely free from rust, and yet would be called 'serviceable.' A number were 'unserviceable' from various causes, and some had already been condemned by the inspector, but were still in use for lack of better ones to replace them.

"There was no target practice during this encampment. The regulations of the Nebraska National Guard, published in 1883, provide an allowance of five rounds per month to each man, and that a report of such practice shall be made to the regimental commander. I am informed that at the encampment in 1883 prizes were offered and a competition took place under the supervision of the commanding officer."

Iowa had a number of camps, all inspected by Lieut. Clarke, who says of the 2d Regiment: "The regiment was armed with the Springfield rifle—one company with caliber .45 and seven with caliber .50, old pattern, all breechloaders; they were in good condition, having but recently returned from Rock Island Arsenal, where they had been undergoing needed repairs."

Of the 6th Regiment he says: "This regiment is armed with Springfield rifle, breechloader, two companies having caliber .45, the remaining six being armed with caliber .50, old-pattern Springfield. Arms in splendid order, particularly the caliber .50 rifles, they having been but recently received from Rock Island Arsenal, where they had been sent for repairs."

About the 6th Regiment, at camp near Clear Lake, Lieut. Clarke says:

"No target range had been selected, although suitable grounds could easily have been found for one. The uniform was the full dress United States regulation, without helmets, as in the other regiments. The regiment was armed with caliber .50, old-pattern Springfield breechloaders, which were in fine condition, having but recently come from Rock Island Arsenal, where they had been undergoing repairs."

In the 4th Regiment he found that two companies were armed with the Springfield .45 breechloader and six with the .50 caliber old-pattern. Arms in good order, most of them just from the Rock Island Arsenal, as in the other regiments.

"A range of 200 yds. had been laid off and targets provided, under the supervision of the major of the regiment. The best five shots from each company were selected as teams, the one making the highest score to be known as the 'regimental team,' every one of its members being entitled to wear a gold medal as long as his team score should be ahead of all others in the regiment. Five silver medals, very neat in design, were also offered for the best corresponding number of individual scores."

Generally speaking, Lieut. Clarke recommends: "I am informed that most of the companies have facilities at home for target practice, and that, as a consequence, many good shots are already to be found in the guard. The State allows 1,000 rounds of ammunition a year for this purpose. I earnestly recommend that this be increased, and that proper attention be paid the subject at all succeeding encampments."

New York State is the first one reported upon, and Lieut. Col. Clason makes an extended report, saying of the camp at Peekskill:

"The supply of blank ammunition is fixed at fifteen rounds per man. For use on the range, forty rounds per man of ball cartridges are furnished. Most, if not all, the regiments bought out of their own funds ammunition in addition to that issued by the State, and it would seem as though a larger supply could very profitably be used. It was the intention for the State to hold in reserve at least half a million rounds."

The New York National Guard are armed with the .50-caliber Remington. It will be made to correspond in caliber with the United States system when that shall have been finally decided upon.

"The work done and the results gained on the rifle range in continuation of the experience at Creedmoor and at the various regimental armories deserve special commendation, as might be readily inferred from the presence on the field of such men as Col. Bodine and Gen. Roberts, the Inspector-General of Rifle Practice of the State. He was assisted by Col. Beal, Col. David, Major Fox and the different regimental instructors."

"There are ranges for 100, 200, 300 and 500 yards, with seven No. 2 and seven No. 3 targets of the Brinton make. The men are divided into three classes, the third comprising such as have had no practice, the second such as practice on the 100 and 300 yard ranges, kneeling at the latter distance, and who, when they have completed a score of 25 at both these ranges taken together, form the first class and continue practice at the 200 and 500-yard ranges, lying down at the latter distance. A score of 25 here makes them marksmen, and a score of 42 sharpshooters. In addition, there is required volley firing of five rounds at 100 yds., as follows: By company, two rounds; by rank, one round; by company, one round front rank kneeling; by company, one round rear rank in front kneeling; and also five rounds in the skirmish drill, advancing from 250 to 50 yards three rounds, and two on the return."

Col. Clason does some fine writing in winding up his report and among other things says:

"A body of men who can go through the manual with all the uniformity of a die might certainly amuse, but could hardly obtain that respect from the mob that is felt for a shooter known to be good for his man up to 500 yds., or over. Exact alignment and unvaried likeness of step and wheel are well enough, and probably under the corporal's stick, reached a higher point of perfection than a hundred years ago. The modern soldier's grenadier is more than he has since attained through the pleasurable stimulus of gate fees and prize packages; but when days of danger come, such mechanism will soon be eliminated in favor of the man taught how best to protect himself in disposing of his enemy and who has learned how most completely to provide for the exposure and wants of the march and bivouac, and whose reliance is not so much upon the touch of his neighbor's elbow as upon his own efforts and experience. If we have not time for both the military and marrow of the profession, the former can suffer be slighted."

"The fire drills of the utmost importance and men should be kept at it until they have lost all fear of the piece, are perfectly familiar with its working and power, and can be trusted to handle it with ease, confidence and effect."

"Under the conditions given to our present life, powder will have as much to do in bringing about any millennium as philanthropy; and the more terrible its possibilities, the greater the need for intrustment in the only men of trained intelligence, special capacity and tried character."

COL. LAIDLEY.—A dispatch from Palatka, Fla., dated April 4, states that Theodore T. S. Laidley, Colonel or Ordnance, United States Army, died there on that date, aged 65 years. He was born in Virginia, and was appointed from that State to the West Point Military Academy in 1838. He was graduated four years later and made an Ordnance officer at Watervliet Arsenal, N. Y. He went to the Mexican war and participated in the siege of Vera Cruz. For gallant and meritorious conduct in the battle of Cerro Gordo he was made Brevet Captain April 18, 1847. He followed General Taylor and obtained the title of Brevet Major for bravery in the defense of Puebla. After serving at the Washington, Charleston and North Carolina arsenals, he was, in 1856, made Captain of Ordnance for 14 years' continuous service. He compiled a new edition of the "Ordnance Manual." For services during the rebellion he was made Major of Ordnance in 1863, and two years later, for faithful service in the Ordnance Department, he was made Brevet Colonel and was subsequently advanced to Lieutenant Colonel. He was Colonel of the 1st New York Artillery from May, 1866, to April, 1871. In 1875 he was Colonel. He was on the retired list at the time of his death. He will be remembered among riflemen as the author of "A Course of Instruction in Rifle Firing," prepared under order of Gen. Benét, dated 1877. The work was transmitted to the War Department in 1879 and published by Lippincott the following year. It gave rise to litigation between Col. Laidley and the Government, claiming that the book was an infringement upon his earlier work. The courts sustained his claim, and the book was withdrawn from the market, to be replaced a few years after by the manual prepared by Col. Blunt.

FULLSHED RIFLE CLUB, April 2.—12 ring target, possible 120; J. H. Brown 119, G. Zimmerman 118, M. Dorrler 118, E. Flach 117, J. Scherbringer 117, J. Schütz 117, C. G. Gerlach 116, C. M. in 116, E. Holzmann 115, C. W. Karcher 114, H. Gunther 114, J. Jordan 114, A. Liss 111, H. Sindlinger 109, V. Steinbach 108, D. Holland 102, D. Loutzki 100, R. Wragge 100, H. Wasmuth 100, A. Shaw 97.—A. Lobes, Secretary.

NEWARK, N. J.—The Zettlers, of New York, are anxious to arrange a match between ten of their men and the ten best shots of New Jersey for \$400 and are likely to be accommodated.

SIR HENRY ST. JOHN HALFORD.

A CABLE dispatch on Monday brought the brief announcement, "Sir Henry Halford is dying." To the riflemen of America he will be remembered as the hero of several well-fought matches, and either as victor or vanquished was always the same courtly gentleman. For years he had been a leader among the advanced riflemen at Wimbledon, and from the start he took the liveliest and most intelligent interest in the international matches. He entertained Col.

Gildersleeve and his men on their visit to Great Britain in 1875, and the American gentlemen shot over the private range of Sir Henry at Wistow Hall. In 1877 he captured the British small-bore team to Creedmoor and took defeat gracefully. In 1882 he brought over a team of military shots and administered a sharp knockdown to Col. Bodine and his team of militia shots, and when in the year following Col. Bodine peacefully invaded Wimbledon the defeat was repeated and emphasized.

It was at the time of his visit here in 1882 that a writer sketched the old Elcho shield veteran, and part of his words we quote:

As the books write him down, he is Sir Henry St. John Halford, Bart. of Wistow Hall, in the county of Leicestershire, Lieutenant-Colonel of the Leicestershire Rifles, born in the year 1828. Apart from his dignities he is a Vaingian. The Vaughans are a very, very ancient Welsh family. Lord Lishurne is now the head of the house.

Toward the close of the last century James Vaughan was a physician in the borough of Leicester. Among the magnates of the town was Alderman Smalley, who had married a daughter of Sir Richard Halford, whose baronetage was in a few years destined to become extinct. Hester, the Alderman's daughter, was wooed and won by our reputable young country doctor, and in time became the mother of a son who was christened Henry and was sent to London to study medicine. In the course of years he became famous. He was made physician to that plain old monarch King George III. He was created a baronet and revived the title of his mother's family, being thenceforth known as Sir Henry Halford. That was in 1809.

In his son Henry, the second Baronet, a new strain appeared in the family. King George's physician married the daughter of Lord St. John of Bletso, the head of another very ancient family, descended from Sir John St. John, whose half-sister was the mother of King Henry VII. One of the St. Johns married a daughter of the Duke of Newcastle, another had the hardihood to seek a wife in America, and to marry Miss Schuyler of New York. "Data fata secutus" was their motto, and as a rule, they did not seek other than their appointed destinies. They were zealous Conservatives, and the head of the house always took his seat at the council board of the Carlton Club. So Sir Henry Halford, second of the name, was content to follow the traditions of his race; he, too, was a Conservative; he, too, was a member of the Carlton; and when his son Henry St. John Halford was born, he determined to bring him up as became the prospective master of Wistow. But the third baronet had a soul above politics. He sighed for military glory, and not being allowed to join the army, he forthwith joined the volunteers. Then began his record of success as a marksman. He swept the prize board at Wimbledon. He won the Cambridge Cup, the Albert Cup, the Association Cup, the Duke of Cambridge's prize, and twice made the highest score in the competition for the Elcho Shield.

Although he had been always the friend of Americans, although he had entertained our countrymen at Wistow, he was at first slow to come to the United States. He thought it improper that Irishmen or Scotchmen should accept separate challenges from America. He thought that the match should be national, not sectional. With his customary frankness he stated his objections, being supported by Lord Wharfedale and other men of note, and when the Scottish and Irish teams determined to come to Creedmoor, he objected with vigor. Next year, however, in 1877, he made up a national team to compete for the Centennial trophy. His men were of a wholly different kind from those whom he now commands. Many of them were barristers, men who could merely practice at the butts in the intervals of waiting for a brief. There was Humphrey who won the Queen's prize, and Evans, a Cambridge M.A., and Pigott, a University man, and Fray, a Doctor of laws, from Edinburgh. All the profession joined in that strange collection. There was Col. Lennox Peel, of the Scots Guards; Colonel Fenton, of the Seventy-seventh Foot; Grant Peterkin, who had shot tigers and stuck pigs in the jungles of India; William Rigby, brother of John, the rifle maker; Ferguson, the Scot; Milner and Greenhill, of the Irish team; Sergeant W. H. Gilder, an old soldier and a hardy catbermorn. Falstaff's regiment was not more curiously composed.

Sir Henry Halford stood on the deck of the City of Richmond as she steamed up the bay. The American delegation went down to meet him. Judge Stanton made a little speech. It was a somewhat rhetorical little speech. It was even a little speech in the view of Mr. Hannibal Chollup. "The representatives of two great nations," said the Judge, "are now to meet at Creedmoor armed with deadly weapons. And seeing that Sir Henry did not act, the orator remarked: "Kind sir, I welcome you, and extend the hand of friendship." Whereat the captain of the British team shook hands very warmly, then blushed, grew confused, cleared his throat several times, said he would make a speech if he could, but he couldn't, and was immensely relieved when the band of Governor's Island blared out and drowned his excuses. So it was after the match. Sir Henry Halford had been the life of his party. He might have been seen everywhere in the field, slipping about in the tent, looking after the watchers in the rifle pits, making the best score of the team—71, 63, 71 on the first day; 75, 66, 66 on the second—marring his total by one fatal miss alone; and when it was all done and he was enthusiastically called by the crowd to make a speech, he could only say, "Gentlemen, to say I am not disappointed would be to lie. I congratulate you on your team."

Who that was present has forgotten the scene in Gilmore's Garden when the trophy was presented to the Americans? The hall was decorated with flags and plants. Gilmore's brass made the roof resound. Mr. Carleton sang "Hearts of Oak." Fashion was there in its choicest costumes. Sport was there in its turbulence. The American team, in their brown working suits, came down the platform arm in arm with the British team in their evening dress. Judge Brady made jests about wailing and gnashing of teeth. Sir Henry Halford advanced amid a tempest of applause. "No," he said, "I do not do it. I do not gnash my teeth. You have beaten us honestly, fairly, nobly. You have done it thoroughly, but in all courtesy. We made a good score, but not good enough to beat you. I wish to God we had."

Our portrait of the man who knew so much of the art and science of rifle shooting is a very good one. It represented him as he appeared at Creedmoor on his first visit. Five years later he had still the figure, tall and erect, the commanding presence. His men obey him implicitly; he is their Marlborough, their Wellington. Time had dealt gently with Sir Henry Halford. The five years had helped to frost his beard and hair; but look more closely, note the sunny smile that plays about the mouth; see how the snows of age vanish at its coming, how the light of an Indian summer breaks over the features; how boyish is the face, how genial, how honest—the face of an English gentleman, a man of peace.

RANGE AND GALLERY.

CHICOPEE FALLS, Mass., March 27.—Maynard Rifle Club weekly shoot, at Riverside Rifle Range, good attendance, weather conditions all that riflemen could wish for. The club used Eames's standard union target. The following are the scores by decimal, Massachusetts and Creedmoor counts.

Decimal Count.												
Garden	9	8	10	8	8	8	7	8	6	8	50

GARDNER, Mass., April 1.—There was a good attendance at the last regular meeting of the Gardner Rifle Club at Hackmatack Range. The new standard American target was used, distance 200 yds., shooting off-hand. The score was as follows: G. F. Ellsworth, 90, 88—178; W. C. Loveland, 83, 87—170; L. N. Dodge, 78, 75—153; Frank Nichols, 78, 74—152; Charles Edwards, 59—126; C. Lefland, 58, 63—121; C. N. Edgill, 61, 62—123. The following is a detail score of three strings shot during the afternoon by

G F Ellsworth	7	6	7	8	9	10	10	10	10	9	84
	8	10	10	9	10	8	8	8	8	9	90
	7	10	7	9	9	8	8	8	10	88	

WALNUT HILL, April 3.—The riflemen turned out in numbers to-day at Walnut Hill. The day's weather conditions were poor, the storm making the targets indistinct. A team match for practice was shot. W. Charles, with a military rifle, made a fine score of 88 on the standard American target. Fast day, April 8, the riflemen will meet and matches C and F will close.

Decimal off-hand Match.

ZEUGNER VS. PLAISTED.—George Plaisted, of the Zettler Rifle Club, of New York, and August Zeugner, of the Greenfield Rifle Club, shot a match for \$100 a side at Greenfield, Monday, March 25. The conditions were 25 shots each, German ring target, 200yds., off-hand, any rifle. The match resulted in favor of Zeugner by a score of 517 to Plaisted's 466.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

A MAGAZINE TRAP.—The Raub trap would seem to reduce the question of a flying object as a target down to the minimum of trouble and expense. You will give an idea what the trap is like. It consists of a cylinder into which a number of cardboard disks are inserted and fed up to a slit by a spring. A lever arm sends the whirled disks whirling up in the air, and when the score is shot out they are picked up, and those showing shot marks are scored as hits. Mr. Raub claims for his invention that it can be used in shooting

gallery and fired with equal success. Can be adjusted to throw either to right, left, or perpendicular, and at any angle required. The height of flying target can be regulated by the simple adjustment of the spring. The targets are three inches in diameter, and weigh $\frac{3}{4}$ ounce. Twenty-five can be thrown from the trap in 5 seconds or as rapidly as required and can be used many times, thereby making the shooting very inexpensive. The trap is arranged to be either bolted to the box in which it is packed, to a stake in the ground, or to the floor when used in shooting galleries. Each trap is compactly packed in a box and is made of composition of hard clay and straw board, colored light on one side and dark on the other, and can be thrown with either side to shooter. The trap is arranged to hold 25 targets numbered from 1 to 25 to correspond with score sheet accompanying each trap. The trap throws but 1 target with each full pull of the cord, and can be operated either by the foot of shooter or by an assistant. The trap, packed in box with 500 targets, scores, cord, etc., complete, weighs but 25 pounds and is a valuable luxury taken into the sales agent's stock of these traps, and report a satisfactory sale since their recent introduction upon the market.

DUNELLEN, N. J., April 3.—Middlesex Gun Club match at live birds, 3 ground traps, handicap, 30yds. bounds, Long Island rules:

	1st Sweep.	2d Sweep.	3d Sweep.
Canon, 26yds.	111-3	301-2	111-3
Quimby, 24yds.	111-3	111-3	110-2
Richards 23yds.	101-2
Ayers, 24yds.	101-2	011-2
Williams.....	110-2	101-2	110-2
Dickens.....	111-3	100-2
Squires.....	010-1	100-1	111-3
Terry.....	111-3	111-3
Miller.....	011-2	111-3	111-3
Campbell.....	010-1

Quimby, Terry, Miller and Dickens divided first money in sweep No. 1 and 2, Canon wins second sweep No. 1 by killing all in 3d sweep. Terry, Richards and Canon tied for 2d money in 3d sweep. Quimby winning second after Dickens had made him kill 5 birds out of 10 in the shoot off at 30yds.—DUFFER.

WELLINGTON GUN CLUB.—The contest for the recently presented to the Wellington Gun Club by the ladies of Wellington opened on April 1. The entries were numerous, the leading scores being for the first ten, two re-entries of 9, Stanton 9, Wilson 8 and Sanborn 8. The other events: 1. Five blackbirds—Adams and Snow first, Renard and Papanti second, Schaefer third. 2. Five pigeons—Tucker, Adams and Schaefer first, Moore third, Papanti third. 3. Five blackbirds—Swift first, Sanborn second, Adams and Schaefer third, Tucker fourth. 4. Five pigeons—Suow, Swift and Schaefer first, Adams and Renard second, Palmer third, Sanborn and Schaefer second, Adams third, Swift fourth. 5. Five pigeons—Tucker first, Schaefer second, Adams third, Snow fourth. 6. Five blackbirds—Sanborn and Schaefer first, Tucker second, Swift third, Palmer and Bradstreet fourth. 8. Five pigeons—Palmer, Moore and Schaefer first, Snow second, Renard and Swift third, Sanborn and Tucker fourth. 9. Five pigeons—Renard and Tucker first, Stanton, Schafer and Palmer second, Swift third, Papanti fourth. 10. Five blackbirds—Stanton, Schaefer second, Bradstreet and Gage third. These pair pigeons—Stanton first, Swift second, Adams second, Sanborn third, Papanti fourth. 11. Five blackbirds—Snow first, Stanton second, Schaefer and Short third, Palmer fourth. 12. Five pigeons—Swift, Palmer and Renard first, Stanton, Wilson and Sanborn second, Adams and Schaefer third, Moore fourth. 13. Five blackbirds—Swift first, Sanborn and Schaefer second, Moore third, Short fourth. 14. Five pigeons—Snow first, Gage and Adams second, Woodruff and Wilson third. 15. Five pigeons—Adams first, Snow second. 16. Miss and Gut-Taken first. Adams. A contest for a diamond badge will soon be held on the grounds of the gun club.

MASSACHUSETTS RIFLE ASSOCIATION.—The Massachusetts Rifle Association, in addition to the regular practice and sweep stake competitions, offer for competition of members, on the following conditions:— Entrance fee, 25 cents each day; score to consist of 7 clay-pigeons from three traps, 18yds., and 3 pair blackbirds, 18yds.; four elegant diamond collar buttons, valued, viz: One at \$25, one \$20, and two at \$15 each, inscribed M. R. A., 1886, A., B., C., D., respectively. The Association also offer for competition to all non-members, on the same days and conditions, the following prizes, viz: One collar button, valued at \$20, inscribed M. R. A., 1886, F. Competitors for the non-members' trophies, making equal scores on the day of competition, will each be credited one point in the class in which their score is made. Competitors for the non-members' trophy making the highest score or scores on the day of the competition will each be scored one point. At the close of each day's competition, competitors who have scored in the different classes will shoot off to determine who shall be the holder of the trophy in their class until the following shoot. The holders of the trophies shall hold and vouch for the trophies until the next competition, when they shall deliver them to the secretary of the Association. At the final competition, competitors who have, during the several competitions, scored an equal number of points in the different classes will shoot off for the ownership of the trophies. In the event of any competitor having tied for more than one trophy, such competitor must elect, before shooting off, for which trophy he will shoot for. Ties in single matches will be shot off at three angles (take place at Walnut Hill Range, to open on Wednesday, April 7, and succeeding alternate Wednesdays, viz.: April 21, May 5 and 19, June 2, 16 and 30, July 14 and 28, Aug. 11 and 25, Sept. 8 and 22, Oct. 6 and 20), and will come off at the designated times, regardless of weather. Class shooting in all matches. Shooting to begin at 10 A. M. Entrance fee 25¢ each day to non-members. Dinner served and ammunition for sale at the range. The range to open for practice to all every week day except on days devoted to rifle shooting.

STANTON, Va., April 2.—Match between Bargamin and Summerson, of the Stanton Gun Club, and Cord and McClean, of the Hagerstown (Md.) Gun Club. 50 clays, 18 yds., 2 angles.

[illegible]

Coord. 1001101036101000100111001001011100001000111-26
 Second match at 25 days:
 Bargatin 1111111111111111001111-23
 Summerson 1111111111111111111111-24
 McClellan 1101101101100101001111-19
 Cord 000010101100010101010011-1
 Whittle 0111111111111111111111-22

Whittle shot independently of the others.

SPRINGFIELD GUN CLUB.—Regular shoot at club grounds, Maspeth, L. I., March 31:

Major Aery	1110011111-7	M Englert,	0010000101-5
Al Davis	0.00011010-3	M Bairich	01010101-4
Dr Mullins	111110100-6	A Strohmenger	1000100001-3

The low average was caused by a bottle of wine breaking over the cartridges, in consequence of which they failed to reach.

FITCHBURG, Mass., April 1.—Members of the Fitchburg Rifle and Gun Club were out to the River street range yesterday shooting clay-pigeons. Out of a possible 30 the totals of each were as follows: E. N. Cummings 22, G. W. Weymouth 21, A. W. Baker, Jr., 19, F. H. Sperrin 15, W. I. Fox 14, H. I. Wallace 14, George A. Colony 14, U. L. Gotham 10. Walter Simonds 7, J. E. Kellogg 5.—E.

THE FOREST CITY GUN CLUB of Savannah has elected the following officers for the ensuing year: President, E. J. Kieffer; Vice-President, John Riedeman; Secretary and Treasurer, J. D. Helmken; Directors, John Booker, P. J. Ott, P. O. Kessler, J. Rocker, F. G. Jangstetter, Geo. Eberwein.

JAMAICA, L. I.—There are few clubs on Long Island where, as much intellect, wealth and sociability exist as in the Rod and Rifle Association of Jamaica. This fact is made only the more interesting when it is known that every member is a resident of the village in which the headquarters are situated. The name is indicative of the intentions of the original members, but these intentions have almost been forgotten. The rod has given way to whist and the rifle is only spoken of as an ornament to the walls of the club-room. When first organized this club was called the Rod and Rifle Club, in the rear of the "Judge's" home in the eastern part of the village, and some very credible shooting has been done by the members. The range now is a thing of the past, but the love for the rifle still exists among a few of the members, who take advantage of every opportunity to indulge in one of their favorite pastimes. While nearly every member swears by either rod or gun, they find more pleasure in hunting or fishing in couples, than the trying conclusions with teams from similar organizations throughout the State, at the target range. The club-room is a large room, and is decorated with a row of bring, with brown stone trimmings, and is one of a row of four belonging to the Herriman estate. Inside it is handsomely fitted up, and on every side is evidence of the taste of the men who spend their evenings in the rooms. Deer antlers, buffalo heads, canvas-back ducks, storks and in fact all species of birds and game that have been hunted by the gentlemanly sportsmen adorn the walls, occupy brackets in the corners and crop out in every direction the visitor sees. Cards, chess, dominoes, checkers and billiards are among the attractions of those who prefer them to reading or discussing the political chances of some candidate, probably one who is a member of the club.

JOIN THE NATIONAL GUN ASSOCIATION.—Send 10 cents, for handbook giving all information, to the Secretary MATT R. FREEMAN, General Manager, F. C. ETHERIDGE, Secretary and Treasurer, Macon, Ga. Board of Directors: Dr. L. E. Russell, Springfield, O.; C. M. Stark, Winchester, Mass.; J. Von Lengerke, New York city; Washington A. Coster, Flatbush, L. I.; Wm. G. Cooper, Savannah, Ga.; E. A. Crawford, Tallahassee, Fla.; M. R. Freeman, W. W. Parker and F. C. Etheridge, Macon, Ga.—*adv.*

Nachtrag.

Address all communications to the Forest and Stream Publishing Co.

CRUISE OF THE COOT.

The Cruise of the Coot will be continued in our next issue.

A CLASS FOR THE LARGE SINGLE-STICKERS. If there was any doubt as to whether the older boats would save their time over the new and larger class, it was dispelled very early in the first tri race, when the 70ft. Priscilla paired off, leaving Bedouin and Gracie together astern. Since then it has been perfectly evident that the present time scale left the 70ft. boats out of the race, and to remedy this matter the Eastern Y. C. have this winter created a separate class for the large yachts over 70ft. The New York Y. C. propose to follow their example at the meeting this week and to establish a similar class of over 70ft., making the second class include Gracie, Bedouin and Mischief with boats of this size. The question was mooted last week as to the probable fate of the large yachts in the buying and it was generally considered that they were too expensive to be kept up, and would be converted into schooners. Now two more are building and the fatherless Priscilla has at last found a real owner, and it looks as if the class had come to stay. Ever after the cup race of this year is concluded. The outlook for the 70ft. class is much less promising, and it will muster only two boats in New York and probably three in Boston. The small r class, under 55ft., is filling up in away that is suggestive, and it probably will take the place in popular interest so long filled by Gracie and her sisters.

OSWEGO Y. C.—This club will cruise to Charlotte on July 3.

LAKE ONTARIO YACHTING.

Editor Forest and Stream:

While there will be no boom in yachting on Lake Ontario and its great inlet, the Bay of Quinte, in 1886, there is yet every indication of the sharpest contest that has yet taken place for the championship of the Lake Yacht Racing Association—in the first and second classes at least. Belleville has kept ahead heretofore, in the first class with the *Norah* in 1884 and the *Atlante* in 1885, and in the second class with the *Iolanthe* in both years. This year, in the usual order, we have the *Wendell* and the *Wendell* for the first honors, are to be disputed, and by no means antagonistic. Mr. Goodenough is a large schooner, and which you have had particulars, will no doubt dispute the highest honors in the first class with our champion sloop *Atlante*, and in the second class a new and formidable competitor to our peerless *Iolanthe* will make her debut. This craft, which has been named the *Vision* was built at Cobourg, by Cuthbert, to the order of a gentleman whose name has not been made public. She is described by us to have seen her best of beautiful model and well and strongly built of iron, and is a schooner, and is a schooner, and is a schooner, in the same manner as the of the Atlantic, now building at Bay Ridge, and the dimensions of hull and spars are given as follows: Keel, 29ft.; length overall, 34ft.; beam 12ft.; mast, 36ft., topmast, 17ft.; gaff, 17ft.; boom, 32ft.; bowsprit, out-board, 18ft. Her keel, timbers, garboard streak, bottom as far as waterline, wales and all deadwood are of white oak; the planking above waterline and deck of the best yellow pine. The *Laura*, of Kingston, has been cut in two and lengthened several honors in her class. *Laura* was a good boat last season and won several honors in her class. She was a good boat last season, but the champion closer at Kingston was badly beaten here, receiving second honor by a lucky streak. She will be a formidable opponent if any improvement is made in her.

The *Iolanthe* has not been altered, but she has been smoothed down finely and will be in perfect trim. If handled as ably as usual she will take a lot of beating.

The big sloop Atalanta, been, I have been informed, chartered by the members of the B. Q. Y. C., and will make the circuit which will probably be commenced here. FORT TACK.

BELLEVILLE, Ont.

ONONDAGA Y. C.—This club, organized last November, now has a membership of 93; it was incorporated Feb. 6, the incorporators being Philip A. Barker, Dr. Victor, M. Smith, Wm. Wescott, Charles D. Dibble, Charles N. Brown and Frank L. Stevens. The fleet now numbers seven sailing and four steam yachts, and there are about thirty sailing skiffs, canoes and rowboats owned by members of the club. In exploring the waters of Onondaga Lake during the summer and during the coming season, several members having expressed the intention of buying yachts, the club is building for the use of its members a sectional boat house, 60x20ft. It is being built in sections so it can be removed in the fall to the club's winter quarters, the low, marshy shores of Onondaga Lake being submerged in the fall and spring two feet at least, and a permanent structure would be crushed in the ice. The new building will be situated on the Salina Pier, the property of the Geddes Pier, on the westerly side of the lake, free of charge, on which to erect its club and boat house, but as at least two-thirds of the members of the club live on the easterly side, it was decided that on account of the inconvenience the kind offer could not be accepted. The management of the Salina Pier offered the club a tract of land also, but demanded a yearly rent of \$100, which the members unanimously refused to pay as they deemed it too exorbitant. The matter has been settled by the club securing a tract of land southwest of the Salina Pier on both banks of the old channel of Onondaga Creek, which forms a natural harbor and has ample depth of water at all times to accommodate the fleet. The unlooked for opposition of the manager of Salina Pier is a subject of general comment both by members and outside parties, and their unfavorable opinion of the club is being widely spread. The club's future seems to be far from overcast, and every member is working for the success of the club. The opening day and first regatta will take place May 31. Our fixtures will be forwarded to you soon.

HAMILTON, Ontario.—The yachts are all getting ready for the coming season, which, no doubt, will be an early one. The Cruiser, Molly, and Whistling are all having more ballast put on outside. The latter has been replanked and newly decked, and will have a new suit of sails throughout. The Cruiser has been lengthened 4ft. in the bows, and has had her counter pulled out about 2ft. She will also appear in a new suit of sails and rig. She has had a ton of iron put on her keel outside, and will be the first sloop which has taken step in this direction in these waters. The cutter Whistling has been taken to Port Dalhousie, where Messrs. A. Muir & Bro. have her on the dry dock placing two tons more ballast on her keel, and lowering her keel, sail, and rig. The cutter will have a new keel, and no inside ballast. Her owner expects by lowering her weight in this way to be able to discard one ton of lead and still retain her stiffness. She is also having her counter lengthened and some other work done on her. The yawl Molly is having her ballast arranged in a like manner to the Whistling, and will now carry five tons outside. She is to have a new sail plan on a larger scale. The Brunette, Cacique, Thetis, Flirt, and Neptune have had nothing done to them. The cutter, however, has had her keel, and some of her rigging, repaired. She is a little deeper than his other productions, the Cruiser and Neptune, and will no doubt be an able little craft.

A MODERN ENGLISH CRUISER—The *Mary*, the new cruising craft for Mr. Cosmo Romilly, was lowered down into the water on Wednesday. Her leading dimensions are: Length on the load water-line, 50ft. 3in.; length over all, 65ft. 6in.; beam, 11ft. 3in.; draft of water, 5ft.; tons, 28 (by light measurement). She has 10 tons of lead on her keel, and iron ballast inside. The yacht possesses good accommodation for six persons, with a w. c. and wardrobe on one side and a w. c. and wardrobe on the other, while in the steeage is the ladies' cabin. She has a roomy forecabin, with w. c., and there is 6ft. 2in. of head room under the beams. The fittings in the main cabin are of teak and birch polished, and in the ladies' cabin pine and teak. The cabin is carpeted with a patterned carpet with orange and blue, and the floor is partially of coppered, and it is probable she will be hauled up again shortly for this being completed. —*The Field*.

FAST TORPEDO LAUNCHES.—The search for high speed is still going on in England with satisfactory results, judging by some recent craft. A torpedo boat, lately built by Messrs. White, Carter & Cowell, and purchased by the British Admiralty, has made 21 knots on trial, and is said to turn within her own length at full speed. She is 155ft. long. Another "torpedo catcher," the Great Britain, has also been commended for her speed. On 20th April she made 23½ knots on trial, and Commander H. P. Beresford estimated speed being 19 knots. Her armament includes five guns, 4 Nordenfeldt machine guns, and 4 torpedo tubes. Still another has been completed by Messrs. Yarrow, for Austria, 155ft. long, 13ft. 9in. beam, 88 tons displacement, with three cylinder compound condensing engines, and a screw shaft wheel of solid steel, 6 ft. diameter, turning at an average of 22.8 knots, and capable of 25 knots under light load.

EMPIRE Y. The officers lately elected are: John S. Macduff, Commodore; Daniel O'Brien, Vice-Commodore; Lewis McGowan, Rear-Commodore; Richard Cullen, President; James Mulligan-Treasurer; Charles Raub, Secretary; Chas. F. Friend, Assistant Secretary; A. J. Brush, Measurer; Hiram Ketchum, Judge-Advocate; Robert J. Lang, Chaplain; W. W. Yungce, Fleet Surgeon; John O'Brien, Sergeant-at-Arms; John Blue, Steward. Trustees—John S. Macduff, Richard Cullen, A. J. Brush, Daniel O'Brien, Patrick Myhan, Patrick J. O'Brien, John A. McManus, William Kinsey, George Barr, Robert J. Lang, John P. Mulvaney, Joseph M. McCormick, Patrick J. Myhan, John A. Mulvaney, John A. McManus, John J. Chaffoy.

O'Brien, John Fennell, John A. McManus, Jenn J. Calkins.

STOVE STORIES FOR YACHTS.—*Editor Forest and Stream.* The cuts representing two different styles of stoves for the issue of the 23rd are about exactly correct, and a word of explanation may save trouble. The stoves should be placed together and fitted snugly in the box to avoid shifting, and the tops of the stoves should be about 2in. below the top of the box in order to get a good effect from the radiated heat. The cut showing the end of the stove is a mistake; it is the side view, and the hinges of the door will be found pressing on hinges and a rest at the bottom of the door.

Yours truly,
Wm. H. Dittworth,

THE SALE OF THE PRISCILLA.—Com. Canfield, S. C. N. Y. C., has purchased the Priscilla from Messrs. Bonnet and Douglas, and will sail her in the coming races. Important alterations will be made around her by the direction of Mr. A. Cary Smith. Her forefoot will be rounded off, beginning at a point about 20ft. abaft the stem, the greatest reduction being 15in. The sternpost will be raked 3ft., and the mast will be shifted 2ft. aft, the channels being removed entirely. The boom will be lengthened, and also the gaff and bowsprit, while the mast will be cut down, preserving about the same sail area.

BROOKLYN Y. C.—A meeting of this club was held last week, at which the date of the annual regatta was fixed for June 12. The committee on the location of a club house recommended a site on the shore of the Hudson, near the foot of the river, where the water, which is known as the Widow's Hole. Though the anchorage is deep water, it can only be reached by a narrow passage, and a bar that would exclude the larger boats of the club and admit only the shoal ones. The suggestion of such a site is not likely to help the club to regain its old position.

SOUTHERN Y. C.—At the annual meeting on April 1, the following officers were elected: Emile J. O'Brien, Commodore; Alexander Brewster, Vice-Commodore; Joe Marencovich, Esq., Rear Commodore; J. B. McConnell, Esq., Treasurer; H. B. Hopkins, Secretary House Committee; Frank M. Hall, Chairman; M. S. Bringier, Wm. Walsh, Blaine Jamison, P. R. Canfield.

AMERICAN CENTERBOARD SLOOP ATLANTIC.

[From a Photograph by Miller.]

THE COLLAPSE OF THE CUTTER BOOM.

SOME wicked person has evidently imposed successfully on the credulity of the *London Field* and has magnified a petty difference in a yacht club into a general uprising of the leading American clubs against the cutter men and a complete extinction of the type in America. Under the title of "Topics of Interest," the *Field* of March 20 speaks as follows ament the present status of sloops and cutters in America. "The centerboard type of yacht is just now exciting a great deal of justifiable admiration in America. A year or two ago was some chance that the type would succumb under the advocacy there and introduction of the British type of yacht in America. But we saw all along that this was not likely to be the case, and predicted exactly what would happen in the way of a compromise. Well, the undoubted success of the Puritan has stifled the 'cutter boom,' and the British type of yacht will have a struggling existence for some years to come in America. The members of the New York Y. C., Seawanhaka Y. C., and Atlantic Y. C. have turned out of office all officers with cutter proclivities, and everything, it appears, will be done to give the American type at least a fair chance. We, on this side of the Atlantic, would have thought such nursing of the national type entirely unnecessary; but there is more in the maneuver than appears on the surface. That yachts like Puritan, Priscilla, and the new vessels building will be a most formidable type for deep keelers to tackle there is no doubt, and, supposing that they are actually no better for match sailing purposes than the narrow, deep yachts, there is still every inducement for most Americans to prefer them, because they are better suited to the coast."

This statement was denied in the *Field* of Mar. 27 by Mr. E. M. Padel, now in England, and New York yachtsmen also will know how far from the truth it is concerning the three clubs mentioned above, but lest it should carry some weight with those at a distance, we hasten to deny it in toto. It has originated in the disputes that have vexed both the New York and Seawanhaka clubs this winter, disputes which have no connection in any way with the cutter question.

In the New York Y. C. a difference arose between two parties in the club, the principal issue being over the question of the representation of non-owners in the meetings. The result was the election of a new board of officers, and the removal of the old, every one of the latter being strong centerboard men. Not a member of the old or new board is a cutter man, so the occurrence has no importance whatever except within the club.

In the Seawanhaka Corinthian Y. C., trouble has also arisen this winter over a purely business matter, between the trustees of the club on the one hand, and several members who have heretofore been most active in forwarding the interests of the club, and who have been chiefly instrumental in providing a club house and anchorage. It happens that these gentlemen are nearly all cutter advocates, and as they have resigned from the club it has given some color to various rumors, but the newly elected commodore is a cutter man, other cutter men are still in the club, and the difficulty is entirely a personal one, the question of sloop versus cutter being in no way involved.

The third club mentioned, the Atlantic, has been almost to a man, resolutely opposed to the cutter, or even to keel boats during the whole of the long controversy. Until a very recent period there has not been a cutter in the fleet, and every officer of the club for many years has been a staunch upholder of the shoal centerboard type, the same being true of the officers lately elected. The only action which the club has taken that bears at all on the question of cutter and sloop, is the adoption of a rule which makes it possible for cutters to enter the club races with some chance of success, from which heretofore they have been as completely excluded by an ancient and illogical measurement rule as centerboards are by the Y. R. A.

These facts reduce the reported expulsion of "all officers with cutter proclivities," and the "nursing of the national type" to their proper place as silly canards, which should not have imposed on such an authority as the *Field*.

Looking at the prospects of the cutters for the coming year it is not encouraging to know that Wenonah and Ileen will probably lay up all the season, and only Bedouin in the large class will be afloat; but on the other hand all this is more than offset by the almost complete disappearance of their antagonists, the first class sloops; a class that was once the pride of American yachting, and that this season will have but one representative afloat. Mischief will not fit out, Hildegarde and Fanny have dropped all racing, Vision will be in commission but will not race, Arrow will not show up at the line, Pocahontas is rotting in Manning's Basin, and Gracie, the sole survivor, is even now undergoing an extensive modernizing. The cutters of the large class are few in number and built here as experiments, and one at least has won a reputation that will last for some seasons, though she does not win another race. The sloops are the outgrowth of over three decades of American yachting, supposed but five years

since to be the best that we could produce, and consequently far superior to the yachts of any other nation. To-day they have practically retired from racing, leaving the field either for the genuine English cutter or to a mongrel production whose salient features are as much English as American.

Last year it seemed probable that a win for Genesta would turn the tide entirely in favor of the modern cutter. We have previously discussed the issue between the two large boats and shown that the main point in dispute was beam, moderate or extremely narrow; and that with that decided the question of board was only one of adaptability to special purposes. All the other points of rig and ballast have been conceded in the general adoption of the details of the English cutters. Everyone knows how the question, trembling in the balance, was turned by Puritan's victory in favor of the wider boats, and also of the centerboard. How little it took to effect this change is shown by the fact that the great race was won by a minute and a half. A little difference the other way and almost every boat built this season would have had a keel, and we should soon have outstripped the English in the matter of narrow beam, draft and lead.

This year it is extremely probable that with four boats to choose from on this side, and such weather as we are apt to have, the new type will be again successful against a still narrower adversary than Genesta, though it is not such a dead certainty as most Americans consider it. The result will be to foster the development of the new type and a very good type it is for certain purposes. Fast, able, comparatively safe, well sparred, and with a draft that is certainly of great advantage in many places, it is incomparably superior to the yachts it has displaced so effectually. Along our coast and for our uses it may prove superior to the modern cutter, especially in the sizes under 50 or 60 feet. When it comes to bolder and more dangerous offshore work, which, judging by the increasing interest in yachting and the fleet which found its way south this winter must soon become general; the new type has not been tried.

How the combination of beam and lead will affect not the comfort but the strength of a centerboard in a continued hammering in a seaway is a question not yet settled, and some of the new weight carriers if caught in a long blow may solve it in a far from satisfactory manner. The form of the keel of cutter of narrow or moderate beam is one allowing of great structural strength, while the wider flatter hull of the centerboard boat, with its strength reduced where most needed, and the weak place attacked by the strain of the board, offers a serious problem to the builder. We know that centerboard yachts can be and have been proved seaworthy; but the new type, with heavy and low ballast and high bilge, has yet to be tried. Of course such boats can be built strongly enough for coasting, cruising and summer racing; but we must look forward to a time not far distant when our yachtsmen will not be contented with this, but will eagerly push further afield to the West Indies and Mediterranean, and for this purpose will come to the keel boat of medium or narrow proportions.

The "stifling of the cutter boom" to which the *Field* alludes, implies a total failure of efforts made by a comparative few to introduce this type in America, but has such been the case? The races of 1886 have not yet been decided, and it is not yet fully settled that Galatea will prove the failure that many so confidently expect. Supposing that she is beaten by Puritan or her fellows, does it prove conclusively that the keel is inferior to the centerboard, or is it not rather probable that the vice-like compression of an unreasonable and arbitrary rule has compelled the British yachtsman to handicap himself with less beam than is absolutely essential? It rests with the British yachting world to win the Cup soon if they would regain their prestige, and should Lieut. Henn's plucky attempt fail it will be time for them to drop the present cramping rule and build a cutter especially for the contest. In the 70ft. class, Bedouin is likely to be able to take care of all comers if she is up to her old form, and to give a good account of herself. The interest this year, outside the Cup races, will depend entirely on the 50ft. class, and though there will be at least one new boat of the "national type," besides Athlon, Gaviota, Daphne, Isla, and several others, Oriva if in commission has a good show for a high place, while little Clara promises to be ahead of the leaders. What the result may be no one can tell, but supposing that every cutter from Galatea to Delvin is beaten, and that Bedouin, Ileen, Wenonah, Oriva and Clara are left next year to rot on the shore while people build "compromises," is any one prepared to say that the "cutter boom" has been a failure? To it alone is due the extinction of a false standard of yachting, a dangerous and undesirable type of yacht that unfortunately was really "national," and from it have been drawn the canards and pomps of the new type. Rig, ballast, methods of construction, and numberless details of the new boats are thoroughly English, adopted, not adapted, from the cutter. Beam we have retained, though even

that has been lessened; while our boats are far deeper than of old extreme depth we have rejected from local considerations; while for the same reason the centerboard is retained. With these innovations we have thrown aside old rules that compelled the construction of certain types, and with a foresight and a comprehension of the entire question of the development of yachting which the British yachtsman has not seen fit as yet to follow, we have enacted fair and just regulations that bear as equally as any rules can on all types. This has been done here since the inauguration of the "cutter boom" and largely by the "cutter fiends" and "cutter cranks," who have been so heartily abused. The results are plain and palpable in the present state of American yachting, and no better evidence can be had than the common verdict which hails as an American sloop, a vessel that only a couple of years since would have been ridiculed by all as an English cutter. Now let our British confreres profit by our example with benefit to themselves, while they can still do it gracefully; for another victory for the American yacht will probably put a quietus to the present measurement rule of the Y. R. A., and the advent of a thoroughly well built yacht of the Puritan type in English waters, after a successful passage across the Atlantic, will compel a recognition of centerboard yachts in spite of the scolding of that irascible old lady, the *Saturday Review*.

YACHTING NOTES.—Mr. Mumm launched last week a new open cathoot, the *Phryne*, for ex Com. J. R. Maxwell....Norseman, schooner, Mr. Ogden Goellet, is now at Tebo's Pier, all ready for her voyage to Europe. Her owner will cross at once by steamer. The Norseman has received a suit of heavy canvas....The South Boston Y. C. have finished the rebuilding of their house and are now in very convenient quarters....Lagonda, steam yacht, will undergo general repairs at Wilmington, Del....Radna, steam yacht, has returned from Norfolk and is at Twenty-fourth street, East River, repairing the damage received by collision....Indolent, sloop, has been purchased by Mr. Frederick Grinnell, of Providence, from Com. Rhodes, of New Bedford, and has changed her name to Lydia....Gaviota, Mr. Edwards's iron sloop, will this year have a larger rig. Her centerboard trunk will be removed and board dispensed with....Wm. McKie, of East Boston, has nearly completed the steam yacht he is building from Mr. Burgess' designs for Mr. Ford. She will be ready for the water by May 1....Wood Bros. have the engines in Mr. Pickman's new steam launch and will soon put her afloat. The *Adelaide* will be rigged on the stocks and launched all complete....Elfin, schooner, formerly Latona, has been sold to Mr. C. P. Huntington, who will use her about the west end of Long Island Sound....Moutauk, schooner, will have a new set of racing sails by Sawyer, all made from hard cotton duck, specially woven in narrow breadths. The rig will include an extra boom foresail and double head sails....Atlantia, schooner, will be overhauled for the season at City Island....Grayling, schooner, has gone from Gowanus Creek to Mumm's yard to fit out....Decoy, sharpie, has been launched at Mumm's and is cruising after ducks in Great South Bay....Elephant, sloop, has been taken to Twenty-fourth street, Brooklyn, to fit out. She has wintered at New London....Wallin & Gorman launched last week a racing sloop for Mr. Theodore Roosevelt, which will be sailed in Quaker Bay this season....Varuna, schooner, has arrived at Mumm's Basin, from Newark, where she has wintered. Mr. W. W. Scott, the mechanical engineer, has been busy with yacht engines this winter. Besides the pair of compounds which he designed for the *Reva*, he has designed one for the *Sappho*, Dr. Webb. This engine is 10 and 18 by 12 in., inverted compound. Mr. Scott has charge also of the alterations in the machinery of the *Edith*, and J. W. Sullivan is doing the work....Bedouin, cutter, will soon be afloat, as Capt. Pettuck and his crew have lately arrived from England. A new and stiffer stick will be shipped at once, as the new mast, put in last year, was a failure....Coronet, schooner, has been on the screw dock for a suit of metal, and is now nearly ready for sea....Venture, sloop, lately put overboard at Mumm's, settled on her anchor and stove a hole in her planking. No serious damage resulted....Puritan will be out early in May, with Com. Forbes in command....Lawley & Son will run out their dock at the new yard this summer, and will dredge out the basin, offering every facility to large yachts, either to haul out or to take aboard or under store and gear at the dock. They have planked the Harvard launch, and will soon put in the engine. Mr. Fay's sloop is all ready to be framed together. The little Baltimore sloop is nearly finished. A lead keel has been added to the sloop *Echo*....A new cruiser, building at Milbay, Eng., is 32ft. waterline, 8ft. beam, 6ft. 6in. draft, and 6ft. clear headroom, with a 6-ton iron keel....Galatea is having new spars made by Payne, of Southampton....May, 40 ton cutter, will go to the C Class this year, of course with reduced rig....Yanessa, the ever famous, is being modernized to the extent of a reduction of her prominent forefoot, and will also sail in the C Class....Messrs. Simpson & Dennison have lately built a little launch, for use in warm Eastern countries, entirely of Delta metal. The hull is 24x5ft., and "planked" with longitudinal strips of the metal, and very handsomely fitted up with teak and nickel-plate. Her machinery includes a small set of Kingston engines....Cythera, yawl, Mr. W. A. Stewart, was at Southport on March 10, going on the patent slip at Day & Summers. After a clearing and examination she sailed for Gibraltar, leaving Yarmouth on March 23....Sylvia, keel cutter, 10 tons, has been sold by Vice Commodore Pike, Bay of Quilte Y. C. to Mr. H. E. Parrish, Buffalo Y. C....Sboma, 5 ton cutter and rival of Delvin in British waters, has been sold to a Boston yachtsman, and will be shipped on the deck of a Boston steamer....Magnaolia, steam yacht, sailed on April 4 from St. Augustine for the North....Ambassadors, schooner, arrived at St. Thomas from Martinique on March 9, and sailed on March 13 for Jamaica....Yega, schooner, arrived at St. Thomas from Fernandina on March 22.

SOUTH BOSTON MOSQUITO FLEET.—The regatta of the mosquito fleet will be sailed on Fast Day, starting at 11 A. M. from the house of the South Boston Y. C. The boats will be in two classes—open boats, 13 to 15ft., in the first, and under 13ft. in the second. Two prizes, \$10 and \$5, will be given in each class. Entries can be made to James Bertram, 803 Fourth street, South Boston.

PHOTOS OF THE ATLANTIC.—Yachtsmen at a distance who are interested in the new Atlantic, can form an excellent idea of the boat's shape from the photos made by Chas. Miller, 62 Nassau street, N. Y. Five views have been taken, one of the bow, one from astern, one from the high ground above, showing the deck frame, and two broadside views.

OUR LIST OF FIXTURES has run to such a length already that a more compact arrangement has become necessary to obtain space. There are still many clubs not represented, and some of the dates in the table are not official. We ask the aid of club secretaries and others in completing and correcting the above list.

SAN FRANCISCO.—Lurline, Chispa, Aggie, Nellie, sloop, are all in commission, and the season has begun. A movement is on foot in San Francisco to organize a club for small yachts under 40ft. A meeting has been held and a preliminary organization effected.

GENESTA.—We learn from private advices that Sir Richard Sutton will not race Genesta this season owing to family matters, and she will be offered for sale.

HUDSON RIVER Y. C.—This club will hold a union regatta, open to yachts of all clubs, on June 7. The steamer Columbia will accompany the fleet.

Canoeing.

CANOE CLUB IN PATERNON.—*Editor Forest and Stream:* A canoe club was organized on Saturday, March 27, under the name of Paterson C. C. The following officers were elected: Commodore, A. S. Pennington; Secretary-Treasurer, Charles K. Berdan. —CHAS. K. BERDAN, Secretary.

WISCONSIN RIVERS.—*Editor Forest and Stream:* Will any of your numerous readers kindly tell me the route to take from Winneconne, in Wisconsin, to the Mississippi? Do I go up Fox River to the Wisconsin, and is there any portage?—AN OLD SUBSCRIBER.

A. C. A.—The following names have been proposed for membership: Messrs. Edward A. Moseley, Boston; Chas. K. Colb, Boston; Chas. K. Berdan, N. Y.; J. H. V. Kent, Halifax, N. S.; J. A. Seely, Ogdensburg, N. Y.; George Brown, Ottawa, Can., and Harner I. Denny, Pittsburgh, Pa.

A. C. A. MEMBERS AND A. C. A. MATTERS.

IN an organization such as the American Canoe Association, in which the members are scattered over a very large territory so that a general meeting of a majority is impossible, it must be more or less difficult to secure the views of all and to legislate in accordance with them. True, a general meet of the Association is held at the camp in August, but it is attended by less than one-sixth of the whole number of members. To remedy this disadvantage and to give full weight to every voice, two means are adopted; one, the selection of the officers so as to give as complete a representation as possible to each section, taking leading men who are well known in their respective localities for the officers and members of the Executive Committee. The other and principal means of communication between the Association and its individual members is through two publications which are devoted especially to the sport and are recognized by the A. C. A. as the official mediums for the publication of its communications, the *American Canoeist* and the *FOREST AND STREAM*.

In every club or society it is of vital importance that every member shall be on an equal footing, and have an equal voice in all deliberations and voting. In the case of yacht and canoe clubs this is easily accomplished, as the members reside near the headquarters of the club and can be promptly summoned to a meeting. In the case of the A. C. A. it is of course impossible to secure a majority of the members at even the great yearly meeting, but it is not just that a man should entirely lose his voice in the proceedings because he cannot make a long journey to the meet. As a substitute for such personal communication with the association, the members have a medium in the *FOREST AND STREAM*, coming to them every week with the official records as well as the general news of the association, and open to them for such comment and discussion as they may choose to make. By this means every member may know long in advance of any proposed action or change in the rules, and may express his objections or approval to as large an audience as he would have were the subject under discussion at a meeting. The *FOREST AND STREAM* is ready at all times to publish any *bona fide* communication, whether signed or unsigned, provided the name of the writer be sent to the editor, and reserving only the right to reject anything manifestly improper, or to condense letters of too great length. This gives every opportunity for such a thorough and complete discussion as should precede a change in the rules or constitution, and the officers would gladly encourage such an expression of the general opinion as would aid them in their work and relieve them of a portion of the responsibility.

Our invitation to canoeists to use our columns for a free discussion of A. C. A. matters has been extended for some time. How has the scheme worked? Since the Executive Committee meeting in November there has been a very important subject under consideration, the offering of a trophy on the occasion of the coming visit of some of the leading English canoeists to our August meet. The Executive Committee resolved to offer such a trophy, to become the property of the winner, and appointed a committee to raise the necessary funds and to purchase the trophy. Since this resolution has been passed the opinion has been widely expressed that the offering of a valuable prize would not be in consonance with the aims of the A. C. A. or with its rule in relation to prizes, and that the trophy should be given as a challenge cup, to be raced for each year at the meet, or if won by our visitors, to be raced for abroad under similar conditions. Certainly such a cup will effect the desired end better than a prize given outright, but whether or no a change in the conditions is desirable is not the question at issue just now. What we wish to emphasize is the lack of interest taken by canoeists in the question, and the failure of all discussion.

In our issue of March 4, one side of the question was presented by our correspondent "S." in a very able manner, but in the month that has since elapsed it has failed to awaken any response, and canoeists have exhibited a complete indifference to the matter. A short time since we published a complaint concerning last year's races. The programme was made out and published long in advance, and was a legitimate subject for criticism by all interested, and any weak points, on being revealed, would probably have been changed. No comments were forthcoming at the time, however, though it now appears that serious objections were held by some canoeists to the races laid out. The programme for 1886 will soon appear in our columns, and an opportunity will be given for fair and intelligent comment.

This matter, with the trophy and many others concern directly every member of the Association, and if any disapprove, it is their duty to make public their objections. By this course only can the Executive Committee be guided in its efforts to govern the Association fairly and agreeably to all. Every member should feel that he has an immediate interest in all measures presented to or by the A. C. A., and that if he fails to record his objection at the appropriate time, he must not complain or rebel when the proposal has become a law.

A WORD FOR THE WATERS OF THE TOOTH-PICK STATE.

Editor *Forest and Stream*:

Now that each season the waters of lake and river, from Maine to Florida, are cleft by the sharp prows of the cruising canoes, and the glancing paddles and miniature sails of the adventurous canoeists gleam alike o'er the placid bosom of Superior and the turbid waters of the "Daddy of Waters," it is strange that no one has cared to bestow a thought upon the almost unknown streams of the "Tooth-pick" State, and their romantic scenery of mountain and lowland along their respective courses.

Occasionally a party of well-informed sportsmen will visit the swamps of northern Arkansas for a few weeks spent in slaughtering the game with which our forests teem, but as they generally come and go in the bleakest season of the year, they see but little of the beauties of nature that can be beheld at more favorable seasons and in more desirable localities.

It is an unaccountable but at the same time an indisputable fact that, by the generality of the reading public, less is known of the half-settled regions of this State than of the furthest wilds of Idaho or Arizona. To them the name "Arkansas" conveys an indistinct idea of vast swamps, peopled only by mosquitoes, alligators, and their blood-stained and scaly second cousin the desperado. To this in calm serenity beneath the rays of an April sun, would be indeed a revelation. Here amid our rank valley vegetation and mossy mountain sides the amateur bonatist might loiter for weeks, listing or classifying to his heart's content; or the ardent naturalist bring down the choicest specimens from the ever-present swarm of birds. Here the mineralogist could seek—aye, and find—indications of gold, silver and the baser metals, and the hammer of the geologist weary with constant hacking on attractive boulders; and here the happy owner of a Rubicon or a Powell and Douglas can find hundreds, yes, thousands, of miles of miles of creek and river that has never divided before the bow of a modern canoe or saturated the garments of him whose glory is the reel and fly.

If I were to attempt to speak at length on the various streams of the State I should naturally place the Arkansas first on the list, as longest and largest of all, and in its upper course—between Little Rock and Fort Smith—its narrow valley, bordered by a range of mountains on either side, would afford many interesting views to the seers it would prove less attractive than many of the smaller streams.

The White, that rises in the Boston Mountains east of Fayetteville, sweeps grandly through the borders of Missouri, and then re-enters Arkansas for a 600-mile run to the Mississippi, would no doubt offer as great attractions as the rivers of Maine, if the canoeists were only aware of the fact. Certainly few rivers east of the Rocky Mountains traverse so rugged a region as the White proper and its tributary the Buffalo, and few rivers, even in the swampy South, can show a wilder stretch of overflow lands than the White from Batesville to its mouth.

Classified as mountain streams we can append the Upper Washita, with its gold-speckled bars and bluffs rich in the purest of crystals; the little Cossatot, trickling down from the mountains of the same name; the Little Missouri, the Little Saline and the three forks of the larger stream of that name; the Antoine, Caddo, Mulberry, Little Red, Petit Jean, Fautbe, Fave and others; while the wilderness of swamps border the lower waters of a few of those named, and the entire length of the St. Francis, L'Angeville, Cache, and various creeks and bayous, all swarming with the finest of game fish, and most of them entirely unknown outside of the State. Verily an enticing field for exploration. Can some one tell me why it is thus neglected?

BEEBE, Ark.

S. D. BARNES.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

ROURY.—Please send address to this office.

J. W.—We have no reports from there this season.

E. H.—For wild rice, write to Valentine Bros., Janesville, Wis.

T. M., Cleveland, O.—Write to Charles Harker, 62 Cortlandt street, New York.

M. A. F.—The 8 pound 12 bore will probably suit you, and we would advise the hammerless.

J. V. W., New Haven.—We cannot direct you with certainty. See answer to another correspondent on same subject.

L. Niagara Falls.—The "inventor" of the invisible duck boat is Lew Casady, of South Bend, Ind. The principle is very ancient.

TOURIST.—You will probably find Minnesota the better region. We believe that both the States pay bounty on wolves; we do not know how much. Try a .35-caliber.

T. C., Troy, N. Y.—The vicinity of Salisbury or High Point, N. C., will give you good quail shooting in season, with some other game also. The quail season in Virginia is from Nov. 1 to Feb. 1.

JAY BEAR.—Are there any changes in the plumage or other markings of the male ruffed grouse with the approach of the breeding season in the spring? Ans. None that can be relied on so far as we are aware.

A. E., Wellington, Kan.—1. Are the poison fangs of the rattlesnake fixed in the jaw like the tusk of the dog or cat? 2. Did the migratory quail importation amount to anything? Ans. 1. No. 2. We have no information that any of the birds survived.

W. D., Lyme, Conn.—We reprint on another page the paper by Mr. D. W. Cross on wild celery. We cannot advise you where to apply for the seed. If some one would make it his business to supply this plant to those who wish to cultivate it he would find patronage.

W. P. M., Baltimore.—1. Will you be kind enough to tell me whether an Irish setter must have a dark nose, or is a light-colored nose allowed? 2. If the word Mr. Wells calls "dagame" in his book "Fly-Rods and Fly-Tackle" can be bought in New York? Ans. 1. The nose ought to be dark. 2. We do not think it can be found here, but an inquiry at the tackle shops might discover it.

F. W., Providence.—Can you tell me where in Connecticut or Massachusetts I can find English snipe shooting this month, and whom to apply to for board and particulars in the vicinity? How is mouth of the Housatonic River for sniping? Ans. 1. The best snipe grounds in Connecticut are on the Connecticut River, near Essex and Lyme. A few birds are sometimes to be found on the meadows at the mouth of the Housatonic, but they are not to be depended on to furnish sport.

R. H., West Torrington, Conn.—Please describe the following artificial flies? Ans. Cow dung—Body of yellow mohair whipped with yellow silk, and wings of grayish blue, either mallard or land-rail. Green drake—Body of hog's down or light bear's hair mixed with yellow mohair, whipped with pale floss silk and a strip of peacock herl for the head; wings of the rayed feathers of mallard, dyed yellow; hackle from bittern's neck, and tail from the long hairs of the sable or ferret. Queen of the water—Body of yellow mohair, feet and hackle of brown, wings of gray, mallard feathers.

ACCIDENTS WILL HAPPEN, whether you like to think so or not; and if you do not wish to run in debt while disabled, or have your family suffer if you die, insure in the Travelers, of Hartford, Conn.—*Adv.*

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name on any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be incomparably superior and guaranteed in the most liberal manner.

We have just finished and put on the market a new caliber round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the best balanced and most perfect rod in the market.

Perfection at Last.

THE

BRAY FLY BOOK.

It will be gratifying to anglers to know that there is at last a perfect Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

Leaves to which flies are attached are of flexible metal, and of a composition that will not rust. Extra leaves of waterproof leather covered with felt for a dryer. Pockets for extra hooks, leaders, etc. You should see it.

Prices in Sheep Skin.

MESSRS. A. G. SPALDING & BROS., CHICAGO, ILL.:

GENTLEMEN—Agreeably at your request I tried your new "Hammered" Spoon Bait at Gogebic Lake, where, from the scarcity of live bait of any kind, a trolling spoon becomes almost a *sine qua non* at such times when the bass refuse to rise to the fly. The "Hammered" Bait is a happy idea, for it is hardly possible to devise a more attractive lure, as all who have used it can affirm. It is well and carefully made, has good, strong hooks, and well deserves the great popularity it has so soon acquired.

Very truly yours,

The "GOGEBIC" Trout and Bass Reels.

Light, Handsome and Durable, and compares favorably with higher priced reels.

In presenting this line of Reels to anglers, we call attention to the moderate price and practical value over the majority of reels, as are pointed out in following description. They can be changed at will from trout click to free-running bass reels. The large diameter of spool makes the multiplication equal to any quadruple reel made, and the open side disks permits a free circulation of air, which dries line quickly on spool, and is of great practical value in keeping any line in prime condition, thereby preserving it from rotteness, which often occurs on the old style closed disk reels where line is left on wet.

"FOX LAKE" BLACK BASS REELS.

Rubber and Nickel, Multiplying Steel Pivot,
with Adjustable Click.

No. 402, 40 yards, 2 inches diameter of plateeach, \$4 00
" 403, 60 " 2 3-16 " " " "" 4 25
" 404, 80 " 2 3-16 " " " "" 4 50

Can furnish above with back sliding click at same price.

SPALDING'S CELEBRATED SPLIT BAMBOO RODS.

With Patent Serrated, Shouldered, Waterproof Ferrules.

Unequalled for Uniformity of Spring, Durability and Beauty of Finish.

A. G. SPALDING & BROS.:

GENTS—Yours of Feb. 8 came duly to hand, and I could now make good use of the Fly Book if I had it. This is the third winter I have been here, and have always heard there was no fly-fishing to be had in the vicinity. Bait fishing in front of the House was sometimes good and sometimes wretched, usually the latter. On Feb. 21 I went to visit a sick negro, and was rowed by an old fisherman down the lagoon. While on this mission I saw thousands of mullets and several channel bass and sea trout (our Northern weakfish); they were in shallow, weedy water, evidently feeding. Bait fishing for them would have been an impossibility. The idea occurred to me to try the fly, a notion which was so ridiculed by the other people in the House that I did not air it very much. On the 23d I tried the fly, and in about twenty minutes I had a broken leader from the vigorous onset of some funny monster. Then I had two other strikes which I lost. I didn't really tell anyone about this, because I knew they would say I had been snaggd. The next day, however, I went out and caught two channel bass of 4½ and 4¼ lbs. respectively. Next day I caught a sea trout 5 lbs. 6 oz. Feb. 26, three sea trout, Feb. 27, one channel bass, 4¾ lbs., Feb. 28, nothing, 4½ lbs. Now, why do I bother you with this score? Simply because I thought you would like to know what could be done with the "Spalding Rod." I gave it a pretty good test at the Brooklyn reservoir the day I caught line behind me in casting, and the old drum fish gave it another hard wrestle the other day in the lagoon. How does it stand it? Well, with the exception of a slight curve, it is as sound, straight and true as the day I bought it. You know salt water plays the deuce with a fly rod, and it takes a good rod to stand it, but from present appearances my rod next year will be as good as new, unless I hitch on to a tarpon or some leviathan. If that fly book is ready before March 20, please send to above address and oblige.

Yours in truth,

GEORGE TROWBRIDGE.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price \$1.00.

Twenty-six dogs and bitches, comprising one of the best packs in Pennsylvania, a few bitches being in whelp by champion dogs. Address Box 1684, West Chester, Pa. jan28,tf

The Kennel.**BENCH-LEGGED BEAGLES.**

These hounds were originally a cross between the English beagle and the baset or dachshund, but they have been carefully bred for many years in Pennsylvania, Delaware and Maryland, until they now may be classed as a distinct breed.

For very rocky, or briery country where a rather slow hound is required, they are exactly the sort of hound wanted.

In body they are longer than the true beagle, usually a tri-color, gold length of ears, splendid voices, height from 10 to 14 inches, very strongly built, front legs slightly bowed, and for keen scent and staying powers are believed to be superior to the English beagle.

We can furnish broken dogs or bitches, 2 to 5 yrs. old, at \$30 each; 1 yr. old, not broken, \$15 each; and pups of either sex, \$10 each. They make excellent coon and possum hounds.

ASSOCIATED FANCIERS,

237 South Eighth Street,

PHILADELPHIA.

St. Bernards

Of purest Swiss strains, recently imported. Several fine dogs and bitches and a few puppies are in my hands to be disposed of. I can promise purchasers they are of excellent pedigree, and full of true St. Bernard character.

Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices \$1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, \$5 per year; \$3.50 for six months. Address all communications,

THE WATER-BUTCHER WINS.

THE clamor of the few has prevailed over the interest of the many. Selfishness has carried the day. The water-butcher has won. Yesterday the Senate of New York passed the bill to repeal the anti-hounding law. The bill was passed as given in our last issue, save that the amendment was adopted limiting the number of deer killed by one person to three. An amendment forbidding the killing of deer in the water was voted down. St. Lawrence and Delaware counties are exempted from the dog scourge. The measure now goes back to the Assembly for its concurrence in the amendments, and then to the Governor, who will promptly give it his signature, and the dogging and water-killing of Adirondack deer will have the sanction of the law of the land.

The result was not unlooked for. It had been practically a foregone conclusion from the beginning. As explained in these columns two months ago, the conditions at Albany this year were peculiarly favorable to the clique of individuals who had declared their purpose of overthrowing the deer protective law. The Speaker of the House, Mr. Husted, a deer hounder, was opposed to the law because it interfered with the sport of himself and some of his cronies; and it was understood that he would use the influence of his position to secure its repeal. Several of the members of the Legislature, as Barnes, Hadley and Palmer in the Assembly, and Kellogg in the Senate, had been directed by the June mountain mutton hotel keepers to repeal the law; they had practically no volition in the matter; they were told what to do, and when the time came they obeyed orders and did it. Mr. Husted took care to appoint the right kind of a game committee. It was a body made up of wax-noses, and their plasticity was something astonishing. It was equalled only by their avidity to be humbugged. That the hounders had taken an accurate measure of these men, was proved by the character of the misleading and deceptive document they sent to the Legislature. This was prepared by an Albany doctor, who gave it out as coming from the Eastern New York Fish and Game Protective Association. In its ostensible origin, its contents and its purpose, it was a humbug; and naturally had weight with the committee and the Assembly. As had been anticipated, when the bill came up in the House, the members,

eager to curry cheap favor with Speaker Husted, rushed the measure through and sent it to the Senate.

In the several hearings before the Senate committee the humbug was stripped off. The defenders of the bill were compelled to recede from their stand as game protectors. They were forced to acknowledge, one after another, the ridiculous nature of their pretenses, and to own up that all their hue and cry were solely with purpose to secure to themselves present gratification. The selfish character of their efforts was clearly proved. The committee fully understood this and knew that the bill ought to be killed; but surrounded as they were by the persistent doggers and hampered by entangling alliances, they lacked the moral courage to do what they knew to be right, and sought a way out of it by "compromising"—the customary makeshift of weak men. (It should be stated that Senator Vedder, of the committee, intelligently and consistently opposed the measure.) The bill, which had been favorably reported by the pliable Assembly wax-nose committee because of deficiency of brains, was approved by the Senate committee because of a corresponding lack of back-bone.

In its final form the bill does not give the hounders all they at first asked, but it gives to the selfish clique for whose special benefit it has been passed, about all they want. These men go to the woods in September. Lawful hounding will be limited to that month and the first five days of October, a period suiting their convenience. The evils attendant upon the system will, however, not be confined to that season. The destruction of deer by dogs will, in the future as in the past, go on at all times of the year. All the abuses and abominations incident to the maintenance of herds of domestic wolves in the Northern Wilderness will be perpetuated. That an Albany doctor may take the President of the United States on a deer dogging expedition in September, the dogs will be fed on February killed does heavy with fawn. That a Peekskill politician may have his September sport, the young deer dogs will be "blooded" with the blood of deer run down in March snows. That a New York physician may gratify his propensity for butchering deer and leaving the carcasses to rot, the Adirondack woods must witness the hounding to death of the mother doe in July. That the members of the Bisby Club may dog deer in September, fawns must starve to death in August. That Paul Smith may feed his guests on "run" venison, running and clubbing and drowning must be waged from Jan. 1 to Dec. 31. The so-called "compromise" is such only in name. Hounding one month means hounding twelve months. Killing with dogs in September means killing with dogs in June and January. There is no such thing as a compromise between dogs and no dogs.

Temporarily, then, the hounders have gained what they sought. Temporarily—because in the very nature of things their extraordinary privileges cannot be lasting. They have obtained permission to destroy. They have added celerity and certainty to the approaching practical extermination of Adirondack deer. When they have enjoyed for a short while this license to destroy, they must perforce come to a halt. The supply cannot last. The end will come when the deer are gone.

It may come before. With a Legislature less in awe of millionaire deer doggers, less susceptible to humbug, less eager to please cliques, less forgetful of their obligation to the community, it may be possible to save the deer from the fate certain to overtake them if hounding continues.

The deer doggers have gained their point, but it is most certain that they have lost something as well. The discussion has not been altogether fruitless. It has thrown a flood of light on the motives of the advocates of deer dogging. It has torn from them their mask; laid bare their motives. They can never again pose as philanthropists and game protectors. The thorough selfishness of their demands has been made clear. The next time they appear at Albany it must be in their real character, not as seeking game conservancy, but as putting in a special plea for personal privileges of game destruction at the expense of the public.

Moreover, a brand has been put on the forehead of the water-butcher. The prowess of hounding "that buck when I was in the Adirondacks" will not be as great in 1886 as it was in 1884. The same old dog and guide and boat and magazine rifle and club performance will be repeated as of yore, but it will not be so generally sanctioned as in years past. Mr. John T. Denny and other water-butchers of deer may be rowed out by their oarsmen to the animal and bravely slaughter it, but they can no longer prate of their philanthropy in "pumping lead" into the struggling creature to make it "shy," so the cruel still-hunters may not get

it. Such valiant exploits will be put down for what they are. The public now has a pretty clear notion of what Adirondack deer hounding means. It will have a still clearer notion in the near future. The time is coming when the antlers of an Adirondack buck killed in the water will be about as much of a trophy as the horns of a Texas steer killed in the abattoir. That time is not far off either.

THE FOLLY OF SPRING SHOOTING.

WE presume that in the ordinary affairs of life the sportsman conducts himself much as other men do. Why then in matters connected with his recreation should he show himself a fool—a selfish fool? If he be a farmer he does not send to the butcher cows that are about to calve, nor does he kill the ewes just before lambing time. He knows that to do this would be to bring upon himself loss, that he would lose two animals while receiving the price of but one. When it comes to shooting and fishing, however, the average man seems at once bereft of intelligence and foresight. He reasons with himself that the game and fish are something elusive, here to-day and there to-morrow, if one man does not take it another may. The future may look out for itself. So he starts out in the spring and butchers, or tries to butcher, the snipe and the ducks and the geese which are passing on to northern breeding grounds, but many of which, if undisturbed, would stop with us and rear their brood, where they used to in the old days before the greed for blood had become universal throughout the land. Each year the killing goes on and every year the birds become fewer in numbers.

There are localities, of course, such as Currituck Sound for example, where the fowl are more plenty now than in former years, but this is because a certain amount of protection is afforded them on these waters, and having been driven from others on which they were formerly scattered, they have concentrated in such places, leaving their former homes tenantless.

Every female killed in the spring is so much taken from next fall's shooting, and in these days when game is so scarce and good shooting so hard to find, it ought not to be difficult to make the sportsman realize that it is for his interest more than for that of any one else that this abominable, selfish and and wasteful practice should cease. The fact that the birds are in such wretched condition in spring would furnish to the minds of many a strong argument against the practice. They are lean, often rank in taste, and frequently affected with parasitic worms in the flesh, which certainly are not pleasant to see, however innocuous they may be to the eater.

It is high time that spring shooting were abolished. We have more than once made strong efforts to bring about such a change, and a few years since came near seeing the passage of a bill in New York State entirely forbidding shooting after February 1. The selfishness of certain New York sportsmen, and of the keepers of Long Island shooting resorts, defeated the objects we had in view.

It is time that the sportsmen of the country awoke to the importance of this matter. If any change is to be made it must be done by agitating the subject in earnest, and arousing a public interest in the matter.

The birds are becoming fewer and fewer. The old shooting resorts are giving out, there are no new ones to go to, for the whole country is covered with shooters. If we are to have any game left we must more closely restrict the killing, and the most effective way to do that is to cut off the murders of the mother in the spring.

THE NEW ONTARIO LAW.—By the omission of a word in reference to the new Ontario game law last week an erroneous impression of the clause relating to spring shooting was given. By reference to the full text of the law, as printed in another column, it will be seen that the killing of swans and geese is forbidden between May 1 and Sept. 1; of ducks and other water fowl between Jan. 1 and Sept. 1; and snipe, rail and golden plover between Jan. 1 and Sept. 1. A correspondent suggests with good reason that the flaws of the several States should be changed so that the protection given to migratory game may not be limited to the line between the United States and Canada.

MICHIGAN'S NEED.—The Michigan Sportsmen's Association members have before them the task of awakening public interest in their cause. The effort will be made at the next session of the Legislature to secure a State game warden. The Association cannot begin too early a systematic campaign to prepare the way for securing what the people of the State so greatly need.

The Sportsman Tourist.

SOME POINTS IN WOODCRAFT.

Editor Forest and Stream:

Perhaps it is a little late to answer a critique printed last December in FOREST AND STREAM. But as there are some points in it that may mislead the general reader, I beg to answer briefly.

"Wawayanda," under date of Dec. 31, "begs to inform the father of the craft, before whom we are all but as dust," etc. It is answered that "Nessmuk" does not assume any such paternity; that he is only one of an army of outers who love the forest and spend much time therein, with small profit in a worldly point of view. That he gets more comforts and woodland conveniences into a fifteen-pound knapsack than the average outer gets into a dry goods box may be true; and he does not go into the woods to rough it, but, as claimed in "Woodcraft," to smooth it.

We beg to inform "Wawayanda" there is no such dissimilarity between us on the "shirt" and "soap" question as he is pleased to assume. We use both—in moderation; and we may here mention that, on a week's recent outing with a couple of gentlemen who came into camp with a skiff-load of duffle, the knapsack of "Nessmuk" furnished forth the only piece of soap in camp.

As to the piece of soap and towel that were carried for seven weeks in the North Woods without being once used, the critics and cavilers remember to forget that it is stated in immediate connection that clear water was used, and that at intervals of two or three days woodland hostilities were reached where a thorough ablution could be had, to re-establish the anti-black-fly glaze on once more taking to the woods.

"Wawayanda" doesn't understand why one should "prefer an open brush shanty for a two-months' outing when a tent that will close is obtainable," etc. This is hedging the question with a vengeance. "Nessmuk" never recommended or used the brush shanty when anything better was to be had. But it is well for the outer to know how. As a dernier resort, one can be comparatively comfortable in very bad weather with only a brush shanty for shelter. Let "Wawayanda" read just what is said in "Woodcraft" on the shanty question. As to "a tent that will close," I recently spent a week in one on a lonely spot up the coast, and found it very light, airy and pleasant. I wish I could always have one when camping out. But I cruised there in a ten pound canoe, and if the tent were cut in two in the middle the little Rush-ton could not carry one-half of it. What she does carry is the oblong square of cotton drilling described in "Woodcraft." It is 7x9 feet, and when skillfully put up and stretched at a pretty sharp angle, makes a sufficient shelter. If intended for more than one night, the sides are closed in with the large fans of the cabbage palmetto. I have lived a good deal in such a camp during the last fourteen months and found it, even during the northerly that prevail here, entirely satisfactory. It is intended for two, but will shelter three very well.

As to that "extra shanty" for outdoor cooking in rainy weather, I can best explain the immense trouble connected with it by briefly relating a little episode of an outing wherein I took the role of guide and cook for a party of two gentlemen, one from Lincoln, Del., the other from Chicago. We were camped at the head of Lake Butler, where game was fairly plenty and black bass most abundant, when there came up a norther, and it was evident we were to have a rough, rainy night of it. The gentlemen referred to will bear me witness that in less than half an hour I had the fire sheltered with that "extra shanty" in a manner that proved effective during an all-night rain and strong wind. To erect an old stove top and build a smoky fire inside a tent in wet weather would hardly take less time and trouble.

Again, "Wawayanda" admits that it may require less labor to outstay a rattler than to build a bedstead. Say 150 bedsteads and add time to the labor. Then say that among ten of the grayest woodsmen you can find not more than one was ever called on to outstay a rattler at all. I have certainly made as many as 150 camps, and if I had my choice between building that many bedsteads or chancing a rattler's strike in the dark, I would take chances. Not to mention the facts, that a rattler when disturbed in the dark is pretty certain to strike at a slight noise, and that a bedstead raised a few inches from the ground affords no safety from the stroke of a large rattlesnake.

As to that old stove-top, I "dunno." It rather beats me, though I have met with much the same notion in my outings. I once had a friend, a genial, wholesouled fellow, who was delighted to camp out with us in the crisp October days, although he was no hunter and a poor shot. We always gave him the runway nearest the shanty, which he usually left in less than two hours to cook and moukay around camp, and his weakness was broiled venison. So long as he confined himself to a three-pronged frizzling stick of birch or hickory, this was *en règle* and even commendable. But one unlucky day he came across the discarded wheel of a baby wagon, and the plentitude of wire spoke being suggestive of broiling, he adopted it as a broiler and went into camp with it dangling from his knapsack, to the intense delight and merriment of the older hunters. Of course, it made a good enough broiler, and as we happened to get a deer on the first day, he devoted his time mostly to broiling and eating choice bits of venison steak. It happened, one morning, that he had a runaway near camp, while I watched one-half a mile further down. And I sat on a log and heard our best hound go through his runway with the rapid, eager yelps I so well knew the meaning of, and no shot! It was clear that Billy R. had quit his runaway and gone to camp to broil venison. Deer were not plenty enough to fool away in that fashion, and I left my runaway and walked up stream to see about it. The camp was on a little flat on the east side of the creek, and on the other side was a high bank with a dense growth of laurel. It was easy to bushwhack the camp from the laurel to within twenty-five yards of the camp fire without being seen. So I crept up in moccasins and took a peep through the laurel. There he was, the little wheel resting on the summits of three small stakes driven in the ground, a bed of bright embers underneath, and a nice, juicy steak being broiled to a turn. It was a grand chance to run a rig on him and he deserved it. Waiting until he squatted on his heels trying to get a turn on his steak, I drew a fine bead on the rim of the wheel and cut loose. There was sudden commotion in that camp. Wheel and venison flew off into space, Billy gave a spasmodic yell, and the last I saw of it all as I backed silently out of sight was a pair of boot heels keeling up over the wearer's head. In ten minutes I was back to my runaway with the rifle reloaded, and drowsily smoking by the

smouldering watch-fire. Down came Billy, pale with excitement.

"Did you hear the shot?" he asked wildly. "Well, I thought I heard a shot. Sounded as though it was near your runaway."

"My runaway? I should say so. May I never breathe or speak again if that shot wasn't made at me. Yes, sir, missed me by an inch or two and hit the briler. You ought to see it. It's just a tangle of twisted wire. Some of these Babbs Creek sneak hunters did it. Crawled along the bank in the high laurel and took a standing shot at five rods. It's a cold-blooded attempt at murder, and it's a miracle how I escaped."

"Well, if any sneak hunter in these woods has really missed you at five rods it is a miracle. Looks to me as though some feller had been trying his sights on that briler."

A light seemed to break in on him. His under jaw dropped, he looked me steadily in the eye for a full minute, and then said in tones of mingled reproach and entreaty:

"George, if you did it, don't tell the boys."

There was uproarious fun and laughter in camp that night. We hung the demoralized "briler" in the light of the camp fire, and I told the story as well as I could under the circumstances. Billy also gave his version, and he had wit and good sense to get as much fun out of it as any man in camp, while returning to sound woodland principles in the shape of a three-pronged birch fork.

And there is no moral that I recollect. The little wagon-wheel made as good a "briler" as the birch fork, but no better. And it was a ridiculous piece of hunting kit to carry into the woods.

By the same token, I have no doubt the old stove-top answers the same purpose as two small logs placed side by side on the ground as a cooking range, after the manner described in "Woodcraft." But it is no better; and if there be any significance in the fitness of things, one would be more apt to look for it in a camp of gypsy tinkers than in a camp of hunters. Nevertheless, I have no disposition to "pay out" on "Camp Flotsam," and none but genial feelings for "Wawayanda." I am about done with Florida for the present; and I half promise myself another cruise across the Northern Wilderness in a very light canoe. I think Camp Flotsam is on Long Lake, not far from Mitchell Sabattis's landing. If so, I am likely enough to paddle in on it some pleasant July evening, and take a (knife and fork) shot at that old, old stove-top.

P. S.—"Kingfisher" alluded to me a long time since with some mild criticism, but so gentle and genial that I was without sting. And his conclusions are sound, *i. e.*, to take all the comfort you conveniently can when going to the woods, but go. Would that I might cruise in on a "Camp of the Kingfishers." The liberal and free-hearted manner in which I would wade into their 11 cwt. of groceries should convince them that I am not so prejudiced against weight after all—when some one else carries it.

N—K.

Natural History.

THE AUDUBON SOCIETY.

Editor Forest and Stream:

Your note about the AUDUBON SOCIETY followed me to Mexico and here. After this long delay, if it is of any service to you, I should be glad to be quoted as in entire sympathy with its object. A dead bird does not help the appearance of an ugly woman, and a pretty woman needs no such adornment. If you can get the women to recognize these two things a great deal will be done for the protection of our song birds.

Yours sincerely,

NEW ORLEANS, April 5, 1886.

At a meeting of the Narrows Island Club, held in this city April 12, the subject of the destruction of our non-game birds was brought up by Mr. Lewis Edwards. Mr. Grinnell made some remarks on the magnitude of the evil and the methods which were being taken to suppress it, and Mr. Elliot urged the importance of each individual exercising his influence to put an end to the present fashion of wearing birds in hats. Dr. J. C. Barron presented the following resolution:

Resolved, That this club heartily indorses the plans and work of the committee of the A. O. U. on the protection of birds and of the AUDUBON SOCIETY, in their efforts to suppress this wholesale destruction.

The motion was seconded by Mr. Edwards and unanimously carried.

A writer in the *Evening Post* of April 7 says: "My visit to the National Academy was spoiled yesterday. Not by viewing bad pictures, either. It was by a young lady's hat. There was nothing in her face to denote excessive cruelty. Indeed, she was very pretty, and the attention she paid to the best pictures seemed to indicate that her artistic taste was not uncultivated. But her hat! The front rim of this was decorated with the heads of over twenty little birds. I counted them at the risk of seeming to stare rudely. These heads were simply sewed on side by side as closely as possible. Aside from the shock that any lover of bird life must receive on seeing this evidence of slaughter of innocent warblers, their use as a decoration was so inartistic and ugly that I wondered that any milliner would so apply them. I hope the Legislature will not fail to push the bill to check the extermination of our song birds by the milliners and their customers."

Is it not possible to persuade the women of Boston—the city we are proud to consider a center of refinement, reason and intelligence—to take a decided stand in the matter of the slaughter of birds, and protect them by refusing to wear them? We are fostering a grievous wrong out of pure thoughtlessness. A bit of ribbon, or a bunch of flowers, or any of the endless variety of materials used by the milliner would answer every purpose of decoration without involving the sacrifice of bright and beautiful lives. But women do not know what they are doing when they buy and wear birds and feathers, or they never would do it. How should people brought up in cities know anything of the sacred lives of birds? What woman whose head is bristling with their feathers knows, for instance, the hymn of the song sparrows, the sweet jargon of the blackbirds, the fairy fluting of the oriole, the lonely, lovely wooing call of the sandpiper, the cheerful challenge of the chickadee, the wild, clear whistle of the curlew, the twittering of the swallows as they go careering in wide curves through summer air, filling earth and heaven with tones of pure gladness, each bird a marvel

of grace, beauty and joy? God gave us these exquisite creatures for delight and solace, and we suffer them to be slain by thousands for our "adornment." When I take note of the headgear of my sex, a kind of despair overwhelms me. I go mourning at heart in an endless funeral procession of slaughtered birds, many of whom are like dear friends to me. From infancy I have lived among them, have watched them with the most profound reverence and love, respected their rights, adored their beauty and their song, and I could no more injure a bird than I could hurt a child. No woman would if she knew it.

The family life of most birds is a lesson to men and women. But how few people have had the privilege of watching that sweet life, of knowing how precious and sacred it is, how the little beings guard their nests with almost human wisdom, and cherish their young with faithful, careful, self-sacrificing love. If women only knew these things, there is not one in the length and breadth of the land, I am happy to believe, who could be cruel enough to encourage this massacre of the innocents by wearing any precious rifled plume of theirs upon her person. At this moment, when again comes April back to us, bringing once more these sky-born minstrels and poets dear, troops of boys throughout the whole country are slaughtering the bluebirds for the milliner! and not only the bluebirds, but every feathered thing that flies. Oh, let us begin to try to put an end to this evil, "wrought from want of thought!" The AUDUBON SOCIETY furnish some facts which prove how far it has gone. "From one small district on Long Island about 70,000 birds were brought to New York in four months' time. In New York one firm had on hand Feb. 1, 1886, 200,000 skins. The supply is not limited by domestic consumption; American bird skins are sent abroad; one New York firm had a contract to supply 40,000 skins of American birds to one Paris firm."

Will not the women of Boston lead the way as a city of merciful women, and take vigorous steps toward putting an end to this outrage against our Mother Nature? Once let refined and cultivated women see the matter in its true light, refuse to wear feathers and refuse to allow their children to wear them, the evil in this city at least would soon disappear. And it would be a beginning—let the fine women lead the way, the rest will soon follow; the servant will not wear what the lady refuses to countenance, for curiously enough fashion is respected as much by the ignorant as by the cultured—high and low alike bow down before the grim goddess and fashion has become a murderous fiend.

It is spring, the old hats and bonnets are to be laid aside. Let us buy no more birds with which to "decorate" the new head covering. More than this, let us not keep any we have now for future use, neither give them away, but destroy them at once, without hesitation, that they may never again set a bad example. Let us all be proud to walk abroad without a badge of cruelty upon our heads. Destroy them and never purchase others. How slight a sacrifice is this for us, how great a gain in the cause of humanity! At once, this day, this hour let us, in the name of love and pity, begin to spare and try to save the birds.—*Celia Thaxter, in Boston Transcript.*

THE A. O. U. CHECK LIST.

AT the first session of the American Ornithologists' Union, held in New York in September, 1883, a committee was appointed to consider the question of a Revision of the Classification and Nomenclature of the Birds of North America. This committee, which consisted of Messrs. Allen, Coes, Ridgway, Brewster and Henshaw, reported to the Union at its second meeting in October, 1884. The report was accepted, adopted and referred back to the committee, with instructions to complete their work and submit it to the Council, which was empowered to accept and adopt the report and to publish it in the name and under the auspices of the A. O. U. The Council accepted the report in April, 1885, and it is now issued in its completed form.

The volume, which is handsomely printed on laid paper, contains 400 pages. Of these seventeen are devoted to an historical introduction, in which is briefly set forth what has been done in zoological nomenclature up to the present time and the basis upon which its principles are founded.

Then follow fifty pages devoted to "Principles, Canons and Recommendations." The principles are five in number, and while briefly stated, are quite fully explained in the remarks which accompany them. The fifty-one canons come next in order and are also fully annotated, as are the recommendations, of which there are ten.

The Check List proper completes the volume, and to those who have not altogether kept up with the progress of modern ideas on nomenclature and classification, it will be a surprise. It is an absolute overturning of old methods, the order of the species being reversed, and the lower forms of bird life coming first in order, while the higher ones bring up the rear. This is, of course, the natural order, and the one which has long been followed in all groups except birds, and why the desirability of such an arrangement has never before occurred to ornithologists is one of the mysteries that will perhaps never be solved. As soon as the idea was suggested, it at once commended itself to every one; but it was long in coming.

Beginning then with the Pygopodes, the List takes us through the Longipennes, Tubinares, Steganopodes and Anseres, the trumpeter swan ending the true swimming birds. Then follow in order Odontoglossae, Herodiones, Paludicola, Limicola, Gallinae, Columbae, Raptores, Psittacae, Coccyzes, Pici, Macrochires (goatsuckers), swifts and humming birds, and finally Passeres.

Recent investigations into the nomenclature of our birds has brought about many changes of names, and old and well-known titles have disappeared to give place to others, older, no doubt, but not as well known. Thus, the loon is no longer *Colymbus torquatus* Brinn., but *Urinator imber* (Gum.), and the red-throated diver is *U. lummei*. The black-headed gulls, long generically separated from *Larus* under the name *Chroicocephalus*, now return to their former place. The generic name *Plutus* has become *Anhinga*, *Mergus* is changed to *Merganser*, *Anas* includes the old genera *Anas*, *Chauleasmus*, *Mareca*, *Nettion* and *Querquedula*; *Aythya* includes the old *Aythya*, *Fulica* and *Fuligula*. The name *Clangula* is no longer applied to the golden-eyes and buff-head. *Glaucionetta* is the generic name of the former and *Charitonetta* that of the *Anas albeola* of Linnaeus. *Clangula* is now used for the old wife or long-tailed duck, once *Harelda*. A long list of these important changes might be given, but they would not supply the place of the volume itself, which must be in the library of every working ornithologist.

A number of doubtful species have been thrown out of the list, so that it now numbers but 768 species as against nearly 900 (878 to be exact) in the last edition of Dr. Coes's Key.

Following the Check List is a Hypothetical List of twenty-

six species, which consists of "species which have been recorded as North American, but whose status as North American birds is doubtful, either from lack of positive evidence of their occurrence within the prescribed limits of the present Check List, or from absence of satisfactory proof of their validity as species. This includes such species as *Nemata furcata*, doubtfully N. American; *Chen ceruleus*, probably only a color phase; *Spiza townsendi*, still a mystery, and others. A list of forty-six fossil species, most of them made known by Professor Marsh, and, as to one group, fully described and figured in his superb monograph on the Odontornithes, or birds with teeth, completes the Check List, to which is of course added an excellent index.

The volume represents the best work and the most careful thought of our foremost ornithologists. As the exponent of this thought and work it will carry great weight, and will be gladly received by workers in this field at home and abroad.

THE SPARROW HAWK IN WINTER.

Editor Forest and Stream:

In your issue of April 1 your correspondent, Dr. M. G. Ellzey, quotes my statement that the sparrow hawk "lives almost exclusively on grasshoppers and crickets," and asks "what does he do for grub in winter time? Does he keep a silo or cannery?"

Certainly not. Why should he? About Washington, at least, he has a bountiful store of preserved English sparrows which he falls back upon when hoppers are scarce, which fact the Doctor may easily verify for himself—or might have verified a few weeks since—by taking a stroll through the Smithsonian or Agricultural grounds.

Mice and sparrows answer very well for any sparrow hawk who is foolish enough to winter so far north, and it may be remarked that very few are so foolish. For the sparrow hawk is a rare winter resident in these parts, the large majority going south, where they have no difficulty in finding plenty of their favorite insect food. Even in summer the sparrow hawk destroys more or less field mice, and there is plenty of evidence on record to show that he is occasionally responsible for the death of a small bird, while in winter the few that remain in this latitude do, no doubt, rely "almost exclusively" upon mice and small birds. However, taking the year round, the food of the sparrow hawk is grasshoppers, crickets, and such like, by a very large majority.

But how dare Dr. Ellzey so defame the climate of Washington and mislead the innocent readers of FOREST AND STREAM by asserting that: "About here there are some seven months in twelve when there are a few classic 'crickets on hearthstones' around and nary 'brown old grasshopper'?" He must "den up" very early in the fall and wake late in spring if this is a sample of what he knows about the festive 'hopper. Under ordinary circumstances grasshoppers are plenty around here up to the middle of December, and on warm, sunny days, in both January and February, a sharp-eyed and hungry sparrow hawk will have little difficulty in finding a few immature 'hoppers crawling among the leaves, while as early as the middle of March well developed insects are to be found. As a matter of fact, then, there is not a month in the year when an enterprising sparrow hawk—and all the Washington hawks are of this sort—cannot get more or less grasshoppers—enough, at least, for a relish.

I rather think the Washington sparrow hawk doesn't trouble himself much about grasshoppers in January and February, and there are certainly periods of longer or shorter duration in those months when he couldn't get them if he would, owing to cold weather and snow; but "seven months!" Fie, Doctor, how could you! Can it be that this severe reflection upon our climate is made in the interests of those who would see the capital moved beyond the Mississippi?

H. W. HENSHAW.

WASHINGTON, D. C., April 8, 1886.

HOUSES FOR BIRDS.

YEARS ago I traveled through the State of Maine on my way to the Bay of Fundy, where I was to join a party of "pseudo naturalists" who were off for three weeks on a grand bird slaughtering and egg snatching expedition. During this journey I was often amused at the many crude and grotesque styles of bird houses used by the farmers and country folk. Among these were tomato and fruit cans, butter firkins, old straw hats, dilapidated bee hives, and in one case a most worthy and bird-loving farmer had scooped out several crook-neck squashes which he had fastened under the eaves of his barn, in which several families of wrens were bringing forth their young, mixing freely and peacefully with their neighbors, the barn swallows.

Does the reader think that the evidence I met on every hand of how deeply the kind-hearted farmers and people of the town and country love our native birds made no impression on me? Oh no! It sank deep, so deep, that after returning from the slaughtering expedition, repentant and most thoroughly disgusted with myself for the part that I had taken in it, I determined that for all time to come I would devote myself to the protection of all wild birds of gentle habits. Having shot but one wild bird in my life, and that some thirty years ago, there was still time left to make ample restitution in kindly acts performed toward and in the defense of my sweet-voiced and light-feathered friends. What more natural, therefore, than that I should turn my attention to the proper construction of bird houses—a subject that, as a rule, has been much overlooked.

The prevailing style of bird house architecture is very primitive and very ugly, consisting mostly of a rude square box with a hole cut in it, on which is placed a sloping roof, and afterward, as if to add to their ugliness, they are painted a dead white, glaring yellow, occasionally bright red, ultramarine blue and even black; and often, meaningless jack-knife whittlings, vanes and wind mills, painted in every combination of bright colors, are nailed on to them. None but those foreign, feathered tramps and loafers, the European sparrow, would ever condescend to occupy such quarters, but they being color blind and of no refinement or æsthetic tastes, are indifferent so long as they obtain a roof to shelter them, a hole to crawl into. When painting bird houses, never use bright or loud colors or gilding, as it is not only in bad taste and out of harmony with the surroundings of the birds, but to birds of modest, refined and retiring habits, I believe it is very trying. Imagine, reader, lover of our wild birds, if you can, a pair of those plaintive-voiced birds of gentle habits, the bluebirds, selecting a house debauched with grinning yellow chrome! Believe me, these birds of azure blue and breasts of red would never think of degrading their beautiful plumage by bringing it in vulgar contrast with a hideous yellow. I know of none of the animal kingdom who are so

æsthetic, artistic, nice and exquisite in all their tastes and habits as are our native wild birds. They seem to have an instinctive knowledge of the propriety and fitness of all things, never breaking up nature's harmonious color plan, but always falling in with it.

My father, some years ago, fastened a number of flower pots against the side of a brick house. The holes at the bottom of the pots were made large enough for wrens and too small for bluebirds, as a battle between these two species had been raging for a number of days over the possession of the only bird house on the grounds. I have since used flower-pot bird houses very extensively. The simplest method of making them is to fasten a five-inch pot against a stone or

Fig. 1

FLOWER POT BIRD HOUSE.

brick wall. The drain hole of the pot is enlarged by chipping off a small piece at a time with the sharp ferrule end of a file, but to do this successfully the pot must first be soaked in water for three hours to soften the ware. Do not try to make the hole exactly symmetrical, but have its outline irregular. Two small holes are also chipped in the sides of the pot, one of the diameter of one half inch; this hole when the pot is in position is to answer as a window to admit a small quantity of light into the interior of the pot; the other hole, on the under side of the pot, is to be but one-quarter of an inch in diameter, and is for the purpose of admitting a current of fresh air. When it is placed in position the pot is held against the wall to which it is to be fastened by leaning a post or board against it. For a cement for fastening and ornamenting the pot, plaster of Paris is to be preferred to Portland or other cements, the plaster being light and quick setting, which is hastened by adding a small quantity of salt when mixing it. Another advantage the plaster possesses is that it is a non-conductor of heat, so that all danger of the interior of the bird house becoming overheated is removed. Before applying the plaster to the pot the latter must be soaked in water for one hour, or the plaster will not adhere. If the pot is an old one it must be thoroughly scrubbed with a stiff brush in warm water to remove all minute vegetable growths. Before applying the plaster to the rim of the pot and against the wall, the wall must be thoroughly moistened or the plaster will not adhere. When

Fig. 2

HANGING OR STANDARD FLOWER-POT BIRD HOUSE.

applying the plaster about the rim of the pot, and against the wall, use it thick and pasty and apply rapidly. After the plaster has set, the board prop is removed and work on another part begun. When all are in position the plaster is given six hours to harden and dry before putting on the rough ornamental coating, as the weight of this might break away the pots from the wall. This rough coating is applied with an old tea or table spoon well greased with lard or suet fat, to prevent the plaster from adhering to the spoon and forming into an unmanageable mass. When applying the plaster, small living branches of vines can be imbedded in the plaster, and before the entrance a small twig or rustic branch is fastened for a perch.

After the plaster is thoroughly dry two heavy coats of boiled linseed oil mixed with a "dryer" are applied. The oil protects the plaster from the action of rains and the atmosphere. The pots can be painted with a dull green or any of the grays or browns that match the colors of the barks of our native trees, or that correspond with the grays or dull browns of our various earths. Lichens and mosses can be fastened to the houses by imbedding them in the plaster when it is soft.

A hanging bird house can be constructed of a nine-inch flower-pot and an old milk pan, as shown in Fig. 2. A hole is made in the bottom of the pot and pan large enough for a turned picket or round stick to pass through, so as to allow for the fastening of the straw which is to form the thatched roof. A small hole is bored through the picket into which a cross pin of either iron or wood is inserted. On this pin the bottom of the pan rests, otherwise it would slide down the picket. The sides of the milk pan are punched full of

holes to allow the plaster to pass through and clinch, as it will not adhere to the smooth surface of the tin.

The pan is to be filled with earth, in which may be planted *Tradescantia*, German ivy, or moneywort, which will droop over and twine in the branches of the "cat screen." Some of the more hardy succulent plants, such as house leeks, creeping Charley, *Sempervivum*, etc., do well in dry locations.

This bird house can also be fastened to a standard pole, as indicated by the dotted lines in Fig. 2, when it is not desired to suspend it. The cat screen is intended to prevent cats from passing up the pole and also to break the otherwise stiff and ungraceful lines, and as a trellis for vines to entwine on after having climbed or been trained up the standard pole. The cat screen is made of the branches of the black alder, or birch, which are firmly bound to the picket or standard pole, some two feet below the bottom of the pan, against which they press and radiate out as shown in the figure. The best and most ornamental woods for making the screens are red birch with the cones on, spruce with its rich buds, and sweet gum with its curious corky bark.

A. W. ROBERTS.

A LEAST BITTERN'S NEST IN A TREE.—Newport, R. I. Feb. 28, 1886. Editor Forest and Stream: It was on the 19th of June, and a finer morning I don't believe could have dawned, that I left the house about 8:30, taking a good lunch, and went out to a place called Hanging Rocks, to see if I could see any new birds or find any new nests. I hunted about until noon, and then I ate lunch under a large oak tree. While I was sitting there a chickadee came and lit on the tree. He lit about ten feet over my head, but in a very little while he worked himself down within about three feet and there he sat for a minute or so watching me with a kind of a what-do-you-want air, and then flew off. I then started off for Southwick's Grove, and on my way I went through many orchards. I remember one of them very well, and I think I will never forget it. It was G. A.'s, as the boys called it, meaning George Anthony's. As I walked through it, watching the wood pewees, the least flycatchers and many other birds, my attention was attracted by the noise the robins and redwing blackbirds were making. I stood still for a moment, and a male blackbird came and lit on a little bush not over six feet away. He did not see me, and as I knew he didn't, I picked up a rock and sent it at him. And now comes the surprising part of my day. On missing the blackbird the stone went tearing through a pear tree, and to my utter amazement a least bittern (*Ardetta exilis*) flew out. I ran quickly to the tree that the bittern flew out of, ascended, and there, in a very shallow nest, composed of first a layer of twigs about the size of an ordinary lead pencil, next a layer of smaller ones, and lastly a lining of moss and a few bits of straw, lay one egg of a very pale bluish white, without spots or any markings whatever. I left the nest and returned on the 21st. This time I found three eggs in the nest, and this shows that the bittern lays an egg every twenty-four hours, or within that time. I waited to see if she would lay any more eggs, but on visiting it on the 23d I found the same three eggs and took them. I was obliged to leave the nest, as it was too frail to take from the tree. I was again in the orchard some time afterward, but the nest was gone, the bird having broken it up, or it having fallen to pieces. It is a mystery to me that this bird should build in such a dry place, it being one of the water birds, and besides there was no water within a distance of a half mile, except a half stagnant brook which afforded no food for the bird whatever. I hope some of your correspondents will relate some of their experiences with this bird.—F. L. T.

ANOTHER TAME PARTRIDGE.—The Athens "spook" bird has been captured. On Tuesday evening last, reports the Hudson Republican, April 6, as Deacon Gordon W. Brady was returning to his home in Athens from Catskill, he observed the partridge running beside his horse. Mr. Brady alighted and attempted to catch the bird, chasing it around the wagon a couple of times, but the bird managed to keep out of reach, until finally Mr. Brady stopped and made motions with his hand as if to strike the bird, when it immediately turned on him and fought his hand, striking with his feet, rooster fashion. Mr. Brady caught it. The partridge made no resistance when captured, not even fluttering. It seemed perfectly docile. Mr. Brady rode home with the bird, in high glee. The news soon spread, and scores of citizens flocked to see it. The partridge, unlike other birds of its species, shows no signs of fear while being handled, not even a single heart palpitation, which is so pronounced in all wild birds when touched. It seems utterly unconcerned to all around it, submitting to stroking on its head and breast with indifference. Many people in Athens entertain a superstitious fear of the *rara avis*, asserting it to be the "ghost" of the murdered Waltz, who was hung in Catskill some years ago for the killing of a scissors grinder named Hultz. Others again feel anxious to possess the partridge, offering large prices for it. Many strange stories are related of this partridge. Early last winter, while a sleigh-load of men were returning from Hamburg, where they had been working on the ice, the partridge flew from the hillside in through the sleigh, and passing out between the heads of two men. Two days later the partridge again flew in and out of the sleigh in precisely the same manner, passing between the same two men as before. A few evenings later, while Col. Henry Nicholas, of Athens, was driving home, the partridge alighted upon the back of his horse, he being compelled to use the whip in order to drive it away. Next George W. Loud met with the partridge; it alighted on the back of his horse. Mr. Loud, in relating the incident, said that he was not at all superstitious, but he hoped the partridge would not bother him again. It did on two subsequent occasions. Many other reputable citizens relate similar stories of meeting with the bird at night, some evincing such fear as to avoid traveling along the road after dark.

SALEM, Mass., April 12.—Cedar birds have been in flocks and plenty of them this year. I understand two Lynn parties whose names are known have been buying them from boys this season for seventy-five cents a dozen. If either of them see this mention I hope they will set a better example to minors. A few scattering Wilson's snipe have been shot and woodcock are along. Swallows (*T. bicolor*) and purple finches are about, and the frogs are piping merrily. Bluebirds are nesting and several other species are mating.—X. Y. Z.

BUFFALO.—A correspondent reports a herd of 400 buffalo. The residents are not killing them, except occasionally one for food, and they are increasing. They will have to move soon, however, as the ubiquitous wire fence is encroaching on them.

UTILITY OF THE SPARROW.—At a council meeting of the Royal Agricultural Society of England, Miss Omerod, in her report on injurious insects, maintained her indictment against the sparrow as a mischievous bird, and repeated her advice in favor of checking its enormous increase. She said: "We do not find from examination of their contents that they feed on corn red-maggot, corn-thrips, corn-aphis, or any other corn insect; nor have we any observations of fields infested by these huge flocks being freer than other places from insect attack. From careful observations in different places, extending over a period of from one to fifteen years, we do not find any diminution of insects round the farm buildings where the sparrows greatly resort, but we find they have been observed, in many cases, to drive away true insect-feeding birds. The State Entomological Returns from the United States confirm these views, and likewise information forwarded by Mr. A. Molineux, member of the Committee of Agriculture of the Royal Agricultural and Horticultural Societies of South Australia, relatively to the English sparrow, as observed by himself at Adelaide, South Australia. Sparrows can and do eat some amount of insects if other food is short, but by choice I consider it to be proved that they are almost wholly corn and vegetable feeders. The matter being of much importance, I have collected information from known observers on the subject, of which I give the main points in my own forthcoming report."

New Publications.

McLELLAN'S POEMS.*

TO the three volumes of poetry, "The Fall of the Indian," "The Year," and "Mount Auburn," published some years ago, Mr. Isaac McLellan has now added a fourth, "Poems of the Rod and Gun." This is the long looked for collection in book form of the poems on sporting topics, which have graced the columns of the sporting press for the past quarter of a century. Mr. McLellan's muse has taken all animated nature for her own. The volume now before us is not confined to any one phase of field sports, nor is it limited in range to game animals and fish, nor to the American continent. The author's love for nature is deep, his ear quick to catch the rhythmic union of the harmonies in the winter winds which howl about the camp of the moose hunter in Canadian wilds, in the tinkling splash of the distant western rivers, in the dissolution of Arctic ice packs, in the inharmonious harmonies of the tropic night forest. Here are pictures of sport in Africa, America, Australia, Ceylon, in the Arctic and the Antarctic, the north and the south and the east and the west. He sings of all birds, from the albatross to the woodcock; all animals, from the antelope to the wolf; all fishes, from the bass to the yellow perch. No form of sport, by sea or land, with game or fish, is foreign to his sympathetic pen. Of the nearly 200 poems, 104 relate to game and shooting, 14 are classed as miscellaneous, and the rest sing the charms of angling and the varying fortunes of its devotees. The first poem in the book, "Nature's Invitation," originally occupied the first column of the first number of the FOREST AND STREAM. Among the miscellaneous poems is a "Frank Forester Memorial Ode," written by request for the proposed ceremonies in laying the cornerstone of a monument to be erected at Greenwood Lake in honor of Frank Forester. The monument never reached the proportions entitling it to a poem, though it will be remembered that the "generally diffused" funds originally intended for the memorial were not very many years ago tangible enough to draw out a great deal of vicious swags and grotesque bathos from some of the Forester idolaters and hierologists. "This votive cenotaph," of which Mr. McLellan writes was unfortunately never erected to

hear
The tribute of affection's tear.

and it is probable that the poem, as preserved in this volume, will be, as it is now, the only permanent record of the monument enterprise. Mr. McLellan's volume will meet with a warm welcome by American sportsmen. It is a book which should be in the library of every man who uses rod or gun. The poems make a substantial volume of 271 pages, bound in cloth, and embellished with an etching, "The Shot at the Start," by Mr. J. E. Sabin. From the author's preface we take the following:

"Our widely extended country, reaching from the Atlantic to the Pacific coast, from the Northern Lakes to the Gulf of Mexico, abounds with almost every variety of wild game of the choicest qualities. The ocean, the river, the lake, the brook, mountain, forest, prairie and subtile field, all have their peculiar tenants; fish, fowl and wild animal ranging the wood, swimming the waters, beating the air. Almost without limit are the attractions of field and flood in our noble and far spread land; and to describe their different varieties, their mode of life and capture, the scenery where they are found, has been the business of the naturalist, novelist and sportsman; but the poet in a collected volume has hardly here contributed his part to the general store of knowledge. As the variety of the noble game and fish of our land and waters is greater and more attractive than that of any other country, with the exception perhaps of Africa, so nowhere are the sports of field and flood more universally followed than with us. The consideration of these facts and the desire to contribute something to the treasury of the knowledge of our wild game, and to depict the pleasures to be enjoyed in their pursuit, led the writer to prepare this work; and if it may yield pleasure to any person, and more especially to brother sportsmen, he will feel he has his reward. To commence and complete the work has been a labor of love, for his participation in field sports has not been small; and he can only regret that his ability to describe does not equal his power to enjoy the delightful pastimes of the gunner and the angler."

"The author, in preparing a work that might perhaps be styled a book of natural history, has not confined his pen strictly to descriptions of birds, fish and animals that are considered as game, but has included many others that have no claim to such title. In the present volume he has sought to reproduce, as far as possible, his collection of sporting poems lost in a recent disastrous fire in New York, viz., the burning of the Potter Building on Park Row, attended with grievous loss of life and property."

"Since this volume was commenced, several years ago, a great number of sporting associations have been formed in the country, consisting of gentlemen of leisure, intelligence and high repute, who are interested in field sports and the preservation of fish and game, and to gain their brotherly favor would be honor indeed. So what poems we have been able to save from the wreck we hope may find favor in their sight. There has always been a degree of friendly brotherly feeling among sportsmen, and this has encouraged us to offer this work for public notice, and above all, to brother sportsmen, to whom it is respectfully dedicated. If we meet with fraternal approval at their hands, we shall feel rewarded for the labor of many years in trying to produce something acceptable to lovers of the rod and gun."

For autobiographical notes by Mr. McLellan see Vol. XXV. page 444.

*Poems of the Rod and Gun; or, Sports by Flood and Field. By Isaac McLellan, Greenport, Long Island. New York: Henry Thorpe, 1886.

HUNTING TRIPS OF A RANCHMAN.

A SECOND and less expensive edition of Mr. Theodore Roosevelt's capital book has recently been issued by the Putnam. On its first appearance we took pleasure in calling attention to the merits of this volume, which is both happy in its conception and excellent in its execution. In all respects it is a delightful book, full of the breezy freshness of the plains, and telling graphically and entertainingly the story of the simple life of the cow camp. It gives, too, a great deal of information about the various species of our large game which are passing away at so rapid a rate, and which the hunter of a few years hence will find only in the few preserves that have been or may be established in the mountains. In our previous notice we called attention to one or two points on which the author generalized from insufficient experience, and also to two of the illustrations which were unsatisfactory. These last we afterward learned were prepared during the author's absence in the West, and were not seen by him until after the volume was issued from the press. In the present edition all these matters have been put right, and there is now nothing to be said save in praise of the book, which although much less elaborate than the *Medora* edition, is still a handsome volume. It lacks the etchings and the rubricated title and the initials, but has all the engravings, and considerable additional reading matter.

RECOLLECTIONS OF A SPORTSMAN.—II.

IT WAS in the early autumn of 1861. Foliage was still on. Farmers were cutting and shocking corn. The buckwheat had just been cut, and much was yet in the fields in little heaps ready to be hauled to the thrashing floor; when I decided, as my work of this kind was well in hand, to spend the afternoon with my new gun and dog. "Bob White" had long since ceased to call his name, and only used the call note when his family had become scattered, or at evening when going to roost. Dash had never been with me in the field before. However, I had the most implicit confidence in him, as I knew his former master never kept a poor dog. He had brought Dash across the water because he considered him the best dog in his kennel, one of the finest in England. Dash seemed to have as much confidence in me. When I threw my gun on my shoulder and whistled him up, his very look and action spoke most eloquently of the fun we were going to have in each other's company. I began to wonder if Dash would think as well of me when we returned.

We took our course down a little brook that ran mostly through a narrow wood into a large millpond. On the south bank was a farm on which I knew were two coveys of quail, well grown and strong birds. Along the brook were many patches of cat brier and alders. In one of these Dash came to a beautiful point, a picture of grace and beauty that would charm the eye of an artist or stir the soul of a sportsman with delight. I walked in, expecting to flush a woodcock, but up jumped a rabbit right in front of the dog and went off shaking his bunch of cotton at me in such a tantalizing way I fired both barrels at him, apparently without effect, except to increase his speed. I had scarcely emptied my second barrel when I saw a woodcock disappearing through the alders. Dash was still pointing, though it seemed to me he had changed his position slightly. I could flush nothing in front of him, so tried to call him off, but could not. I was about to collar and lead him away, supposing he was pointing where the woodcock had been, when up got another woodcock behind the dog. I wounded it with my second barrel, followed up and secured it by another shot. I considered it a serious defect in my dog that he should be liable to point at either end.

[This, by the way, reminds me of an incident that occurred in later years, that may bear repeating. I was once returning from a little hunt near the city, with my gun and dog, carrying a small bunch of game in my hand. My outfit and rig would not indicate to the average feminine mind, accustomed to city habits, a high idea of gentility. As I was crossing on a Fulton ferryboat, standing in front of the ladies' cabin, I noticed two ladies watching me, evidently admiring my birds. Presently they stepped up to me, and one of them asked how I sold them. I replied that I did not usually deal in birds as merchandise, but if they were very anxious to buy I could not think of charging them more than cost, and proceeded to figure up my railroad fares, hotel bill, ammunition, etc., when my fair questioners gracefully withdrew, exclaiming, "Oh, we thought your dog caught them!" As it was a time of day when but few people rode uptown, I succeeded in getting my dog into a street car. I had just stowed myself away comfortably, when the same ladies got into the car, we being the only passengers. They immedi-

ately asked if my dog would bite. I assured them he would not, and called their attention to the fact that he was very tired, already being coiled up close in the corner under my feet fast asleep. The idea that a dog ever got tired was new to them, and they wanted to know why. I explained to the best of my ability, and by way of illustration made old Bob get up and straighten himself, I stroking his tail, making him assume the position of pointing as nearly as possible. Both ladies exclaimed, "Oh, isn't it wonderful! Yes, thanks, we understand," one saying to the other, "Don't you see, my dear, nature has so adjusted the creature that he points with his tail!"]

I was quite uncertain for some time at which end of the dog to look for the bird, but concluded to watch both ends and all around whenever he pointed and be ready on all sides. A first-class resolution, but not always lived up to. The most careful sportsman will sometimes lose the chance for a good shot by thinking his dog "is just fooling." I had proceeded perhaps 300 yards, when Dash found and brought me a rabbit not yet dead, but with one hind leg broken, and his good-bye end well filled with shot. Before reaching the millpond, a distance of about one mile, I got seven more points on woodcock, two of which I killed. I then hunted some thickets around a buckwheat stubble, without finding the covey I expected. Continuing to a ridge or sort of bluff at the edge of the Raritan meadows, Dash, while ranging at full speed, suddenly wheeled, walked cautiously to a brush fence and looked into it in a most interested way, wagging his tail all the time. Presently he jumped in as if to catch something, when out flew a sparrow. I scolded and shamed him, but he persisted in devoting his attention to that brush fence. He followed it about 200 yards to a rugged ravine, where he made a stiff point in tolerably open oak woods. After kicking in the leaves behind the dog until I became nervous, I walked some twenty feet in front of him and flushed a fine covey of quail. They flew well together, straight from me, so I pulled away with both barrels without aim at any particular bird and didn't get a feather. Dash behaved splendidly, though in my ignorance I blamed him for coming in and lying at my feet as soon as I shot. When I told him to go on, he struck out full speed in the direction the birds had taken.

He had not gone over 150 yards when he made a kind of sideway double summersault and froze stiff. I know none of the quail had stopped there, and noticed the ground where Dash stood was springy and wet. I expected a woodcock, when up jumped three English snipe, flying toward the meadows at a ninety-mile per hour rate, but I stopped one of them very neatly within fifty yards. Having marked the quail to my satisfaction, I followed and found them beautifully scattered in the head of a little hollow, in large oak woods with whortleberry undergrowth not very thick; in fact just the place where an expert shot would like to have them. Dash made ten or twelve beautiful stands on single birds, and I fired both barrels at each bird as it rose, but my bag was still yawning for quail. I followed up a few birds I had been able to mark on their second flight with the same result, until I had birds and dog as wild as they could be made. I then sat down, pulled out an old pipe and proceeded to take a smoke.

As it was now about sundown, it was not long before the quail commenced to whistle. I took Dash to where they were whistling, and although he was constantly trailing, he could not get a point. Becoming desperate I fastened him to a sapling with an old skate strap. Leaving him howling and whining, I hastened to where I considered a good stand and proceeded to whistle them up. In this way I killed two at one shot on the ground, and one at another. At the last report of my gun I saw Dash coming toward me with part of the strap, which he had gnawed, hanging to his neck, and a quail in his mouth. One that I had evidently hit during my reckless firing. As I was going home, passing near where I had first flushed the covey, he found another which had been wing-tipped, and caught and brought it to me. Although I was ashamed of my poor shooting, I felt pretty well satisfied with my bag, having 3 woodcock, 1 English snipe, 5 quail, and 1 rabbit, the result of 38 shots fired. This first hunt with my new outfit satisfied me that I had a first-class dog, and probably a good gun, but did not know how to use either.

BEDFORD.

AN UP AND DOWN SHOT.

Editor Forest and Stream:

Under the head of "Erratic Bullet Flights" you have recently published two communications from me giving incidents in my own experience where life was endangered by singular and unlooked for bullet flights. I will now give another incident in my practice which, although not quite so singular, was really attended with more probable danger. It occurred within half a mile of the scene of my duck shooting adventure, published by you. I was hunting black and gray squirrels in the adjacent forests; I had that very common run of luck so often experienced by the solitary squirrel hunter, namely, of having the squirrels lie close to and on the opposite side of a horizontal limb. Finally I tried the plan of stepping directly under the squirrel and imitating its bark. This caused the squirrel to stretch its neck and look down over the side of the limb, exposing most of its head, which in those days I rarely missed, whether firing perpendicularly or otherwise. I had in this manner killed two or three squirrels within a half hour, when another opportunity offered and I stood so nearly under the squirrel that it would have fallen upon me if I had not stepped aside at the instant it dropped at my feet. As I was raising my flask to the muzzle of my rifle there was a whizz and a sharp crack, partly behind and within three feet of me upon the ground. As I turned my head quickly I saw the extreme ends of a dry limb about one inch in diameter and six or seven feet long just falling upon the ground. An examination revealed the fact that the bullet having expended its force vertically in the air, had returned, and striking this stick squarely midway between the ends had partly cut and partly broken it in two, bouncing the extreme ends upward. The bullet mark was plainly defined nearly through the stick. This ended my vertical rifle practice.

MILTON P. PETRICE.

PHILADELPHIA, Pa.

MECHANICSVILLE, N. Y., April 5.—A Rod and Gun Club was organized in this village last week. The object is the better protection of game and for trap shooting. You will hear from us in the future concerning the club's improvement. The members are all true woodsmen, and I think the club will be a success. We are watching the deer bill with interest. Ice is going fast and the fisherman is vanishing his rod and inspecting his lines for the spring fishing. Boys are having fine luck catching the river fish.—A. C. J.

THE ONTARIO GAME LAW.

Editor Forest and Stream:

I inclose a copy of the Ontario game bill passed during the session just closed. You will find that though deficient in some respects it is a great improvement on the last one. It is to be hoped that the States of the Union adjoining Ontario will see fit to follow in her footsteps and put a stop to spring duck shooting. The great difficulty we experienced in getting the Legislature to consent to this change was the fact that spring shooting was allowed on the American sides of the St. Lawrence, Niagara, Detroit and St. Claire rivers in sight and hearing of our sportsmen. The true sportsmen of the United States will doubtless thank us for taking the initiative and for clearing away this difficulty in seeking legislation against spring shooting. All true Canadian sportsmen hope that their American brother sportsmen will go still further and put a stop to all spring shooting—geese, swan and plover as well as ducks, and stimulate us in turn to further exertions. We had hoped that plover of all kinds would have been included with the snipe, but some members of the famous Toronto Gun Club spoke so strongly before the committee on the sport obtained from black heart plover in May that the clause embracing snipe and plover was not passed in its entirety. Pot shots of from ten to thirty of these small birds on their way to breed can be made and it must be grand sport indeed.

In contrast to these small bird destroyers we had opposition from the grand sportsmen who desired to retain spring geese and swan shooting. It was suggested that they could hardly be consistent if they desired the abolition of spring duck shooting, which they said they did, but reason could not prevail. Were it not for the opposition from these parties, a more stringent game law would have passed, we believe, and one that would have done still greater credit to W. C. Caldwell, Esq., M. P. P., who kindly undertook its management before the house. It is well known that this bill embodied resolutions passed by the Wentworth Fish and Game Protective Association from time to time; in fact that the proposed change in the law came from this association, and that to one local member, J. M. Gibson, Esq., M. P. P., we are chiefly indebted for this stringent bill. No one will regret more than W. C. Caldwell, Esq., M. P. P., and J. M. Gibson, Esq., M. P. P. their failure to secure the prevention of deer slaughtering in the water and the exportation of small game. They have done good and faithful work, and the sportsmen of Canada may well thank them.

MEMBER WENTWORTH FISH AND GAME
PROTECTIVE ASSOCIATION.

HAMILTON, Ont., April 3, 1886.

Following is the text of the Ontario law:

Whereas, It is expedient to amend the law respecting the preservation of game and fur-bearing animals in Ontario; therefore, Her Majesty, by and with the advice and consent of the legislative assembly of the province of Ontario, enacts as follows:

1. The act passed in the forty-third year of Her Majesty's reign, and chapter 31, is hereby repealed.

2. None of the animals or birds hereinafter mentioned, shall be hunted, taken or killed within the periods hereinafter limited:

(1). Deer, elk, moose, reindeer or caribou, between the fifteenth day of December and the fifteenth day of October.

(2). Grouse, pheasants, prairie fowl or partridge, between the first day of January and the first day of September.

(3). No quail shall be hunted, taken, or killed, during the years 1886, 1887, and no wild turkeys during the years 1886, 1887, 1888, and in each case thereafter not between the fifteenth day of December and the fifteenth day of October following.

(4). Woodcock, between the first day of January and the fifteenth day of August.

(5). Snipe, rail and golden plover, between the first day of January and the first day of September.

(6). Swans or geese, between the first day of May and the first day of September.

(7). Ducks of all kinds, and all other water fowl, between the first day of January and the first day of September.

(8). Hares, between the fifteenth day of March and the first day of September.

3. No person shall have in his possession any of the said animals or birds, no matter where procured, or any part or portion of any such animals or birds, during the periods in which they are so protected; provided that they may be exposed for sale for fifteen days, and no longer, after such periods, and may be had in possession for the private use of the owner and his family at any time, but in all cases the proof of the time of killing, taking or purchasing shall be on the person so in possession.

4. No eggs of any of the birds above mentioned shall be taken, destroyed or had in possession by any person at any time.

5. None of the said animals or birds, except the animals mentioned in Section 8 of this act, shall be trapped or taken by means of traps, nets, snares, gins, baited line, or other similar contrivances; nor shall such traps, nets, snares, gins, baited lines or contrivances be set for them, or any of them, at any time; and such traps, nets, snares, gins, baited lines or contrivances may be destroyed by any person without such person thereby incurring any liability therefor.

6. None of the contrivances for taking or killing the wild-fowl known as swans, geese or ducks, which are described or known as batteries, swivel guns, sunken punts, shall be used at any time, and no wildfowl known as ducks, or other water fowl, except geese or swans, shall be hunted, taken or killed between the expiration of the hour next after sunset and the commencement of the hour next before sunrise.

7. No beaver, mink, muskrat, sable, martin, otter, or fisher, shall be hunted, taken or killed, or had in possession of any person between the first day of May and the first day of November; nor shall any traps, snares, gins, or other contrivances, be set for them during such period; nor shall any muskrat house be cut, speared, broken or destroyed at any time; and any such traps, snares, gins or other contrivance so set, may be destroyed by any person without such person thereby incurring any liability therefor; provided that this section shall not apply to any person destroying any of the said wild animals in defense or preservation of his property.

8. Offenses against this act shall be punished upon summary conviction on information or complaint before a justice of the peace, as follows:

(a) In case of deer, elk, moose, reindeer or caribou, by a fine not exceeding \$50, nor less than \$10, with costs, for each offense. (b) In case of birds or eggs, by a fine not exceeding \$25, nor less than \$5, with costs, for each bird or egg. (c) In case of fur-bearing animals, mentioned in section 7 of this act, by a fine not exceeding \$25, nor less than \$5, with costs, for each offense. (d) In case of other breaches of this act, by a fine not exceeding \$25, nor less than \$5, with costs.

9. The whole of such fine shall be paid to the prosecutor unless the convicting justice has reason to believe that the prosecution is in collusion with, and for the purpose of benefiting the accused, in which case the justice may order the disposal of the fine as in ordinary cases.

10. In all cases confiscation of game shall follow conviction, and the game so confiscated shall be given to some charitable institution or purpose, at the discretion of the convicting justice.

11. In order to encourage persons who have heretofore imported or hereafter import different kinds of game with the desire to breed and preserve the same on their own lands, it is enacted that it shall not be lawful to hunt, shoot, kill or destroy any such game without the consent of the owner of the property wherever the same may be bred.

12. It shall not be lawful for any person to kill or take any animal protected by this act by the use of poison or poisonous substances, nor to expose poison, poisoned bait or other poisoned substances in any place or locality, where dogs or cattle may have access to the same.

13. (1) No person shall at any time hunt, take or kill any deer, elk, moose, reindeer or caribou, for the purpose of exporting the same out of Ontario, and in all cases the onus of proving that any such deer, elk, moose, reindeer or caribou, as aforesaid, so hunted, taken or killed, is not intended to be exported as aforesaid, shall be upon the person hunting, killing or taking the same, or in whose possession or custody the same may be found.

(2) Offenses against this section shall be punished by a fine not exceeding \$25, nor less than \$5 for each animal.

14. No owner of any hound, or other dog known by the owner to be accustomed to pursue deer, shall permit any such hound or other dog to run at large in any locality where deer are usually found, during the period, from the fifteenth day of November to the fifteenth day of October, under a penalty on conviction of not more than \$25 nor less than \$5 for each offense; any person harboring or claiming to be owner of any such hound or dog shall be deemed the owner thereof.

15. It shall be lawful for the council of any county, city, town, township, or incorporated village to appoint an officer who shall be known as the game inspector for such county, city, town, township or incorporated village, and who shall perform such duties in enforcing the provisions of this act, and be paid such salary as may be mutually agreed upon.

16.—(1). It shall be the duty of every such game inspector appointed as aforesaid, forthwith to seize all animals or portions of animals in the possession of any person contrary to the provisions of this act, and to bring the person in possession of the same before a justice of the peace, to answer for such illegal possession.

(2). It shall also be the duty of every such game inspector to institute prosecutions against all persons found infringing the provisions of this act, or any of them, and every such inspector may cause to be opened, or may himself open in case of refusal, any bag, parcel, chest, box, trunk, or receptacle in which he has reason to believe that game killed or taken during the close season, or peltries out of season, are hidden.

(8). Every such inspector, if he has reason to suspect, and does suspect that game killed or taken during the close season, or peltries out of season, are contained or kept in any private house, shed, or other buildings, shall make a deposition in the form A annexed to this act, and demand a search warrant to search such store, private house, shed, or other building, and thereupon such justice of the peace may issue a search warrant according to form B.

17. This act shall come into effect on and after the first day of July next after the passing thereof.

A GOOSE SHOOTING MATCH.

Editor Forest and Stream:

The turkey shoot described in your last issue by Mr. Merrill, reminds me of a goose shoot in which I participated about five years ago. I used a Phoenix single-barrel breech-loading 12-gauge shotgun, made by the Whitney Arms Co. The barrel is steel, 28 inches long, and the entire gun weighs six pounds. A few days previous to the match I targeted the gun at 40, 50 and 60 yards. While shooting at the latter distance, two of my brothers expressed the opinion that they could excel my shooting, they to use their old muzzleloaders. Their challenge was promptly accepted. A new target was put up. One of my brothers fired at it. I was standing near the target, and noting the effect, told him to try the other barrel. The other barrel was fired. My younger brother then toed the mark and fired a heavy charge of No. 12 shot from his long single barrel. A new target was put up and I fired one shot at it. The number of pellets in each target were then counted, and it was found that in one shot I had exceeded their three shots by about 40 pellets. This experiment, and numerous others, convinced me that the new gun was good enough to shoot for geese. I even went so far as to bargain with a neighbor that if he would give me twenty cents to pay for two shots, I would bring him home a goose.

When the day for the match arrived I hitched up Prince to the old milk wagon and drove three miles to the place where the shoot was to take place. On my arrival there was considerable merriment over the unusual proceeding of bringing a wagon to a shooting match. I explained that although I could easily walk the distance, I might not be able to carry my winnings home. This explanation was received with loud and probably derisive laughter on all sides. The terms of the match were as follows: Distance, 40 yards; any shotgun of ordinary size, loading unrestricted; target, 4 inches square with a cross mark in the center. The marksman putting a pellet of shot nearest the cross won the goose. The geese were weighed, labeled and numbered. A value was set upon each goose by the owner, and this amount was made up by the shooters paying ten cents a shot. The geese averaged 84 pounds each, and were valued at about \$1.50 each. There were 10 shooters, and about one-half the number took two shots for each bird. When more money was put up than the bird was worth, the surplus was put up as a second prize, and went to the shooter making second best shot.

Goose No. 1 was put up. I took two entries and fired two shots. Won by Jacob Ecker, Jr. I was second best on target. No second prize. Goose No. 2. Took two entries. Fired one shot and won first. Goose No. 3. Took two entries. Fired one shot and won first. No. 4. Two entries. One shot and won first. No. 5. Two entries. One shot

and won first. Goose No. 6. Two entries. Only one man would enter against me. Eight men positively refused to shoot against my six-pound popgun. All the other guns in the match were muzzleloaders, and weighed from one to four pounds heavier than mine. It was proposed that I lay aside my breechloader and select any one of their guns and continue shooting. This I respectfully declined to do, and withdrew my last entries, and the shooting was resumed. Then it occurred to some of the shooters how a wagon was a useful accompaniment to a popgun at a shooting match, when they saw me load up my four fat geese won in four successive shots. When I got home I notified Mr. Zenas M. Savage that his twenty cents had won a fine fat young goose weighing eight and one-half pounds. He paid the money and took the goose. The next day we ate goose No. 2. The third goose I sold to a friend who had attended the match and won nothing, for about one-half its value.

Then my brother and John Fox, a shooting companion in nearly all our hunts, commenced a new line of argument. They tried to convince me that had they been at the shoot the result would have been very different. This had the desired result. I put up goose No. 4 for thirty cents. We each put ten cents in the pool and each fired one shot. Again I won the goose and the pool money. My style of loading was 1 dram of powder and 21 ounces of No. 12 shot, with one pink-edge wad over powder and one over shot. The trajectory was very high, but it brought the meat. With this charge I was compelled to aim several inches above the target to get the center of the charge where I wanted it. I used this same gun in many turkey matches since that time and never came home empty-handed, although I have sometimes spent more money in entrance fees than the value of my winnings. I always shoot off-hand in these matches, while my opponents almost invariably shoot from a dead rest placed close to the ground. This gives me an advantage, as I am shooting down hill while they are shooting on a level. This is a very important matter when extreme proportions of powder and shot are used, such as $\frac{1}{2}$ dram to 3 ounces, as some use. This is not intended as a "dickering." It is a truthful statement of actual occurrences, and devoid of exaggeration in every particular.

E. A. LEOPOLD.

NORRISTOWN, Pa., April 9.

GAME PROTECTORS' REPORTS.

Editor Forest and Stream:

Fred P. Drew, Special State Fish and Game Protector, has made the following annual report to the State Fish Commission:

To the Commissioners of Fisheries:

GENTLEMEN—In submitting for your consideration my second annual report, I am reminded that the protection of game and fish, like the stocking of our lakes and streams, does not in a single season display all the results that might be hoped for or which a later examination may develop.

My duties, as you are aware, have been largely of special and detective nature, and a great part of my services have been rendered pursuant to the orders of the Commissioners outside of the district to which I was assigned. The information I have obtained on special trips has been mostly of a kind that could not be made public without detriment to the objects in view, and therefore will not be recapitulated in this report, having already been communicated to you either in verbal or written form. I have, nevertheless, rendered some important service in my district, and especially in the counties of Broome, Cortland and Otsego, localities in which, till very lately, the game laws have been a dead letter.

Five suits successfully prosecuted in Broome county, for spearing fish in the Susquehanna River, resulted in securing a pretty general observance of the law in that county.

In the fourth district for violation of the first section of the game laws I commenced proceedings in county court, which were promptly settled by the defendant pleading guilty and paying the penalty and costs to the district attorney.

A suit is pending in Cortland county for pollution of public waters, the effect of which, it is hoped will tend to check this most injurious and too-long-tolerated practice. In the county of Otsego I have endeavored to make a very thorough examination into all offenses that have been reported to me and have begun eleven suits for violations of the law, in all of which I think the testimony is sufficient to warrant an affirmative verdict. I have also virtually secured sufficient evidence in several other cases of violations of the law in the same county, which will be placed in the hands of the district attorney at an early date. I have seized a number of nets in Schuyler Lake which are now in the hands of the sheriff and have suits pending against some of the owners. Here permit me to say that if the officers in every county in the State would emulate the example of the sheriff and district attorney of this county, violations of the game laws would be less frequent and the duties of a protector less arduous.

I have also suits pending in the tenth district which, I am informed, will not be contested by defendants.

Early in the season, with Protector Schwartz, of the fifteenth district, I took from the St. Lawrence River two large nets, which we burned at Clayton.

The difficulties principally in the way of enforcing the game laws I find to be, in my experience, a lack of interest in many localities, or a laxity of public opinion. There is also need of more active and courageous co-operation of those interested in the maintenance of the game laws, whereby the hands of the officials may be upheld in the discharge of their duties. Too much is often expected of the officers and they are often censured for not doing what is not in their power to do with their limited allowance for traveling expenses. Wherever the public sentiment is sound the obstacles to enforcement are no longer formidable. Where there are good game protective associations acting in practical and hearty co-operation with the officers, there are but few violations, but when from indifference or fear, or a corrupt self-interest, they will not assist, the best efforts of the protectors are often without avail.

In reviewing the results of my labors during the past year I find much to encourage all who are interested in the propagation and protection of fish and game. Public opinion is slowly but surely awakening in favor of protection. A number of protective associations have been organized and evince a strong desire to advance every effort in behalf of a rigid enforcement of the laws.

The amendments to the game laws which were passed at the last session of the Legislature respecting brook trout meet with general approval. The same may be said regarding the anti-hounding law for the protection of deer. There are a large number of sportsmen in this district who have

for years frequented the northern wilderness each season, and with scarce an exception they fully approve of the law, at the same time being cognizant of the fact that it has not had a fair test. From my own observation and information obtained from guides and sportsmen while they were engaged in hunting deer in the counties of Herkimer and Hamilton, I think it but fair to attribute much of the success of the still-hunters during the past season—which we are asked to believe was unprecedented and will exterminate the deer faster than they can be bred, even with the aid of such powerful auxiliaries as jack lights and hounds—to the fact that dogs were running in every direction during the open season at least. A single instance, the truth of which cannot be disputed, illustrates this. A well-known still-hunter in October last shot a deer, but had hardly dressed it when two valuable dogs came baying on its trail. He secured both, and they were soon subject to your orders. This is not an exceptional case, as one of my special reports will show, and for this reason we fear the fate of the deer of the Adirondacks is foreshadowed by that of the buffalo of the Western plains.

The argument that outweighs all others in the minds of many opponents of the present law for protecting deer may be briefly stated thus: It helps the hunters who are endowed with more money than skill in hunting, for they can, by a lavish use of the former, secure the services of a half dozen or more guides and a full pack of hounds, who will drive the game to water, where, if needs be, they will hold it till the valiant modern Nimrod succeeds in killing it—with their assistance perhaps at that. Is it to be wondered at then that these persons should join with the pot-hunters in the cry that went up in olden time: "Our craft is in danger to be set at naught."

With your permission I beg leave to offer a single suggestion regarding the distribution of trout spawn for restocking public waters in the settled portion of the State. A prerequisite to granting every application should be the existence of an active protective association, some of whose members reside in the neighborhood of the waters it is proposed to restock. All of which is respectfully submitted.

FRED P. DREW.

Special N. Y. S. Fish and Game Protector, 11th District.
WASHINGTON MILLS, N. Y.

HUNTING AT ARMY POSTS.

Editor Forest and Stream:

Your letter of Jan. 9, 1886, making inquiries in regard to game in this vicinity, also with what success the Government Springfield shotguns are used in improving the company's mess, has just been handed me by the commanding officer with request to answer. Whitetail deer can be found within five miles of the fort, but mule or blacktails are further off, about forty miles. Last fall a black bear cub was killed on the prairie within fifty yards of the guard house. Elk can be found thirty miles away, and mountain sheep seventy or eighty miles. Sharptail grouse, sage hens and blue quail are abundant. I saw but one ruffed grouse during the hunting season last year. A species of jack rabbit, here called "black-tail," are very plentiful; a short time ago they were such a nuisance that the county paid a bounty for their ears. Sixteen years ago some gentlemen of Boise City imported to this county or valley a lot of eastern quail (Bob Whites) and turned them loose, hoping for fine sport within ten years. An act was passed by the Legislature protecting these birds, but the pot-hunter has left but few.

With regard to the shotguns, I consider them but little better than nothing, and no one thinks of using them if they can possibly get any other kind. But little game was killed by the men of my company last year, but the previous year at Fort Lapwai in this Territory they killed a good many sharptail grouse and a few ducks.

C. A. DEMPSEY, Capt. Second Infantry.

BOISE BARRACKS, Idaho, March 28.

ONONDAGA SPORTSMEN'S CLUB.—Syracuse, N. Y., April 7.—At the annual meeting of the Onondaga Sportsmen's Club last evening Mr. Howlett was elected President; Z. C. Smith Smith, Vice-President; John Steadman, Secretary; Harry Ayling, Treasurer; George Palmer, Financial Secretary; Wm. Prettie, James Montgomery and Daniel LeFever, Executive Committee. There seemed a disposition on the part of the old heads to make the younger members officers. A. G. Courtney was chosen attorney of the club amid great applause. G. W. Dakin moved a vote of thanks to Thomas Kimber for his faithful performance of the duties of treasurer for the ten years he has held that position. The motion was carried with enthusiasm. The treasurer turned over \$894.77 to the new treasurer. F. M. Eams, Edward Hudson, Jr., and Charles Castle were elected members of the club. It was voted that article 17 of the constitution shall be rigidly enforced, and all delinquents in dues should be blackboarded. Jefferson Hopkins, of Caughdenoy, asked the club to give him a letter to Assemblyman Nutting, stating that the members do not oppose the people of that vicinity having eel weirs for catching eels in the Oneida River, not interfering with game fish. It is understood that an effort is to be made to have a law pass the Legislature forbidding eel weirs in that river. The club voted to give Mr. Hopkins a letter to the effect desired. There is talk of holding a celebration on the twentieth anniversary of the establishment of the club, Sept. 29, 1886.

"WONDERLAND, or Alaska and the Inland Passage." By Lieut. Frederick Schwatka. With a description of the country traversed by the Northern Pacific Railroad, by John Hyde. This is a beautifully illustrated pamphlet of a hundred pages describing the scenic beauties, attractions and resources of the Northwest. It relates to a portion of the United States which is every year visited by larger and larger numbers of tourists, and which would attract thousands more were it better known. Those who are thinking of a trip to the Yellowstone Park, to the Pacific Coast, or to Alaska should, before leaving home, provide themselves with this work. It is sent free on application by Charles S. Fee, Gen. Passenger Agt., N. P. R. R., St. Paul, Minn.

THE BOSTON DUMPING GROUND.—Chicago, Ill., April 6.—*Editor Forest and Stream:* I desire through your widely circulated paper to ask if the sportsmen of Massachusetts will not at once set about having a law framed and passed by their Legislature, making the close season for game to begin the same as in most of our Western States, Jan. 1 of each year, so as to prevent the trapping and killing of prairie chickens, grouse, quail and deer in the West all winter. The best way to stop this illegal killing and shipping out here is to close the markets for sale of game.—M. R. B.

A BOLD RUFFED GROUSE.—Cortlandt, N. Y.—Occasionally a remarkable instance of boldness of the naturally timid ruffed grouse is related. Two wood choppers stated to me that while they were felling a tree in the woods last winter a partridge, which had from some cause been startled from its hiding place in the cover adjoining, alighted in the tree they were chopping down and remained there until the tree commenced to fall. From observation and reports of others more ruffed grouse were found in this section last season than have been noticed for a number of years past. Evidently the hunters have not caused the destruction of these game birds to such an extent as the foxes, hawks and owls.—Mig.

SAN LUIS OBISPO, Cal.—We are about forming a sportsmen's club, as game and fish receive little or no protection in this county. I have been agitating this for a year, as I have seen the wanton destruction of game and fish in the State of Colorado. Many are out every day murdering the trout now, and as we have no organization, I am powerless. Quail are now mating. There are but few out with guns, but they, I fear, respect nothing.—C.

SPITTING ON THE SHOT FOR LUCK.—Ferrisburgh, Vt., April 7.—*Editor Forest and Stream:* If it is worth noting, you may say in FOREST AND STREAM that when "Awahsoose" was a boy, it was a common custom with our gunners to wet their shot with spittle, not for luck, but from the idea that it made them carry closer. But we always used to spit on our baits of worms for luck, and nothing else. Sometimes it brought it.—AWAHSSOOSE.

NARROWS ISLAND CLUB.—The annual meeting of the Narrows Island Club was held in this city on Monday, April 12. The following officers were elected: President, Mr. D. G. Elliot; Vice-President, Mr. J. A. Howlett; Secretary and Treasurer, Mr. C. T. Barny; members of the Governing Committee in addition to the above, Messrs. H. Sampson, W. G. Dominick and B. Dominick.

NEW JERSEY.—Smithburg, April 8.—Since my last report I have been out looking after the birds, and find quail in fair supply. Started one covey of about 18 or 20 birds. Woodcock are quite plentiful now, but they seldom remain here until the shooting season opens.—W. L. B.

TEXAS.—Midland, March 31.—Plenty of prairie chicken and curlew here, but their flesh is strong, owing to their eating grass and weeds. I have seen but two antelope since Jan. 1.—D. H. K.

THE CHAMBERLIN CARTRIDGE LOADING MACHINE is on exhibition at Messrs. Tatham & Bros.' establishment, No. 82 Beekman street, this city. It is worth going to see.

Sea and River Fishing.

ANGLING GUSH.

IT may not be amiss thus early in the season to give some angling impressions. In the first place, it is wonderful to note how the interest in the rod and line has increased during ten years even. It is also amusing to notice the way different individuals are affected by the mania; for mania it is with one whole class of anglers. Indeed, anglers may be separated into three distinct classes—viz., the staid and true anglers, the gushing anglers, and the selfish anglers. The true anglers have been in the profession for years. They go to the lakes and streams annually, as regularly as the sun rises, and if they fish from sunrise to sunset without a single rise, they return to camp satisfied; they have spent another day on the beloved waters; they have tried the trout, but wait till to-morrow for success. Do black flies bite or mosquitoes trouble, it is all the same. The disposition is unruffled and undemonstrative. They will take out some tar to-morrow and try the trout again. To this class success and pleasure always come. It would almost seem as though the big trout come to their hooks out of pure respect for a disposition as kind, as quiet, and as loyal as persevering. Such are the true anglers. Dawson—only gone before us—was a fitting type of this class. Chester A. Arthur is another. May heaven restore his strength for other campaigns in the forests and on the waters! There are many others in Boston, in your own city, good FOREST AND STREAM—scattered all over the world; but their native modesty forbids a roll call in public print.

But for the gushers—What shall be said of them? They feed upon gush until the season opens, and they are carried away by gush. Their flies "lightly kiss the surface, as smooth as a maiden's cheek." Another dextrous cast, and the tinsel-ornamented lure falls as lightly as a summer zephyr; when the sheen opens, there is a mighty swirl of a really pretty tail! The water boils and eddies as the plant rod bends and buckles, but the angler is as true and steadfast as gush can make. The struggle lasts one month, if a mosquito with a big bill does not happen along and send Gusher to camp. A—what—"speckled beauty" is caught, just tipping the scales at 5-10-1,000 pounds. Plain trout is not a name good enough, and greeny always selects "speckled beauty," because that name is new—to him—and not a bit silly.

Now, if all this could have happened under cover, with the trout in a pool before an open window, it would have been better, and less tiresome, you know. The places should also be heated with steam and well lighted with gas, and there should be an admiring audience. Here is a sample of what catches Gusher. It is from the Boston *Sunday Herald*:

In the show window of a store on Washington street is a prettily constructed tank, whose waters are inhabited by about three dozen of the finest trout that ever gladdened the eye of an angler. Over this miniature pond stood Manager Soden yesterday evening. His eyes had a turnstile twinkle as he gazed upon the "speckled beauties" gracefully moving about in the limpid waters. Turning to an attaché of the place, he said:

"I wonder if they would like a fly?" "You may try their appetites," said the clerk, and in a few moments an improvised rod and line, with a tempting bait attached, were placed in the hands of the astute manager of the Boston Base Ball Club. With a graceful move of the right arm the fly was thrown in true angler style, and it fell within an inch of the nose of a queenly fish. But much to the surprise of the no-dead-head-ticket-this-season manager, the piscatorial belle paid not the slightest attention to the Delmonico lunch that had been so generously offered her. With a jerky movement of her pretty tail, she sailed disdainfully away to another part of the pond. The buyer of franchises was evidently a trifle disappointed at his first attempt to make an agreement with the water

coquette, and again the arm was lifted and the fly sent to another point on the trembling surface of the little lake. It dropped as lightly as a baby's kiss immediately over the heads of half a dozen finny Yun-Yuns, each one of whom, as soon as the tidbit struck the water, gave a gentle movement of the tail, and departed for new quarters. The fifty cent admission manager looked up with surprise at this second refusal to bite at his free lunch. At this time a large number of men and boys had collected in front of the window, and were eagerly watching the performance of the far-sighted director of the Boston league team. Not realizing, in his eagerness to demonstrate his skill as an angler, that he had so large an audience, he hastily withdrew to the rear of the store, and remarked that he was more successful in catching subsidiary coin than hooking trout.

What twaddle! The light of a fact or two is too plain. The "improvised rod" was the tip of a lancewood pole. The flies had both hooks broken off. The cast into the "little lake" was about as much "in true angler style" as a lady's smile is like a dump cart. The audience was the usual one which throngs any show window or street fight. Such literature disgraces the profession. It might do for base ball, but never for the true angler. The plain congratulation of an angler of thirty years' every season at the Andros-coggin Lakes, told the true story when he beseechingly said: "I wouldn't worry the poor trout with that stick!"—the improvised rod of the base ball manager; then bowing and shaking hands with Mr. Litchfield, he quietly said, "Let me congratulate you on a good show of trout."

The third class of anglers must not be omitted, but they too take more pride in their profession. To call them the "meanest men on earth" might be too much of a compliment. They fish for numbers, and count their trout as does the butcher his meat—by the pound. The selfish anglers have depleted our lakes and streams till we tremble for the residue. In their greed they steal pounds of trout which should go to make up the sport of their brother anglers. I have a case in point.

The selfish angler came from the Quaker City—that all Quakers are not like him, is doubtless true. He arrived at the Upper Dam early in the season. He hired a guide—only for a day or two. It did not take long for him to find out, through his guide, that by standing down on the pier of the old apron and casting a line down the rushing torrent, baited with a live minnow, trout might be caught about as fast as the hook could be baited and returned. This was the spot for him. He had found the Mecca of his dreams. With his guide, he planted himself on the end of that pier—about wide enough for two persons. The guide dipped up the live bait and the Quaker City man slew trout. Did another person attempt to drop a line? That person was quickly reminded that the position was occupied, and that no gentleman would ever interfere with an angler's pre-empted position. They kept that position till the next day at noon. When the Quaker City man went to his meals at the camp, the guide held the position; then the guide would go to dinner. But the second day, when the guide went to dinner, the assembled sportsmen could stand it no longer. They made a rush for the position with baited hooks; throwing their lines over the Quaker's head. He frowned; but when two other lines were hooked to his on which he was drawing in a trout, he saw the point and quietly wound up his tackle. He called his guide and together they proceeded to dress off the catch. They had 350 trout. The largest weighed 4½ pounds and the smallest probably not less than 1 pound. The fish were packed in a big box, and the next morning the Quaker City man paid his guide and started for home with his catch. It was before the 50-pound law of Maine, or he would have been stopped. It was a true specimen of the selfish angler. The question is, How much true sport with the fly, later in the season, did he carry off, which rightfully belonged to a hundred other anglers? SPECIAL.

THE TROUT OF SUNAPEE LAKE.

Editor Forest and Stream:

I have read the views of your different correspondents on the identity of this fish and am very anxious to learn how the vexed question will be settled. Mr. Hodge claims that this fish has been in the lake for perhaps centuries, while Mr. Quackenboss, Mr. Webber and Mr. Stone incline to think it a recent importation of *S. agassizii* from Maine. I, being merely a monad from Monadnock, have no theories to confirm nor to condemn, the facts will be entirely sufficient, if they can be obtained. If all your correspondents can look at it in this light and feel as Dr. Bean did when he said to Mr. Hodge, after pronouncing the fish a *fontinalis*, "you were right and I was wrong," then we may hope to see the question settled.

I must confess to feeling a little doubt about the possibility of a fish of small breed, whose ancestors never measured more than ten inches, reaching a weight of ten pounds in new waters. This doubt is based on the fact that there are certain limits assigned by nature to all forms of life which, while they may be occasionally exceeded by individuals, or even by many, under different conditions, are constant even in the exceptions. For instance: The average weight of a man is about 150 pounds, the world over, but individuals have been known which reached upwards of 400 (outside of dime-museum weight) and there are countries where the average is 160 pounds or above, but none where this average reaches 200 pounds, or one-third more than the average for the whole world. Again: An individual ox might weigh 2,500 pounds, or about three times the average of his race, still we would doubt that one could weigh 240,000 pounds under any conditions. In this case it would be forty times the average of his race, placing this average at 6,000 pounds. Now take a blue-backed trout which does not average a quarter of a pound in his native waters, in fact one rarely reaches that weight, and then imagine him to grow ten pounds in some new lake because there was plenty of food there!

Food is a great factor, but it cannot make an elephant out of a mouse because the material is not there, the ancestry is not there, and ancestry is as important as food.

THE THIRSTY PELICAN.

MONADNOCKEWUNK, Ap:il 10.

BASS FLIES.—New York, April 9.—*Editor Forest and Stream:* The flies mentioned by me were Post, and Jungle St. Patrick—not Post Jungle. Your correspondent will find these flies, with the exception of the Post, on the hand colored plate of standard black bass and lake flies, published by Messrs. Abbey & Imbrie of New York, and often advertised in your paper. The Post has wings of wild turkey, salmon colored body, black hackle, and tail of scarlet ibis and yellow, mixed. The St. Patrick is also known as the Alexandra.—W. HOLBERTON.

CAMPS OF THE KINGFISHERS.*

CARP LAKE, MICHIGAN—VII.

THE morning dawned gloomy and dismal and rainy, with a sharp cold wind blowing from the west that chilled us to the bones, and the girls came reluctantly out of the "henery" at the call to get ready for breakfast, without the usual cheerful morning "cackle," and stood shivering around the glowing stoves with a far-away, wish I-was-home look on their lengthened faces. This seemed mightily to the pleasure of that philosopher Al, who was industriously dodging and elbowing his way around among the blue-looking crowd as he got the breakfast ready. Meantime chuckling softly to himself at his great luck—as Ben and I figured it out—in finding his kitchen and cooking utensils in so much better shape than was to be looked for after the violent storm of the previous night. But more than likely the little one-sided chuckling match the philosopher was consoling himself with was in the nature of getting even with the girls for laughing at him when told of his struggles with his tent during the night; however, the exact cause of his unusual cheerfulness remains an unsolved mystery to this day.

It was indeed a spiritless crowd, but I am not quite sure but old Ben and the skipper of the holler log edged along to the further end of the table to nudge each other and work off a shivery snicker at the general cerulean aspect of the camp.

It was pleasing, however, to note the effect of a cup of hot coffee and a good breakfast on the temper of the party. Long faces shortened up, an air of good humor diffused itself through the camp, and every one seemed determined to make the best of an uncomfortable position without grumbling.

A rousing fire was built directly in front of the big store tent, the flaps tied back, and into this the happy family gathered to chat, read, amuse themselves, and wish for pleasant weather.

Sunday should be a day of rest in a camp, and I had promised myself to stay in as a shining example to the others, but when the spirit begins early in the morning to wheedle one into going a-fishin', it's not much use in trying to hold out against it, and accordingly between 9 and 10 o'clock the inclination prevailed. I bailed out one of the boats, put in a bucket of frogs, bait box of worms, the old bass rod and a short stiff one, handy to get along with in the brush, and headed up shore to find a trout stream which one of the Horton boys had told us about, that came into the lake a couple of miles above camp.

Mother Jim and her sister Fanny having been brought up in the rigid old mossbacked Scotch Presbyterian faith, were no doubt horrified at this move; but as the sin of fishing on a Sunday is probably not greater than that of loafing in camp and thinking about it all day, making imaginary casts and bringing to gaff or net a brave, strong fish the whiles, I settled with my conscience in this view of it, and, bending to the oars, was soon out of sight around the point above Horton's, looking for the landmark by which I was to find the mouth of the stream. The others seemed to have caught the spirit of goodness pervading Mother Jim, or perhaps they did not care to brave the discomforts of the cold wind and rain, and I was to have the day to myself.

I failed to find the landmark or the mouth of the stream, as it was lost in a maze of swamps and dead trees, killed by the backwater, that extended back I could not tell how far in the direction of the hills, and I had a pull of nearly a mile further before I could find a place where I could make a landing—at Alexander's Point, full three miles from camp.

Here the lake takes a turn in a southwesterly direction, and from this point to the head is about four miles. The wind had veered around since my leaving camp, and was now blowing down this long stretch with a force that kicked up white-capped waves three or four feet high and rolling and tumbling, quartering down the lake till they spent themselves with a roar and a cloud of spray against the further shore.

Directly across from the Point is a big steam sawmill and a small hamlet (Bingham P. O.), and, as a matter of information for the brethren, I may note that it is about nine miles from Traverse City by wagon road, and that Mr. B. J. Morgan a lively man at Traverse, has a boat house here and boats to hire to any one wishing to drive out for a day's fishing.

As it was useless to think of making headway against the heavy wind and sea, sweeping by only a few rods away, I pulled the boat up under the shelter of the point, hid the bass rod in a handy pile of logs, took the other one and worms, and crossing a field of growing peas, struck into a road, which I followed back till I found the trout stream, a puny affair a yard or two wide and slightly discolored by the heavy rain of the previous night. There are trout streams and trout brooks, and this was perhaps one of the latter, but it took another and equally as bad a day to establish the fact that there were some good trout in it, of which more anon. This dreary Sabbath day I fished for a goodly distance down and up, through an open field and up into the woods into a dripping tangle of "bresh," floundering over logs and fallen trees, crawling under them when I couldn't crawl over, nearly stuck fast once in a treacherous swamp, and ever fighting skeeters; all this without catching sight of a solitary fin.

There is a good deal of straight fun in fishing an average Michigan trout stream in its wild state if you know just how to do it, but it requires long practice and a thorough training in all the grades of true goodness to do it without drifting into profanity. I've tried it week days and Sundays, and always with results bordering more or less on a failure. It is no place for an average church deacon, for he would backslide to the level of an ordinary, every day sinner before he had fished and 'fit musketeers' five rods. I worked back out of the tangle into the road, hot and tired, and trudged back to the boat filled with disgust and disappointment, for I wished very much to treat the girls to a trout supper as a peace offering, a bribe, so to speak, to go easy on the skipper in the matter of the scoring they were certain to have laid up for him for the sin of Sunday fishing. But I "hadn't ketch'd nuthin'," and the sin was perhaps not so flagrant as it might have been.

The rain had stopped, but the wind had increased and the lake was rougher than when I left it to hunt the trout stream. I tied a troller on the bass line, and getting in the boat, pulled out past the point into the waves and headed

with the wind for the further shore with the swiftly-revolving spoon trailing 200 feet astern, a tempting sham for any bass, pickerel or maskalonge that might mistake the glittering, quivering thing for a new-fangled bug that he had not sampled.

It was a wild ride for three-quarters of a mile, first on top of a big wave then bow buried in a roller with stern high in air, raising the line clear of the water with a jerk that caused the troller to skip from the crest of one wave to another like a bright-winged insect full of life; again stern down and bow high out, pitching and rolling we went, the boat and I, over the curling waves till, when near the middle of the lake, a savage tug tightened the line like a bow string, and before I could free the reel handle and snatch the rod from under my leg, the strain eased, and a glance at the sagging line and "feel" of the reel handle told the tale; the troller was gone, and with it, of course, the mightiest pickerel or maskalonge in the lake. I felt sore over the mishap, but then, one always does lose his biggest fish, simply, I believe, because he is big and strong and powerful enough to break ordinary tackle, if inadvertently the slightest advantage is allowed, and I consoled myself with a quotation, slightly altered, from old Ben: "Any fool kin ketch a pound bass, but it takes science to ketch a big muskylunge, espeshally ef he slips up on ye when ye ain't a lookin'." Besides, had I been attending strictly to business instead of gaping around over the lake enjoying the blow, I would have lost him anyhow, for the water was so rough and I was going at such a pace that I would not have been able to handle boat and rod at the same time. There's nothing like a good excuse for losing a big fish, and the brother that can't make peace with himself for his awkwardness by framing a plausible and satisfying reason that will cover all the weak spots in the case, had better not go a-fishing. When I found out it was not my fault—and it is surprising how easy a conclusion of this kind is arrived at—I felt easier; but I did not feel like telling the camp of the adventure, and being laughed at as the "peerless prevaricator," according to "Old Knots," and to this day they don't know that "old Hickory's calamity box" is short its most enticing troller. (Note—To whom it may concern: Tell no "fish story" to old campers without the fish to back it up; they've been there.)

After pulling down shore for half a mile into comparatively quiet water I reeled up to see how much of the line had gone with the troller and found dangling at the end of it a fragment of the broken swivel—nothing more—and this accounted for the calamity. That fish must certainly have been a thirty pounder.

The philosopher had told us of a trout stream coming into the lake near where I then was, out of which he had taken over 70 trout a couple of days before we arrived, but there was such a dense growth of deadened trees standing in the backwater along here for half a mile and extending back further than I could see through the network and tangle of dead trunks and leafless branches, that I looked in vain for the mouth of the stream. There were more days left, however, and the stream could be more easily reached by an old road beginning at the water at a point opposite camp, and the signs were not good for trout that day and "the Joneses wasn't used to hev'in' trout o' Sundays nohow," all these trilling drawbacks making a most gratifying excuse for not taking any back to camp.

I tied on a hook, put on a live kicking frog and at a point where the shore swept back, forming a little bay, soon forgot all about tangles and trout streams in a lively fight with a big-mouthed bass of quite three pounds. In less than an hour five more were on the stringer shedding fresh water tears of regret over the unsatisfying results following their several encounters with a speckled frog with a fishhook in his mouth, when, as six bass were enough for supper and breakfast the boat was headed for camp, now in plain sight, the stars and stripes whipping in the breeze, a mile or more down the lake, but I may say (this for the especial eye of old Dave) that the start to camp was not decided on till some time after the fish had quit biting.

I found the family, except Dan and Ben, in the big tent as comfortable as a good fire in front could make them, but wearing an aspect of "subdued cheerfulness" that said plainly they were all glad the dismal, gloomy day was about drawing to a close. I fancied, too, I could detect in the reproving glance of Mother Jim the symptoms of the expected lecture I no doubt merited (for not bringing in a mess of trout), and I could have hugged "Top" (a nickname old Ben had bestowed on little Cora Muller) when she broke the silence by asking naively, "Did you catch any fish, James Mackerel?" This raised a general laugh at the expense of "James Mackerel," and diverted Mother Jim's thoughts from the scoring she had doubtless mapped out in her mind for J. M., and taking advantage of the hilarity Top and I repaired to the boat to look at the bass, the others following shortly, Mother Jim with the rest, so innate is the desire in us all to view the trophies of a sportsman's skill with rod or gun, even though killed on a day that should be devoted to better pursuits. But if Sunday fishing is a sin, it is easier to be a sinner than a saint, and it would seem the brethren of the rod have need to mend their ways.

I may note that from that evening on Top and the Skipper had a good many little confidences together—a relation which has since grown into a kind of "June and January" friendship, and, I take it, no man is the worse for the friendship of a pure-minded, artless little girl.

Those two old worthies, Dan and "Hyperbolic Jones" (the girls had so named old Ben), had dozed around camp most of the day suffering in silence, but when the rain was over the longing to go a-fishing was no longer to be resisted, and they had bailed out a boat and taken their way down the lake, as Ben said, "to limber up their joints an' sneak 'round kinder onconcerned like an' find out whereabouts the bass an' pickerel held their Sunday schools."

They came in a short time before supper was ready with four or five bass, a couple of pickerel and a dogfish of over two feet in length, the latter identical in appearance with dogfish found in Lake Erie, the Wabash, Kankakee, and Tippecanoe rivers; the same eel-shaped mouth, dorsal and caudal, with the same black spot on each side of the tail fin near the base, and the same little bead-like, snakey eyes. They may, and no doubt do, inhabit other lakes in Northern Michigan, but Carp Lake is the only one we have taken them in. Their flesh is soft and mushy, and utterly worthless for the table; the longer it is cooked the "slicker" it gets; but they are a powerful, hard-fighting fish, and about the meanest, vicious-looking devils that infest the water. I merely record the fact without comment, that the natives around Carp Lake call them "lawyers."

Before supper was over the rain began to fall again, and continued throughout the night.

CINCINNATI, Ohio.

ATTACHING DROPPERS.

NOW that the angling season is so nearly ready to begin, almost every angler will be overhauling his tackle, etc. A new stock of leaders he will either buy or tie. So I think it will be perhaps pardoned me, if I present the method I have elaborated for attaching droppers to leaders, in consideration of the fact that it will be useful to many of the fraternity. It may very likely happen that this method is, in slang, "a chestnut." I have shown it to a number of my friends, and have found none who have seen it before. They have adopted it and assure me that it is very satisfactory; at least, there will be some to whom it is new, and to them I recommend it, and hope those who may perhaps have already struck upon it will forgive me for the sake of those who have not. The drawings will, I think, explain themselves. In tying lengths of gut together to make the leader, when you arrive at the point where it is desired to have a dropper loop, say thirty inches for a fine trout leader, or three feet for a heavy trout or bass, from the lower end to which the stretcher fly is looped, double the gut back, making a loop up the leader, lay the other upper strand alongside, as in Fig. 1, then make a curl in them all and pass loop and line gut through, or in other words, make a knot, as in ordinary tying.

It will then present the appearance of Fig. 2. Then draw down tight, and, having the gut well soaked and soft, take the loop just tied in one hand and the upper end, C, in the other, and pull them strongly apart, so that the loop will be pulled down the line. Then when released, instead of pointing straight up the leader and lying hard on C, it will

point out nearly at right angles. The advantages of this loop, which is seen on a completed leader in Fig. 3, and in which A is the stretcher loop, B the dropper loop and C the upper or reel-line loop, are these: As flies are tied nowadays they invariably come on short gut snells, terminated by a loop; it is highly desirable to be able to use the same fly indifferently for stretcher or dropper. It may be that some day they will be tied on eyed hooks, and we can then follow the ideas of some of our angling authors, but until they do, the attaching of the dropper will always be a nuisance, according to the old methods. This way enables any man, whether he be an adept in making tackle or not, to fasten on or take off in a moment a dropper as easily as a stretcher. The advantage of tying the loop into the line in this way is that pointing up and being a short stiff loop, the dropper always stands out at a right angle with the line, making it an impossibility for it to foul with the leader; the hook is never curled over the line, so if a fish strikes he gets it into his mouth as easily as the stretcher fly.

This idea is not wholly original with me, for Mr. Up De Graff, in "Bodine's," presented the leader shown in Fig. 4. I tried this, but found that the loop standing on a stem, so to speak, of single gut, soon dragged down and lay along the line; I then tried tying the loop into the line, with perfectly satisfactory results. The extra stiffness acquired in this way obviates the former difficulty. As it might, however, be too stiff at first, the pulling it out at a right angle is recommended. It may be claimed that this loop will crack, when the dropper is struck by a heavy fish, at the knot. I always soak my leaders or keep them moist awhile, before using them in any case, to have them soft and pliable. I have used this method for two years now, and have never had an accident from it, nor have any of my friends, although the leaders have been hard worked and have often landed two large bass at once. As has been observed, "the proof of the pudding," etc., and I have tested this to my entire satisfaction and, with the precautions I have mentioned, and which should be used on any leader, in any case, I think it will be, by all those to whom it is new and who care to try it.

PERCYVAL.

OPENING THE SEASON ON GREEN CREEK, L. I.—*Editor Forest and Stream:* I opened the ball on Green Creek with the best day's fishing I ever had there. A friend and I killed 98 trout, weighing in all 41½ lbs. We did not strike any very large ones, the biggest of the lot being only 1½ lbs. I lost one fish that may have been bigger, but I am rather wary about estimating size of lost fish. I would rather believe a poor pair of scales than George Washington. The greater number of fish were just about ½ lb. each, a very nice size for light tackle, and especially considering the unusually fine condition the fish are in for the season. The trout are about as far advanced as I generally find them the latter part of April. They are round and full of vigor, take the fly on the surface and give great sport in handling. Used hooks about two sizes smaller than I am accustomed to fish with April 1. The best patterns of flies were Abbey, Grizzly King, Lowery and Professor.—CHAS. F. IMBRIE.

NEVERSINK CLUB.—New York, April 9.—The third annual meeting of the Neversink Club took place at the office of D. W. James, Jr., April 5. Alfred Roe was re-elected president, and W. Holberton secretary and treasurer. The club is in flourishing condition. Unusual care will be taken the coming season to guard the stream against poaching. Since the last annual meeting the club has purchased most of the property they formerly leased.—W. HOLBERTON, Sec.

Two bills for the benefit of the trees have passed the Connecticut Senate. One exempts from taxation for twenty years land not worth over \$35 an acre on which 1,200 trees to the acre have been planted and have reached the height of six feet. The other, to prevent forest fires, visits severe penalties on those who kindle fires in wood land. There is to be an arbor day.

*Continued from page 400, Vol. XXIV., July 16, 1885. Old Ben suggests that "as it has been such a long spell between drinks, the 'Jones family' had better apologize to the brethren an' ask 'em all into the big tent to hev a drink o' water." The apology and invitation are hereby tendered.—K.

SHORT LOBSTERS.—It appears, says the Boston Herald, from recent communications to Deputy Commissioner Shattuck, that a great deal of interest is being taken in the enforcement of the law protecting lobsters under a certain size. Even the lobster fishermen say that they have for a long time regretted that such small lobsters were being taken and not allowed to grow, and these same fishermen promise to aid in enforcing the 10½-inch law, provided all their number can be brought to obedience. They can see the advantages to themselves under such a law, and they are daily coming to the authorities with information, much of it valuable, in enforcing the law. They even propose to form societies of their own for the keeping of the law. This is especially true in one or two towns on Cape Cod, which were formerly noted for sending short lobsters to New York by smacks. In Maine the canners are sending congratulatory letters to the authorities upon their success in enforcing the law against the "slaughtering of infant lobsters." They say that they get all the lobsters there are, anyway, and "we must be fools to desire the trouble of opening small lobsters—two or three to the can, when one should do it." In an interview with a prominent Maine canner yesterday, he promised Deputy Shattuck all the aid in his power toward the enforcement of the law, and hoped that he should yet see lobsters of good size at his cannery. He also complained of the injustice of that form of the Maine statute which makes the canner responsible for short lobsters left on his wharf. He says that the lobster fishermen persist in bringing them in, and they are dumped, with those of lawful length, on the canner's wharf; that he has invariably caused the short ones to be thrown overboard as soon as they come to his notice, but that, under the law, he is liable for lobsters he does not want. But in such cases the canner "owns the fisherman," as it were. He furnishes him money before the season begins and takes his catch in payment; yet he does not desire unlawful lobsters. It might be a question for the courts which was the real owner at any stage—the fisherman or the canner.

Nov. 22.—Fifth annual field trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

DOG SHOWS.

April 13, 14, 15 and 16. First Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

April 13 to 15.—Bench Show of the Buffalo S. F. P. C. A., Main Street Rink, Buffalo. E. H. Rounds, Secretary, 75 White Building.

April 27, 28, 29 and 30.—Third Dog Show of the Cleveland Bench Show Association. C. M. Minhall, Secretary, Cleveland, O.

May 4, 5, 6 and 7.—Tenth annual dog show of the Westminster Kennel Club, at Madison Square Garden, New York. James Mortimer, Superintendent, P. O. Box 1818, New York.

May 18, 19, 20 and 21.—Third Annual Dog Show of the St. Louis Gun Club, St. Louis, Mo. Geo. Munson, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription \$1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 3481.

THE BOSTON DOG SHOW.

THE second annual dog show of the New England Kennel Club, held at Boston last week, was a very successful one. The show was held at Mechanic's Hall, a building very well adapted for the purpose, it being somewhat larger than the Armory at New Haven. It was feared that the location was very unfavorable, as it is a long distance from the center of the city, but as Music Hall could not be secured the experiment was tried and the result proved most satisfactory, as the hall was crowded every day, notwithstanding the very uncomfortable weather of the first two days, during which there was almost a steady down pour of rain. On Thursday the weather was better and the building was uncomfortably crowded from the middle of the forenoon till the closing hour. There was also a large crowd on Friday and the club have added to their funds some two to three thousand dollars. The dogs were benched in the center of the hall, leaving considerable space at the sides which would have been better utilized had there been a row of stalls next the walls, leaving more space for visitors near the judging ring. Mr. John Read superintended the show, and so well were the exhibitors satisfied that they presented to him a handsome and valuable silver service as a token of their appreciation of his efforts to please.

There were 622 dogs entered, and the proportion of absentees was not so large as is usual. The quality was above the average, and in some of the classes it was superior to anything we have yet seen. With the exception of the classes assigned to Mr. Tracy and one or two minor classes, the judging was done on the first day. Many of the stalls were elaborately draped, adding very much to the attractive appearance of the show. Mr. Alexander Pope displayed several of his best pictures in a well lighted room; among them was a life size painting of champion Argus that attracted much attention. There was also a well-executed picture of a foxhound, and another of a pair of beagles, that were greatly admired. The list of judges was as follows: Mastiffs, St. Bernards and collies, Mr. James Mortimer, Babylon, L. I.; pointers, Irish and Gordon setters, Mr. J. M. Tracy, Greenwich, Conn.; English setters, Mr. J. Otto Donner, New York; bulldogs, bull-terriers, fox-terriers, wire-haired, Irish and Yorkshire terriers, pugs and miscellaneous, Mr. R. H. Barlow, Philadelphia, Pa.; spaniels, Skye, Scotch, Bedlington, Dandie Dimont and black and tan terriers, Newfoundland, foxhounds, basset hounds and dachshunds, Mr. J. F. Kirk, Toronto, Ont.; greyhounds, deerhounds, Italian greyhounds and poodles, Mr. J. B. Pierson, Brooklyn, N. Y.; beagles, Mr. N. Elmore, Granby, Conn.; veterinary, Dr. G. Walton, Boston, Mass.

MASTIFFS.—(MR. MORTIMER).

There were thirty-one mastiffs entered, with four absentees. In the champion dog class Homer was placed over Hero II., a decision that we cannot indorse. Hero was sick and in poor condition, but he was not near so badly off as to deserve a beating by Homer. Prussian Princess and Rosalind were the only entries in the champion bitch class; both were in excellent condition, but only the former was brought before the judge. In the open dog class Ilford Caution was placed first and Boss second. While recognizing the many good qualities of Caution we cannot ignore his serious faults, and should place him behind Boss. Three dogs received vhc.; of these Dictator is much the best, although he is too small. Dread, hc., won second at Newark; he got all he deserved. Thor,

also hc., is a large dog and not yet developed. His muzzle is too long and pointed, and he is deficient in bone. Gripp, c., is a promising puppy, and bids fair to turn out something good. Ashmont Prince, also c., did not show at all well in the ring. Had he shown up as well as when we examined him he would undoubtedly have received at least another letter. The remainder of the class were sadly wanting. In the bitch class only four of the seven entries were shown. Hilda V., looking well, won first, although she was closely pressed by Nellie, winner of second, a nice broody bitch with a good head, ribs well rounded, broad and deep loins, good legs and feet and plenty of bone. She carries her ears badly. Tamira, vhc., is a nicely made bitch on the small side. Her head is too long and pointed at muzzle and she is rough in coat. Freda, also vhc., is of good size and has plenty of bone. She is also too pointed in muzzle and carries her ears badly. In the dog puppy class Hannibal was placed first. Monarch, the winner of second, is much the better dog; he is less than five months old and promises to make a winner in good company when mature. Dolly Varden was alone in the bitch class. She is litter sister to Monarch and is a fairly good specimen.

ST. BERNARDS.—(MR. MORTIMER).

There were 50 St. Bernards entered with only two absentees. In the champion class for rough-coated dogs, Duke of Leeds, looking well, was alone, and Gertie also had a walk-over in the bitch class. Merchant Prince had an easy win in the open dog class. He was looking better than we have seen him, but he was still far from being in first-class condition. He also won the special over Duke of Leeds for the best rough-coat, and was beaten by Leha for the best of either breed. Two years ago Duke of Leeds beat Leha at New York under the same judge. We are glad to see this decision reversed, as the Duke is not quite up to Leha; we thought him, however, just about good enough to win over Merchant Prince in their present condition. Rudolph II. came next; he deserved the place. Prince was given the reserve card. His good head and correct markings entitled him to the place; he might be stronger in muzzle and better in coat; he is also too small. Czar, vhc., is light in muzzle, faulty in marking and curly in coat. Loyal, also vhc., is a nice dog in front, but faulty behind. Thelo, hc., is fairly well made with good bone. He might be better in head and coat. Everest, also hc., is of good size and has a good head except that he is not deep enough in muzzle. He was not in good condition. Rip Van Winkle is also of good size and has good markings. He is long in head and light in bone and curly in coat. In the bitch class Miranda well deserved her first. Verone, second, is rather nicely put together, but is houndy in head, long in ears and lacks coat. Stella, reserve, was better for the place. Lys, vhc., has improved since we saw her last. She is a trifle long in head and was not in good condition. Cadess, hc., has a good head with badly placed ears. She was short of coat. Empress, c., is rather a nice bitch with a houndy head. In dog puppies Loyal won. He was also vhc. in the aged class. Second went to Bruno II., a big eight months puppy and hc. to two very pretty little fellows only two months old. In the bitch class Lys, the winner, was also vhc. in the open class. Linda, second, is a fair specimen of good size; she is too sharp in muzzle. Lady Guyder, hc., may develop well, there is certainly room for improvement. The champion smooth coats were well represented by Don II. in the dog and Leila in the bitch class. In the open dog class Apollo won; he was closely pressed by St. Botolph, placed second; both were looking well. Leo, reserve, is a big dog, well made, but a little deficient in bone. Rigi was vhc. Essex, hc., was not in good condition. Terror, also hc., we failed to find. In the bitch class only two were shown, Beatrice being absent. Belle of Sterling, awarded first, is a nice level bitch, faulty in ears and muzzle. Second was properly withheld from Flora, a weak-headed specimen lacking in character. All of the puppies, with the exception of one very moderate specimen, were of one litter. They were too young to judge but were given a diploma for their good looks.

NEWFOUNDLANDS.—(MR. KIRK).

With the exception of Bruno, first, and Prince, second, there was nothing worthy of notice in the open class. The two puppies shown are of the same litter, they are quite pretty but too young for the show bench.

POINTERS.—(MR. TRACY).

There were fifty-nine pointers entered, with nine absentees. Taken as a whole they were a better lot than we generally see. There were no entries in the champion classes. Graphic had an easy win in the open class for large dogs. Next to him came Tempter, winner of second in the puppy class at New York last year. He has grown to be a fine upstanding dog, with good head, shoulders, chest, loin, legs and feet and tail; he has plenty of bone and moves well; he is somewhat throaty, and might be better just behind his shoulders. William Tell, greatly improved since New Haven, received the vhc. Bang, hc., well deserved his card; he begins to show age. Randolph Guy, also hc., is not so good as Bang; his head is of good shape, but it is a trifle heavy; he has plenty of bone and is fairly well put together; he is throaty, a bit shallow in chest, and stands too high on his legs. Captain Fred, first at New Haven, was thrown out on account of his dew claws. We thought him deserving at least two letters. Scott, also unnoticed, is a useful sort, with a fair head and capital legs and feet; he is too wide in front and a trifle out at elbow, but worth a c. There were several others in the class that looked like workmen, but they are not quite up to show form. Tammany and Duke of Bergen were absent. In the corresponding bitch class Revel III. and Nell, respectively first and second, were the only ones noticed. Old Regalia, shown grossly fat, was looking well for her years. She has grown throaty and wide in front since we last saw her. In the small dog class Bracket again scored a win. Bob, placed second, has gone a bit wrong in forelegs since last year. Dick Deadye, vhc., has a fair head, but is wide in front and a trifle light in bone. In the corresponding bitch class Meally won handsly. Belle Randolph, placed second, is a nice bitch, with good head, chest, loin, legs and feet; she might be better in shoulders and tail, and cleaner in hocks, she also stands a trifle high. Vhc. went to Daisy B., a very fair bitch of large type; her open feet are her worst fault. Vayool, hc., should not have been noticed; she is well made, but a dwarf in size, with an awful head for a pointer. Jule and Clover, both hc., are much better specimens; Jule, except that she is a trifle light in muzzle and coarse in tail, is very good; Clover is also good except that she is wide in front and coarse in tail. Modesty, Happy Medium and Leda were absent. In the dog puppy class first went to Don Quixote, a catchy-looking black and white with a nice head, which he carries very handsomely; he is much too flat-ribbed and straight behind, and has a coarse tail; he should have exchanged places with Mascot, a very promising lemon and white, with no marked faults except that his ears are a bit high; he was the best in the class, and if he goes all right he will take a lot of beating. Tennis was rightly given second; he is rather a nicely made dog, a trifle shallow, and out at elbows, and he might be better in feet. Tom Tucker, hc., has a pretty head but is shallow. There was nothing else in the class worth notice. The bitches were nothing remarkably good. Daisy Belle, hc. at New Haven, was placed first, and Jeanette second; she is rather pretty but too shallow and light, she may improve. Daisy Ranger, vhc., we liked as well as any in the class, although there was not much to choose between the three. Daisy is of bad color, but has the best form of either and moves much the best; her badly carried ears are against her. Favette, hc., is fairly well put together; she is decidedly cross-eyed. Mr. Tracy handled the classes very well and his decisions were well received.

ENGLISH SETTERS.—(MR. DONNER).

There were 57 English setters entered, of which only Rockingham, Modesta and Lady Rock were absent. Plantagenet

was consequently alone in the champion dog class; he was looking fairly well. In the open dog class Foreman scored another first, making five in all, or two more than necessary to qualify him for the champion class. Some of the exhibitors grumbled at the working of the rule which should be changed so as to count all winnings up to the date of any show. Second went to Premier, rather a taking looking dog, with capital shoulders, good legs and feet, nice color and coat. His head is a trifle heavy and plain, owing somewhat to bad tan marking. He is also long in back and lacks quality. We preferred Gus Bondhu, vhc., for the place. He was shown a trifle too fat, but was looking as well as ever we saw him. He is a rare bred one and shows it in his looks. Mack B captured the reserve. There was not much to choose between him and Premier. Dracy, hc., is rather a nice dog and deserved his card. Roy, c., we did not find in his stall. Old Coin showed want of grooming, as did Glen Rock, both unnoticed. The judge was sparing of his favors and several dogs that were worthy of mention received no notice. We do not believe in an indiscriminate distribution of ribbons, but in a good class a judicious bestowal of deserved favors is not out of place. In the bitch class there were no flyers, although there were several very good specimens. First went to the well-known Dashing Belle and second to Vixen III., winner of same position at Pittsburgh this year. She is plain in head and too wavy in coat, otherwise she has no bad faults. We liked Peck's Bad Girl, vhc., better for the place. She is a trifle wide in front and was shown too fat, but otherwise she was about as good as any in the class. She is the best mover of any of them. Lulu received the reserve card; she was looking well. Bessie, vhc., is a nice bitch with a fair head. Her coat is almost curly and she was shown too low in flesh. Katy Berwyn and Alice D., both hc., are good with the exception of plain heads. Katy is not quite straight on her fore legs. The dog puppies, with the exception of the winners, were an ordinary lot. In the bitch class first went to Princess Novel, a very nice puppy with a plain head, Zulu winning second. Bess, vhc. reserve, was very badly shown. Had she been in proper condition she might have done better as she appears to be very good.

GORDON SETTERS.—(MR. TRACY).

The premium list called for Gordon setters instead of black and tan. There were eighteen entries with four absentees. Argus was alone in the champion class. In the open dog class, first went to Tom II., a fairly well made dog of good coat and color, and better hind legs than we generally see on a Gordon. He is rather plain in head and his ribs are not well sprung. Second went to Jack. He has a good head and is well formed. Had he been in good condition he would have undoubtedly won; he was shown too fat and in bad coat. Gyp, vhc., we liked; he has a fairly good head, is well put together, has a good coat and markings. Trim, hc., is rather coarse and has a weak head. Dash, c., is a cobby little dog, with fair coat and markings. In the bitch class, the well-known Heather Lass was placed first. Second went to Jessica; she is a well-formed light-weight, with a weak head and light eye. Vic, vhc., was nursing a litter and not in form; her head is of the Irish setter type. The two puppies shown were weak in head and poorly marked. The prizes were properly withheld.

IRISH SETTERS.—(MR. TRACY).

There were 61 Irish setters entered with 7 absentees. In the champion dog class, Elcho, Jr., was the only one to compete. He was in better form than we have ever seen him. Old Elcho was not for competition in this class; he carries his twelve years lightly, and was looking better than when we saw him three years ago. In the bitch class, Noreen, in elegant condition, won over Lady Clare and Zella Glenduff. Retta was absent. The open dog class was a red hot one, and the unnoticed ones would have made a very good class of themselves. The well-known Blarney was properly placed first. He has got rid of some of his lumber since New Haven and was looking better. Second went to Dash, winner of first at New York three years ago. We did not think him so good as Bruce, hc.; they should have exchanged places. Bruce is a typical dog, and when in as good form as he was here it takes a first-class one to beat him. Echo, vhc., is a well-made dog, but was not in good condition; hc. was about his mark in such company. There was scarcely an inferior specimen in the class. We noticed the owner of one of the dogs that received a card looking for a poor specimen to place his dog alongside, thinking that the contrast would help him, but after a careful search he gave up the job in disgust. The bitches were not so good as the dogs, still there were several very fine animals in the class. Lorna, the winner, is well-known; she was in beautiful condition; she showed up very stylish in the ring. She is symmetrical and well formed, her head is clean cut but a trifle too wide. Hebe, second, and Jessie, hc., should have exchanged places; both are well-known. Daphne, vhc., is a sweet bitch and deserved her card. Noreen IV., hc., would not have disgraced the three letters, and Mona, unnoticed, deserved mention. The winning dog puppy, Thaddeus, promises well. The bitch puppies were well placed. Sonsie, the winner, will do to show again.

SPANIELS.—(MR. KIRK).

The spaniel classes contained fifty-two entries, the same number as were at New Haven. The Irish water classes did not fill well, and with the exception of Mollie, did not amount to much. She has a good head and topknot. Black Prince was alone in the champion field class. He was looking well. In the open class for dogs, Black Beau, Jr. was rightly placed first. He is a good dog with few faults. A little more depth to the muzzle and thickness through the pads would improve him. He is also a bit high, and will lower down with age. Beau, second, is good in body and coat, but has wretched forelegs, as crooked as a dachshund. His muzzle should be heavier. Black Dandy, hc., is short in body and head, and a little high on his pins, but has a very good coat. He is of the cocker type. Newton Abbot Lady headed the class for bitches. She was in good form. Onyx, second, is high on her legs and light in eye, but otherwise good. She will show better after breeding. Critic, also light in eye, and more of the cocker type, received hc. The champion cockers were divided by sex. In consequence Helen and Brahmin did not meet at New Haven. Each had a walk-over. Helen was vastly improved from her Newark form, though her coat is still not right. Brahmin was in good condition. The open class for liver or black dogs, though containing but five entries, proved a hot one. Black Pete, feeling a little dumpy, led the string, with Young Obo, Obo, Jr., Kobo and Ned Obo following in the order named. It was a close pull between the three latter, but we should have placed Kobo and Ned Obo in front of the Junior. He is weak at the elbows and has very short ears. The bitch class was a fairly good one and very well judged. Shina got the blue ribbon, with Dido W. second. They are good ones. Black Pearl, vhc. reserve, is poor in head. Pauline Markham, vhc., is much improved from her last year's form. Alice Obo was not shown well. She is light in muzzle and lacks substance. She does not improve as we expected she would when we saw her last fall. Miss Obo II. was absent. The liver or black cocker puppies were a weedy lot. Blister, in getting first, got more than his allowance. The any other color cockers were led in the dog class by Don, a bit short-headed and high on his legs, and in the bitch class by Marion. Aside from the winners, these classes did not show much quality. The Clumbers numbered four all told. They were only fair. Punch won. Sancho and Pedro will have a chance to improve, as they are only eight months old.

GREYHOUNDS.—(MR. PIERSON).

Eleven of the fourteen greyhounds entered were owned by Mr. H. W. Smith, who won everything but second and a commended card in the open dog class. Memnon was alone in the

champion dog class. He was drawn a bit fine, but was looking well. Mother Demdike, in capital condition, was also alone in the bitch class. In the open dog class, first went to Stranger in White. He looked soft but felt hard and good. Second went to Stag, a fair-looking animal with a broken toe. Sir Ben, vhc., was not looking his best. Jack, c., has too heavy a head and too bad feet to receive notice. In the bitch class, first went to Sister in Black, looking well. Sorceress, second, is a nicely formed animal of high weight, with well developed quarters. Sept. 20th, the winning dog puppy, is a large dog and not yet developed; his ears are a bit large. Silver Bells, the winning bitch, is a fair animal in bad condition.

DEERHOUNDS—(MR. PIERSON).

The display of deerhounds was much better than we have ever seen, nine of the thirteen entries are owned by Mr. John E. Thayer; nearly all of the winners are well known. Bran and Lorna were the winners in the champion classes. In the open dog classes first went to Chieftain, and second to Brian, the winner at New York last year, both were looking well, as was Duncan, vhc. Torrum, also vhc., was badly shown. Wanda won in the bitch class, with Heather Belle second, Belle is a large bitch with a good head; she carries her ears badly and is straight behind; she was not in good condition. Only two puppies were shown. They are from the same litter; both are of good size and promising; they are somewhat lacking in length of skull. They are not yet a year old, and if they improve as they should they will be found among the winners when mature.

FOXHOUNDS—(MR. KIRK).

Only five foxhounds were shown. Roney had a walk over in the champion bitch class. In the open dog class Ranger had an easy win. Zip, second, has a good head and is very fair all round, except that he has open feet. Lady Stewart, the only entry in the bitch class, is more of the English type than any of the others; her very small ears will always keep her back in good company.

BEAGLES—(MR. ELMORE).

With one exception all of the beagles noticed at New Haven were at Boston. In the champion class the decision at New Haven was reversed and Mischief was placed over Bush by four points; we have not the figures made at New Haven but to the best of our recollection they were two points in favor of Bush. This is a matter that should be explained as exhibitors do not understand how so great a difference can exist. In the open dog class the awards were the same as at New Haven, except that Trifle received one letter less. In the bitch class Chase was placed over Twinkle, again reversing the decision at New Haven. Chase also beat Little Duke for the special; both of these decisions we must dissent from. Mr. Elmore is a painstaking judge and examined his dogs very carefully, and with the exception of placing Chase too high, he handled them very nicely. In the class under 12 inches, Fair Maid won first, second went to Bramble, a very nice puppy that will do to show again. The two winning puppies are also very promising.

BASSET HOUNDS—(MR. KIRK).

Nemours in the champion, Bertrand in the dog and Canace in the bitch class were all that deserved notice. All are well known. The two others showed more of the harrier than basset.

DACHSHUNDE—(MR. KIRK).

There were ten dachshunde, all but one of them receiving notice. Two or three different types were shown and nearly all of the animals were above the average of previous years. We thought them well placed.

COLLIES—(MR. MORTIMER).

There were 40 collies entered with six absentees. In the champion dog class, Robin Adair, the only entry, was absent. In the bitch class, Winnie won. She was looking well, except that she has a new coat that is not fully grown. She was the best collie shown and should have had the special, which went to her kennel companion, Bruce of the Fyde, also the winner in the open dog class. He was in good form and well deserved the place. Second went to Roy Boy. He was not looking his best, and should have given place to Kilmarnock Bruce, who received the reserve card; he was looking fairly well. Skip, vhc., is a nice dog, with good head, coat and frill. He is a bit short in body and too light in eye. Joker, he, has improved since last year, but is still far from perfection. There was nothing else in the class that will ever be heard from in good company. In the bitch class, first went to Daisy Dean, a beautiful animal, fairly good all over, except that her ears are badly carried and she is a bit short in body. Second went to Dahlia, a very sweet bitch, better all round than the winner. Lass O' Lowrie received the reserve card. She is faulty in head and soft in coat, and should have exchanged places with Kilmarnock Belle, a nice bitch; she was a little short of coat. Drumlin Isle, vhc., was not in first-class condition. In the dog puppy class first went to Ronald, a fairly well-made animal; he is off in coat and was shown very thin; he is too long in head and muzzle and a bit heavy in ear. Bute, second, is also well made, with a good head, plenty of coat, and a well-carried tail; he stands a bit high behind. Daisy Queen, winner in the open class, easily captured first in the bitch puppy class. Second went to Madge, a nice little black and tan. Topsey, vhc., we failed to find in her stall.

TERRIERS—(MR. BARLOW).

There were forty-two fox-terriers entered with General Grant the only absentee reported, although we failed to find Stableford Joe after a diligent search. Mr. Barlow generally handles his terriers in a masterly manner, but he was off the mark in placing Belgrave Primrose over Fennel in the champion dog class, and in placing Splaiger at the head of affairs in the open dog class. Bacchanal should have been first and Baby Jack second. Nearly all of the winners are well known. They were placed as well perhaps as possible. There were no entries in the wire-haired classes. Nearly all of the winning bull-terriers are well-known. Birmingham Joe, winner in the small dog class, is just a fair specimen. He is out at elbow and carries the marks of many a battle. There was only one black and tan in each of the three classes represented; all have been described before. The winning Skyes were a fair lot, we thought them well placed. We did not see a single Yorkshire in good coat. Only three Scotch terriers were shown, each was first in its respective class, Heather was the best of them. There were five Dandies shown. Fanny and Bennie Britton we failed to find in their stalls. Meg, second in the bitch class, and Kelpie, vhc., should have exchanged places. Nora was alone in the Irish class. Sentinel and Sting, in the dog, and Wasp in the bitch class, represented the Bedlington.

BULLDOGS—(MR. BARLOW).

All of the bulldogs in the aged classes have been often described, and as they were placed right no comment is needed. First was withheld in the dog puppy class and second given to Doctor, not a good specimen. Atossa, in the bitch class, was deserving her first.

PUGS—(MR. BARLOW).

The pugs were not out in force, only nineteen were entered. The winners in the champion and dog classes are well-known. Only two bitches were noticed, both are very fair specimens. Only one of the four puppies suited the judge; she is quite promising.

TOY TERRIERS—(MR. BARLOW).

The toy dogs had but one representative, Bootless, a nice Maltese not yet in full coat. In the bitch class first and second went to two very fair black and tans.

KING CHARLES SPANIELS—(MR. KIRK).

There were fourteen King Charles spaniels entered with two

absentees. This is more than twice as many as were shown at New Haven, and much the best display that we have seen. In the dog class Duke of Edinburgh should have been placed first, with Milwaukee Charlie next, and Pictou, vhc., and in the bitch class Nellie and Dolly should have exchanged places. Our reasons may be found in former reports. Nearly all of them were in bad coat. There was only one Blenheim shown, Joan of Arc, winner of vhc. at New Haven.

ITALIAN GREYHOUNDS—(MR. PIERSON).

There was only one in this class. She was too large and had to be content with second prize.

POODLES—(MR. PIERSON).

There were three entries in the dog class. Beaulieu, winner at New York last year, was the only one worthy of notice. Both of the bitches shown were awarded prizes. They are fair specimens.

MEXICAN HAIRLESS—(MR. PIERSON).

Me Too and Mide, both well-known, were respectively first and second.

MISCELLANEOUS—(MR. BARLOW).

In the miscellaneous class, over twenty-five pounds, first and second went to two fair Ulmers. First was withheld in the small class, and second given to a Maltese terrier, too large and not good in coat.

Following are the corrections to the list of awards published last week, together with the specials:

CORRECTIONS.

In small pointer bitches Tuckerfield Kennels' Daisy B. was very high com. instead of Parker's Daisy Belle. In black or liver cocker spaniel bitches Black Pearl was reserve instead of Rev. In beagle dogs Wakefield & Co.'s Trifle and W. E. Deane's Little Duke, Jr., and Racer, Jr., were com. In bitches Wakefield & Co.'s Vixen and D. O'Shea's Hasty were high com. and M. W. Hammond's Zulie, Associated Fanciers' Midget and A. E. Bowler's Jennie were com. In puppies C. H. Hounsbury's Little Rhody was high com. In champion large bull-terriers W. J. Comstock's Victoria won instead of Grand Duke. In champion small bull-terriers R. & W. Livingstone's Little Maggie won. In Yorkshire terriers W. Barrowscale's Dandy was first and P. Clancy's Bill second. In Italian greyhounds first was withheld and Mrs. A. A. Moorehouse's Minnie was second.

ADDITIONAL AWARDS.

GORDON SETTERS.—CHAMPION—Dog: J. E. Thayer's Argus. Bitch: No entry.—OPEN—Dogs: 1st, G. A. Coleman's Tom II.; 2d, C. E. Molloy's Jack. Very high com., G. D. Holbrook's Gyp. High com., G. R. Reed's Trim. Com., S. H. Blodgett's Dashi. Bitches: 1st, A. H. Aldrich's Heather Lass; 2d, G. E. Browne's Jessica. Very high com., J. L. Wells's Vix. Puppies: Withheld.

IRISH SETTERS.—CHAMPION—Dog: Dr. Wm. Jarvis's Elcho, Jr. Bitch: Dr. Wm. Jarvis's Noreen.—OPEN—Dogs: 1st, E. W. Clark, Jr.'s Blarney; 2d, T. Wilson's Dash. Very high com., Dr. Wm. Jarvis's Elcho. High com., C. F. Kernerson's Tim; A. Wright's Trip; J. L. Locke's Dash Elcho; R. C. Van Horn's Patsy, and I. H. Roberts's Bruce. Bitches: 1st, Dr. Wm. Jarvis's Lorna; 2d, I. H. Roberts's Hebe. Very high com., J. D. Ide's Daphne. High com., W. Hoyt's Noreen IV.; I. H. Roberts's Jessie, and C. F. Milliken's Dolly M.—PUPPIES—Dogs: 1st, W. H. Saunders's Thaddeus; 2d, withheld. Bitches: 1st, G. THE HARTFORD DOG SHOW.

[From a Special Correspondent.]

THE first dog show of the Hartford Kennel Club commenced at Hartford on Tuesday. The number of entries is 869, of which about 800 are present. The quality in many of the classes is much below the average. The building is well adapted for a small show. Judging has progressed fairly well. The show is well managed so far with the exception of unnecessary delay in bringing dogs into the rings. The attendance to-day has been only fair. Below is a list of the awards:

AWARDS.

MASTIFFS.—CHAMPION—Dog: Winlaw Kennels' Homer. Bitch: Winlaw Kennels' Prussian Princess.—OPEN—Dogs: 1st, E. Moore's Ilford; Caution; 2d, Winlaw Kennels' Hector. Very high com., P. H. Ingall's Odia. EASTERN FIELD TRIALS CLUB.—There was a quarterly meeting of the Eastern Field Trials Club at the St. James Hotel on the evening of March 13, Vice-President J. O. Donner was in the chair. The other members present were Messrs. F. R. Hitchcock, Bayard Thayer, H. E. Hamilton, A. E. Godfrey, D. S. Gregory Jr., 2d, and W. A. Coster. The rule allowing members to handle other dogs than their own was rescinded. There was not a quorum, under the rules, to act upon the proposed amendment abolishing the initiation fee. After the open meeting adjourned the Board of Governors convened. It was voted that every member of the club in good standing be allowed to enter one dog in the Members' Stake free, and that for each additional dog an entry fee of \$10 shall be required. Several names were proposed for membership. The next meeting will be held the first week in May.

THE HOSPICE KENNELS.—Mr. K. E. Hopf has removed his kennels of St. Bernards from Newark to Arlington, N. J. Arlington is on the New York & Greenwood Lake Railroad, seventeen minutes from Jersey City.

DISQUALIFICATION OF THE SANS SOUCI KENNELS.—Editor Forest and Stream: The New England Kennel Club have disqualified H. M. Perry, proprietor Sans Souci Kennels, from exhibiting dogs in their show.—G. E. OSBORNE, Sec. A. K. C.

attended shoot at this range to-day, there being two classes, Creedmoor count, best 4 strings to count. A. D. Gardner won first prize, a gold medal, and S. R. Ayers second a silver medal. The scores of the winners were Gardner 56, Ayers 73.

LAWRENCE. April 8.—The team shoot for gold and silver championships was won by the Lowell and Lawrence Press rifle clubs occupied this afternoon. Col. John P. Sweeney won the first individual prize. A banquet was served at St. James Café, and by invitation, the press clubs occupied boxes at the Opera House.

THE BULLSEYE TARGET.

BOSTON, April 8.—The range at Walnut Hill to-day was occupied by a large number of riflemen, anxious to enjoy Fast Day, including detachments of militia, who shot at 200 and 500 yds. The weather conditions were excellent. Appended are the results of the winners of the matches which closed, also the scores of the day, all at 200 yds.:

QUEER DIET.—Morgantown, W. Va., April 11.—James Houston, a well-known resident, is dying from a most painful cause. He has 42 rifle bullets in his stomach. These bullets Houston swallowed at divers times as a cure for costiveness, and all attempts of physicians to remove them have proved futile.

POWDER BAGGAGE.—New Haven, April 9.—John A. Thomas, a gunsmith of Meriden, was arrested to-day for expressing package

of gunpowder without their being properly marked. It was discovered in the depot in this city by some of the railroad hands in handling the trunk. They found powder sifting out on the floor. They at once notified the fire marshal and the police. There were about 30 pounds of powder in the trunk, enough to have gutted the building had it ignited. The penalty for this offense is not more than \$10,000 fine or five years in State prison.

WINCHENDON, Mass., April 9.—The Winchendon Gun Club held its annual meeting this week and elected the following officers: President, James Sutherland, Jr.; Vice-President, P. S. Davis; Secretary and Treasurer, J. G. Henry; Directors, F. F. Hopgood, A. H. Felsh, L. E. Martin, P. S. Davis and F. E. Mann.

HAVERHILL RIFLE CLUB.—On Fast Day, April 8, the Haverhill, Mass., Rifle Club shot a telegraph match with the Hillside Rifle Club, of Waltham, Mass. Conditions, 10 men, 200 yds., off-hand, standard target, 5 points allowed for military rifles:

THE TRAP.
Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.
Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

SAVANNAH, Ga.—A three day tournament will be held during the Chatham Artillery Centennial. It will be the fourth inter-State shot-

gun and wing-shooting contest, under the auspices of the National Gun Association, to be held at the shooting park of the Chatham Gun Club, Savannah, Ga., May 4, 5 and 6, 1886. General manager, W. G. Cooper, president Chatham Gun Club; general secretary, W. H. Connerat, secretary and treasurer Chatham Gun Club. The matches will be: Individual sweepstakes, teams of 3, individual championship, for badge donated by National Gun Association; championship match for State championship, medal and money, teams of 5 men members of organized gun clubs; consolation purse, barring all winners of first and second moneys; individual American championship contest for diamond badge, donated by the Ligozsky Clay-Pigeon Co., of Cincinnati, O., no entrance fee for members of the National Gun Association. There will be 3 moneys in all matches unless the entrances exceed 40, then there will be 4 moneys. In individual championship winner to have both badge and money. National Gun Association rules to govern all matches.

WASHINGTON HEIGHTS GUN CLUB.—Monthly glass ball shoot, club grounds, Sixteenth street and Ridge road, April 3. Mr. Harrison winning the medal for the third time becomes the owner:

FAST DAY SHOTS, April 8.—The shotgun tournament at the Wellington Gun Club's range to-day was participated in by a large number, the first prize winners in the various events being as follows: Five blackbirds, Sanborn; 5 pigeons, Stark; 5 blackbirds, straight-away, Papanti and Bancroft; 7 pigeons, Stanton; 7 blackbirds, Dickey; 5 pigeons, Parker and Lawson; 3 pair blackbirds, Stanton and Lawson; 7 pigeons, Dickey; 5 blackbirds, Eager and Stanton; 5 blackbirds, Adams and Lawson; 7 pigeons, Stanton; 5 blackbirds, Lawson and Stanton; 7 pigeons, Dickey and Eager; 5 pigeons, Williams, Dickey and Swift; 7 pigeons, Stanton; 5 pigeons, Dickey and Lawson; 5 pigeons, straight-away, Sanborn and Parker; 5 blackbirds, Stark, Stanton and Sanborn; 5 pigeons, Stark; 5 blackbirds, Parker, Eager and Chester; 50 birds, private match, Dickey; 5 pigeons, Hall; 3 pair pigeons, Henry Tank and Eager; 5 pigeons, powder match, Stanton, Swift and Dickey each taking a key; 3 pair pigeons, Swift; 5 pigeons, Stanton and Dickey; 3 pair pigeons, Stanton.

The Suffolk Sportsman's Club, of Chelsea had a shoot to day at its range, Woodlawn avenue. There was a large attendance. The winners of the matches were: Sweep, 5 clay birds, Warren; 5 clay birds Sampson and Warren; 3 pair clay birds, G. Libby and H. F. Libby; 5 clay birds, Libby, Warren and Perry; challenge match for Magee cup, 10 single and 5 pair clay birds, H. F. Libby; badge match, 10 clay birds, Sampson and Warren; novelty match, Warren and Perry, sweep, 5 clay birds, Hatch and Warren; two-man team match, Perry and Warren; 5 clay birds, Warren and H. F. Libby; 5 clay birds W. Jones and H. F. Libby; two-men team match, Warren and R. Jones; 11 clay birds, Perry and Warren; miss and out, Warren; miss and out Perry.

The members of the Dedham Gun Club held a shoot to day at their grounds in Dedham. The following is the score, each member shooting at 20 clay blackbirds at 18 yds. rise: John Philbrook, 16; G. A. Phillips, 14; Dr. H. A. Baker, 13; Amasa Alden, 11; A. G. Baker, 11; H. G. Humphrey, 8; George Baker, 7.

There was a large attendance at the range of the Wakefield Sportsman's Club to-day, including many visitors from neighboring towns, and several interesting matches were shot. The first prize winners in the clay pigeon tournament were: Kellum, Goodale, Smith, Curtis and Gerry. The Dutton gold badge was won by Mr. B. F. Kellum, score, 17 out of a possible 20.

NEW YORK Y.C.—At a meeting April 8, Mr. John Hyslop was elected measurer in place of Mr. John Wilson, resigning. A resolution was passed prohibiting the use of club topsails on the annual cruise. This does not cover the regular races, but only from port to port. A new classification for sloops and cutters was adopted as follows: Class 1, all over 70ft. load waterline. Class 2, all of 53 and not over 70ft. Class 3, all of 45 and not over 55ft. Class 4, all under 45ft. At the last meeting of this year a nominating committee, five yacht owners were elected to nominate candidates for officers. This nomination not to be binding on the members or to prohibit another ticket.

so amazing that I danced repeatedly over the stern to be sure the breeze was still blowing down from the northward in the rear. The calm belt, probably induced by the heat reflecting from the sands, for the sun was shining brilliantly, and a sheer given to the breeze at the surface by the curvature of the hook extended for three miles to the southward. The true wind came languid in little puffs and gusts, and I had to haul in successively but the full force of the original wind was not attained. These sand capes should be given a wide berth in consequence.

Below Cedar Point the shore backs in S.W. and then trends out along S.E. down to Point No Point, ten miles below, forming a long bright three miles deep in the center. There is no harbor of any kind along this stretch. With a leading breeze, the Coot was sent across the bright so as to fall in with No Point. Below the same lack of wind-greeted the Coot which had been observed at Cedar Point, and the broad bright light rays slowly lifted the yacht along, past St. Jerome's Point, and out into Lookout's Bay. The wind slowly lifted the boat, the broad horizon of the majestic Potomac until the lighthouse was brought abeam. The point is strikingly marked and can be made out a long way off by a prominent cluster of tall trees which rise from the sea before the low sands upon which they stand appear above the horizon. It is the most available and favorite land mark for vessels sailing the Bay bound to or from Baltimore. It is a very close point, but again, only worse. The wind had picked up after leaving No Point and the Coot was in the lee of the bay mark. When I had Lookout over the quarter and was settling down for a nice run across the Potomac in a nice wind with boom well off, the inevitable calm belt under the lee of Lookout squashed all hope of shaking the big sand spit's company. For hours not a breath, not the faintest air filled the canvas, though it was apparently breezing lively everywhere else. As evening wore on, I tried to turn up the sheet, but the wind died to a soft puff. The wind died and the waves of the Potomac rose to a five foot swell. The wind died and the waves of the Potomac rose to a five foot swell. The wind died and the waves of the Potomac rose to a five foot swell. There was no other harbor within seven miles and no wind to get anywhere at all, not even under Point Lookout itself. All this time a nice wind was drawing close inshore round the horseshoe curve of the Point, but not within my reach by two miles. The right way to the Potomac is to hug the point of sand just as close as you dare for to catch the draft, which always blows close along shore in the big wind. The wind died and the waves of the Potomac rose to a five foot swell. I noticed that this was the maneuver of all boats locally posted. They know by experience what it means to get stuck under Lookout's inevitable and annoying lee. After jibing till the boom seemed tired and whistling and patience till it fell pitch dark, that last hope of the forlorn boat sailed the scull, was shipped over the stern. By dint of wriggling till 11 P. M. the Coot was prodded into the light into the vicinity of Lookout's St. Jerome's Point, a half up the river. There was of course no harbor, the place being open to everything except N. and N.E. It was not even a half respectable roadstead and a very poor place for a little thing like the Coot to spend a winter night. But nothing else could be done under the circumstances. Once more I had to trust blindly to luck. Luck stood by me. Slept like a log of course and woke up to find the wind had shifted to a sunnier and more favorable direction. The waves of the Potomac I had left. I continued to stay there, blow high or low, as long as I remained in these latitudes and probably is there still to catch other strangers in its net. Further down the coast, in coming across smacks bound for the river, the unvarying hail was, "How do you leave the Potomac, any wind?" which went to show that its treachery was a matter of common familiarity. The harbor for the Coot is in the vicinity of Lookout's St. Jerome's Point, which is buoyed and inlet, which can be made out a long way off, also the station of the U. S. Fish Commission and has a well stocked store and post office close by. Keep out of the Potomac if you can. The first harbor in the river is Smith's Creek, six miles up the northern bank; other inlets marked on the chart are now closed. Hearing from a colored gentleman in a canoe that there was a post office at Little Neck, I went back to the creek. The scull was along, till light land breezes lifted her up to the desired haven. The entrance is zig zag between properly painted buoys. Inside there is deep water, 17ft. to 10ft. clear up and in the lateral branches. On the chart the creek cuts a very small figure in comparison to neighboring waters, but in this part of the world, creation did things on a big scale. The so-called creek is three miles long, has a two mile branch and a four mile branch, and is a very good place for small anchorages. It is a beautiful ramification for sailing small boats, and has a lot of hundreds of like attractions, the existence of which is unsuspected by the provincial New Yorkers. Multiply Northport harbor in Long Island Sound by four and you have but this one little insignificant

indentation out of fifty connecting with one river out of fifty flowing into the Chesapeake. Place obscure plebeian Smith's Creek in the Sound and its glories and praises would be heralded far and wide, till the New Yorker actually believes that Smith's Creek is the eighth wonder of the world and the "finest yachting waters on earth, sir." But of Smith's Creek a few miles away from his stock-tieker or dry-goods box he wots not of.

The Coot sailed in among oystermen tonging from canoes much to their astonishment. She brought up in a snug little round hole before an expedition to the post office was set on foot. Some suspicion attached to her character. She was supposed to be a police boat bent on catching offenders of the rigorous oyster laws, and was eyed somewhat askance. Gradually the conviction gained that "she was a New Yorker just pleasurin' round." C. P. K.

A HANDSOME STEAM YACHT.

THE accompanying illustrations show the lines and plans (with a few alterations) of a small steam launch, now being built in the yards of R. J. Douglass & Co., at Waukegan, Ill., for Mr. Jas. Alexander Kirk, of Chicago, Ill., for use on Pine Lake, Wis. Her length is 45ft., beam, 9ft.; draft of water aft, 36in. The keel is of the finest selected white oak 6x8, with stem, sternpost and deadwoods of the same. Her frames are of oak, sided 2in., moulded 4in. at heels, 2in. at heads, with galvanized wrought iron floors on each, fastened with 2in. x 3in. bolts, 3in. apart, and 1 1/2 in. x 1 1/2 in. thick, copper fastened. The garboards, sheerstrake and keelsons under boiler and engine being oak for good fastening. Her decks are laid in white pine with oak covering board and partner for holy stone finish, and her inside finish will all be solid mahogany.

The oddity of her arrangements from a first observation is a little puzzling, but a closer study will disclose its advantages.

In the first instance there is a gangway to go aboard of her (something new in a boat of her dimensions, every person climbing in at the best place they could pick out to get aboard). The gangway is shown between two dog heads on the brass railing. From the gangway one can see the engine room through the door which has only one seat on either side for the helmsman (never having any persons sitting in the passage way). From the cockpit one can pass into the accommodation proper, between two upholstered mahogany seats on either side. There is comfortable seating capacity for 25 persons. Passing from the after accommodation to the forward, with the extra beam of light from the skylight above, one can see the boiler around the boiler, not having a lady climbing over coal bunkers, as in the ordinary launch of her dimensions. The canopy is supported with carved mahogany stanchions (instead of turned, as shown), celled on top with Spanish cedar. Her finish throughout will be mahogany and polished brass. The outside fender or strake running around plank—will be painted black. The hull plating will be painted black. The polished standards, Bits, cheeks, cleats rudder head, flag staff sockets, etc., will all be polished brass. A half circling fender, 30in. high, with parallel sides made of 4 brass rails, and a plate glass space of 34in. will surround the engine, giving an opportunity to see the engine without danger of getting the clothing soiled from oil. Electric annunciators will be used throughout for signalling the engineer.

Under the forward decks there will be a galvanized iron refrigerator with an ice space of two feet, and three shelves below. Under the stern decks is a catch-all stowage. Her scuppers and drainage are perfect.

She has a close rail (not shown in drawing) running around the outside edge of planksheer, with mahogany cap made perfectly watertight. Inside of this are 3 1/4" deck scuppers with brass caps below and above, emptying through the skin below waterline. The canopy also has a close rail, and is drained through the center stanchions on to deck below by brass spouts.

The engine is being built by the Hercules Iron Works, the boiler by John Davis & Co., both of Chicago. They are both a credit to their builders, and combined will develop 60 horse power. The wheel is a 42in. diameter and 5in. below keel.

DORCHESTER Y. C.—Officers for 1886: Commodore, Henry W. Savage; Vice-Commodore, W. D. Hodgkins; Secretary, Henry B. Callender; Treasurer, Samuel G. King; Measurer, Hartford Davenport; Assistant Measurer, William L. Dearborn; Directors, W. H. L. Smith & C. H. Nute; Cooling-berm; Regatta Committee, Louis M. Clark, Erastus Willard, William B. McClellan, Herbert S. Carruth and Frank Gray.

THE BOSTON SCHOOL FOR YACHT DESIGNING.—An exhibition of the work of the students of this class will be held in the Bird school at South Boston on April 21-22. Besides yacht designs there will be exhibits of freehand and mechanical drafting and clay modelling. The school has proved very successful this year and will be continued next season.

QUINCY Y. Officers for 1886, elected April 10: Commodore, C. F. Adams, 3d; Vice-Commodore, H. H. Shepley; Fleet Captain, G. H. Porter; Measurer, A. B. Lelois; Secretary and Treasurer, Henry M. Faxon; Regatta Committee—G. W. Morton, E. W. Baxter, G. G. Sa. The regatta was held on the 27th inst. and the following gentlemen were appointed to the regatta committee to procure plans, etc., and report in two weeks: E. W. Baxter, Geo. W. Morton, G. G. Saville, C. F. Adams, 3d, H. M. Faxon. Seven new members were initiated. Dates for the season's regattas will be decided upon later.

CLEVELAND YACHTING ASSOCIATION.—The annual election of officers was held on April 3, the following officers being elected: Commodore, Geo. W. Gardner; Vice-Commodore, Percy W. Rice; Rear-Commodore, Charles W. Kelly; Secretary, J. Geo. Downie, SS; Treasurer, H. D. Moran; Public Relations, R. E. Mix; Club Marshal, Lach; Assistant Measurer, H. D. Moran; Surveyor, H. C. Rettger; Director, Charles W. Kelly; Regatta Committee, R. E. Mix, Chairman; L. H. Ware, C. C. Goodwin, P. A. Mettling, H. Richter. Three new members were admitted, and the club is in a flourishing condition.—J. Geo.

TORONTO SKIFF SAILING CLUB.—On April 6 a special meeting was held at which several amendments to the by-laws were made, and a committee was appointed to revise the classification. The report of the secretary showed the club to be in a prosperous condition. A meeting to elect officers will be held on April 15 at the club house. An "At Home" will be given in May. Races will be sailed every Saturday through the season.

COLUMBIA Y. C.—At the annual meeting, April 6, 1886, the following officers for the ensuing year were elected: Commodore, R. P. H. Ahell; Vice-Commodore, Geo. R. Stone; Secretary, C. M. Armstrong; Treasurer, Joseph A. Weaver; Measurer, A. Fowler Gore; Steward, Chas. H. Knubel; Fleet Surgeon, Henry Griswold, M. D.; Regatta Committee, A. M. Everett, Chas. Dietz, C. T. Will, L. D. Urban, W. J. Graecen.

A NEAT TURNBUCKLE.—A new style of turnbuckle for yachts is now made by R. Mitchell & Co., of Boston, the body being a sleeve of round brass with a right hand screw in one end and a left hand in the other. One screw is finished with an eye and the other terminates in a shackle, so that the treacherous hook usually employed is dispensed with. They are made in various sizes.

SHIP AND YACHT HARDWARE.—We have received from L. W. Ferdinand & Co., 267 Federal St., Boston, their new catalogue of fittings of all kinds for yachts, boats and large vessels. They deal in everything required by builders and yachtsmen, including cordage blocks, paints, oils, and brass and iron goods.

THE CRUISE OF THE AMBASSADRESS.—The schooner *Ambadress*, Mr. Nathaniel Thayer, arrived in New York on April 7, and reached Boston on the 18th, after a cruise in the West Indies, visiting Bermuda, St. Kitts, Martinique, St. Thomas and Cuba. The voyage was a very pleasant one, but without special incident.

SOUTH BOSTON Y. C.—Officers for 1886, elected April 7: Commodore, Henry Hussey; Vice Commodore, W. J. Orcutt; Fleet Captain, J. J. Bligh; Treasurer, Thos. Christian; Secretary, John C. Merry; Measurer, James Bertram; Trustees—C. McKenna, Charles Griffin, F. E. Colley.

NEVER HEARD THE "MIKADO."—The *Field* notes the launch of a new 5 tonner on the Clyde, named Pitti Sing, "after an African river."

HULL Y. C.—The club will probably offer substantial prizes in the large class, 26 to 40ft., to encourage entries this season.

SEAWANHAKA C. Y. C.—The annual regatta this year will be sailed on Saturday, June 19.

PUBLISHER'S DEPARTMENT.

A CLOSE SHOOTER.—Picking up No. 445 of the Dickerman patent hammerless single barrel shotguns at the works of the Strong Firearms Co. at New Haven the other day, a member of the FOREST AND STREAM staff aimed at a screen 32yds. away; 272 pellet marks in a circle with a 6-inch radius tells the close shooting qualities of the arm.

In our issue of April 9, 1885 we chronicled the event of the opening of the New York branch of the sporting goods house of A. G. Spalding & Bros., of Chicago, and at that time we predicted a successful issue of the experiment on account of their well known ability and enterprising spirit. Indeed, the result has been so successful that it is almost phenomenal. In this issue on another page will be found their advertisement for their spring opening for 1886, and a glance at its contents will show a few of the novelties they will bring out this season. Through the agency of the Chicago branch, we have secured a large supply in some twenty of the largest cities east and west.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

F. P. W.—The shell should fit the chamber. If it is shorter the shooting will be injured.

J. B. M., Orillia, Canada.—For information about openings for veterinarians in this vicinity write to Dr. Lowe, Paterson, N. J.

G. S. W., Concord, April 11, 1886.—I saw a bluebird building in a hollow tree. Is not this early for bluebirds to build here? Ans. It is not early.

CLUB CONSTITUTIONS.—The attention of several correspondents is directed to the forms of club constitutions printed in issues of March 25 and April 8.

W. R., Meridian.—The Sharps rifle is not manufactured. Address of the other firm is given in our advertising columns. There are a dozen from which you can select.

E. P. D.—The best book on the subject, giving instructions in fly-fishing for bass, is Dr. Henshall's "Book of the Black Bass," which we can send you. Price \$3.00.

H. A. S.—A setter dog has been killing chickens (always selecting the best game). He does not eat them. I have punished him severely whenever I have caught him, but still he continues. Can you tell me how to stop him? Ans. The next time he kills a fowl tie it securely

to his neck and make him wear it as a badge of disgrace. This has worked well in some cases, where other devices have failed.

INQUIRER, Stamford.—Is it rare to find the great white egret as far north as this? A very fine specimen was shot near this place April 2. Ans. Quite unusual so early in the season. The species only occurs in Connecticut as a rare accidental visitant.

F. C., Madison Ave., N. Y.—Being anxious to have some snipe-shooting—English snipe preferred—and not having the time to travel any great distance, I thought you might be able to inform me of some place within one or two hours ride from city where if possible one can go and come the same day. Ans. There may be some place that will fill your requirements, but if there is we do not know of it.

W. A. B., Spring Hill, Conn.—Please state through your correspondent column whether water draws a bullet or not when fired across it. Ans. Water "draws" a bullet just as land "draws" a bullet, no more, no less. A bullet will fall the same distance in the same time, whether it be shot over water or over land, in obedience to the law of gravitation.

L. E. P., Greenfield, Mass.—Is Sunapee Lake, N. H., a desirable place to camp out? Is there good trout or bass fishing and how large do they run? What flies are used there for bass in August? Ans. Excellent camping place, on shore and islands. Take train from Claremont to Newbury station, on Concord and Claremont branch of Boston and Lowell Railroad. Steamers leave there for all parts of the lake. Good bass fishing, up to 5 lbs. in weight. Trout up to 6 or 7 lbs., the latter in deep water in August. Usual bass flies, ibis, Henshall, oriole, silver doctor, Prouty, etc. Write A. H. Powers, Grantham, N. H., for further particulars.

A Senate committee has acted unwisely in favorably reporting a bill for the extension of a railroad through the Yellowstone Park. It is said by the supporters of the bill that such a road is needed for the accommodation of miners at the Clark's Fork Mines, in Montana, not far from the northeast corner of the park, but it is stated by others that a road can be built directly from their mines to the Northern Pacific. The Yellowstone Park should be preserved in a state of nature. It is proposed that the road shall pass through one of the most interesting regions of the reservation, in the valley of the Yellowstone River. This road or any other would go far toward destroying the beauty and charm of the park. It would tend to destroy the game. It would necessitate the establishment of settlements on its line. Its construction would be followed by the destruction of many trees, felled by the axe or swept away by fires. There are almost innumerable arguments against the building of such a road, and we can find none in favor of it.—*New York Times*, March 26.

HOW WOULD YOU LIKE IT to have your wife and children in want of the necessities of life? Many families have suffered this from death of a protector who expected it as little as you. Moral, insure in the Travelers, of Hartford, Conn.—*Adv.*

In lots to suit, all grades and lengths, "Extra Heavy" to "Extra Fine." Assorted thousands, ten different grades, including "Extra Long," put up for country trade and clubs. Prices, \$5 to \$15 per 1,000. Assorted thousands, \$7.50. Address LATASA & CO., P. O. Box 2,702, Washington Building, N. Y.

Dickerman Pat. Hammerless Single-Barrel Shotgun.

DESIGNED ESPECIALLY FOR

TRAP SHOOTING.

12-GAUGE NOW READY.

Weight 7 lbs.

Warranted to throw 350
No. 8 shot in 30-inch circle
at 33 yards.

All Modern Improvements.

Automatic Safety Pistol Grip, Double Bolt, Rubber Butt Plate, Full Choke,
Blued Frame, with Twist, Laminated or Damascus Barrels.

The Top Snap is utilized as the lever for cocking the hammer as well as breaking up the gun. The leverage is so adjusted that the gun is broken up and hammer cocked as easily as an ordinary gun with simple top snap is broken up. By the same movement of the top snap the safety bolt is forced under the forward part of the trigger, locking the latter firmly into the bent of the hammer. The Safety Button is located just in front of the trigger, and is fully protected by the guard (as shown in cut). Pronounced by the trade and sportsmen generally the Finest Single Gun Made. INTERCHANGEABLE RIFLE BARRELS OF ALL CALIBERS furnished for these guns if desired. SEND FOR CIRCULAR.

Manufactured by THE STRONG FIRE ARMS CO., New Haven, Conn., U. S. A.

THE
Chamberlin Cartridge
COMPANY, CLEVELAND, OHIO,
MANUFACTURERS OF
Fixed Ammunition for Shotguns.

SORA.

Loaded by machinery. Every cartridge perfect. Every one alike. Wadding of uniform thickness, and placed squarely on the powder and shot. Rammed with uniform pressure. Beautifully and securely crimped. Packed 25 in a pasteboard box, 20 boxes in a case. **The Most Convenient and Best Ammunition in the World.** Highest scores on record made with these cartridges. Persons who use them in the field are constantly speaking in their praise. WOOD POWDER has shown its best results in these goods. PIGOU, WILKES & LAURENCE POWDER does its best work in Chamberlin cartridges. Any of the leading brands of paper shells or powder may be had. THE VARIETY OF CARTRIDGES FOR TRAP SHOOTING IS NOW COMPLETE. WADDING ONE SIZE LARGER THAN BORE OF GUN for such guns as require this style of loading.

PERFECTION AT LAST.

THE
BRAY FLY BOOK.

It will be gratifying to anglers to know that there is at last a *perfect* Fly Book in the market one in which flies may be attached as quickly as they could be thrown into an ordinary envelope, being at the same time perfectly secure, and may be as readily detached. The snell, regardless of its length, is at all times kept straight (the advantage of which no angler need be told), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires.

The Spalding Hammered Bait.
(ENDORSED.)

Made in Ten Sizes. Prices in silver plate: Nos. 1, 2, 3, 4, 5 and 6, 30 cts. each; Nos. 7 and 8, 45 cts. each; Nos. 9 and 10, 75 cts. each. Gold plate, 25 cts. extra.
MESSRS. A. G. SPALDING & BROS., CHICAGO, ILL.:
GENTLEMEN:—I have just received your new "Hammered" Spoon Bait at Gage's Lake, where, from the scarcity of live bait of any kind, I have been obliged to use the "Hammered" Bait, and I have no rise to the fly. The "Hammered" Bait is a happy idea, and it is really a great success. I have used it can affirm. It is well and carefully made, has good, strong hooks, and well deserves the great popularity it has so soon acquired.
Very truly yours,
J. A. HENSHALL.
CYNTHIANA, Ky., Sept. 25, 1885.

SCHOVERLING, DALY & GALES.

Charles Daly Hammerless. THE BEST HAMMERLESS GUN IN THE WORLD. W H Y .

THE PECULIAR SYSTEM OF BORING, CHOKING AND CHAMBERING gives the maxim result in closeness of shooting (this, however, can be done by any one), combined with PENETRATION. This latter is the great point. Ask any one who shoots a Daly and they will tell you they "Kill dead."

THE GREAT SUPERIORITY IN ACCURACY OF THE FITTING AND CLOSENESS OF THE WORK makes the guns last a lifetime. Large numbers of DALY GUNS have been in use a score of years, and are as tight to-day as when first made. The workmen who make these guns are all "ARTISTS IN IRON AND WOOD." We confidently assert that no better or closer work can be found in the world, whether it comes from a Purdy, a Grant, or a Westley Richards.

THE BARRELS AND LOCKWORK ARE MADE OF FIRST QUALITY MATERIAL. One of the great points in a gun is the accuracy with which the barrels are put together. It costs more to put a pair of barrels together properly than it does to make an ordinary gun out and out. DALY GUNS have no superior in this respect.

THE ANSON & DEELEY SYSTEM, ON WHICH THESE GUNS ARE MADE, is the best ever yet put on the market. It is the same system as used by Westley Richards, Harrington & Richardson and many others. The only objection has been that the forearm of the frame is rather short. We have, however, overcome this difficulty, and a DALY HAMMERLESS ANSON & DEELEY SYSTEM WITH LONG FOREARM IS THE STRONGEST HAMMERLESS IN THE WORLD.

THEY ARE BEAUTIFUL IN OUTLINE, ARTISTIC IN FINISH. THE STOCKS HAVE HANDSOME FIGURE. They are stocked for use, "come up" properly. It is a pleasure to handle them, and to look at them is like viewing a handsome picture. A DALY is A "THING OF BEAUTY."

THE RIBS ARE HAND MATTED (not machine work which does not give the best effect) and give a perfectly dead surface to sight over.

PROOF.

While in sales every other Hammerless Gun has fallen off at least 50 per cent. this season (which has been a dull one in gun trade) the DALY has increased 50 per cent. Everyone who has one is enthusiastic in their praise.

No. 120—10, 12 and 16 Gauges, Damascus Barrels, Neat Engraving,	\$125 00
No. 200—10, 12 and 16 Gauges, Diamond,	225.00

SCHOVERLING, DALY & GALES, 84 & 86 Chambers Street, New York.

Manhattan Three Barrel.

This Gun has met with an unprecedented sale for an arm of this kind—far beyond our expectations. In order to get them it is necessary for the present to enter orders in advance.

They are made with fine Damascus Shot Barrels, Best Steel Rifle Barrels. Matted Rib, Locks and entire work of the very best quality.

Pushing the Top Lever to the left, the rifle barrel is fired by the right-hand lock. This mechanism is very simple, but effective and durable, and does not admit of any mistake being made.

A Folding Peep Sight throws down flush with the tang of the frame; a hinge back sight is placed on the barrel, which is flush for shotgun use and can be turned up for rifle use.

Price, with Sights Complete, \$85.00.

SCHOVERLING, DALY & GALES,
84 & 86 Chambers Street, New York.

HINDS' BLACK-FLY CREAM,
For Repelling Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

GLENS FALLS, N. Y., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:
DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the Cream a perfect preventive against their bites when it was applied to face, hands, ears and neck. For many years I have sought after the insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

No Tar. No Stain. Price, 25 Cents, Postpaid.

The Celebrated "UNION HILL,"

Illustration of a rifle and two target diagrams.

First target represents 10 consecutive shots made by Otto Jaeger, June 10, 1885, at Wheeling, W. Va., 200 yards off hand, with some wind, using a No. 6 1/2 Off-Hand, .32-caliber. It counts 94 on Massachusetts Decimal and 117 on Massachusetts Target. The cut is one-half size.

Second target represents 5 consecutive shots made by J. D. Marks, June 24, 1885, at Springfield, Mass., 200 yards, with rest, using a Union Hill, .32-caliber. The entire five shots are inside of a 1 1/2-inch circle. The cut is full size.

This style of Ballard Rifle and the "Off-Hand" are the standard guns for target shooting, carrying off nearly all the prizes. Send for Catalogue: **THE MARLIN FIRE ARMS CO., New Haven, Conn.**
